W. R.:—To restore the color of black kid, mix ink with the white of an egg and apply with a soft sponge. To clean white kid, dip a clean white flannel cloth in a little ammonia and rub lightly on a cake of white soap. Rub the soiled parts gently, changing the cloth as soon as it becomes soiled. To polish tan shoes, wash the shoes clean with a sponge and warm water. Wipe with a dry cloth and let dry. Then rub freely with the inside of a banana peel. Wipe carefully with a dry cloth and polish with cotton flannel. Patent leather shoes should not be "polished" in the strict sense of the word. Apply a mixture of one part linseed oil to two parts cream to the shoes, rubbing it well in with a soft flannel cloth. This will keep the leather soft and it will not crack as readily.

Joe:—Even though you have not yet met the bride, the present should be sent to her. Wedding presents are never sent to the bridegroom.

Bedtime Stories

Tommy's Stamp Book.

When through my book of stamps I look,
What wondrous things I see!
It's dearer than the storybook
My mother reads to me.

With great delight ten times a day
I stop my play to glance
Upon these stamps of Paraguay,
Greece, Italy and France.

They beam on me in every hue
That in a stamp is seen—
In crimson, lavender and blue,
And cardinal and green.

I look upon the book with pride
To see its pages fill;
And yet I am not satisfied,
And shall not be until

The postman pauses in his tramp,
And in his outstretched hand
I see a letter with the stamp
They use in Fairyland.

The Fairy of the Roses.

Most people thought the old lady who lived in the house that stood all by itself was very queer and very cross; but Alline said she was cross only because she had rheumatism; and that if you could get her to tell a fairy story she would forget all about the pain, and be just as pleasant as anything.

"I'm going to her house now," said Alline, "for she promised she would tell me to-day about the fairies of the roses."

"Can you see that rose tree?" said the old lady, when Alline was comfortably seated on a stool beside her. "Well, it is owned by a fairy who, like the old woman who lived in a shoe, has more children than she knows what to do with. She is so dreadfully afraid of having anything happen to them that she has shut each one up tight in a rosebud. There they will stay until they grow big enough and strong enough to burst the buds open, and then each one will fly away."

"And where will they go?" asked Alline.

"That I cannot say," answered the old lady; "there are so many of them, and they choose such different places. They are also very fond of disguises—sometimes one might take them for butterflies, at other times for humming birds. Often, when you can't see them at all, you can find out just about where they are by listening."

"Oh," cried Alline, "what do they say?"

The old lady shook her head. "Who can tell what they say? If that were possible, mortals would perhaps be wiser than they are. You can often hear them either whispering among the leaves—though there are some who will tell you it is only the wind—or singing by the brook a little tinkling song."

While the old lady and Alline were talking, a sudden shower that had come up passed over, and the sun shone again in all its warm brightness. The birds began to sing, and in through the window darted a humming bird. It darted right out again; but not before the old lady and Alline had both seen it.

"Alline," the old lady said, "a bud on my rose tree looked this morning as if it might be pushed open soon. Go to the window and see if the fairy hasn't come out."

Alline ran to the window. "I see a great white rose," she said. "That little humming bird must have been the fairy. Oh, I'm so glad we both saw it!"

Sunlight for the Cellar.

There is a mistaken idea that a house is warmer if the cellar is not under the entire building. The argument is that there are no windows with crevices to let in the cold air. That may be true concerning the cracks next to the frames, but without doubt there will be dampness where the ground has not been excavated. Then the first-floor joists are nearer to the frost in the earth in the winter.

Set the first-story beams well up from the grade, not less than 24 inches from the sill. If there is a distance of 30 inches between it to still better.

Excavate for a basement beneath the whole house, and do not be afraid to provide sufficient windows. There is nothing quite so dingy as that dark and damp space under the house. The expenditure of a few dollars would have made it light and cheerful. Do not try to bar the sunlight.

The Paisley Advocate

PAISLEY, JULY 11th, 1917

The agitating politicians of Quebec province would have the rest of Canada believe, prior to the vote on the conscription bill in the House of Commons, that the French-speaking population was ready to bring on a civil war if the Government should attempt to enforce a compulsory recruiting measure, since the conscription bill has actually been carried, there are no alarming sounds heard from the habitants, and we are assured by various investigations that the opposition is not strong or determined, in fact the people will probably submit to the conscriptive process about as willingly as other parts of Canada. The ambitions and clever Quebec Nationalist leaders can make a big noise themselves, but it appears this is not to be regarded as the true echo of the voice of their constituents. Quebec really look better to us since last week. Sir Wilfred Laurier took a creditable course when he advised his compatriots to accept the situation without more ado. We may have a general election yet, however, as those Liberal members who voted for Borden's conscription bill are not willing to lie down like lambs with the Borden Government wolves.

—Another startling and murderous German air raid over the English coast and into London, with its rain of high explosive projectiles upon innocent non combatants, does not prove the effectiveness of that method of warfare, but it makes more emphatic the need of greater forces of fighting men and munitions to carry to an early and successful culmination the campaign of the Allies. While bombs are thus being dropped in the capital of this Empire by our Hun enemies Canadians cannot fail to be impressed by the danger of this fair Dominion beyond the seas being a point of attack at some time unless the struggle ends so decisively in our favor as to make it impossible for Prussian militarism to again assume the aggressive against Britain. While our politicians are wasting time at Ottawa and making no progress towards bringing the whole resources of Canada to bear upon winning the war, the young men now at home still have the opportunity of voluntarily offering their services to the cause of greater world freedom and higher civilization. Young man, if ever your country needed you, it is now, to reinforce the divisions we have sent overseas, and from whose ranks have fallen thousands of our noblest sons.

—In referring to the summer session of County Council, the Owen Sound Advertiser admits the importance of that body, but observes the waste of time, and notes that improvement can be made in its system. The Advertiser says: "It is one of the institutions that could not in a pinch be dispensed with; and its work is of the most essential kinds. But its methods of operation are of the most primitive and archaic. Not that results are not obtained, for results are obtained and ultimately everything works out alright. But the point is that the same work could be done in less time, with much greater expedition, and consequently at less cost." . . . The members are "compelled to fritter away time uselessly if they follow the system that is laid down for them—a system of routine that gives whole days to trivial non-decisive things and only reserves minutes at the end of the session for the really important and essential things. This is the chief fault with the system. Important matters upon which legislation is to be passed are crowded to the last of the session and these matters are jammed through regardless of their great importance—the time that should have been spent on their consideration having been frittered away on comparative trivialities. So far, fortunately, no serious results have come of it; but some day a piece of legislation will go through that will work detriment to the county simply because the matter was not fully studied."

—Ewingvne Patriotic Society had a very large crowd at their garden party. Nearly $300 was taken in at the gate and booth.

We have received by mail recently two or three contributions of in-loving-memory verses. These should be accompanied by the requisite charge of five cents per line which is the general charge for obituary, poetry, or verse of this character. Where cards of thanks are sent by mail, fifty cents must be enclosed to cover charges, or insertion must be refused. It is impossible for any publisher to devote his space to matter of this character, which is of purely private interest, and for charge. Items of general news also are always welcome, such as personals, notes of weddings, deaths, accidents, etc., etc. When you have friday visitors throughout the summer, call us up by phone or drop us a card. We will appreciate the favor.

THE GRIM REAPER

An Epidemic of Death—Three Funerals in One Day. Old and Young are Called

The Sombre Angel has visited four families in and near Paisley within the past week. A very deep and general sadness has been cast over the community by particularly sudden bereavements which have fallen upon homes and plunged so many into deepest grief.

Mrs H. Reed, of Paisley, suddenly expired from heart trouble at her home on Thursday forenoon. Mrs R Fleming, who left here in good health about four weeks ago to visit members of her family in Toronto and points in the west, passed away in Chicago after an illness of only two days. Mrs R H Curry, of 6th Bruce, was found dead in her bed on Saturday morning. The funerals on these three took place to Paisley cemeteries on Monday afternoon. On Monday morning the 17-year-old son and only child of Mr and Mrs Thos Irwin, Elora road north, succumbed to an attack of pneumonia which had seized upon him only a week before. There is loss and sadness in the passing away of the aged mothers who after having borne the burdens of comparatively long and active lives, and are laid quietly to rest in God's acre. Yet, the very fulness and completeness of their lives with the measure of joy and happiness that has been theirs, makes for reconciliation in the hearts of those whom they precede to the other shore. But when a young life just opening into the first flush of manhood is snatched away from a home in which he was the only child—this indeed is the saddest of all, and the parents are made to drink at one draught the full cup of sorrow. The heart-breaking events of the past few days have cast a heavy gloom over the community, and the hearts of all have gone out in deepest sympathy to those bereft.

MRS. R. FLEMING

In the death of Elizabeth McRae Fleming there passed away one of Paisley's pioneer residents. She was the daughter of Robert and Mary McRae, and was born in January, 1840, at Sheffield, Ontario. In 1858 she came with her parents to the county of Bruce where they settled on the townline of Bruce and Saugeen. Elizabeth McRae was one of the sturdy and earnest young women of her day and cheerfully assisted the family in their endeavor to make a home in the new land. In March, 1865, she was married to Peter Sinclair, who predeceased her some forty-five years. Left alone with a family of three boys and one girl she loyally and earnestly devoted herself to the purpose of training and educating these children as good citizens. Her children recognize how faithfully she executed her purpose. Her many friends can testify to her sterling character and firmness of purpose in all her undertakings. Her ever readiness to help her neighbors, young and old, to do their duty, assisted in strengthening the community's moral character. In 1888 she married the late Robert Fleming. Her demise was a shock to her family and all her friends in Paisley. Leaving Paisley some four week ago she went to visit her daughter, Mrs John Hargreaves, in Toronto. On Monday evening, July 2nd, she started on a contemplated visit to her three sons who live in the United States, and arrived Tuesday morning in Chicago. The same evening she fell ill and grew rapidly worse until Friday morning, July 6th, when she died in the presence of her son, Peter Sinclair, his wife, and her granddaughter, Florence Hargreaves, of Toronto. The remains, accompanied by Mr and Mrs Peter Sinclair, were brought to Paisley on the late train Saturday night. The night was dark and dismal, but the presence of her many friends at the station and at the residence was a glowing testimony to the love and esteem with which she had been regarded. She was buried on Monday, July 9th, in Paisley cemetery. The funeral services were conducted by Rev G C Little, assisted by Revs Diehl and Neilson. She leaves to mourn the loss of a noble and devoted mother her children: Mary, wife of John Hargreaves, Toronto; Peter Sinclair, Chicago; Robert C Sinclair, North Yakima, Washington; and Archibald C Sinclair, Portland, Oregon, as well as two brothers, Alex and William McRae, of Bruce and Fort Elgin.

MRS. H. REED

Isabella Scofield, beloved wife of Henry Reed, of Paisley, who passed away very suddenly at her home on Thursday last, was born in 1848 at Paisley, Scotland. The family came to Canada in 1851, and settled at Dunblane, where Mr Scofield died in 1855. Mr and Mrs Reed were married on Dec 24th, 1867. Of their family three daughters and four sons are still living—Mrs Russell of Paisley; Mrs Harvey Brown, of Perth, B C; Mrs W Cook, of Toronto; Wm H, of Winnipeg; J Louis, of Gull Lake, Sask; Alvin M, of Columbia Falls, Mont; Robert, of Guelph; and Norman, with the overseas forces, and now convalescing in the military hospital at Stockport, England. Mrs Reed was identified with the Methodist church, Paisley, for nearly 30 years. She was of a quiet, retiring nature, and took more interest in her home and family than in any other matters. Since the death of her daughter Alice, her health has been failing and she has been anxious concerning the fate of her youngest boy, Norman, who was in the trenches from December last to April 12th, when he was stricken with trench fever. With the exception of three years when the family lived in Owen Sound, her life was practically spent in Paisley, and in the 50 years of married life she had made many dear friends outside the circle of immediate relatives who were always welcome in her home. The funeral services were conducted by Rev Mr Crighton, assisted by Rev Mr Cosens of Walkerton, a former pastor here. Both ministers alluded specially to the splendid God-like, loving and kindly life she had lived, and the beautiful example left for the children, husband and friends to emulate. Mr Crighton in selecting the hymns for the service was indeed fortunate in choosing possibly the two most loved by Mrs Reed—"Forever With the Lord" and "Abide With Me." Mr Crighton fittingly described her life and example as that of "pure gold," and said that any attempt to eulogize her memory would be like "painting the lily." Mr Cosens spoke of an incident connected with a visit he paid her two weeks ago and the confidence with which she spoke of the preparedness in which she awaited the Great Master's final call. The beautiful casket was piled high with numerous wreaths of flowers sent by friends from far and near in loving remembrance of one whom they had held in love and esteem. The pallbearers were three sons—William, Bert and Louis, two sons-in-law, J B Dewar and W W Cook, and a nephew, W Beattie. Two sisters and one brother of deceased are living—Mrs Patterson of Sarnia, Mrs Moffatt of Cargill, and Wm Scofield of Pinchet Creek, Alberta. A home established here nearly 50 years ago has suffered its greatest loss. No one who ever met or knew Mrs Reed will doubt for a moment but she has gone to that great reward she has sought for years to attain, and has surely now entered into. Free now from pain, tears and anxiety, a kind, loving mother has been taken from her midst, one who for years was a living example in Paisley of a christian woman's devotion to her husband, family and home.

JOHN SPARROW

This former Elderslie man, a brother of Messrs William, Thomas and Mike Sparrow, died on July 4th, at Selkirk, Man., from blood poisoning. Upon learning that his brother was seriously ill, in the hospital at Selkirk, Mr Thos Sparrow left for that place, but did not arrive until the day after death had occurred. The deceased was farming on toth con Elderslie until he left for the west about seventeen years ago. The news of his death will be learned with regret by his many old friends in this locality.

LOCAL AND DISTRICT NEWS

A Record Bunch of Cattle

The Seaforth Expositor says that Thos McMillan, of Hullett, delivered at the Seaforth Stock Yards 34 head of cattle that for quality and size will in all probability long remain a record for the county. One pair weighed 3,370 pounds, another pair weighed 3,450 pounds and the 34 head averaged 1,362 pounds. Mr McMillan received 12½ cents per pound, the 34 head realizing $6,596. The cattle were purchased for the Buffalo market.

Always Stick to Your Bargain

In the Division Court held at Paisley on Wednesday last, Mr Maurer, of Elderslie was the plaintiff in a suit against A L McKinnon for $8, the price of a young pig. The defendant had bought 15 little porkers from plaintiff and took one home with him when the deal was made. Returning for the other 14 on date agreed upon, he found that plaintiff had sold them again at a higher price. As the plaintiff had advertised them in The Advocate, there were plenty of buyers. McKinnon kept the pig, declining to pay for it on the ground that he had suffered damages through non-fulfilment of bargain. He also put in a claim for $3 for the feebleness trip he made for the balance of the pigs, and judgment was given in his favor, plaintiff to pay court costs as well. The plaintiff expressed the opinion that this was queer law, when the judge handed out the simple admonishment: "Always stick to your bargain."

Elderslie S S Picnic

The union Sunday School picnic held in Mr John McDermid's beautiful woods at Gillies Hill on Wednesday afternoon last brought together fully 1200 people. There were young and old from all parts of the township. The numerous motor cars had been loaded to full capacity to bring the owners' families and as many neighbors as could be carried in each. The Sunday Schools of Elderslie are live institutions, that are doing a great work not only for the religious and moral welfare of the community, but also developing a social acquaintance among the people. The teachers in these schools devote themselves assiduously to the work, during the months it is possible to have the schools open. The program on Wednesday included addresses by Reeve Cass, C J Halliday, S Wilcox, Wm McDonald M P P, and Rev Mr Wilson, selection by Salem male quartet, music by a string band, solo by Miss Alma Fraser, club swinging by girls, stirring tunes by Piper McKinnon. Mr William Pearce occupied the chair. Five hundred Red Cross tags were sold out in a few minutes. The contents of all picnic baskets were completely consumed, and a brisk trade was done at the fruit and refreshment booth. Baseball, football and footraces completed the afternoon's sport. Following is a list of the winners in the races: Boys 10 yrs and under—Jas Oswald, John Oswald; girls—Jamie Millar, Annie Millar; boys 12 yrs and under—Clarence Hammond, Harvey McGill; girls—Marjory Hodgert, Olive Martin; boys 15 yrs and under—Geo Oswald, Frank Hammond; boys 15 yrs—M Swenger, Ed Tanner; girls—Mary Hodgert, Isabel McKay; young men—John Thompson, Wat Miller; officers and teachers—Rev Wilson, Stephen Winch; girls' 3-legged race—Janet McCannel and Isabel McKay; single men (Wat Miller, Lome Winch, John Thompson and Arch Stuart) won the relay race against married men (W Tanner, John Davis, Jos Dudgeon, John Buchanan); single ladies (Misses Tanner, McLaughlin, Sims and McKay) won relay race against married ladies (Mesdames Maxwell, Crawford, Robb and Hopper); married men's race—Oscar Lloyd, Wm Maxwell; fat men's race—Alex Marshall, J C Miles.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel As If Walking On Air

OMELIA, ONT., Nov. 28th, 1914.

"For over two years, I was troubled with *Constipation, Drowsiness, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *soon I felt fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".

DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

CARD OF THANKS

Mr H Reed and family desire to express the appreciation they feel for the sympathy and kindness manifested to them in the hour of their great bereavement. The kindly words of so many friends will be long remembered with feelings of gratitude.

"WHY WOMEN CANNOT SLEEP."

The highly organized, finely strung nervous system of women subjects them to terrors of nervous apprehension which no man can ever appreciate.

The peace of mind, the mental poise and calmness under difficulties, which are necessary for happy womanhood, are only possible when the sensitive organism is in a perfectly healthy condition. If there be any derangement in this respect no remedy in the world so completely restores womanly health as the wonderful "Favorite Prescription" invented by Dr. R. V. Pierce.

Chatham, Ont.—"A few years ago I suffered a general break-down and got very weak and thin. I was in an awful state. I was very much discouraged and at times thought I would lose my mind. I knew of Dr. Pierce's medicines so I got his 'Favorite Prescription.' It gave me immediate relief, and completely cured me in a very short time. My health is good it with good results also. She was in a very delicate condition. I got her to take it and two bottles cured her completely.

"I take great pleasure in recommending Dr. Pierce's medicines; they are all that is recommended of them."—Mrs. Marguerite Bernard, 87 Fruit Ave., Chatham, Ont.

Letters from the Soldiers

Pte. Alex Blue Again in the Trenches

Somewhere in France
June 10th, 1917

DEAR FATHER—Just a few lines to let you know that I am quite well and going strong. We are having plenty of warm weather out here and plenty to do, and I might say there are lots of Fritzs coming in. They seem rather pleased with themselves to be taken prisoners. In appearance they seem well built and don't look as if they were starved. In fact they look fat enough, if that accounts for anything. Well, who do you think I ran across the other day, to my surprise—Billy [Wilbert] McLeod. He looks fine. He is orderly for the C O of an hospital. That is a pretty good job. We have more artillery out here at present than when we went out, and it certainly is doing lovely work along the western front. I am happy because there is no more Ypres Salient. That was one hole if ever there was one. They would pepper at you from all sides, but now it is changed with this last advance which we have had success. Now, if we can only keep them on the run it will be lovely, but you see they have so many reserve lines to fall into, and trench warfare is hard work. I would certainly like the cavalry to get a chance. I expect they will before long. Anyway, watch the Jocks and Canucks, for when you put them both together look out for dirty weather on the four cross roads. Well, how is that conscription bill going to pass? Do you think it will go through? I am not in favor of it, but I suppose if they can't get the men they will have to enforce it. If they give us a vote, as I expect they will, watch how we vote. The English women out here are certainly doing noble work and they are just as handy as the men at the jobs they do. I believe if you would give them a rifle and uniform they would go to the trenches and strafe Hiney if they got the chance. Although if I had my chance I would rather stay in Blighty for I found out that I am not bullet proof. Well, just a year ago to-day Fritz made an attack on us but he never reached his point.

SPENT LEAVE IN IRELAND

Pte Chris Maloney, who joined the Bantams, wrote on May 19th to Mrs S Rae, Elora Road north, from West Sandling Camp. He says: The first week we lived in tents at Shorncliffe where you can hear the roar of the cannon in France. Now we are living in huts, have a table to sit at and dishes to eat off. There are 30 men in each hut. We have also straw mattresses to sleep on, so we are not so bad off. I got a week's holidays and went to Ireland. I visited Dublin first, which I found in ruins. The Post Office and bank have only the walls standing. Then I went to Delgany, where I spent my childhood I hardly knew the place and the people did not recognize me. The people in Delgany got up a nice little concert as a welcome back to the old home town. I had written to them when I came to England. My, how I hated to leave there. When I came back to England I had the pleasure of seeing the king at Liverpool which place he visited, and I happened to be there that day. There are lots of aeroplanes here, as there is a aeroplane station only one mile away. We are having a holiday on the 24th of May. I also visited on my holidays London and Holyhead, it is very easy to get lost in London. You have to keep your head about you if you have a great chance of being run over by a vehicle. I will tell you more again. I hope to get a line from you. We are not Bantams any more. Our badges were taken off and we were given a plain Canada badge.

TEACHER APPRECIATED

U S S No 9, Bruce,
June 29th, 1917

To Miss Megraw, teacher:

DEAR TEACHER—I have been requested by the pupils of S S No 9 Bruce to offer a slight token of our esteem and respect. I cannot tell you how delighted I am to be the means of conveying to you the expression of our united love which you have manifested so strongly to us in all your department of duties, sparing not yourself in any way that we might become noble men and women. What we offer you is a poor symbol of our feeling, but we know you will receive it kindly as a simple indication of the attachment which each one of us cherishes in our heart of hearts. You have made our lessons pleasant to us—so pleasant it would be ungrateful to call them tasks. We know that we have often tried your temper and patience, but you have dealt gently with us in our waywardness, teaching us, by example as well as precept, the advantages of kindness and self-control. We will never forget you. We shall look back to these school days in after life, not as a place of penance, but as a scene of mental enjoyment where the paths of learning were strewn with flowers, and whenever memory recalls our school days our hearts will warm towards you as they do to-day. I have been requested by my schoolmates not to address you formally but as a loved and respected friend. In that light, dear teacher, we all regard you. May you always be as happy as you have endeavored to make your pupils, and may they—nothing better could be wished for them—be always as faithful to their duties to others as you have been to your duty to us. Signed in behalf of the section, Floyd Wightman, Wm Smith, Chambers McKinnon, Howard Smith.

FOR FLETCHER'S
CASTORIA

MARRIED

GIBSON—CORMACK—At the residence of the bride's parents, on July 11th, by Rev G C Little, B.A. Mr Wm W Gibson, of Toronto (son of Mr J C Gibson), to Miss Constance M, daughter of Mr Mrs And. Cormack, Elora Road south.

DIED

REID—At Paisley, July 8th, Isabella Scofield, beloved wife of Henry Reid, aged 68 years and 11 months.

FLEMING—At Oak Park, Ill, on July 6th, Elizabeth McRae, widow of the late Robt Fleming, aged 78 years.

CURRY—In Bruce Tp., on July 7th, Maria Galbraith, widow of the late Robt H Curry, aged 72 years, 4 months and 29 days.

ELDERSLIE COUNCIL

Gillies Hill, July 3rd, 1917

Council met on above date, all the members being present.

A communication was received from Mr C J Henry asking the council to pay wages of boy minding gate while gravel was being taken from lot 23, con 13. No action taken.

Miss R Smart and Mrs John McCurdy, representing Vesta Red Cross Society, addressed the council requesting a grant. It was agreed that they be given $25 from the funds of the Elderslie Pat League.

A communication was received from Mr T Kilgas asking the council to pay damages to harness and buggy caused by his horse taking fright at some object on 30 sideroad. No action.

Allen—Thomson—That the following accounts be paid.—Carried. Andrew Watson, 28 yds gravel pr, T O Brown, pathmaster, $2 80; Paul Oltaker, 68 yds per Jas Sheepy, $6 80; Alex Brown, performing arrears of statute labor, div No 8, $4 50; J B McBride, performing R R arrears of statute labor, $3 75; J Palmer, 40 yds gravel per A Stroud, $4; H Wilson, 121 yds per Wm Herron, $12 10; Thos Collins, 32 yds per J J Thompson, $3 20; S K Ewart, 91 yds per A McConnel, $9 10; Edward Bone, 71 yds per H J Raby, $7 10; Geo Addison, 84 yds per W R Weatherfather, $2 40; Arch Thomson, 55 yds per A Thomson, $5 50; Thos Collins, 66 yds per John McBeath, $6 60; W J Allen, 57 yds per W R Patterson, $5 70; T Dunsmore, 88 yds per Wm Lewis, $8 80; Geo Addison, 104 yds per And Young, $10 40; J Palmer, 51 yds per Alex Robb, $5 10; Geo Addison, 45 yds per Jas Walks, $4 50; J J Thompson, performing arrears of statute labor, $8 25; R C Pearce, half year's salary as clerk, $92 50; Jas Walks, gravelling lot 6, con 2, $56 25; Wm McDonald, part payment printing contract, $50; Jas Hammond, building culvert lot 26, con 8, $3 75; Wm McCallum, repairing bridge and culvert, 10 s r, con 12, $6; Alex Robb, digging ditch and repairing approach to bridge lot 8, con 13, $4; Wm Bernsfather, inspecting gravel contract, $2 50; Frank Quigley, repairing bridge con 8, $1 50; John Bryce, travelling Arran and Kid townline, $15; John Bryce, cleaning ditch Arran and Kid townline, $2; Arch Brown, inspecting gravel contract, $2; Robt Christie, 10,000 ft cedar, $100; W G Brown, building 3 culverts, 3 s r, con 4, $50 50; W S Bernsfather, work in div No 9, $6; S K Ewart, operating grader, $27; T A Patterson, repairing culvert, 25 s r, con 2, $2 50; W R Fortune, two sticks timber and replacing bridge on sideroad, con 1, $13; John McAllister, half year's salary as caretaker of hall, $5.

Fraser—Lewis—That the reeve be instructed to procure the services of an engineer re Elderslie swamp drain.—Carried.

Fraser—Lewis—That this board do now adjourn to meet again on Monday, Aug 6th, at 10 o'clock a m, for general business, and that school boards be requested to have their requisitions in the hands of the clerk by that date.—Carried.

Elderslie, June 16th, 1917

A special meeting of the council was held in the clerk's office to consider what action should be taken in regard to the writ issued against the municipality by Mr J H Turner claiming damages to his crop owing to the alleged non-repair of Elderslie swamp drain.

It was moved by Mr Lewis, seconded by Mr Fraser, that the reeve be instructed to have township solicitor enter a defence.—Carried.

R C PEARCE, Clerk

The Boy Who Didn't Pass

A sad-faced little fellow sits alone in deep disgrace.
There's a lump arising in his throat and tears stream down his face;
He wandered from his playmates, for he doesn't want to hear
Their shouts of merry laughter since the world has lost its cheer,
He has supped the cup of sorrow, he has drained the bitter glass,
And his heart is fairly breaking; he's the boy who didn't pass.

In the apple tree the robin sings a cheery little song,
But he does'nt seem to hear it, showing plainly something's wrong;
Comes his faithful little spaniel for a romp and bit of play,
But the troubled little fellow sternly bids him go away,
And alone he sits in sorrow with his hair a tangled mass,
And his eyes are red and weeping; he's the boy who didn't pass.

Oh, you who boast a laughing son and speak of him as bright,
And you who love a little girl who comes to you to-night
With smiling eyes and dancing feet with honors from her school,
Turn to that lonely boy who thinks he is a fool,
And take him kindly by the hand, the dullest in the class;
He is the one who most needs love—the boy who didn't pass.

REPORTS OF THE HORTICULTURIST AND THE CEREALIST

Up to the year 1914 the annual report of the Dominion Experimental Farms could be accomodated in one volume. During the following two years it required two volumes, running up to about 1200 pages, to contain the information. The work has so developed that still another volume has had to be added for the year ending March 31st, 1916. Volume one which contains the reports of the Director and of the Divisions of Chemistry, Field Husbandry and Animal Husbandry was announced a few weeks ago. The second volume, giving the reports of the Divisions of Horticulture and of Cereals is now ready for distribution. This deals with the work carried on, including the results of experiments in these branches of agricultural industry at the Central Farm and at the twenty-five Branch Farms, Stations and sub-stations distributed throughout Canada. Grain growers, vegetable growers, fruit growers and florists in every part of Canada may therefore look to this volume for valuable information on the growing of the various classes of crops. The work is covered not only in relation to field and orchard culture, but in relation also to the greenhouse and the experimental plot. Irrigation in horticulture has been given special study. The information on this topic is of great value. Experiments are recorded of work with orchard heaters for the protection of crops against frost. Many other phases of horticulture are dealt with.

In the report o' the Cerealist a table of twenty-five new varieties or selections of wheat produced at the Experimental Farms is given showing the relative value of each as regards production, weight per bushel, number of days for maturing and other qualifications. Corresponding information is given with regard to coarse grains and flax. Volume two as well as the former volume referred to, are available to those who apply for them to the Publications Branch of the Department of agriculture, Ottawa.

D D CAMPBELL, Teacher.

DEAR EDITOR:

We are putting forth great efforts to fight successfully a great and powerful enemy abroad, but even there as well as here, man has a greater enemy than guns and shells. That enemy is unseen and he belongs to no nationality in particular, and fears none. If you give him a chance he will endeavor to kill and actually does succeed in killing more than the Germans or any foes in the shape of man. I refer to the germ life. Germs are everywhere. We breathe them; we eat them; we drink them. How to defeat these millions of relentless and deadly foes is our greatest problem. The seat or basis of man's strength is his stomach. Whatever tends to keep the stomach in good working condition tends to lengthen life by creating a healthy condition in all the organs of the body. If the stomach fails in its work all parts of the body are affected. How very important, then, to keep the stomach in the condition where it will do its best work, so that the food you eat may be assimilated by the tissues, and thus on account of the pure blood created in this way every organ performs its functions and a good healthy body results. The very first thing necessary is to be able to crush or masticate the food into a pulp well mixed with the saliva in the mouth. This, of course, is the work of teeth and tongue, and it is absolutely necessary that this work is rightly done if the stomach is not to be injured and in time rendered incapable of doing its work properly. How necessary, then, it must be to have the teeth given to by nature kept in good repair, so that the stomach is not given too much work such as endeavoring to assimilate lumps of food uncrushed and unpulped, namely, meat, bread, vegetables, etc, which it cannot possibly do, as this is absolutely the work of the teeth. To have solid food in good condition before swallowing one must have good crushers or grinders. How to do so and why people are so easily led to do things that are not in their best interests from the standpoint of health and their pockets too, I shall endeavor to point out in another issue.

Yours truly,
A H ALLEN

FOR FLETCHER'S
CASTORIA

—A clergy whose salary had not been paid for several months told the trustees that he must have money as his family were suffering for want of the necessaries of life. "Money," exclaimed one of the trustees noted for his stinginess, "do you preach for money? I thought you preached for the good of our souls." The minister replied, "So I do; but I can't eat souls, and if I could it would take a thousand such as yours to make a meal."

Shoes Must "Make Good"

The same as men.

There is a competition among shoes—or rather the manufacturers — that is pretty good for you people.

It shoes you and your family with the best shoes in the world without it costing you a cent more than it has to.

Of course you expect us retailers to gather these shoes that are the winners in this war of competition, and that is what this store is constantly doing.

Our claim is that every time you have a shoe need you ought in justice to yourself let us supply it.

Our stock exemplifies all the prevalent shoe newness. It contains the latest shoe thought of the leading manufacturers.

CHOICE OF AWARD

Old Man's Peculiar Will Develops Good and Bad Traits of Nephews

By George Elmer Cobb.

"And I hereby bequeath and devise to my nephews, Ralph Davis and Jonas Greer, the house on Main Street and the house on Railroad street, my trustees to make the choice of awarding the same.

The lawyer read this exact from the will of old Peter Davis in a singsong tone. There was a long sigh of relief from Jonas Greer, and a pleased expression on the face of Ralph Davis. Good old Uncle Peter had not forgotten them, even if he had given a goodly portion of his worldly goods to charity.

"Further," the lawyer continued his reading, "the first one of said nephews making five thousand dollars, the same shall be received in full payment for the old homestead."

There was die speculation among the gossips of Brandon for a week after that, as to which of the fortunate heirs of old Peter Davis would receive the best property award.

The place on Main street was the choice of the two residences. The house was modern, the neighbors were of the best social set in the village, the street was paved. The Railroad street place held a neat but old-fashioned cottage. Main street was a broad tree-fringed thoroughfare. Railroad street had half of its area taken up by tracks, aidings, and freight houses. The Greers had no children. There were two pretty, curly headed tots in the Davis family.

After thinking and debating over the matter at the end of a week the trustees of the Davis estate awarded the Main street property to the Greers.

"It's a burning shame, Ralph!" said outspoken Mrs. Davis. "There is no right or justice to it. Everybody knows it, everybody is scandalized."

"Oh, we're property owners now, and shouldn't complain," reminded her husband in a pleasant way.

"But think of it—the Greers have no children, and we have. It is dangerous for them so near the railroad tracks. Besides that, this property isn't worth half as much as the Main street place."

"Well," rejoined Ralph, "I understand that John Moore, one of the trustees, is wearing a new diamond pin, and they say that Greer presented it to him. Let it go. When I look around and see how cosy you've made the place here, I feel as if it is a kind of palace."

"Oh, Ralph, you are so easily satisfied," sighed Mrs. Davis.

"That's because I've got what Greer can't achome for and get."

"What's that?"

"You and the children," cried the big hearted fellow, and his wife returned his bouncing kiss with a proud and Lappy face.

"I suppose the next thing we know," she said, "Greer will scheme to get the fifty thousand dollar homestead for that five thousand dollars. He'll raise it among his friends."

"No, he can't do that," dissented Ralph. "He has to 'make' it. I'll let you into a secret, Madge, dear: I am going to work and scrimp and save to raise that money. The Greers won't They are going in for society in their new home. Sort of look down on us back street folks. So, they spend all they get."

Ralph's loyal little wife had a good deal of humiliation to subdue for a time. Mrs. Greer began to take to herself a certain social importance. People who were cads ignored the back street home. The yards of the two houses adjoining at the rear. First Mrs Greer pitied her humbler neighbor. Then she was indulgent. Finally she ignored her. Ralph worked hard. His life was centered in his home, and his sterling, steadfast faith in the future began to influence his wife. One day he came home in the middle of the day. This was an unusual thing for him. His wife looked alarmed and then curious, for her husband's cheery face was wreathed with smiles.

"Well, I reckon we'll have to move," he announced.

"Move! When? Why?" cried his bewildered helpmate with a gasp.

"Right away, and because our house here is sold."

"Sold!"

"That's right," smiled Ralph, and he acted and looked as if supremely satisfied with the arrangement. "Here is a little paper to sign," and the speaker produced an official looking document.

"But why sell it; who is buying it?" stammered the bewildered wife.

"The railroad company. If we hold back, the property will be condemned anyway, so we had better close the bargain. They are paying us a big price."

"But to tear up, when we are so nicely settled here!"

"As well as the Greers?" inquired Ralph archly.

"Yes, we are!" declared the stalwart little woman. "It's been just delightful, and we have made it a real home."

"Well, the new one may suit you better," predicted the husband. "In fact, Madge, I have decided to buy the old homestead."

"Why, where, how can you get five thousand dollars?"

"The railroad company are giving us twelve thousand dollars. It is three times the value of this place, but they must have it. That leaves us seven thousand dollars and what I've saved to begin a new life in grand style."

The delighted little woman broke down and cried for sheer joy.

About all the family did that evening was to scan the prospect before them and plan out the golden life offered ahead. The old Davis homestead was a regal place—a roomy, comfortable house with beautiful gardens and a small farm area behind it sufficient to pay the expenses of living.

"Here is a Little Paper to Sign."

The next morning Mrs. Greer met her neighbor on the street. The latter noticed that she scanned her last season's dress rather keenly. Then, when she heard that the Greers were giving a large party and she was not invited, Mrs. Davis realized that the upstart Greer family were ashamed of their supposedly humble friends of former times.

The whole town knew of what they called their good luck, one morning. The sale of the little house on Railroad street was the gossip of the village. Jonas Greer heard of it with a sense of indignation. He felt wronged. Then he suddenly recalled a certain scheme ending in a bribe, and kept his conclusion to himself.

Glum and sullen Mrs. Greer grew sharp voiced and thin over "the freak of chance" that had placed her despised neighbor in affluence. She suffered worse when a new humiliation faced her. The railroad people proceeded to build their noisy, smoke producing shops within fifty feet of the Greer residence.

In the meantime the social strivings of the Greers had led them to mortgage their home. Then came the crisis. They sold their equity in the place for a song, and went to live in a rented flat.

Ralph Davis had too good a heart to neglect a relative and he placed the Greers again on their feet in a substantial way. His pedigree, however, never failed to exploit "the advantage taken of them" by the whole souled fellow who understood how to enjoy prosperity because he had known adversity.

PLAN FOR NEXT YEAR'S SEED.

Select the Best Part of the Field and Give it Special Attention.

Of 400 farmers visited in Dundas County, Ontario, by the Commission of Conservation, during the summer of 1916, only three were found to be following a really systematic selection of their seed grain; only 23 per cent. were saving the best part or parts of their fields for seed. Practically all of the farmers visited stated that they cleaned their grain for seed, but it was found that 74 per cent. cleaned it only once through the fanning mill. It is quite plain that sufficient attention is not being paid to the seed grain. It has been shown, time after time, that, other things being equal, the best seed will produce the best crops. It is, therefore, surprising that not more than 23 per cent. of the farmers were found to be keeping their best grain for seed, and that 74 per cent. cleaned it only once through the mill. If the grain from the best part of parts of the fields is stored and then graded or fanned until all the small and inferior kernels are removed, the quality will be greatly improved. By improving the seed the net profit on a grain crop can be greatly increased, such action increasing the yield a little without increasing the cost of production.

It is not much trouble to keep apart the best portion of the crop for seed. It would even pay to give special care to a special lot or small field from which to obtain seed for the following season's crop. There is, perhaps, nothing on the farm that will give a more profitable return than the time spent in securing a supply of good seed. Plan now to save the choicest of this year's crop for next spring's seeding.

A Blind Editor.

Mr. John Whall has the distinction of being the only blind journalist in England. The son of a Crimean veteran, Mr. Whall had the misfortune of losing his eyesight when quite a child. After completing his education at a London college for the blind, he became organist at Hounslow Parish Church, a position which he held for nearly thirteen years. Turning his attention to writing, Mr. Whall, by means of the Braille system, was able to take up reporting on a weekly newspaper. In 1891 he was appointed editor of the Middlesex Chronicle.

Future of Rheims Cathedral.

Conversion of the battle-torn cathedral at Rheims into a Pantheon for the unknown dead of all the armies fighting in France for the common cause of democracy has been determined upon by the French Government. The plan is to be put into execution as soon as the war is over. It is proposed that the cathedral shall not be restored, but that the representatives of all the Allies shall place their battle flags within what remains of the historic edifice, which then shall be formally dedicated as a monument to the heroic dead.

About the House

Preserving Cherries.

Cherries are ripening and may be canned, preserved, made into jams, jellies or spiced. To can cherries wash the fruit thoroughly, then drain well. Sort the fruit over carefully, removing all blemishes and all soft cherries. Remove the stems and stones. Pack them into sterilized jars and cover with boiling water or a syrup made of sugar and water, using the formula: One cupful sugar, two and one-half cupfuls water. Place in a sauce pan and bring to a boil. Cook for five minutes. Place the rubbers and lids in position, partially fasten them, then place the jars in a hot water bath and process for thirty minutes after the boiling starts. Now remove, fasten the tops securely, invert to test for leaks, then label and store in a cool place.

Preserved Cherries.—Stem and stone the cherries. Weigh after stoning, allowing one-half pound of sugar to each pound of cherries. To each pound of sugar allow one-half cupful of water. Place in a saucepan and when the heated that the Greers were stir until well dissolved. Bring to a boil and cook for five minutes, then add two pounds of prepared cherries. Cook after the boiling point is reached for twelve minutes, then fill into glass jars. Place the rubber and top in position and partially tighten; now place the jars in a hot water bath and process for ten minutes after the boiling strata.

Cherry Jam.—Three-quarters pound sugar, one pound stemmed and stoned cherries. Place in a saucepan and cook until thick. Fill into jelly glasses; allow the jam to cool, and then cover the glasses with parowax. Seal and store in the usual manner for jellies.

Cherry Jelly.—Cherries do not make good jelly, owing to the absence of pectin. This pectin may be added in form of apples. Peel one large lemon very thin, discarding the peel. Cut peeled lemon in small pieces. Cut a sufficient number of apples in small pieces to measure three cupfuls, then add: Three pounds cherries, one quart water. Place in a saucepan and cook until soft enough to mash, strain in the usual manner for jellies and measure the juice, allowing an equal measure of sugar. Return the juice to the preserving kette and boil ten minutes. Then add the sugar. Cook until it jellies when tried on a cold saucer, usually about eight or nine minutes. If a thermometer is used, cook until 221 degrees Fahrenheit is reached.

How to Preserve Eggs.

Eggs must be fresh and perfectly infertile; the shells must be clean and free from cracks. A single cracked egg may cause the whole batch to spoil. Get water glass solution from the drug store, dilut. with nine parts of cool boiled water and place eggs in small crocks containing the water glass. The solution should cover the eggs to a depth of two inches above the topmost layer of eggs. Cover the crock and place in a cool place where it will not have to be moved about. Repace the water which evaporates with cool boiled water occasionally.

Limewater may be used in place of water glass. Make the solution with 2½ pounds of unslaked lime in five gallons of cool boiled water and use the clear liquid after the lime settles. Containers for eggs must be clean and should be scalded with hot water after washing.

Eggs preserved in water glass or limewater should be rinsed in clear, cold water and used immediately after taking them from the solution. They can be used for soft boiling up to November, frying until December, and after that until March for omelettes, scrambled and in cooking.

The Useful Tomato.

Outside of such staples as potatoes and beans there is probably no vegetable that is more prized and more generally used all the year around in one form or another than tomatoes.

Tomatoes grow easily, but they have an enemy that you must be on the watch for—a large green worm so nearly the color of the plant he feeds upon that it is hard to detect it in spite of its size. This must be knocked off and destroyed or sprayed with arsenate of lead.

Tomatoes can be used in more ways than any other vegetable. For canning one must choose perfect fruit in good condition. Dip them in hot water for a few minutes and then remove the skins, cut them up and place in an almuinum or procelain lined kettle and add a level teaspoonful of salt for each quart. Bring slowly to a boil, stirring frequently, and boil for at least half an hour.

If you are using the screw top type, immerse the jars, tops and rubbers in boiling water. Remove the jars one at a time, place a rubber around the neck and fill with the boiling hot tomatoes. Take the top of the jar from the boiling water, being careful not to touch the inside with the fingers for fear of introducing spores into the jar, and screw it on tightly. Invert the jar and let it stand in this position until cold. Have everything sterile that is put into the jar. Wipe using a spoon, fork or cup with the tomatoes first immerse it in boiling water.

Another method of canning tomatoes is to take off the skins and drop the tomatoes, as nearly whole as possible into wide-mouth jars. Pack them in until the jar is full and add one level teaspoonful of salt to each quart. Put on the rubber and top and fix the spring to leave the top loose and allow the steam to escape during the boiling.

In the wash boiler or sterilizer set as many jars upon the false bottom as the boiler will conveniently hold and pour in enough cold or tepid water to come about two inches up on the jar. It is not necessary to have the jars competely immersed during the boiling; the steam does the cooking. Put the top on the boiler and set it on the stove; bring to a boil and sterilize for one hour. Remove the top of the boiler, allow the steam to escape and press down the spring at the side of the jar. This will clamp on the top and prevent any outside air from getting in.

In the vast majority of cases this one sterilization is all the treatment that is necessary, but it is not always safe to rely on it.

As relishes and flavorings there are numerous ways in which tomatoes may be used. This year it is not recommended that the green tomatoes be used for chow-chow and other pickle combinations, as it is better to let everything mature and ripen so that the supply will go further to meet the great demand.

N. B.—A course in Domestic Science, complete in twenty-five lessons, will commence next week. If you clip out the lessons as they appear and paste in a scrap-book you will have the complete series for future reference.

PROTECTING WATER SUPPLY.

Catchment Areas Being Re-forested to Conserve the Ren ofl

The beneficial effect of proper supervision, and pasticularly of maintaining forest growth, in water-works catchment areas, is being more fully recognized. A recent example is in the state of Pennsylvania, where the Commissioner of Forestry urged the planting of trees on those portions of their water-works catchment areas not useful for agriculture.

Favorable replies were received from one-half and, of the remainder, over 100 had no land requiring planting. To those who replied favorably, all planting facilities were afforded, including the services of a forester, and seedlings were offered at bare cost of packing and shipping, about 50 cents per 1,000 seedlings delivered. Applications were made for a total of 446,100 young trees for use on about 230 acres.—L.G.D.

L. J. POTTS, 1710 Royal Bank Bldg. TORONTO

All He Was Fit For.

In an Irish court house recently an old man was called into the witness box, and being infirm and just a little near-sighted he went too far in more than one sense. Instead of going up the stairs that led to the box he mounted those that led to the bench.

The judge good-naturally said: "If a judge you want to be, my man?"

"Ah; sure your honor," was the reply. "I'm an old man now, an' mebbo it's all I'm fit for!"

The Judge raised his spectacles.

Cabbage, mangels and Hubbard squash all make a good winter feed for poultry.

Thrift that brings Comfort instead of Sacrifice

THRIFT, the paramount national duty, applies to time as well as to money—to small personal outlay as well as to larger family expenditure. Applied to the daily shave, thrift means the use of a

GILLETTE SAFETY RAZOR

The Razor of National Service.

The Gillette reduces shaving time to five minutes or less—an actual saving of a week of working days a year! To the man who depends on the barber, it saves still more time, and from $25 to $50 or even more annually. This means the cost of one or several War Savings Certificates.

Moreover, there is not a man living with a beard to shave who cannot shave better with a Gillette if he will use it correctly—with the blade screwed down tight and a light Angle Stroke.

For the thousands of young men just reaching shaving age the Gillette Safety Razor is a source of good habits—not only thrift, but punctuality, personal neatness, and efficiency in little things. For yourself or your son, at home or Overseas, it is a splendid investment.

Gillette "Bulldogs", "Aristocrats" and Standard Sets cost $5.—Pocket Editions $5. to $6.—Combination Sets from $6.60 up. Send for Catalogue. 251

Gillette Safety Razor Co. of Canada, Limited,
Office and Factory: The Gillette Bldg., Montreal.

"PAROWAXED"

Is but another word for "insured" when it refers to jams and preserves. Molding and fermentation are impossible when the jars are securely sealed with

Parowax

PURE REFINED PARAFFINE

Parowax keeps the container air-tight. When you have the jars securely parowaxed your preserves will be the same when you open them as they were the day you put them up.

Best of all, Parowax is most convenient to use. Pour melted Parowax over the tops of jelly tumblers and they are made air-tight, dust and germ proof.

FOR THE LAUNDRY—See directions on Parowax labels for its use in valuable service in washing.

At grocery, department and general stores everywhere.

Don't PAINT YOUR SHOES FEED them with "NUGGET" Shoe Polish

"Nugget" does not put on a surface shine that disappears in an hour. "Nugget" feeds the leather.

Keeps your shoes soft, makes them waterproof and gives a brilliant shine that will last all day. Ask for "Nugget" at your dealers.

BLACK, TAN, TONEY RED, DARK BROWN. 10c. per tin.

"TAKE CARE OF YOUR SHOES."

The Real "War Bread" must contain the entire wheat grain—not the white flour center — but every particle of gluten and mineral salts—also the outer bran coat that is so useful in keeping the bowels healthy and active. **Shredded Wheat Biscuit** is the real "war bread" because it is 100 per cent. whole wheat prepared in a digestible form. Contains no yeast, baking powder, seasoning, or chemicals of any kind. Food conservation begins with Shredded Wheat Biscuit for breakfast and ends with Shredded Wheat Biscuit for supper. Delicious with sliced bananas, berries, or other fruits.
Made in Canada.

HEAVY LOSS FROM BARN FIRES.

Hay, Improperly Cured, May Cause Spontaneous Combustion.

During the years 1912-1916 inclusive, no less than 5,200 barns were destroyed in Canada, with an aggregate loss of over $7,850,000. These, like the majority of fires, might have been avoided by the exercise of intelligent forethought and proper care. Investigation shows that the most prolific sources of barn fires are lightning and spontaneous combustion. Evidence gathered from all parts of Canada and the United States proves that roofed buildings are practically immune from lightning damage. The cost being a mere fraction of the possible loss in case of fire, it is of economic importance to the farmer that every barn should be efficiently protected by lightning rods.

While it is more difficult to arrive at conclusions with regard to fires caused by spontaneous combustion, it is generally held that such fires are of frequent occurrence. Owing to the excessive number of barns burned in Ontario during the summer of 1916, an investigation was undertaken by Prof. W. H. Day, Professor of Physics, Ontario Agricultural College, with a view to discovering the exact conditions favorable to spontaneous combustion in stored grasses. It was proved that large quantities of imperfectly cured hay were frequently stored in barns with little or no ventilation, and that the high temperatures reached during fermentation resulted in a number of fires. Farmers are not generally aware that the cells in hay continue their existence for some time after it is cut and, when the moist compressed mass is housed in close barns, a temperature of 132 deg. F. is quickly reached. Added to this, the heat from microscopic spores, germinating seeds and the heat of the sun upon the roof may raise the temperature of the mow to 212 deg. F., when charring commences. The carbon thus formed absorbs oxygen and the mass grows hotter, until, at 265 deg. F., visible combustion takes place. Bran, grain and silage may also ignite spontaneously under similar conditions. The remedy for spontaneous combustion is simple and easily applied. All hay should be perfectly dry before storage. In mixed grasses, special care should be given to the clover. Timothy may appear perfectly dry while the heavy stalks of clover may retain a large percentage of moisture. All barns should be provided with ample top ventilation. If these simple matters are given the attention they deserve, spontaneous combustion will cease to figure as a cause of barn fires in Canada.

The Danger Zone for Many Is Tea and Coffee Drinking

Some people find it wise to quit tea and coffee when their nerves begin to "act up."

The easy way nowadays is to switch to

Instant Postum

Nothing in pleasure is missed by the change, and greater comfort follows as the nerves rebuild.

Postum is economical to both health and purse.

"There's a Reason"

Combining Two Materials

A departure from absolutely straight lines is shown in this sketch. The material forming the skirt is cleverly draped and attached to the waist, giving a bouffant appearance at the hips, and a narrowing effect at the ankles. The combination of plaid and plain gingham use in developing this dress is very fashionable. McCall Pattern No. 7832, Misses' Dress; two-piece skirt, suitable for small women. Pattern in 3 sizes: 16 to 20 years. Price, [illegible]

This patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

WAR'S LESSONS.

This Time of Stress and Strain is Teaching Us Many Things.

When we are hearing so much of the horrors of war that we grow sick at heart, it is well to open our eyes to some of the good things that are coming out of all the stress and loss. First of all we are less self-centred, less self-indulgent. Nearly every one has forgotten his own petty ills and grievances in the sight of so much greater suffering.

Men and women are sacrificing pleasures and luxuries as they have seldom done before. Mere sacrifice of these things is nothing meritorious in itself, but when it is done for a worthy purpose it makes for character. It is remarkable how easy and simple we find it to do without many things now that we have undertaken it.

We are getting more democratic because of the war. Social lines merge in the one purpose to do one's level best for the country and for humanity. Little shams and purposeless poses are shamed into disappearing.

We are becoming more frugal, more appreciative of real values, more deeply conscious of the vulgarity and sinfulness of waste.

We are growing more efficient. We make many mistakes by the way, but we profit by them and are learning that if the world is to be saved it must be through useful, effective work. Even the children are assuming their share of responsibility.

ASIA MINOR.

Where Its Borders Lie is a Sort of Geographical Puzzle.

"Asia Minor" is a geographical term of vague extension. It puzzles any one to say exactly where it leaves off.

The name dates only from the fifth century, A.D., when Orosius used it evidently as a novelty. The Roman Empire knew no Asia Minor. Indeed, the Roman province of "Asia" was actually smaller than this Lesser Asia. The alternative name Anatolia (land of the sunrise or east) which has found favor with the Turks, is equally indeterminate.

"The Levant," which means the same thing as Anatolia (region of the rising sun), is even vaguer in its geographical scope. It includes Constantinople and everything anywhere near the eastern Mediterranean.

Few geographical names have incurred more unfavorable association. "Levantine" morals, particularly in the matter of honesty, are a byword, as might be expected from such a jumble of people. Our words "levanter" and "to levant," on the other hand, testify to the fact that dishonesty is not unknown even in the west. They originate from the disappearance of men who could not pay their gambling or other debts and were reported to have gone to the east.

Hardships of Alpinists.

The Italian army maintained its captured outposts during the severe winter of 1916, often at elevations of from 7,000 to 12,000 feet, only by building huts for its men and sending them hot food in thirty-gallon thermos bottles hauled up by steel ropes.

STRENUOUS WORK SOON TELLS ON YOU

Business Men and Breadwinners the Victims of Nervous Exhaustion.

When worry is added to overwork men soon become the victims of nervous exhaustion—neurasthenia—the doctor calls it. Some have no reserve strength in their systems to bear the strain; others overtax what strength they have. If you find that you are nervous and not sure of yourself, that you sleep badly, and wake up tired and aching, your nerves are out of order. Other signs are inability to take proper interest in your work; your appetite is fickle; your back feels weak, and you are greatly depressed in spirits. One or more of these signs mean that you should take prompt steps to stop mischief by nourishing the nerves with the food they thrive on, namely the rich, red blood made by Dr. Williams' Pink Pills. These pills have cured thousands of cases of nervous disorders, including nervous prostration, neuralgia, St. Vitus dance and partial paralysis. Here is an example. Mr. P. H. Callan, a well known business man in Coleman, P.E.I., says: "I owe my present health, if not life itself, to Dr. Williams' Pink Pills. I had always been an active man, and when I began to run down in health paid little attention to it as I thought it only a temporary weakness. As time passed, however, I found myself growing worse, and consulted a doctor, who said that I was not only badly run down, but that my nervous system was badly shattered. I lost flesh, my appetite was poor, I slept badly and notwithstanding the doctor's treatment grew so weak that I had to leave my business and was confined to the house. Time went on and I was steadily growing weaker, and my friends were all greatly alarmed for my condition. In this condition I was strongly recommended to try Dr. Williams' Pink Pills, and as the doctor's medicine was not helping me I decided to do so. By the time I had used three boxes I could tell that they were helping me. When I had taken eight boxes of the pills I felt able to attend to my business again, and people were surprised to see me out. I continued the use of the pills until I had taken twelve boxes, by which time I was feeling as well as ever I did, and was being congratulated by all my friends on my full restoration to health. I feel now that if I had used Dr. Williams' Pink Pills at the outset I would not only have saved much money spent in doctor's bills, but would have had renewed health sooner. I cannot speak too highly of this medicine, and would recommend it to every man who feels weak, nervous or run down."

You can get these pills through any medicine dealer, or by mail at 50 cents a box, or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

BEE-KEEPING IN 1918.

How to Prepare for a Maximum Honey Crop Next Year.

While a maximum production of honey is of pressing importance in this war-food year, yet increasing the bees for next season must not be neglected.

Roughly speaking, bees that are in the hives at the commencement of the honey-flow gather the crop, while the brood builds up the colony for next year, unless there is to be another important honey-flow. This brood is very valuable for forming nuclei, because these, started early with a laying queen, or ripe queen-cell, will build up into strong colonies before winter. Increasing in this way with brood from strong colonies during the honey flow is the basic principle upon which an apiary can be quickly built up while at the same time an almost full honey-crop is secured.

In newly-formed nuclei containing brood in all stages there is always more or less desertion of bees and consequent death of the young brood and sometimes chilling and death of the older brood even when the nuclei are skilfully made by an experienced apiarist. Further, queens may not be immediately obtainable, or they may be lost in introduction. Robbing of the newly-formed nuclei has also to be guarded against, but during the height of the honey-flow only carelessness will cause this; towards its end, however, the danger of robbing grows so great that it is difficult to maintain newly-formed nuclei even when strong. Desertion may be checked by stopping the entrance with grass; the bees will make their way out when the grass dries and shrinks in about two days, but care must be taken to avoid overcrowding the confined bees, which would lead to stifling, especially in hot weather. A good way to overcome the loss of young brood is to place the brood over a queen excluder a week before its removal from the parent hive. This may be done in the ordinary course of relieving congestion in the brood chamber as a means to discourage swarming, a frame or two of empty comb or of foundation being placed in the brood chamber when the brood is raised.

All of these risks may be greatly minimized as follows: Have all the queens' wings clipped (this is not essential), and when a colony of a strain that it is desired to propagate swarms, move the parent hive to a new stand, and place the swarm in an empty hive on the old stand, the queen having been picked off the ground and placed in the empty hive. The swarm will return to the new hive at the old stand. The field bees will now join the swarm, and the super should be transferred from the parent hive to the swarm which will produce the crop of honey. The colony, now depleted of bees but rich in brood, is divided a week later into three to six nuclei, each nucleus consisting of two or three frames containing brood and honey carrying two or three queen-cells containing queens soon to emerge with the adhering bees.

This method has the great advantage that it not only controls and satisfies the troublesome swarming instinct but it helps to secure the desired ends by natural means. The honey gatherers are segregated into a strong force, and the brood, being mostly capped, is not likely to get chilled; the bees desert neither it nor the queen-cells readily, and all trouble in raising and introducing queens is avoided. The bees in the newly-formed nuclei are in the post-swarming stage, when their instinct is to spread themselves over and incubate as much brood as possible, and especially the queen-cells.

The beginner should be warned not to divide the parent colony into too many weak nuclei, but this fault may be rectified in the autumn by uniting. The ideal conditions for building up nuclei are a slow honey-flow throughout August and early September. Fortunately these are supplied in most Canadian localities by goldenrods, asters and buckwheat.

Mismated queens should be replaced any time up to the first or second week in October, preferably not during the robbing season.—Experimental Farms Note.

ON VIMY RIDGE.

Dedicated to the Canadians who died at "Vimy Ridge," April 8, 1917.

O'er prairie homestead, by mountain peak,
Wherever man Honor and Glory seek
With awe and reverence they will speak
Of Vimy Ridge.

Sons of the Maple Leaf, there side by side,
Met thrust with thrust their Nation's Pride,
They laughed at Death, and gloriously died
At Vimy Ridge.

What though a rude cross mark their grave,
Not a tablet in a cloistered nave,
If for their deed their all they gave,
By Vimy Ridge.

Canadian people, do not weep, these are not dead
But merely sleep;
Though foreign clay their bones may keep
On Vimy Ridge.

Think that Mortal Flesh and Blood,
Could bind such Souls to earth for good,
They fly to Heaven as Heroes should
From Vimy Ridge.

Throughout Canada their names will roll,
Will stir to the depth the Empire's Soul,
While Bells in Heaven, their requiem toll
O'er Vimy Ridge.

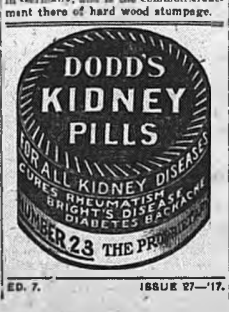
"D" Squadron, C.L.H.,
London, England.

Easy For The Hen



Mother to small son: "Bobby, dear, I hoped you would be unselfish enough to give little sister the largest piece of candy. Why, see, even old Biddy gives all the nice big dainties to the little chicks, and only keeps an occasional tiny one for herself."

Bobby thoughtfully watched the hen and chickens for a time, and then said: "Well, mamma, I would too, if it was worms."

Minard's Liniment Cures Distemper.

Dry fruits and sweet corn and other vegetables that may be preserved in this way. Save the cans for products that can be kept in no other way. Use bottles corked and sealed with paraffine for catsup and other liquid products.

Boring holes into the stumps of hard wood trees and filling these holes with equal parts of nitric and sulphuric acid will so soften the wood that it can be removed by ordinary picks. This has been demonstrated in Germany, and is the common treatment there of hard wood stumpage.

CANADA IS CALLING.

Canada is calling "Give us Men!"
Men to stand guard at the Gate—
Men to keep the nation great—
Men who trifle not with Fate—
Loyal Men!

We've a heritage to hold, O my men!
Bought by sires in days of yore,
Who, when danger touched our shore,
Made the answering cannons roar—
"We are men!"

We'll be loyal to that trust now, as then;
Fling the old flag to the breeze—
Ours the freedom of the seas—
Humbly asking, on our knees,
"God make us men!"
—Kate Simpson-Hayes.

BABY'S OWN TABLETS OF GREAT VALUE

Mrs. J. A. Lagace, Ste. Perpetue, Que., writes:—"Baby's Own Tablets have been of great value to me and I would strongly recommend them to other mothers." Thousands of other mothers say the same thing. They have become convinced through actual use of the Tablets that nothing can equal them in regulating the bowels and stomach; driving out constipation and indigestion; breaking up colds and simple fevers; expelling worms and curing colic. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

DEATH PENALTY IN RUSSIA

National Sentiment is Opposed to Capital Punishment.

It is not at all surprising to those who know Russia that one of the first acts of the new Government was the abolition of the death penalty. Capital punishment is indeed as much against the national sentiment as against tradition in Russia, and as long ago as 1888 the late W. T. Stead declared that it was never inflicted without producing a feeling of shame among educated Russians.

The death penalty was abolished by the Empress Elizabeth in 1750, and though it was later revived, it was only in recent years, and especially after the rising of 1905, that it was carried out in other than exceptional circumstances. The number of executions then, however, quickly multiplied, and early in 1909 twenty-seven took place in one day.

Minard's Liniment Cures Diphtheria.

Wayside Food.

Not every green thing good to eat grows in a market-garden. To the initiated the field and roadside are always sufficient for a delightful salad. The most wholesome and deliciously flavored of these wild salad ingredients is the dandelion, that despised "weed" which we grub out of our lawns with such savage delight. A dandelion diet would be a little monotonous, but the young and tender shoots, either boiled as greens, or used with other things as a salad, are tip-top stuff.

Minard's Liniment Co.; Limited.
Gents,—I cured a valuable hunting dog of mange with MINARD'S LINIMENT after several veterinaries had treated him without doing him any permanent good.
Yours, &c.,

Prop. of Grand Central Hotel.
Drummondville, Aug. 3, '04.

If We Lose.

At the end of a war which cost Germany only half a billion dollars, Bismarck extracted just double that amount from France in an indemnity. Germany kept an army in France until the last dollar was paid. Guess how big an indemnity the Kaiser will collect from you and me, England and France, if he wins this war? It has already cost him more than twenty times what his grandfather paid out in the Franco-Prussian war. On that basis we are already sure of twenty billions of indemnity.

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye free ask Druggists or Murine Eye Remedy Co., Chicago

Not an Acorn.

When James A. Garfield was president of Hiram College, a man brought up his son to be entered as a student. He wanted the boy to take a course shorter than the regular one.

"My son can never take all those studies," said the father. "He wants to get through more quickly. Can't you arrange it for him?"

"Oh, yes," said Mr. Garfield. "He can take a short course; it all depends on what you want to make of him. When God wants to make an oak He takes a hundred years, but He takes only two months to make a squash."

Make sure that your horse has every day pure, fresh water, such as you would be willing to drink yourself.

WOMAN SICK TWO YEARS

Could Do No Work. Now Strong as a Man.

Chicago, Ill.—"For about two years I suffered from a female trouble so I was unable to walk or do any of my own work. I read about Lydia E. Pinkham's Vegetable Compound in the newspapers and determined to try it. It brought almost immediate relief. My weakness has entirely disappeared and I never had better health. I weigh 165 pounds and am as strong as a man. I think money is well spent which purchases Lydia E. Pinkham's Vegetable Compound."—Mrs. Jos. O'BRYAN, 1755 Newport Ave., Chicago, Ill.

The success of Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, is unparalleled. It may be used with perfect confidence by women who suffer from displacements, inflammation, ulceration, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, dizziness, and nervous prostration. Lydia E. Pinkham's Vegetable Compound is the standard remedy for female ills.

EBENEZER

"Untangling Tony" — see this play in town hall, Paisley, Friday, July 13th.

Mr and Mrs H T Potts of Tara are spending a few weeks on the old farm here, guests of their son J D Potts.

Mrs John Robb, of Swan Lake, Man., is visiting her sister here, Mrs C A Thomas.

Mr and Mrs John McCullough, of Manitoulin Island, visited the latter's brother Mr Frank Quigley of this place.

Miss Anna Hanbidge, student at Normal School, Stratford, received the good news last week that she was successful in her exams. We congratulate Miss Anna on her fine success and are glad to learn that the trustees of school section No 8 Elderslie, have secured such a promising teacher as Miss Hanbidge for next year.

Mr and Mrs L Maxwell of Desboro spent Sunday at Mr Robt Quigley's.

Martin's sawing machine has been doing a lot of wood cutting in this vicinity recently. Dright Potts had the largest contract he having about sixty cords cut. Dright certainly intends to keep the home fires burning this winter.

Miss Bessie Laidlaw of Paisley is spending a week with her friend Miss Lina Grant.

Our base ball team journeyed over to Arkwright on Thursday evening and played their first game of the season against the Paisley team. The boys in blue and white proved to be too fast for their opponents, and won the game by the score of 12-1. The next game between those two teams will be played on July 10th, at Mount Hope Garden Party, when Paisley will try to even up on the round.

Rev J T Stapleton the new pastor on this circuit, preached his first sermon on July 1st in this church and made a good impression upon his large audience.

CASTORIA

For Infants and Children

In Use For Over 30 Years

TURNERS

See the play, "Untangling Tony," town hall, Paisley, Friday, July 13.

Mr Wm Karchef has purchased a new car.

Mrs McMillan of Toronto is visiting her brothers James and Thomas Mitchell.

Mr McGillivray of Toronto is visiting his sister Mrs Wm Muir.

Mrs Hyde is spending a few days with her son Joe and old neighbors on the fourth of Bruce.

Mr and Mrs Geo Gibbons of Port Elgin spent Sunday at E Gibbons'.

On account of being ill Dr McDougall was unable to hold a memorial service in St Andrew's church, Saugeen, on Sunday but if able will hold it on Sunday, 15th.

PINKERTON

"Untangling Tony" — see this play in town hall, Paisley, Friday, July 13th.

Dr and Mrs Gale of Bay City, Mich., Mr and Mrs Cleghorn and Miss Cora Cleghorn of Kitchener visited at the Manse over Sunday.

Miss Nellie Donnelly, of Denver, Col., is visiting at her home here.

Miss Jessie Geary, of Niagara, is visiting friends in the village.

Mr and Mrs C Walker, of Parkhead, visited at Mrs N Garland's last week.

Mr T Houston held a very successful barn-raising last Wednesday Messrs Cecil Garland and Wm McFadyen were the captains chosen, the latter's side winning in a very exciting finish. Mr. Wrightson was the contractor.

Mr Cassidy of Riversdale has purchased the old carding-mill and is now busy pulling it down.

GLAMIS

See the play, "Untangling Tony," town hall, Paisley, Friday, July 13.

Anniversary services were held in the Baptist church on Sunday, it being the 43rd year in the history of the church, Rev Waddell of Tivertou occupied the pulpit both morning and evening, Mr. McCauley taking the services for him in Tiverton and Kincardine. The Presbyterians gave up their evening service and worshipped with the Baptists.

District Elder Allen of Hamilton conducted Quarterly services in the Free Methodist church on Friday, Saturday and Sunday.

The Annual Union Sunday School picnic of the Baptists and Presbyterians was held at Inverhuron, on July 3rd. It was an ideal day and a large crowd attended.

Mr McCauley spent a few days last week with his parents in Tara.

Miss Jennie McKeeman who was visiting in Beamsville, returned on Wednesday.

Pte Wilbur McNally took a trip to Toronto last week returning on Monday.

Mr Chas McKinnon of Wallaceburg is home for the holidays.

Those who attended the late Mrs Graham in her last illness returned to their respective homes, Mrs McNally to Sarnia Mrs Lopey to Wiarton Mrs Atkins to Toronto Mrs Robinson to Lindsay.

Miss Edith Howson came home from Clifford and will spend some time with her sisters, the Misses Howson.

Miss Ethel McEachren of London is renewing acquaintences in Glamis. She is staying at Mr Joseph Cunningham's.

Mr Robert McLennan, wife and young daughter of Melville, Sask., arrived on Saturday and will spend the summer with his parents Mr and Mrs Jas McLennan.

Mr and Mrs MacLean of Ripley and Miss White of Kincardine Hospital are spending a few days with Mrs Woodstock.

On Monday evening the people of the village and community were favored with a missionary address from the Rev Chas Waddell, B A., of Tiverton. This address was given in the Baptist church in connection with the 43rd anniversary of its organization. A goodly number attended considering the weather. Mr Waddell, who has spent three years in Northern Nigeria, spoke with the enthusiasm of one who knows. His lecture was instructing and interesting and his excellent collection of curios assisted greatly in illustrating his statements. The proceeds go to foreign missions.

We are sorry to report the illness of Mr Geo Webb. We hope to see him around again in his usual health.

Mrs W J Gilchrist, who has been in the Walkerton Hospital for some weeks, was able to be taken home on Saturday.

The Late Mrs. Graham

On Friday evening, June 29th, at her late home, "Fairview Farm," Glamis, Sarah Elizabeth Beacock, beloved wife of W J Graham, passed to her reward, aged 59 years, 8 months and 25 days. The deceased was a daughter of Mr and Mrs Geo Beacock, and was born in the Tp of Cartright, County of Durham, on Oct 1, 1857. When but a child she moved with her parents to Manvers. On Oct 26th, 1881, she was united in marriage to W J Graham, of West Ops, Victoria Co, who survives her. In 1883 Mr and Mrs Graham moved to Bruce Co, first settling on 6th con Bruce, where they resided a short time, later moving to 8th con Bruce near Lovat, where they spent five years. In 1889 they moved to Glamis, "Fairview Farm," where the deceased resided until her spirit took its flight to God who gave it. The late Mrs Graham was a member of the Wesley Methodist denomination since a very young girl, and during the past few years was united with the Free Methodist denomination. By her death her church here has lost one of its leading members. She was always present at the means of grace whenever possible, leaving a bright influence and example for those who mourn her death. Owing to her illness she was unable to attend church services for a few months past, yet she enjoyed the sweet fellowship in her home. About ten months ago she became seriously ill and it was advised that an operation be performed for cancer of the stomach. After an incision was made the specialist and doctors found an operation was no use, and that it was but a matter of a short time for her life. However, she seemed to rally again and was much improved in health and was around at her work until four months ago when she became ill again, but was able to be up every day until a few weeks before her death, when she was confined to her bed the greater part of the time. All that loving hands and kind hearts could do was done for her, but all in vain. Her work on earth was done, her mansion on high was prepared and God called her home to fill her place in that glorified throng. Trusting in Him and always looking forward to that glorious time of His coming, she was always bright and cheerful. During her long illness her faith never wavered, but grew stronger. She was very patient in her sufferings, patiently waiting for the time to come to begin the greater life prepared for those that love the Lord. The deceased was kindhearted and of a loving disposition, always ready to do her share and help those in need. Her home was always open to strangers and friends, and with a hearty welcome. She will be greatly missed by a large circle of friends. We mourn but as those who have a strong hope of meeting again. Besides a sorrowing husband and a loving son Charles, she leaves to mourn her demise three sisters and three brothers: Mrs Thomas Robertson, Victoria Co; Mrs Wm Nicholson, Durham Co; Mrs Geo Lowry, Grey Co; Thomas, of Durham Co; Abraham, of Grey Co; and George, of Wiarton. The funeral services were conducted at her late home here on Monday afternoon, July 2nd, by her pastor, Rev R A DeMille, assisted by the local clergymen. The remains were then removed to Stark Vale cemetery, Paisley, there to await the glorious resurrection morn when the dead in Christ shall rise. To those who mourn the heartfelt sympathy is extended in these lonely hours. —(Wiarton papers please copy.)

GRESHAM

It is our sad duty this week to record the death of Mrs. Curry, of the 6th con Bruce, widow of the late R. H. Curry, who passed away very suddenly at her home on Saturday morning, having retired to bed the previous night in her usual health. Ever since the death of her husband four years ago Mrs Curry has been visibly failing, but she was always able to be about and attend church. Her sudden demise was a great shock to the neighborhood, and especially to her daughter Sadie and son Thomas, who have done everything in their power to make the evening of her life as full of sunshine as possible since the death of the adored husband and affectionate father. The subject of our sketch, whose name was Maria Galbraith, was born in Scarboro Tp. on Feb. 9th, 1845. From her youthful days she won and ever held a general favor and popularity among her friends and acquaintances. She was an accomplished singer. She married Mr. R. H. Curry, of Mono Tp., who, like herself, was a born singer and musician. They were married on June 8th, 1870, and lived in Mono until 1875, when they moved to the 6th con. Bruce, where they established a comfortable home. Few families of the Tp. became more widely known or more highly respected than they. The Curry string band entertained many a gathering both in this vicinity and for miles around. The family left to mourn the devoted mother are: Mrs Morland, of Baraca, Alta.; Mrs. Robt. Mewhinney, of 6th Bruce; Frank, of Moosejaw, Sask.; Robert, of Woodrow, Sask.; Thomas and Sadie at home. To these is extended the heartfelt sympathy of all. Mr F. Galbraith, now the only remaining one of that family, came up for the funeral on Monday. The services were conducted by the Rev. A MacNab, M.A., pastor of Centre Bruce church, of which congregation deceased was long a devoted member. Interment was made in Stark Vale cemetery. There was a very large attendance. Many floral offerings adorned the casket, one of these being a beautiful wreath from the W. M. S., of which deceased had been an active and honored working member.

Miss Stella Cumming accompanied by Miss George from Paisley Sundayed at her home here.

Mr and Mrs Scott Webb Sunday ed at Mr H Neilly's.

WALKERTON

While coming in on the jigger with a G T R section gang on Monday night, Foreman John Hilker narrowly escaped being ditched by the jigger striking some spikes and stones on the track, which the mischievous kiddies of the neighborhood had deliberately placed on the rails for the purpose of being crushed or flattened out by the incoming trains. As this is a dangerous practice and a serious infringement of the law, the authorities are keeping their weather eye open for the culprits and a repetition of the ordinance is likely to prove costly pastime if the perpetrators are caught. The authorities are also after the scalps of trespassers who are trampling down the ballast along the side of the track.

Sergt Michael McNab, who resigned his position on the Merchants Bank staff here to enlist in the 160th Battalion, is, according to an official wire which passed through the Walkerton central on Tuesday morning to his father, Mr McNab of Chepstow, lying seriously ill with spinal meningitis in Westcliffe Canadian Pioneer Hospital, England. Although his condition is described as serious, yet it is hoped with expert medical care that the popular ex-Walkerton recruit may successfully combat the malady and stage a recovery. As this is the second case of its kind that has broken out in the 160th since the Bruce Boys struck England, Pte Gordon Hogg having just recovered from a severe attack of the disease, it is probable that rigid steps will be taken to prevent any further spreading of the trouble among the troops.

While drilling a well at the home of Mr Ferdinand Frank, Brant, on Saturday morning last, Mr Harry Denny met with an accident by the premature explosion of a stick of dynamite that lost him three toes from his left foot and gave him one of the closest calls to a sudden death that any survivor has ever experienced here. A big stone some ninety feet down, it seems, was giving trouble and Harry was trying to blast it out. Attaching a lighted fuse onto a heavy charge of dynamite he proceeded to lower it with a wire down a five inch pipe to the scene of the trouble some rock. The charge, however, had only got about five feet down, when the fuse ignited the dynamite and caused an explosion that sent pieces of the iron pipe through the boards of a barn over one hundred feet distant. As the air was full of iron, how Harry, who was standing above the hole, escaped being blown to atoms is one of the mysteries of the affair. As it was, he was blown some twenty feet away and landing on his face in the field, was able to pick himself out of the sod and hobble to the house, where it was found that the front of his left boot was entirely blown off and his foot badly shattered. One side of his face was also slightly skinned and burned by the mishap. Dr Sinclair, who was summoned had him driven to the hospital, where an examination revealed that the great toe and the one adjoining it had been split for the entire length clear through the centre, while the middle toe was completely smashed. An amputation of the three toes immediately followed, and although the ball of the foot was also injured the doctor has hopes of saving it. While at first it was feared that the entire foot might have to be amputated, yet it seems that the danger of any such requirement is now passed. Two men who had been assisting him at the well, but were fortunate enough to be a short distance away at the time, escaped unhurt. As Harry was working on his own hook, and will not benefit under the Workmen's Compensation Act, the mishap will not only entail much physical suffering, but is laying him off work for many weeks in a busy season, presents a financial aspect that is anything but inviting.—Herald and Times.

BRUCE TP. COUNCIL

Underwood, June 30th, 1917

Pursuant to adjournment Bruce Tp council met in the tp hall on the above date, members all present. Minutes of previous meeting read, adopted and signed. A number of communications were read and dealt with.

County clerk notified that Bruce Tp share of the county rate for 1917 would be: Gen Co rate, $6720; municipal equivalent, $146 55; Prov war tax, $2016.

Applications to have big ditch, con 4, cleaned out according to award, were received and committee on that division authorized to have this work done.

"As a number of complaints had been coming into council re children not attending school, it was decided to appoint truancy officers for the township, under R S O 1914, chap 272, s 7, ss 3, and that John Nuttall be appointed truancy officer for the schools in con 6 and 12, and Wm J Blair for schools on cons 1 and 2.

A number of people waited on council for information and assistance under the Ditches and Watercourses Act.

The following accounts were paid, and council adjourned to meet on July 28th next.

Jas Avis, team on grader 3 days, $20; J D McLeod, rep bridge s r 23 3, $10; Mr Zahl ied, old iron 1560 lbs, $15 60; John Dobson, teaming, $4 50; Bert Knapp, shovelling snow and rep culvert, $1 50; Robertson & McNab, advice to clerk, $2; treas U S S No 9 Red Cross, grant, $50; treas Glamis Red Cross, grant, $35; J Johnson, reeve, $2 90, special meeting, $4; P Dobson, dep reeve, $2 85, special meeting, $4; Geo Baker, councillor, $3, special meeting, $4; Jas McCants, $3, special meeting, $4; M McNeil, $2 05, special meeting, $4; J Coleman, caretaking, $1 25, special meeting, $1 25; J G MacKay, clerk and treasurer, $25.

J G MACKAY, Clerk Bruce Tp

Paisley Entrance Candidates All Pass

The Entrance Class in Paisley P S have this year made an unsurpassable record, the 21 candidates who wrote having been successful in the examinations and several took honors. This is a result very gratifying to all interested, particularly the teacher, Miss Mitchell, who resigned at the end of the term to take a department in her home school at Arthur.

Freight Train wrecked at Paisley

On Thursday last the freight train was crumpled up to wreckage as it steamed toward Paisley station and was almost inside the yard. The only freight carried was two cars of coal. Both of these went off the track and the trucks were torn from under them, although both remained upright and had to be emptied of their contents before the auxiliary could handle them. The passenger train did not get through until the track was repaired about 12.30 p m.

Both 'Phones — Goods Delivered

Within ten miles of Wiarton there is a farmer who has between 100 and 200 bushels of wheat for sale. He wants $3 per bushel. The buyer offered him $2.50 the other day and refused. Now he is not being offered what he wants, but it would pay him to accept.

"GOIN' 'OME," AN EPIC OF THE TRENCHES

By Patrick MacGill.

I want to go 'ome,
I want to go 'ome,
I don't want to go to the trenches no more,
Where the bullets and shrapnel do whistle and roar.
I want to go over the sea,
Where the Allemong can't get at me,
I want to go
I want to go
I want to go 'ome.

Spudhole finished his song, adjusted his equipment braces, lit a cigarette and leaned his elbow on the parapet and looked at me.

"Sixteen months," he said, emphasizing each word. "Sixteen ole bloomin' months, and this the first leave. I never thought I wanted a trip to Blighty as much as I do now. Sixteen months!" he repeated. "Sixteen 'ole months!"

"You aren't nicknamed Spudhole for nothing," I remarked.

"I haven't got a clean sheet, I'll say that," he answered. "It's as dirty as if it was on the bed of a chimney-sweep. S'pose I couldn't expect leave wiv a reputation like mine. It's not in keepin' wiv regulations. But all the same I do want to go 'ome. Just for a visit."

He sat down on the firestep, leaned his back against a sandbag and folded his arms.

"Seven days leave!" he muttered. "And off to-night. Blimey twon't 'arf be some dein's. Wot'll I do when I get to the old Smoke? Nuffin' much, I s'pose, for wot wiv one thing and annover I'll not be able to do nuffink. Then there's my bird as lives 'arrest off Walworth Road and then—— But wot's the good o' talkin'? Wots the time?"

"Twelve o'clock," I said, looking at my watch.

"I leave 'ere at 2," said Spudhole. "Then to the rail 'ead and then Blighty. 'Ere, isn't it funny that this 'ere leave is my first for sixteen months?" he asked. "Other blokes——"

"Oh, but your sheet!" I said.

"But wot were my crimes?" said Spudhole. "Not much in any o' 'em. I did pinch the apples in the farm at Maxingarbe, but was I the only one?"

"The only one run," I remarked.

"And the 'en that came into our billet at Bethune," said Spudhole. "I didn't catch it, though I killed it. And that scrap on the parade ground when I blacked stumpy 'Iggies' two eyes for 'im, and us 'aving a month's rest back at Cassel. I spent a good part of that rest in jankers. And then in camp in Blighty 'fore we came out 'ere when I 'ops off ter Lunnon, what did I get? Seven days, Spudhole. And then——"

"Please don't enumerate them all," I said.

"O' right, matey," Spudhole answered. "But tell me, wot is the time now?"

"Ten past 12," I said.

"Time's long a passin' this mornin'," said Spudhole. "Yer watch is as slow movin' as a tank. But 2 o'clock and Blighty! Hip! hip! hooray!"

He rose to his feet, danced a step or two in the muddy trench, then got up on the firestep, gripped his rifle, slipped it over the parapet and fired at the enemy trench. One, two, three, half a dozen rounds sped over No Man's Land in quick succession.

"I'm biddin' good-by to the Boche," he said. "I almost love 'im to-day.

"Hey, Tom, you're lookin' glum. Wot's wrong wiv ye?"

He was speaking to old Tom Green, who had just entered the bay. Tom, a man of thirty-five, who belonged to our platoon, was indeed looking glum.

"Well, wot's wrong wiv yer, Tom?" Spudhole inquired. "Bad noos?"

Tom pulled his helmet down over his eyes, and his eyes looked fixedly at Spudhole's bayonet.

"The news is not at all good," he said. "I had a letter wiv last post, and little Betty, my only kid, is not well. And she's such a pretty kid, you should see her! And she's been allus delicate, too. Her cheeks are so thin. It'll maybe be decline, for it's in the mother's people. It's so 'ard not bein' allis to see her."

"Why not apply for leave?" I said.

"It's no good," said Tom. "I've been only out 'ere for three months, and others——"

He walked away and disappeared round the traverse.

"I'm sorry for ole Tom," said Spudhole when the man left. "And a kid too. It's 'ell that's wot it is.

He lit a cigarette and puffed it viciously. His brows contracted until his eyes became mere pin points and he stared fixedly at me. At last he spoke.

"Why shouldn't I?" he said. It doesn't matter. Wot's the time?" he asked.

"Ten to one."

"I must see the officer now about goin' away," said Spudhole, and he left me.

Fifteen minutes later he came back swearing violently.

"Wot d'ye fink o' it?" he yelled. "The 'eads, blame 'em! 'ave cancelled my bloomin' pass. Won't allow me ter go 'cos my sheet is so bad. One doesn't get no chance 'ere. I'm sick of the blamed dein's, sick, bloomin' well sick!"

"Who is going instead of you, Spudhole?" I asked.

"Ole Tom, 'cos 'is kid's so queer."

I looked at Spudhole, and a queer lump rose in my throat. I gripped him by the hand and felt almost on the point of tears.

"Brazen it out as you will, Spudhole, I know what you've done," I said, choking a little.

"But my sheet is not clean, anyow," he muttered in a lame voice.

"But your heart's good, matey," I said.

Tom Green went home that night and the platoon commander saw that Spudhole went a fortnight later.

What the C. O. thinks of Spudhole I do not know. One thing, however, I do know, and that is this: When the officers raised a collection toward Spudhole's expenses on the journey home the C. O. topped the amount collected with a twenty franc note.

EAGLES THAT CHANGE

National Flags Will in Some Instances Undergo Alteration After War.

The standard flags of nations will undergo some slight alteration when hostilities cease. One alteration has already come about, the Russian double eagle, national emblem of the Romanoffs, is no more. The eagle, of course, is the symbol of imperial power.

The artist who designed the Russian double-headed eagle killed his models himself. Two fine chickens were sacrificed for the purpose, and he himself posed them for the design. When the sketch was finished, he and his friends are said to have dined off the unfortunate birds.

There now remain five national eagles—the two-headed birds of Austria and Serbia, and the single eagles of the United States, Mexico, and Germany. Both the Mexican and the U. S. A. birds are excellent life reproductions, the United States being perfect in detail owing to an amusing criticism passed on it some years ago. The bird then in vogue had a superabundance of plumage about its legs, and newspaper agitation for the abolition of its trousers caused it to be shorn of its glory. It is consequently now depicted as an extremely sober looking creature.

"OLD WOMEN" THEN

Age of Twenty-Nine Regarded as Decrepit in the 18th Century.

In the eighteenth century women soon grew old, says an English writer. At the age of twenty-nine Marie Antoinette, the wife of Louis XVI., gravely discussed the question with her modiste, Rose Bertin. She would soon be thirty. Her idea was to change her manner of dress, which inclined too much to that of extreme youth. In consequence she should wear no more flowers or feathers. The glorious Georgiana, the Duchess of Devonshire, complained to the French ambassador that she was already seven and twenty years old. "Consider," said the glorious one, "what an age that is!" to which the ungallant ambassador replied that "in France at seven and twenty a woman was considered elderly."

More horses, heavier horses, horses better prepared for work and fed for work will go far toward increasing and cheapening production per acre or per ton of crop.

THE ANTWERP ROAD.

In October, 1914, Henry Van Dyke Witnessed the Scene He Here Describes.

Along the straight, glistening road, through a dim arcade of drooping trees, a tunnel of faded green and gold, dripping with the misty rain of a late October afternoon, a human tide was flowing, not swiftly but slowly, with the patient, pathetic slowness of weary feet and numb brains and heavy hearts.

Yet they were in haste, all of these old men and women, fathers and mothers and little children; they were flying as fast as they could; either away from something that they feared or toward something that they desired.

For that was the strange thing—the tide on the road flowed in two directions.

Some fled away from ruined homes to escape the perils of war. Some fled back to ruined homes to escape the desolation of exile. But all were fugitives, anxious to be gone, striving along the road one way or the other, and making no more speed than a creeping snail's pace of unutterable fatigue.

I saw many separate things in the tide, and remembered them without noting.

A boy straining to push a wheelbarrow with his pale mother in it, and his two little sisters trudging at his side. A peasant with his two girls driving their lean, dejected cows back to some unknown pasture. A bony horse tugging at a waggon heaped high with bedding and household gear, on top of which sat the wrinkled grandmother with the tiniest baby in her arms, while the rest of the family stumbled alongside—and the cat was curled up on the softest coverlet in the wagon. Two panting dogs, with red tongues hanging out and splayed feet clawing the road, tugging a heavy laden cart while the master pushed behind and the woman pulled at the shaft. Strange, antique vehicles crammed with passengers. Couples and groups and sometimes larger companies of foot travellers. Now and then a solitary man or woman, old and shabby, bundle on back, eyes on the road, plodding through the mud and the mist, under the high archway of yellowing leaves.

All these distinct pictures I saw, yet it was all one vision—a vision of humanity with its dumb companions in flight—infinitely slow, painful, pitiful flight.

I saw no tears, I heard no cries of complaint. But beneath the dumb and patient haste on all those dazed faces I saw a question:

"What have we done? Why has this thing come upon us and our children?"

Somewhere I heard a trumpet blown. The spikes on the helmets of a little troop of soldiers flashed for an instant, far down the sloppy road. Through the humid dusk came the dull, distant booming of the unseen guns of conquest in Flanders.

That was the only answer.

TOMMY'S POST-BAG.

Report of the British Postmaster-General Gives Interesting Figures.

Some wonderful figures of the work of the British post-office are given in the report of the Postmaster-General for Great Britain for 1915-16. Of 70,000 employes who have joined the colors, 3,000 have fallen. The Victoria Cross has been won by two postmen; eight officers have received the D.S. O. and twenty-five the Military Cross; 126 men have gained the Distinguished Conduct Medal, and 62 the Military Medal; while 201 have been mentioned in despatches.

The post-office collected nearly 11,000,000 letters and 875,000 parcels weekly for the troops abroad and handed them over to the army. It distributed £2,200,000 weekly in separation allowances to 2,000,000 persons.

Parcels sent to prisoners of war abroad, mostly in Germany, averaged 82,000 a week, while 15,000, mostly from Germany, were received for prisoners in England. Money orders numbering 91,570, and representing £58,900, went to British prisoners in Germany, and 66,900, representing £97,300, came to enemy prisoners here.

AN IDEAL ISLE OF EXILE.

Better Even Than St. Helena as a Safe Place of Exile for the Kaiser.

The idea of banishing the Kaiser to St. Helena in the event of an Allied victory is often a favorite source of imaginative exercise in England. The conception is grounded in historical precedent, and the remoteness of this little island is still an important asset, as it was in Napoleon's day. St. Helena is familiarly regarded as the most isolated inhabited land on earth.

As a matter of fact, however, St. Helena's seclusion is far surpassed by its nearest, yet far distant neighbor, Tristan da Cunha, in the South Atlantic. Excepting the polar regions, this little-known "colony" of England is the most inaccessible spot in any ocean. Curiously enough, a great war was partly responsible for its present isolation.

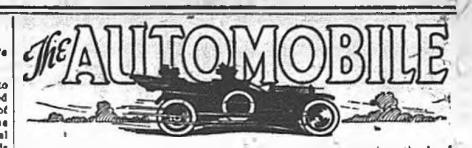
Tristan, which is one of a group of three small islands, lies in the South Atlantic on latitude 37 south and longitude 12 west. It is 2,000 miles from the Cape of Good Hope, 1,500 from St. Helena and 4,000 miles from Cape Horn. The first permanent settlement on the island was made by Thomas Currie, an Englishman, in 1810. Some of the latter settlers came from Cape Colony, a few from Italy and Asia and from shipwrecked vessels. It was Americans, however, who gave a fleeting glimpse of prosperity to Tristan when they used it for a port of call and repair station in the great whaling days before the Civil War.

In that struggle, however, the Confederate sea raiders destroyed American preeminence in whaling forever. No regular liners, and even few tramps and sailing vessels, call at Tristan to-day; the population, who keep a few sheep and cattle and grow some wheat, potatoes, peaches and apples, now numbers but ninety-five souls. They navigate between the three islands and are daring sailors. Sheep wool furnishes the islanders with clothing material. Occasionally they are visited by a British ship bringing needed supplies.

The islands were discovered in 1506 by the Portuguese admiral Tristan, or, more properly, Tristao da Cunha, on a voyage to India. They rise from a submarine elevation, which runs down the center of the Atlantic, and on which are, likewise, situated Ascension, St. Paul's Rock and the Azores. The average depth on this ridge is about 1,700 fathoms. The depth between the islands is in some places 1,000 fathoms. Tristan, the largest island, has an area of sixteen square miles, is nearly circular in form and has a great volcanic cone, 7,000 feet high, usually capped with snow in the center. On all sides of the island, but one, rise precipitous cliffs from 1,000 to 2,000 feet high.

On the hole, Tristan da Cunha would be a reasonably safe place of exile for a certain present day dweller in Potsdam.

HOW SOLDIERS MARCH ASLEEP.



So Used to Marching Their Secondary Memory Keeps Them in Line.

The phenomena frequently seen in the current war of weary soldiers marching steadily and in step with their comrades, although they are sound asleep, can only be explained by examining their brain chambers of secondary automatic actions. Each human being of normal intelligence performs a host of these secondary actions, depending totally upon his unconscious memory to guide him. The hand carries food on a fork to the mouth while the mind is occupied with the morning paper. The body keeps itself erect and maintains its equilibrium while the mind is bent upon business problems.

The soldier trained in walking far more thoroughly than the civilian finally becomes so habituated to the movement that he can permit his secondary memory, totally independent of his primary memory, to guide him in the marching column while he dozes off and gains necessary rest.

Cavalrymen who have become veterans in the saddle can to a less degree permit themselves to sleep, for their habit of sitting firmly on the horse has not except in rare instances, been formed so young as the infantryman's action of walking. Consequently the horseman has to make more effort to maintain his equilibrium.

The AUTOMOBILE

How to Protect Car from Thieves.

A car properly locked up or left with a responsible garage keeper is reasonably safe. The danger comes from leaving the car unattended in the street. Many a man has left his machine with hardly a thought as to its safety and never has seen it again.

The motoring public, however, is gradually awakening to this danger, and so a few suggestions will be of interest. First the owner must be impressed with the necessity for taking some such precaution, as he will not make the effort unless he realizes the need of it.

Many ignition systems have locks on them and the owner carefully locks the switch and removes the key, ignorant of the fact that a good blow from a hammer will break the lock. Devices provided with a good arrangement of tumblers are not open to this objection. But it is easy enough to raise the hood of the engine and remove the wires leading to the lock. This is not so difficult a trick as one might imagine. A man leaves his automobile at the curb near a restaurant while he and his friends go inside. It is evident they intend to stay inside from fifteen minutes to an hour or more. A thief walks out of the same restaurant, goes up to the car in a businesslike manner, raises the hood, fixes a couple of wires with a pair of pliers, starts his motor and drives off. Even a policeman watching him would suspect nothing. Yet the thief has made a clean getaway with an expensive car and left no clew.

The best safeguard is to remove some important part of the ignition system or to disconnect the wires in some place that is not easily accessible. For instance, removing the distributor brush is one of the best. If car is equipped with a magneto the collector-ring brush and the rod connecting it to the distributor should be removed. Any of these will make a gap in the circuit, which is not easily bridged, as the thieves have not yet acquired the habit of carrying these extra parts with them.

Another way is to use a special switch controlling the starter current. Have it concealed under the cowl dash, where no one would expect such a thing to be placed. Use one capable of carrying 100 amperes and run your starter wires to it. With the safety switch open and the starting handle locked in the tool box, the thief will not experiment very long.

Another safeguard that employs none of the above methods is to lock the gasoline valve in the closed position.

Japs Carry Pocket Stove.

Many a benumbed soldier of Nippon saved his life during the Russo-Japanese war by the use of a kwairo (pocket stove). To-day Russia, profiting by the experience of her former enemy is importing these stoves from her ally in great numbers for her troops. Delicate schoolchildren in Nippon keep a stove in their clothing during the winter months while in the class-rooms.

The fuel used is put up in the form of a sausage. It is lighted and forced into a small tin container, which has the outward appearance of a metal cigar case. Fuel sufficient for one loading of the stove costs about one-sixth of a cent, and will last approximately three hours, giving considerable warmth to that part of the body near which it is applied. There is considerable rivalry in the empire to see who can invent the best fuel for the stoves. It must emit neither smoke nor odor. An efficient fuel is made of hemp stalks, a bundle of them being placed in a hole in the ground, then lighted and smothered so as to smolder without air, until turned into the desired size and shape. Finally the fuel is inclosed in a special kind of paper without which the fuel would not burn successfully.

Illiteracy in Spain.

In many villages and small towns in the interior of Spain no one knows how to read or write. There are in Spain thirty thousand rural villages without schools of any kind, and many thousands which can be reached only by a bridle path, there being no highroads or railway communication of any kind. Attendance at school is voluntary not obligatory. Seventy-six per cent. of the children in Spain are illiterate.

There is a great complaint about the shortage of help in many lines of effort, but no one has discovered as yet any lack of bosses.

Barriers extending along the ground from one or both sides of a recently patented roadway gate enable an automobilist to open or close the gate merely by running his car over them.

No single item contributes more toward economy in the preparation of food than the spatula for scraping bowls. If possible two sizes of this flexible two-sided knife are desirable.

A new attachment for telephone receivers permits the hearer to write while receiving the message, as he is able to hear with both ears at once and yet not obliged to hold the receiver in his hand.

WATER!

In the Western Dry Lands of Australia a Foreigner Would Perish.

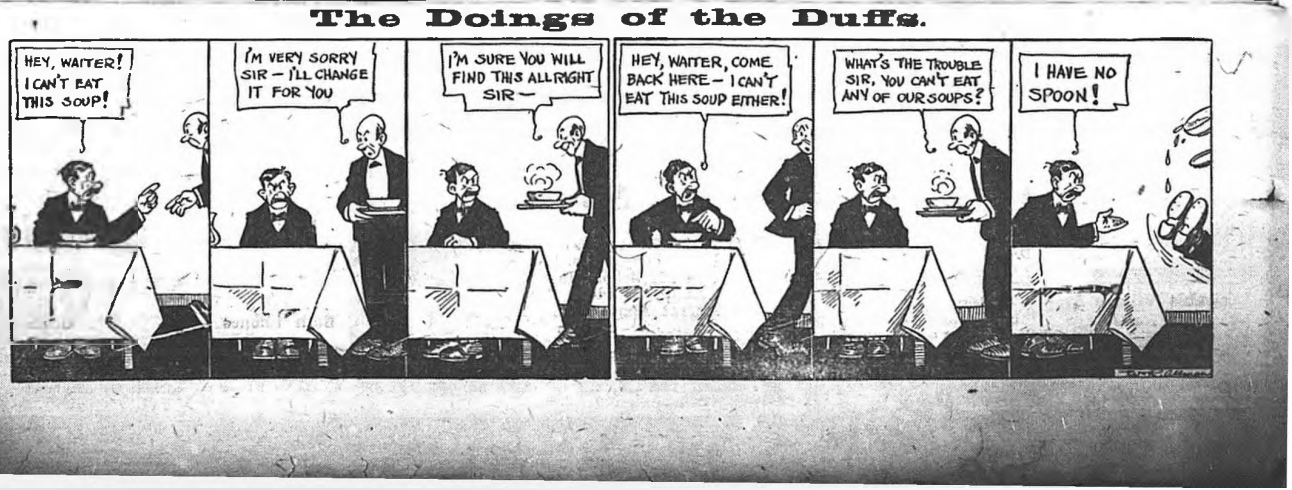
No man who has not mastered the last subtleties of bushcraft should penetrate alone the western dry lands of Australia says Mr. Norman Dunn in his book, Australian Byways. A Canadian woodsman would find nothing in his experience to enlighten him. A North American Indian would perish of ignorance. A Bedouin of the sandy Arabian deserts would die helpless. Australian bushcraft is peculiar to itself. It concerns itself less with killing the crawling desert life for food than with divining the whereabouts of water in a land that is as dry as a brick in the sun. In the midcontinental deserts when sun and dry winds suck the moisture from deep in the ground and all the world runs dry, the aboriginals draw water from the roots of small desert trees by cutting them into short lengths and letting them drain drop by drop into a wooden bowl. But there may be no water trees or the roots may shrivel and dry up. What then?

"Ah, well," said the bushman, "they do with what they have."

"What have they?" I asked him.

"They lick the dew from the leaves and grass!"

It is related by a celebrated Australian traveller, Baldwin Spencer, that, having come in a dry season to a dry clay pan, bordered with withered shrubs, his company was amazed by an exhibition of aboriginal craft. There was no water, no moisture within miles, and the clay was baked so hard that to be penetrated at all it must be broken with a hatchet. A keen native guide presently discerned little tracks on the ground—faintest indications of life, apparently—and, having hacked into the clay to the depth of about a foot, unearthed a spherical little chamber, about three inches in diameter, in which lay a dirty yellow frog. It was a water-holding frog and it was distended with a supply sufficient, perhaps, to enable it to survive a drought of a year and a half. And the water was pure and fresh. Being heartily squeezed, these frogs may yield a saving draft to lost and perishing travelers.



"Find a blackfellow," said our bushman, "and you'll get water."

"What if the aboriginal is obdurate?"

"Ah, well, if he won't tell," the bushman explained, "you rope him by the neck to your saddle. When he gets thirsty he'll go to water right enough!"

When a man knows his own imperfections he is just about as perfect as it is possible for a man to be.

The Doings of the Duffs.

PRACTICAL FARMING

INCREASING HOG PRODUCTION

By W. F. TAYLOR.

Pork is scarce in the market. I do not know how much the present supply might be increased without lowering the price to a point where it could not be produced with profit, but I think we need not worry about any immediate decline in price. Hogs are scarce, pigs are hard to find, feed is so high, and the demand for pork so strong that the temptation to sell every hog off the farm that the buyer will take is very great.

Breed Sows for Fall Litters.

If we are going to increase the amount of pork in the country two or three things must receive attention. First, we must breed our sows for fall litters. Of course, it will be too late for early fall pigs before this advice can possibly be read. But we may be situated so that we can take care of litters that come late, as I am sure that many of us are.

It does not make so much difference when pigs are farrowed, if they have proper care. They may come along in mid-winter, providing the sow has a warm place, and the pigs have a chance to exercise.

Of course, it is not desirable to have pigs come later than October 1, though some of the best ones I have ever raised have been farrowed later than that. After all, it is all in the care they receive, though it is easier to give them that care in warm weather than in the cold of winter.

Second, we should prepare to feed well the pigs that we keep. To plant a larger acreage than we can cultivate, to milk more cows than we can feed properly, or to keep a larger number of pigs than we have the courage to furnish grain for, is to increase with none of the products indicated, but rather it has the effect to diminish the supply. If we have twice as many pigs on hand as we will feed liberally, we might better sell half of them to some one who will feed them, and thus make sure that all of them will be ready for market at the earliest possible date.

Feed Hogs Liberally.

The pigs we do keep should be fed for rapid growth if we would really increase the sum of pork products. If we have not faith enough in the business to feed liberally, let us sell our pigs to someone who has. It is a great mistake to let a bunch of pigs live along, hungry as bears, growing just a little, but evidently preferring to die if they only could, and waiting for the corn to get ripe so that we can get something with which to fatten them.

But you say, "Hold on, do you expect us to pay the present high prices for feed and give it to the hogs?" Well, I am putting a sack full into the self-feeder as often as the hogs can make room for it, and the faster they eat, the more I shall get for my work.

If anyone who reads this doubts that I am right, let me ask him if he expects that grain will be any cheaper next fall than it is now? Think for a moment of our present wheat shortage. Consider the large amounts of breadstuffs that must be sent to the bottom of the ocean before German's submarine war can be arrested. Corn cannot possibly be cheap next year. Pork can not be produced in sufficient quantities to more than supply the demand at the present high prices, if, indeed, it can be grown fast enough to keep the amount up to the present supply. So I shall feed just all the pigs will eat, from the time they come into the world until they go to market.

Utilize Pastures for Profit.

In the third place, we can use pasture in many cases economically. I do not believe it is wise to give the hogs very much good alfalfa meadow this summer, alfalfa is going to be needed next winter for cow feed. Grain is going to be very high. People everywhere are thinking about beans and potatoes, and while I do not think they are going to overdo either, still it looks as though corn will be in great demand. But lands not otherwise occupied can be pastured by the hogs, and rape can be sown here and there, and now and then a man who is short of help may use the hogs to advantage in harvesting his corn. But in a general way, it seems to me that our good meadows, either clover or alfalfa, should be cut and the hay should be properly cured and stored for winter use, except as much as is needed to supplement the pastures, or to feed, for other reasons, on the farm.

In purchasing feeds for the hogs, we should watch for by-products more sharply than before. Products from the breakfast food factories, salvage grains, middlings, and in fact anything that the hogs like, that we can afford to buy.

Use the Self-feeder for Best Results.

In the fourth place, I would feed the hogs from a hopper feeder. It takes but very little time to make one, and that will be saved many times over, in feeding before the summer closes, and the feeder will still be as good as new. Every experiment I have seen proves that hogs will make more rapid, and more economical gains when fed in this way, than when a man attempts to say to the hog, just how much is good for him, and how often he shall eat.

Lastly, I would not sell the hogs until they had attained to good weight, unless the market looked bad. Every time a small hog is marketed, a cause is to increase the supply of food is cut off.

If we feed too slowly, then this would not be good advice, for the hog would be too old to grow economically before he attained the proper size. It should always be remembered that it costs much more to put weight onto an old hog than a young one.

So now in closing, if we would increase the sum of pork in the country, or even if we would maintain the present supply, we must first breed all the sows we can; second, feed as liberally as we can, and third, grow our hogs to a good size before we market them.

Thus, if we seek economical sources of feed supply. If we watch all the little details that make for success, if in short, we put a little of our better selves into this work, we shall get our pay in dollars, and we shall help to feed a hungry world, an thus be good soldiers though employing only the weapons of peace.

You can keep the fine natural color in Raspberry Preserves

IF YOU MAKE THEM WITH

Lantic Sugar

"Pure and Uncolored"

Long cooking fades raspberries. You can avoid this by using LANTIC SUGAR which dissolves instantly on account of its "FINE" granulation. LANTIC is the best sugar to use for all preserving on account of its purity and high sweetening power. LANTIC is a pure cane sugar equally good for the table, for general cooking and for preserving.

10, 20 and 100-lb. sacks; 2 and 5-lb. cartons.

ORDER FROM YOUR GROCER BY NAME IN THESE FULL WEIGHT ORIGINAL PACKAGES

PRESERVING LABELS FREE—Send us a red ball trade-mark cut from a bag or carton and we will send you a book of 54 ready gummed printed labels.

Your Problems

Conducted by Mrs. Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 225 Woodbine Ave., Toronto.

Grateful:—1. It is always the privilege of a bride to wear white with a wedding veil no matter how simple the ceremony or how early the hour, so you have your choice of white or a pretty silk going-away gown. Such things must really be decided by what best suits your own plans. 2. The bride provides the household linen and you would require six sheets, six pillow-cases, three spreads, three tablecloths, one dozen napkins, one dozen lunch napkins, several centrepieces, two sets of silk doilies, also kitchen towels and pantry towels, six each; three dishcloths, one or two pairs of blankets and a table pad. I do not think you could manage well with less. 3. A letter of appreciation should be written to one's hostess after returning from a visit.

Anxious:—1. To remove spots on broadcloth try the following: Grind one and one-half ounces of pipe clay fine, mix with eighteen drops of alcohol and the same quantity of spirits of turpentine. Moisten a little of the mixture with more alcohol and rub on the stains. When dry remove with a woollen cloth. 2. Small swabs of antiseptic absorbent cotton should be used to wash an infant's eyes. 3. The covers can be kept on a small child at night by the use of garter fastenings; one end should be fastened to the side of the crib and the other end clasped to the corner of the covers. In this way they can be kept firmly on, yet the rubber allows the child freedom enough to turn. 4. Cotton stockings are better for children's wear than lisle.

F. H.:—1. The best remedy I know for black ants is to fill a saucer with sweetened water, add one teaspoon of tartar emetic and set it where the ants come. 2. For filling cracks in floors, make a thick paste of linseed oil and wheat flour. Use after first coat of paint and before the second has been applied.

Student:—1. The phrase "wearing the white flower of a blameless life" is in the "Dedication" to Tennyson's "Idyls of the King" and occurs in a tribute to the memory of the Prince Consort." 2. The two great rivers of Mesopotamia are the Tigris and the Euphrates. 3. The original meaning of "chiffon" is rags.

A. B.:—It is said that a tablespoonful of ground pepper and two tablespoonfuls of brown sugar mixed with enough cream to make a smooth paste will kill flies. You might try it.

K. L. J.:—Your phlox and hollyhocks are affected with rust, a common disease. The remedy is to spray with Bordeau mixture. To 4 quarts of water add 1½ tablespoonfuls of quicklime and 1 tablespoonful of copper sulphate. Mix well.

Perplexed:—1. A reply to an invitation to a home wedding, explaining why you cannot attend, is sent to those who issue it, in this case the parents of the bride, and the envelope should be addressed to them. The gift, with your card, is sent to the bride. 2. A shower is given by an intimate friend of the bride-elect and may be given any time within a few weeks before the ceremony, and it is good form to ask only those who are very close friends of the engaged girl, not to go outside and ask just acquaintances favors too much of asking for gifts.

Puzzled:—1. Do not pay any attention to remarks like these. No human judgment can possibly be perfectly just. If we do what we consider right according to our best knowledge we can safely leave the result to a Higher Power. 2. It is not worth worrying about. If you think you would have a good time at the picnic, go by all means.

Housewife:—1. To make mint bags for the linen closet put into little silk bags a mixture made of a pound of dried lavender, an ounce of thyme, an ounce of mint, an ounce of ground cloves and caraway seeds and a tablespoonful of dry salt. 2. Food scientists tell us that corn meal is not "heating" and can therefore be used in summer. It is a duty at the present time to use more corn and save the wheat for our Allies over the seas.

Conserve The Fruit Crop

Last summer, many women did not put up their regular supply of home-made preserves; and bitterly they regretted it. They became scared at what they called the high price of sugar. When sugar reached 7½ cents a pound, they let the strawberries and cherries go by. When sugar sold at 8 cents and 8½ cents, they permitted the luscious peaches, pears, plums and apples to rot on the ground.

But never again. This summer will see a genuine, old time revival in homemade preserving; because the women of Canada now realize what a foolish extravagance it was to do without preserves; especially when the increased cost of putting them up is infinitesimal.

As a matter of fact, every woman can prove, with her first lot of strawberries, that the increased cost of sugar is surprisingly small.

Turning back the files of papers publishing market prices, we find that in 1912, 1913 and 1914, up to the outbreak of war, the average price of granulated sugar was 5¼ cents a pound. To-day, the best granulated sugar retails at 8¼ cents. This is an average of 3 cents a pound for the whole of the country.

A quart jar of preserved berries or fruit, requires but half a pound of sugar; so that the increased cost of preserving, due to the increased cost of sugar, is only 1½ cents a quart, compared with the cost of preserving before the war when sugar was unusually cheap.

Now is the time for the women of Canada to come gallantly to the aid of the country, and help to conserve our food supplies. The fruit crop this year promises to be a record one, both in quality and quantity. Foreign markets being closed because of the shortage in transportation, it rests almost entirely with our housemakers as to whether this crop worth millions is to be a source of profit or a complete loss.

With the home pantries filled with delicious jams, preserves and jellies; with these delicacies served for dessert instead of pies and cakes; enormous quantities of wheat will be released for the troops in France and for the starving children in Belgium.

A careful consideration of the above facts will show to the Canadian housewife that sugar is not too high for preserving profitably; that the increased cost of sugar has not materially increased the cost of homemade preserves; and that preserving is both an economy and a patriotic action.

Bedtime Stories

The First Embroidery Class in the World.

The first embroidery class in the world was held one early, early morning, thousands, oh! thousands of years ago, under a huge mullein leaf. Way before sun-up the members began to arrive.

They tied their butterflies to the clover posts and fluttered down excitedly upon the moss-green carpet. Fairies' of course, they were fairies! And who do you suppose taught them to embroider? Why, Grandmother Spider!

She brought out the wonderful web that she had spun and with the fairies fluttering and flying about her she showed them the first stitches in embroidery. She didn't use silk, though; she used skeins of mist, and when they had been worked in and out and over and over they made the shining dew drops like the ones you have often seen trembling on the grass blades in the early morning.

The fairies clapped their hands and danced with excitement and begged her to let them work some. But the old spider shook her head and sent them off to gather some tiny green leaves. Pretty soon every fairy head was bent over a leaf and the fairy needles were flying merrily.

Next time you see a leaf with these delicate tracings upon it you'll know that some little fairy has been at work—perhaps, if you look very closely you will see her needle sticking in it. I hope so, for fairy needles are golden and very precious, I can tell you! Well, the fairies were so delighted with embroidery that they came again and again to Grandmother Spider's class and she grew very fat and rich, I am told.

And the fairies—why, the fairies set about embroidering everything in the world. The leaves and flowers, their silken coverlets, the great robe of the sea. Have you never seen the frost pictures on the window-panes in winter? Well, that is fairy embroidery!

Yes, the fairies learned to embroider from old Mother Spider and then the kind little creatures showed the human folk the secret of it. They taught them to copy the flowers from the garden upon their centerpieces and doilies and upon their dark frocks, so that the glad out-of-door things could be found indoors, too.

Wherever mortals are embroidering and especially where little girls are, there are always fairies! They hover about overhead, perch upon the needles and scissors and sometimes they steal the thimbles away to use for honey pails.

Poultry

When chicks appear stupid, do not remain with the flock, wings droop, whitish discharge, they are troubled with white diarrhoea.

Medicinal treatment is of little avail. To prevent: Breed from strong healthy birds; proper care and feeding of chicks; keep chicks vigorous; disinfect incubator and brooder; feed sour milk.

A good poultryman is not very easily discouraged.

Boiled oats, after draining off the water, can be mixed with bran and corn-meal to make a valuable egg food. Clover hay, cooked or steeped and mixed with bran and corn-meal, makes a grand breakfast for hens. Green stuff intended for mixing with the soft food should be cut in half-inch lengths.

Cow-peas are relished by poultry, and should be added to the diet at least twice a week. Squash or pumpkins, cooked and mixed in the mash, are good for growth, production and health. All kinds of roots can be fed raw or cooked.

Common field peas are very good. Peas contain a large amount of nitrogenous substances.

The trouble with so many farm hens is that they do not get enough grain during the summer months to make them produce a profitable number of eggs to pay for their keep.

Moulting season is near at hand. This means a decrease in the egg crop. It is necessary at that time to have the fowls properly fed and cared for, that they may pass through the ordeal safely.

No two things about a farm go together better than fruit trees and chickens. Make them acquainted early. Put the newly-hatched brood in a coop under a tree and surround the whole with a circle of two-foot inch mesh poultry netting. It will stand alone in the form of a circle. The shade is good for the baby chicks. The chickens are good for the tree. As they grow, they will scratch the soil and thus cultivate and enrich it, besides destroying many insect enemies.

Cuts Labor in Half

Do you first disinfect, and then go over all surfaces again with whitewash in order to keep your stables, dairies and poultry houses bright, cheerful and free from lice, mites, fly eggs and the germs of roup, white diarrhoea, cholera, glanders, etc.?

Such a method is a waste of time, money and labor. Use Carbola instead—it does the two things at the same time. It is a disinfectant that dries out white—not dark and colorless—and gives much better results.

CARBOLA

is a mineral pigment combined with a germicide twenty times stronger than pure carbolic acid. Comes in powder form, ready to use as soon as mixed with water. Applied with brush or sprayer. Will not clog sprayer. Bake, blister or peel or nor spoil by standing. No disagreeable odor. Absolutely non-poisonous. Satisfaction guaranteed.

The Dairy

The brains of the breeder build up the herd.

Economy in feeding is efficiency in production.

True worth in a bull is vindicated by the performance of his daughters at the pail and the showing of his sons on the block.

A large milk flow is not natural for a cow, but is an acquired character. For that reason it is only by constantly selecting the best and rejecting the poorest that the characteristic can be retained. Selection without testing is merely guessing.

No matter how good a showing a milker makes, she can not be registered unless she is the offspring of a registered sire and dam.

The use of caustic potash when the calves are a few days old makes the use of dehorning clippers unnecessary later on. Before applying the potash, clip the hair away from the buttons on the calves' heads; moisten the stick of potash and rub it on the spots until the places bleed slightly. If too much water is used, it may run down over the head, taking the hair off, or getting into the eyes where it causes serious trouble.

Many feeding experiments last winter, in which silage was made a major part of the ration while grain was used in limited amounts, show that a full feed of grain is not necessary to put a good finish on beef cattle.

The Sunday School

INTERNATIONAL LESSON JULY 22.

Lesson IV. Sennacherib's Invasion of Judah—2 Kings 18, 13 to 19, 37. Golden Text Psa. 46, 1.

Verse 13. Sennacherib—King of Assyria, B. C. 705-681; the expedition against Judah took place in 701. The king's own account may be read on the so-called Taylor Cylinder, Col. II, 34 to Col. III, 41 (For a translation see R. W. Rogers's Cuneiform Parallels to the Old Testament, pages 340-344).

21, 22. The opening words of a taunt-song (21-26), describing the arrogance and impending humiliation of Sennacherib. Blasphemed—Especially through the speech of Rabshakeh (18, 19ff.). Holy One—A favorite term with Isaiah. Describes Jehovah as holy and implies the responsibility of Israel to reflect the same holiness (see Lesson Studies for July 1, verse 3).

28. Raging—The Assyrian being acted like a wild beast, Jehovah will treat him accordingly.

29-31. An oracle directed to Hezekiah. Sign—Meant to guarantee the fulfillment of the preceding promises. Remnant—See Lesson Studies for July 1, verse 13.

32-34. Mine own sake—If he should not do it, the observers would get a false view of his character and power. David—The expression frequently in Kings. The reference is to the promise in 2 Sam. 7, 11-17.

35. Smote—There is no reference in Sennacherib's inscription to this calamity, but an occurrance of this sort would explain the hasty return to Assyria. According to an Egyptian tradition preserved by Herodotus (II, 141), the army was rendered helpless by a plague of mice. Since the mouse is a symbol of pestilence in ancient tradition, the story of Herodotus may imply that a destructive epidemic swept through the camp of the Assyrians. The disaster is said to have occurred at Pelusium, near the Egyptian frontier, a region of swamps and marshes, which might easily breed an epidemic.

37. Assassination of Sennacherib. Nisroch—No Assyrian deity bearing this name is known. Sennacherib's grandson states that the king was assassinated in Babylon, at the entrance of the temple. If so, Nisroch may be a corruption of Marduk, the name of the chief god of Babylon. Adrammelech, Sharezer—Called in Isa. 37, 38 "his sons." The Babylonian account mentions only one son. The difference may be accounted for by assuming either that one of the sons was the prime mover or that there was only one murderer, the two names referring to the same person. Into the land of Ararat—The Assyrian Urartu, the modern Armenia.

Sweet clover on a patch of wornout land or run down pasture may produce surprising results.

When draft mares are used for farm work, the income from the sale of colts each year makes the cost of horse labor much less than when the work is done by geldings.

The Paisley Advocate

PAISLEY, JULY 18th, 1917

—What the people and the press have been saying about the need of food control in Canada is being proven by investigation to be true. The modern profiteers are making huge profits and amassing colossal fortunes out of the food markets. The latest disclosures made by the O'Connor report show that the pork-packing and cold storage business is pulling out a larger margin of profit for certain firms during war time than before. Because of the monopoly of the market obtained large firms it is possible for these concerns to control and manipulate prices for their own gain, and this is where the government should step in and look after the interests of the pork consuming public.

—According to a report published from an authentic and reliable source, the human race may soon be fed on a hay ration. Alfalfa was served to Kentucky farmers in the form of hot biscuits, doughnuts, cake, and candy, at a luncheon during the recent annual farmers' week exhibition of the Agricultural College at the state university. The progressive young women of the domestic-science department took care of the cookery and convinced their farmer guests that very palatable products may be obtained for the table from their alfalfa crops. The flour of alfalfa is of a creamy tint before cooking and a light green afterwards, and while pea-green biscuits may not at first appeal to the average housewife, the flavor is regarded by many as rich and delicious. Food requirements may easily result in greatly increased use of alfalfa for flour in the near future. The recipes used cooking it are about the same as those for wheat flour. Alfalfa candy is made from a glucose pressed from the stalk.

LOCAL AND DISTRICT NEWS

Three More Old Residents Gone

Another groupe of three old residents of Elderslie have passed away since our last issue: Mrs Park of whom a notice appears in this paper, Mrs Davis and Mrs Robb, who both died very suddenly, and of whom more extended references will be given in next issue.

A Confusing Cable

Rev M Neilson received a cable from the Old Country on Saturday stating that "Jack died suddenly" upon receipts of the message it was doubtful as to whether it meant Mr Neilson's son John, who is training in England for service in France or his brother John, a ship captain, but proved to be the latter. Coming almost on the eve of the 25th anniversary of the marriage of Mr and Mrs Neilson, the sad news put a damper on the quiet celebration of the event which it was intended to hold in their home on Monday, and to which Rev Mr Wylie and family of Durham came over to attend.

A Nice Kind of Communication

Editor Paisley Advocate—Enclosed herewith find C N Express money order for $2 to apply on my subscription to The Advocate. I do not know exactly how much I am in arrears, but you can give me credit for the time the amount covers and all will be well. Although it is now nearly 19 yrs since I left Bruce County I look for The Advocate every week just as eagerly as ever, and I enjoy reading letters written from the front by the boys from Paisley and Bruce County, which come out in The Advocate from time to time. Wishing them all the good fortune to come back home alive and well, and with kind personal regards I am, very truly yours, J D MacPhee, Crookston, Minn.

Liquor Seized

Two cases of booze addressed to a citizen of the town were pounced upon at the station one day last week by Constable Leitch, and have since been locked up pending an investigation by Inspector White. There has been considerable traffic in wet goods at times of late. Although a drunk man has not been noticed on our streets for months, there was other evidence to prove that the cup or bottle that cheers is still carried to the lips of those who enjoy the exhilaration of inebriation. It is suspected that there are some who are willing to run all risks for the sake of making a little on the side by dispensing the real juice. The authorities are now out after the guilty parties, and if they don't want to look out some "Indiana" are going to lose their scalps. Needless to say, the penalties will not likely be light ones should proof be found to convict anyone.

The Late Mrs Park

It becomes our duty this week to chronicle the death of one of the early pioneers of Elderslie in the person of Mrs Janet Park, who died on Friday morning, July 13th. The deceased whose maiden name was Janet Low, was born at Niagara-on-the-Lake, and when but a child moved with her parents to the Centre Road, Peel county, where afterwards she married the late Wm Park who predeceased her fourteen years ago. Being of Scotch lineage she had inherited a good deal of the pluck and bright cheerful disposition as characteristic of the race and which made of her and friend of both old and young. She was the youngest member of a family of four, only one of whom survives her, Mrs Graham of Doblinton. The deceased was a regular attendant and consistant member of Salem Presbyterian church. The funeral on Sunday afternoon was conducted by Rev Mr Wilson

(page 4)

also, and was largely attended. Interments were protect from Brampton, to Walkerton, Tara, Port Elgin. She goes to nearer her loss a family of five: sold to Port Elgin; Mrs Cameron (Tara), Mrs Lewis (Mary) on both sons, Elderslie; Annie and James at home.

Remembered Their Teacher

Mr D D Campbell, teacher in U S & No 7 & 8, Elderslie and Sangeen, who resigned at the close of the term, was waited upon by a number of his pupils last week and presented with a Masonic ring accompanied by the following address:

Dear teacher,—It is with feelings of the deepest regret that we, your scholars, come before you today to bid good-bye to the many happy days we spent together as teacher and scholars. During the four years you have been with us you have worked patiently and unflingly for our advancement, not only intellectually, but morally also; and even though at times we have not seemed to appreciate your efforts, yet time will show that your teachings and advice have been remembered by every one of us. We wish you "God-Speed" in whatever line of work you may take up after leaving us. As a slight token of the love and respect of all your pupils in the old Elora Rd North school. Signed on behalf of the pupils—Alma Fraser, Edgar Tanner.

"I FEEL LIKE A NEW BEING"

"FRUIT-A-TIVES" Brought The Joy Of Health After Two Years' Suffering

MADAM LAPLANTE

35 St. Rose St., Montreal, April 4th.

"For over two years I was sick and miserable. I suffered from *constant Headaches, and had Palpitation of the Heart* so badly that I feared I would die. There seemed to be a lump in my stomach and the Constipation was dreadful. I suffered from *Pain in the Back and Kidney Disease.*

I was treated by a physician for a year and a half and he did me no good at all. I tried "Fruit-a-tives" as a last resort. After using three boxes, I was *greatly improved* and twelve boxes made me well. Now I can work all day and there are no Headaches, no Palpitation, no Heart Trouble, no Constipation, no Pain or Kidney Trouble and *I feel like a new being*—and it was "Fruit-a-tives" that gave me back my health".

MADAM ARTHUR LAPLANTE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Gibson—Cormack

The marriage of Constance Mabel daughter of Mr and Mrs Andrew Cormack, to William Wallace Gibson son of Mr J C Gibson took place at the bride's home on Wednesday July 11th. Rev G C Little, B A conducted the ceremony. The bride who was given away by her father wore a charming gown of silk crepe de chene and a corsage bouquet of roses and lily of the valley. The wedding march was played by Mrs Burt Lyon, sister of the bride. After the wedding breakfast Mr and Mrs Gibson left for a short trip down the St Lawrence, the bride travelling in a navy blue suit and small white hat. On their return they will reside in Toronto.

Popular Nurse Weds

Miss Margaret Fortune, a popular nurse who graduated from the Bruce County Hospital in the class of 1911, and who after a post-graduate course in New York, has since been successfully practicing her profession in these parts, was united in marriage to Mr Joseph Johnston, Reeve of Arran township, the ceremony taking place at the home of the bride's brother, Mr Wm Fortune, near Vesta, on Wednesday, July 11th. Rev H A Tibb of the Presbyterian Church, Chesley, officiating. The bride who was unattended, looked pretty in a gown of white crepe de chene silk and carrying a bouquet of bridal roses and sweet peas. The ceremony over, a wedding luncheon was daintily served, after which the happy couple left to reside on the groom's farm near Elsinore. The numerous presents received bear testimony to the esteem in which Mr and Mrs Johnston are held. The bride is well known in Paisley, having been at Mrs Eaglen's for several months.

An Enterprising Move

Mr L C Spofford, general merchant of Paisley, has departed from the beaten paths in going after the farmer's business in this locality. He started out this spring by putting a man with horse and light waggon on the road to purchase and gather eggs, butter and other small produce. For the past few weeks the equine equipment has been replaced by an automobile of design suitable for carrying egg crates, etc. If there is any advantage to the farmers in having their produce taken from their doors and goods delivered likewise, then then they have the opportunity presented for adopting the new method in preference to the old way of bringing and sending themselves. With the general use of rural telephones and rural mail delivery, also automobiles if if they chose, the excellence of this district were beginning to feel that they were about up-to-date. The latest innovation for their convenience puts them just a little in advance of their fellows in other sections. Don't forget to use the phone to Spofford's. Goods delivered anywhere.

About Electric Light Wiring

Mr J A McNeil manager of the Electric Light Co is busy changing over the inside electric light wiring and making it up to standard. Most of this wiring was installed years ago and does not conform to the present rules as set forth by the Hydro Electric Commission of Ontario. Inside wiring is now under rigid inspection and must be up to standard or made so as soon as possible. This inspection was handed over to the Hydro Commission by the Ontario Government and the new act came into force on July 1st 1916. Owing to so many persons being electrocuted, and so many fires traceable to defective wiring, this course has been adopted by the Commission. Each district has an inspector. Paisley is in the Palmerston district. The Electric Light Co is now re-building the lines throughout the town and then put the system in first-class shape. Mr McNeil has secured the services of a first class electrician in the person of Mr Harry Snider of St Catharines. Mr Snider has had many years of practical experience having been engaged with the Hydro Electric in some of the large cities. He is a thorough workman and received the commendation of the district inspector when on his official visit. Anyone having their building's wired by him can rest assured that they will have their wiring installed in the most up to date manner.

"Untangling Tony" Was Well Played

The Tiverton Dramatic Club won golden opinions from those who comprised the large audience that witnessed the presentation of the play, "Untangling Tony," in the town hall, Paisley, on Friday evening last. The company is to be commended for the enterprise and zeal they put into their work of raising funds for Red Cross. They appeared here under the auspices of the Baptist organized class. Following was the cast of players

Carolyn Carroll ..... Miss May McKay
Mrs Rae ..... Miss Laura Campbell
Hazen Tony ..... Melville Reid
Mrs Carew ..... Miss Nellie McLaren
Mrs Mannering ..... Miss Jean Begg
Gladys Mannering .....
..... Miss Rebecca Matheson
Mr VanAlstyn ..... Chas Wood
Mrs Brown Miss Mildred McLaren
Thompson, the butler .....
..... Eugene Montgomery

A vote of thanks was tendered the Dramatic Club on motion of Rev Mr Neilson and Mr F S MacLachlan, which was briefly responded to by Miss McKay. The Paisley orchestra furnished enlivening preludes and interludes, and solos were rendered by Mrs Brown of Underwood, Miss McKay of Tiverton, and Miss Edna Carter of Paisley. Reeve Steele was chairman. The proceeds amounted to $60.

No Fall Fair in Walkerton This Year

The Northern Exhibition, which has been an annual event in Walkerton for nearly half a century, is going out of business for this year at least, the Directors attaching the blame for the non-performance this autumn on the condition of the buildings some of which are too dilapidated for the proper housing of stock, while the palace, which was repainted and fixed up last year, has suffered at the hands of the small boys, who systematically practised on the windows with rocks, with the result that the panes have been shivered and the structure made to look awfully as if it had seen better days. The old historic exhibition, which was the chief attraction for this country in the early times, has a more glorious past than promising future, as the bigger exhibitions are causing the funeral of many smaller fairs. However, if the Fall Show don't amalgamate, as has been proposed with our Winter Fair, and the spirit of our Directors is still alive next year, they may stage a come back that will give the town a Fall Exhibition to be proud of and a show worth the while of outsiders to attend. In the meantime the padlock's on the gate and the "nothin'-doing" sign is up for this year.—Herald and Times.

—The 13th of July was a very wet one with nothing glorious about it, in point of weather. Mr Geo Thompson met Mr Wm Sparrow in town that day, and despite the rain that was falling, and the unbroken appearance of the clouds, ventured the prediction that it would clean up before night, as he had never yet seen a 13th July that passed over without some smallies. And ere he was right, for Old Sol appeared in all his refulgence after 5 p m.

What It Means to You—to Your Pocketbook—to Your Personal Appearance—How It Conforms to Sound Business Judgment to Select from

Our Famous Line of

Men's and Ladies' Suitings

Taking for our text, "He profits most who serves most—he who serves best, serves most"—we put to force a plan of retailing that tends to centre more and more business here—by making it to the advantage of the public to give us their patronage.

We're selling clothes on a margin of profit here tofore regarded as insufficient. But we're winning business on the basis of volume.

Here are 200 patterns for selection. If there's a man who can't be suited we'd like to see him. If there is a man whose tastes can't be met he is a stranger to us.

Success of a New Remedy for Backache, Kidneys, Rheumatism.

Dear Mr. Editor—I suffered for years with backache. Last March I tried "Anuric" and have used this new kidney medicine recently discovered by Dr. Pierce, and it was wonderful the way it eased the pain and gave me relief in such a short time. I have tried several medicines, but "Anuric" is the only one that gave satisfaction. I feel it my duty to recommend "Anuric Tablets" to any one who suffers as I did.

(Signed) Mrs. Margaret E. Snider.

Note: Folks in town and adjoining counties are delighted with the results they have obtained by using "*Anuric*," the newest discovery of Dr. Pierce, who is head of the Invalids' Hotel and Surgical Institute, in Buffalo, N. Y. Those who started the day with a backache, stiff legs, arms and muscles, and an aching head (were not before the day began because they were in and out of bed half a dozen times at night) are appreciating the perfect rest, comfort and new strength they obtained from Dr. Pierce's Anuric Tablets. To prove that this is a certain uric acid solvent and conquers headache, kidney and bladder diseases and rheumatism, if you've never used the "Anuric" and this out and send ten cents to Doctor Pierce for a large sample package. This will prove to you that "Anuric" is thirty-seven times more active than Nuhis in eliminating uric acid—and the most perfect kidney and bladder corrector. If you are a sufferer, go to your best druggist and ask for a 50-cent box of "Anuric." You run no risk for Dr. Pierce's good name stands behind this wonderful new discovery as it has for the past half century for his "Golden Medical Discovery," a general tonic made from roots with pure glycerine which makes the blood pure, his "Favorite Prescription" for weak women and "Pleasant Pellets" for liver ills.

MEDICAL

DR. H. E. GAGE, Physician, Surgeon and Accoucheur, specialist in Diseases of the Eye, Ear, Nose and Throat. Late house surgeon Kingston General Hospital. Office hours—9 to 9 a.m., 1 to 4 p.m.
Successor to Dr. O'Neill

DR. P. J. F. HOURTCS.
Honor Graduate of Toronto University Licentiate of the Royal Colleges of Physicians and Surgeons of Edinburgh and Glasgow, post graduate Coombe Lying in Hospital, Dublin, late assistant Edinburgh Eye Infirmary. EYE, EAR, NOSE AND THROAT—Diseases of the Eye, Ear, Nose and Throat.
Successor to Dr. Morrison.

DENTAL

DR. A. H ALLEN
DENTIST, formerly of Toronto.
Graduate of the Royal College of Dental Surgeons of Ontario. Honor Graduate of Toronto University Dental Department. Master of Dental Surgery. Graduate of the Dr. Mayo Post Graduate School of Prosthetic Dentistry, New York. Office over Moir's Drug Store, opposite the Post Office.

VETERINARY

BOYD BROS., Veterinary Surgeons, Paisley. Graduates of Ontario Veterinary College. Day office at Andrews' blacksmith shop, [illegible] north of pork factory. Phone numbers—Bell 68, Bruce 114.

Co-Operation by Farmers

Co-operation of efforts and plans by farmers is recognized as becoming more important as that largest class of producers in our country. At a convention of the United Farmers of Canada held at Ingersoll on Friday last, greater organization, greater numerical strength and greater capitalisation were points urged.

Olds speaker said co-operation is not a new thing. It had been in effect since the world began, and at the present time in force was being demonstrated by the nations of the world in efforts of destruction. Co-operation should be understood to be working for the good of the community, he said. Farmers had been driven to co-operate, and, he added, "Oppression made a wise man mad." He pointed out that no longer was it possible for a man to co-operate in world business as an individual. The grist mills, formerly located on almost every stream in the country, had disappeared; they had merged into bigger enterprises and eventually wiped out, with the result that farmers were compelled to pay more for articles of food and were not getting the services. He spoke of railway conditions and added that farmers were being urged to work harder and give more to the railway companies. He denounced manipulation in business and said that he had been creditably informed that manipulators on the Chicago market had made one million dollars a day for three months until stopped by the American Government. He added that it was not supply and demand, but manipulation, that was regulating the market. He laid stress upon the importance of agricultural interests. The reports for one year, he said, exceeded those of all other industries, amounting to $850,000,000. Many of the manufacturing industries were dependent upon the farmers, and in business generally he urged that after the war the farmers should see that agriculture gets a square deal. He claimed that the very soul of the nation was in the rural home, and added that it was the duty of the farmers to solve their own problems, through education, organization and legislation. They would then reach a greater degree of efficiency, as co-operation at the present time is only in the kindergarten.

The Vice President of the Grain Growers' Grain Company described the growth of the co-operative movement in the west. He showed the spirit in which the Grain Growers' Grain Company had met a serious loss, and of the adverse criticism that was offered in the press when they made a big profit later. He emphasized the necessity of numerical and financial strength in making a success of the co-operative movement. The Grain Growers' Grain Company, he said, have 4 millions and a quarter of paid up capital, two millions subscribed and three millions of tangible assets. They have tremendous purchasing power because they are known. They had placed an order for tillage machinery for 1918 amounting to $400,000. Last year, he said, they handled 7,000,000 pounds of twine, and for 1918 they had given one order for 12,000,000 pounds, and would contract for more. The company, he said, had a line of credit in New York of from seven to eight million dollars. He wanted to know if there was anyone who would stand up and say that the farmers could not do what any other body of men could do. He told of the company exporting 40,000,000 bushels of grain and said the stage had now been reached in their development where business came to them.

BUSINESS MEN MUST DECIDE

Some merchants say not on their estimates to spend a stated sum in advertising yearly the same as they estimate on new goods. Any person with a little money can buy goods, but it takes a salesman to sell them. A good salesman equips himself with all the selling force at his command and advertising is the only medium that can give him a direct line on his customers. He uses as much care in selecting and using his advertising space as he does in selection of his goods. Stopping advertising to save money is equivalent to stopping a clock to save time. In Brampton and Newmarket the local merchants have gone a new battle to fight, and that is branch offices of Toronto's big stores. Had these merchants been real salesmen, these big concerns would have tried out other pastures before entering a field that showed lots of life. The turnods of these departmential stores will be felt and some lay merchants in other places will have the same fight. Would it not be better to give these big inads a run for their money before they reach us? We leave it to the business men—as business men—to decide. —Meaford Express.

CONSCRIPTION

As there appears to be considerable difference of opinion as to who should be called under the Conscription Bill, the following classification is submitted as a fair and just one. We would raise all the men needed at present, without injuring the country in the least.

Class 1—The fellow who beat me out of $25 on a horse trade five years ago.

Class 2—All my creditors.

Class 3—All piano and grain & phone agents.

Class 4—All agitators, political, racial, or Sectarian.

Class 5—All honorary Colonels.

Class 6—All men who think they know how to pronounce Ypres.

Class 7—All knights, barons and sirs of every description.

Class 8—All fellows who think wives of soldiers are getting too much money.

Class 9—All men who allow dogs and chickens to run at large.

Class 10—All young fellows who prefer dancing and playing pool to defending their country.

Class 11—All income tax dodgers.

Children Cry
FOR FLETCHER'S
CASTORIA

—The tower of Walkerton Public School was struck by lightning on Saturday week. Shingles, bricks and plaster were knocked off, but the damages were small.

—The price of soft coal has taken a drop, but there is no hope of a reduction in the cost of hard coal.

BRAVE CANADA

(From the Los Angeles Times)

When the history of the war comes to be told, Canada's place in it will stand forth to our wonder and amazement. Canada's contributions in men and money, in bravery and endurance, in unselfish resourcefulness, in quick and adequate response, has been tremendous and magnificent!!

Proportionately to her population Canada will be found to have given the largest monetary contributions to the war.

Counting the cost is not the Canadian way. Out of a contingent of 25,000 troops at the outset of the war, not 2,500 lived to tell the tale. Their casualties were appalling, but the only effect they had upon Canada was to accelerate recruiting, and volunteers poured in to avenge their fellows. It has been officially stated in Canada that for every man that falls five more enlist.

The valor of the Canadians on the battlefield has called forth the unqualified praise of the French and British generals.

It was the Canadians that bore the first terrible brunt of the asphyxiating gas attacks, which came as such a staggering surprise.

Canada, a young country, needing all her men at home, never hesitated once they had put their shoulder to the wheel.

It is a splendid record, which will place Canada among the historic nations of the war.

Sergt. W J Garland

Enlisted and crossed overseas with the 200th Winnipeg Battalion. He is 22 years of age and is the eldest son of Mr. Jas A Garland of Brant. After taking his matriculation in the Walkerton High School he entered the Traders Bank of Cargill, which was later taken over by the Royal Bank. He rose step by step, and was accountant at the Royal bank Winnipeg, when he heard the call, and throwing up a splendid position, donned the khaki to go forth and fight for the flag.

Sergt. Elmer A Garland

Enlisted as a signaller with the 160th (Bruce) Battalion. He resigned his position as operator at the G. T. R. station, Paisley, to do his bit in the great war. After joining the 160th he took out a first class certificate in signalling at London, Ont. and also attended the school at Aldershot, England, where he still further increased his efficiency as a signaller. As a consequence he is one of the rank signalmen of the 160th Battalion. He is 21 years of age and is the second son of Mr Jas A Garland.

—The July issue of Rod and Gun in Canada is a good number to tuck into the grip of the sportsman or tourist on vacation bent. A glance at the list of contents shows the following titles: "With the Muskinonge and the Shark. Two Opening Days," by Dominion Day Duck. "Ishbel." Wm MacMillan. "Trout Fishing in Northern Ontario," by C. W. Young. "The Beloved Vagabond," by Edward M. Towler. "The Last Trapshoot," by F. W. Williams, etc. etc. and in addition well maintained departments devoted to Guns and Ammunition, Fishing Notes, Kennel and Trap shooting, W. J. Taylor, Ltd., Woodstock, Ont. are the publishers of this representative Canadian sportsmen's magazine.

DIED

ROBB—In Elderslie, on July 17th, Mary Cordick, widow of the late Wm Robb, aged 85 years.

DAVIS—In Elderslie, on July 16th, Lucy Davis, beloved wife of Hugh Davis, aged 59 years.

PARK—In Elderslie, on July 13th, Janet Park, widow of the late William Park, aged 77 years and 6 months.

VILLAGE COUNCIL

Council met at 7 p.m. 5th July, all present except Mr Logie. Minutes of last meeting read and adopted.

Communication read from county clerk intimating county rates $937 58, municipal equivalent $18 34, and war tax $350 98—in all $1305 78—to be raised by this corporation in 1917.

Mr S F Ballachey and others drew council's attention to repairs required at Inkerman and Victoria streets crossing.

Request for a grant of money from the Queen Alexander Sanitarium.

By-law No. 660 granting authority to the Imperial Oil Co of Toronto to erect buildings and tanks for the storage of oils, gasoline and such other inflammable fluids, on lots 4 and 5, west Victoria St south, and to convey said fluids by means of pipes, across said street, was read the required number of times and passed; also a by-law authorizing the reeve and clerk to borrow moneys required for current expenses from the Royal Bank.

Houston—Sparrow—That the construction of sidewalk on east side of Victoria St north be proceeded with—about 250 ft more or less.—Carried.

Pearce—Sparrow—That the Property Committee put well in park in proper shape.—Carried.

Pearce—Houston—That payments be made as follows:

Murdoch Leitch	$ 48 00
R C Wilkins	43 60
Wm Sparrow	44 00

Paisley Advocate	31 85
J H Manser	35 00
David Thomson	9 00

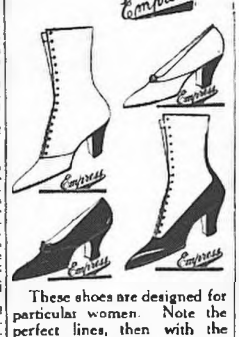
DEAR EDITOR

The child that is furnished with a good set or rather two good sets of teeth has an asset that is hard to value. It is a pity parents do not appreciate as a rule the immense advantage not only to the child health but to the child development. Too often the dentist is not consulted till the usefulness of the infant particularists are rendered past repair.

At six years old the first permanent grinders or molars erupt behind the deciduous or baby teeth. These are quite often taken for the baby grinders and allowed to decay away with the mistaken idea that baby teeth need not be preserved. Let me say here that it is very important for the full development of the jaws that the baby teeth and all the permanent teeth as they come in be preserved until all are erupted. The retaining of the first make the gums develope to make room for the next and soon till all are in place thus making a perfect grinding machine of the human mouth. It does more than this. It rounds out and shapes the features and thus is an aid to beauty and to expression. I will refer to this again in dealing with artificial teeth.

In referring to the temporary or baby teeth I omitted a very important point, viz. the early extracting of the back teeth or molars in a child and the consequent loss of crooked teeth, which is a loss to the appearance in shape and expression and more serious still reduces the power and efficiency of the two sets of teeth. Consult your dentist, then, in early years of childhood.

Some of the results of incorrect eruption of the teeth are: reduced vitality from lack of power of mastication; they have to swallow more or less unmasticated food, weakened stomach, poor digestion, decayed teeth, tumorous growths in the region of nose and throat, loss of brain power, nervousness &c. Cases where results are being and have been made and where it is compulsory to have children's teeth examined and kept in good repair it is well known that full success in attractive children have been realized and studies after the germs were removed but and powers of mastication restored.



I will be pleased to explain still more to parents who seek to know and will ask are advised.

Remember the mouth should be the cleanest and most sanitary part of the body yet it is the hardest to keep so. Begin with the children. Use a sanitary brush like Hiawa brush. A H ALLEN.

CARD OF THANKS

Mr and Mrs Thos Irwin desire to thank their neighbors and friends for the great kindness and sympathy extended to them in their recent bereavement by the death of their only son.

A Quartette of Beauties

These shoes are designed for particular women. Note the perfect lines, then with the knowledge that your feet will be entirely comfortable. This is assured with every pair of "Empress". We are agents for this high-grade shoe which is made in Canada by Canadian artizans.

GRACE'S SACRIFICE

Girl Cashier Starts Misguided Office on Street Called Straight.

By Frank Filson.

Fifty dollars missing! Grace Boyce, cashier and secretary of the downtown office of the Allen Manufacturing company, stood staring in a dazed way into the money drawer of the high screened desk that was her post of duty.

All her pride and esteem went down in a kind of a crash at this, the first blow in her pleasant business career. Never before during her two years' service with the company had her cash been short. The mysterious thing about it was that she could not explain the circumstance.

She had tallied off her cash balance at noon the day previous. Then she had gone to the bank. She had returned and filled the pay envelopes for the factory hands. At four o'clock, as was usual, young Alden Morris, son of the president of the company, had arrived to take the pay roll to the factory in his automobile.

Grace very distinctly remembered that incident. A slight flush tinged her fair cheeks as she thought of it. Whenever the young man visited the office life seemed to brighten up. Then after the day's work Grace had placed the cash box in the safe and had gone over the books.

"I never let the handbag out of my sight from the bank to the office," she reflected. "Then I placed it for a moment on Jerry's desk while I put my wraps away. Oh, yes, I remember—the bag snapped open. But it was only a minute, and I gathered it up and took it into the cage with me."

Because of the minute she tabulated Grace mechanically walked over to the littel desk that was the post of the office boy, Jerry Lang. She stood racking her brain anew, trying to figure things out. Suddenly she gave a start, leaned over, and from the tiny ink tray on the desk took in a long, thick pin.

"A bank pin!" she fluttered—"not another in the tray like it, and—oh, dear, I'm afraid I see it all!"

Grace made a spasmodic dive for a crumpled-up wad of paper lying among the litter of cards and pen holders. She opened it, smoothing out the conventional bank strip used in binding packages of currency together. It had "$50" printed across it, the date of the day previous, and the initials of the bank where the company did business.

It was all plain to Grace now. She grew quite pale. Then, she almost cried. Then she kept watching for the arrival of Jerry. He slouched in half an hours later. He looked wretchedly worried. Something was wrong with him. Grace saw that at a glance.

"Jerry," she called, and beckoned him past the doorway of one of the inner offices. He darted a frightened glance at her, but obeyed her call. "Sit down," she said, closing the door. "I have something to say to you."

"I can't do any arithmetic," blurted out Jerry. "I—I'm going to leave, Miss Boyce. You see—"

"No, Jerry," interrupted Grace, "you are not going to leave until you tell me all about the fifty dollars you took out of my handbag yesterday."

He Looked Wretchedly Worried.

Jerry tried to face his accuser defiantly. Then he broke down. He gulped, writhed and sobbed.

"I didn't take it out of your handbag," he reclared. "It rolled out on the floor. Oh! I wish I was dead. I don't know what I did it for."

"What did you do with the money?" inquired Grace.

"I met some fellows. I went with them to a pool room. I lost it all, and—don't send me to jail!" he pleaded, falling to his knees. "Don't tell my mother—it will kill her! Give me a chance. I'll slave, dig, work nights to pay it back."

"Not here, Jerry," said Grace softly, but sternly. "You cannot be trusted where there is money around, Jerry. I have thought out what I am going to do for you. I shall get you another place. I shall have to pay that fifty dollars out of my own little savings. What will you promise if I make this sacrifice for you?"

Jerry moaned and bawled. Here and there amid his incoherent sobbings a streak of the real Jerry came out, and Grace ended up the interview in a brief talk. At the end of it the contrite office boy declared she had saved him from an abyss and he would be "true blue!"

Jerry went back to his desk. Grace with a sigh drew a check against her little savings account, thought of poor Mrs. Lang, and hoped she was acting for the best. She was a little surprised when young Mr. Morris entered the office a few minutes later. They chatted for awhile. Then Grace asked him to give Jerry a place at the factory.

Two months went by. Every Saturday evening Jerry called upon Grace at her boarding house. On each occasion he had humbly offered her a dollar of his salary, which she declined to take.

"You will soon be better able to spare me something if you keep on as finely as you have started," she encouraged him.

"How do you know that I am, Miss Boyce?" he asked.

"Mr. Morris tells me about you whenever he comes to the office," explained Grace.

"He's good as gold, he is," stated Jerry enthusiastically. "He seems just glad to advise me and show me how to do things. He advanced me last week. And he always speaks of you, Miss Boyce, as gentle like and interested," and Grace had to turn away her head to hide the hot, quick blushes that came to her face.

The last day of the fiscal year a letter was handed to Grace by the office manager. It was from the president of the company, and it inclosed a check for two hundred dollars. "For faithful services," the letter read, "the amount to be duplicated as an advance in salary for the coming year."

Grace was regarding it, dreaming over what the unexpected windfall would mean to her, when a smiling face pressed close to the netted wire. "I heard about that," spoke Alden Morris. "You deserve it, Miss Boyce."

"What will I ever do with so much money?" inquired Grace in pretty, affected dismay.

"Will you let me advise you?" asked young Morris, quite earnestly, and stepping into the cage.

"I—I should be glad, why, yes," stammered Grace, something in the impressive manner of the speaker setting her heart in a strange flutter.

"Then," said Alden, lowering his voice to a tender whisper, "buy yourself a wedding outfit."

"A wedding outfit?" repeated Grace in a gasp.

"That is," smiled Alden, "if you will have me for a husband. Listen, Miss Boyce—Grace. You and I have been sharing some work together. I mean Jerry, you know. I was in the inner office the day you so nobly sacrificed your little earrings to save the boy. I have been co-operating with you ever since. He is going to be a credit to both of us. Won't you continue the delightful partnership, dear?"

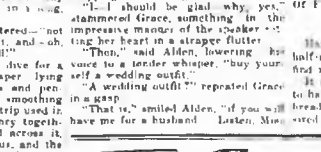
Grace could not say him nay, and the guest at the wedding who congratulated them with honest tears in his eyes, was the misguided boy they had started on the street called Straight.

"The Stately Homes of England."

The stately homes of England
How stricken now they stand,
The cottage homes of England
Are lonely through the land.
And Flanders from her riven side
Sends seagulls in with every tide.

The lilacs bloom in England,
But their fragrance breaks the heart.
The hawthorn glows in England,
But it has a poisoned dart,
And Flanders with her crimson flowers
Has stained the tender hue of ours.

The nightingales of England
Still cry from hill to hill,
The cuckoo sings through England,
But other songs are still,
And Flanders from her fields of red
Sounds as the Last Post of the dead.



The sad waves cry round England,
The sad clouds weep and brink,
But brave man smile in England.
Brave women work and wait,
And Flanders from her deathless pyre
Waves high her torch of holy fire.

The stately homes of England,
How glorious now they stand!
Oh, the cottage homes of England,
How g st they are and grand!
And heroes kiss the sacred sod
Of Flanders and give thanks to God.

—S. M. Smythe.

Have the kitchen shelves placed a half-inch from the wall and you will find it the greatest help in cleaning.

It saves many slices of dried bread to have the loaf brought to table on a bread board and each slice cut as desired.

About the House

DOMESTIC SCIENCE AT HOME.

First Lesson—Food Constituents.

The secret of success in successful cooking lies with the housewife who knows food constituents, their value and the proper method of preparing, as well as how to plan a diet for invalid, child or grown person.

Many women read technical terms and become frightened and bewildered. This is very foolish. Just remember how hard it seemed to do decimals before you mastered them, and how quickly you understood after a little practice. It is just the same way with food terms. Learn the few simple principles and become mistress of the finest profession in the world—become a practical and scientific housewife.

The five principal elements of food necessary to maintain the health are: Proteins, carbohydrates, fats, mineral salts, water.

Proteins.—The source of proteins are meat, milk, cheese, butter, eggs, fish, grains, and legumes. Proteins contain carbon, hydrogen, nitrogen, sulphur and sometimes phosphorus. Containing about sixteen per cent. of nitrogen, their chief use is tissue building, repairing waste and making muscle. They also supply the same amount of heat as starches.

Carbohydrates.—Their source is in starches and sugars, and they are found chiefly in green vegetables, grains and fruits. Carbohydrates are composed of carbon, hydrogen and oxygen in small granular grains inclosed in cellulose coverings. Carbohydrates are used to supply energy or power to do work. They enter, to a small extent, into the process of building tissue. They also furnish heat. Starch, by the process of digestion, is converted into a dextrine and then made into a convert sugar. This change takes place in the intestines.

Fats.—The source of fats is in beef, lard, chicken and other compounds of an animal source, and, in olives, corn, peanut and cottonseed oil as a vegetable source. Vegetable oils are free from all disease. Corn oil is superior to all domestic oils, it is the by product of corn from which cornstarch is made. In composition fats contain carbon, hydrogen and oxygen. Fats in the body furnish a greater amount of heat than starches. They are used also for building tissue. A large amount of fat must be used during cold weather than in hot weather, for the heat radiating over the surface evaporates more quickly in the cold, or, in other words, the cold oxidizes this body fuel.

Mineral Salts.—The source of inorganic salts is principally in green vegetables, grains, milk, meats, eggs and fish. The salts found in foods are calcium, iron, chlorine, phosphurus, magnesium, sodium, sulphur and potassium. Salts are used to regulate the body; they are also needed for the formation of bone and teeth structure and appear in tissue building.

Water.—Water is the most necessary of all foods; it forms a part of all tissues and is the important factor in the blood stream. It is pre. It carries nourishment to the blood and regulates the bodily process of elimination.

Canning Gooseberries.

To can gooseberries, stem and remove the tails, then wash in plenty of cold water and drain. Pack in jars and fill with boiling water or a heavy syrup. Place the rubber and lid in position and process in a water bath for thirty minutes. Remove, and test for leaks, then store in a cool, dry place. Label and date.

Canned Gooseberries for Pies.—Prepare the gooseberries by stemming and tailing. Place in a preserving kettle and add one cupful of sugar for every pound of prepared fruit. Add one-half cupful of water to a cupful of sugar. Place the kettle on the fire and bring slowly to a boil, stirring all the time the berries are cooking. Boil for five minutes, then pour in sterilized jars. Place the rubber and lid in position and process for ten minutes in hot water bath after the boiling starts. Remove and cool and then test for leaks.

Gooseberry Jam.—Use two quarts of gooseberries. Stem and tail them and place in a preserving kettle, adding one and one-fourth pounds of sugar and two cupfuls of water. Cook until very thick and pour into sterilized glasses. Cool and cover with paraffin. Store in the usual manner for jellies.

Gooseberries may be combined with other fruits when making jams, such as strawberries, raspberries, blackberries, huckleberries or currants.

English Gooseberry Jam. — Two quarts of gooseberries, two cupfuls of water. Place in a small preserving kettle and boil until very soft, usually about one-half hour. Rub through a fine sieve and allow a measure of sugar to each measure of fruit pulp. Return to fire, cook slowly until thick. Pour into glasses or pots and cool. Cover with paraffin.

Floor Fillers.

Cracks and crevices in old floors may be filled with the time-honored paper pulp, made by boiling newspapers to jelly, draining, and mixing with glue. The substance is jammed in with a knife, then painted over.

Hot sawdust, mixed also with glue, is more satisfactory, and saves time. Cornstarch, moistened with turpentine or linseed oil, makes an excellent filler for porous-grain wood, to be applied before paint, stain, or wax. If desirable, tint with ocher, burnt umber, or lamp black.

Commercial fillers ready to apply may be bought at any paint store and, of course, save time and trouble.

THE PHYSICIAN IN THE WAR ZONE

WAR TAKES HEAVY DEATH TOLL OF MILITARY SURGEONS.

In Their Efforts to Save Life They Expose Themselves on the Actual Firing Line.

The military surgeon, according to that revised art of war which began to be on a fateful August day three years ago, is no longer the neutral miniatrant to the wounded. He is a leader of men, he sustains the morale of troops, he restores the slightly injured as speedily as he may to the fighting line, and he fits his fellow soldiers for their trade.

Therefore he is marked for death by a savage foe just as though his scalpel were sword and his tourniquet were trigger. The military necessity of Kaiserism demands the torpedoing of the hospital ship, the shelling of the ambulance unit, the bombing of the dugout where the maimed are in refuge. Hence it is that in this tragedy of Europe the casualties in the medical profession have been much greater than in any other war, for they are relatively equal to the mortality among officers of the line and greatly exceed that of the staff.

The army surgeon, whether he be with troops in the charge or far back from the front, is exposed to peril, for in these days of long range weapons safety is not assured by distance nor by the dictates of humanity. The surgeon volunteers who are going from this country to fill the depleted ranks of their brethren abroad are therefore Knights of the Great Adventure whose chivalry is a rally of self-sacrifice.

The Army Surgeon of To-day.

The army surgeon of the new order was revealed recently in a lecture delivered by Col. T. H. Goodwin, D.S.O., an officer of the Royal Army Medical Corps of Great Britain, who has been on the western front ever since the war began.

"When the battalion is ordered to attack," said Col. Goodwin, "the regimental medical officer should, as far as possible, keep near the commanding officer and move forward with him. If the attack is successful there will be a certain number of wounded in No Man's Land.

"The medical officer should direct one of those who are able to walk to go back, taking shelter as much as possible, until they meet the stretcher bearers of the field ambulance division who are coming up behind. Those wounded who are unable to move should be placed in shelter, in shell craters or trenches, and first aid performed as rapidly as possible.

"The medical officer should not delay here. He must at all cost keep in touch with his battalion and move forward with it. His presence in the newly won trenches will be of immense moral value. He can forthwith set about improvising a regimental aid post, improving shelters for the wounded and attending to casualties as they occur. He should take every opportunity to get in communication either by telephone or messenger with the field ambulance bearer division, which will now, under cover of heavy shell fire, be clearing the wounded from the area through which he has just come."

Some one asked Col. Goodwin how it would be possible for a regimental officer advancing with a battalion to attend to so many wounded.

Death in No Man's Land.

"He can do first aid," was the answer, "but he should endeavour to move forward with his battalion. He can, as a rule, place wounded men in fairly good shelter, and if he can do that with every man he should congratulate himself.

"If he had fifty cases, twenty five would probably be more serious. He cannot manage twenty-five cases without taking at least twenty minutes. He cannot delay long, however, as the battalion is probably going into the next trench, and he must at all costs endeavor to be with them.

"I grant that it is difficult indeed, but we have to do our best. There has been the suggestion to abolish the post of medical officer with the battalion, but I am personally very much opposed to that."

"What about the barrage, Colonel?" asked one of the listeners.

"You get quite a certain number of men killed by this barrage fire in No Man's Land," replied Dr. Goodwin. "It is going on the whole time, of course, but it is astonishing the number of men that you can get safely back through the communicating trenches.

"Out of a total of 6,000 casualties you will probably get back 4,000 to 5,000 right away to the clearing station. Sometimes the wounded have to stay in the front area all day in the August and then when the dressers set to split you get them back. Sometimes it seems impossible, but you can manage to do it."

Speaking of the field ambulance, Col. Goodwin said that it was largely composed of newly commissioned officers with men under them who are little more than boys.

"They go cheerfully and quietly for award," he added, "into positions which can only be described as unmitigated hell."

Dr. Goodwin then tersely laid down some general axioms for the guidance of the surgeon in the field and put especial stress upon this:

"Keep cheery. Your mental attitude will have a considerable effect upon the men."

Medical Corps Heroes.

"Although as the organization of the war hospitals proceeds there may be comparative safety for the surgeons at the bases, the ranks of the profession are being constantly depleted by the demand for first aid on the firing line. This is the duty of the regimental medical officers, to whom Dr. Goodwin refers, and among these there has been the greatest loss of life.

When the war began many of the best surgeons of both England and France were sent to the furthest front. So many of the profession have lost their lives that in these days when a skilled and experienced surgeon is worth as much to an army as a Colonel, every effort is being made to protect the surgeons.

Bolivia, South America, the country of Andean heights, torrid valleys and freezing plateaus—a South American Switzerland that perhaps never will be literally provided with hotels for tourists—has a total of 153 automobiles.

BANG GO SAXPENCE!

It is part of our Service to worry for you, so why should you worry about the high cost of living interfering with your annual vacation.

One excellent buying institution combined with increased patronage is enabling us to give the high cost of living a black eye, and with our assistance you can get more for your shillings than you can elsewhere.

That is why you should spend your vacation in Toronto, Canada, or send your wife and kiddies, they will be very much at home at the Walker House, the Home of Plenty, as the management give special attention to ladies and children traveling unescorted.

HISTORIC FLAGS CREMATED.

Or Buried With Military Honors to Prevent Ignoble Uses.

Britain is the only country which allows its historical flags to go into the pawnshop or auction room. One such flag, after having waved over the 79th Foot for three years during the siege of Gibraltar, was actually found covering the sofa cushions of a tradesman's sitting-room!

In 1896 the 1st Battalion Gloucester Regiment recovered from a pawnbroker at York four flags, which it had borne from 1796 to 1810 through the Egyptian and Peninsular campaigns. There may be seen to-day at the Kendal Parish Church a pair of the old colors of the 2nd Battalion Border Regiment. They were rescued in 1868 by Lord Archibald Campbell from a London upholsterer, who had advertised them for sale at so much per yard.

To prevent old colors meeting with such fates many have been cremated with great ceremony, and the ashes preserved carefully in a box. Others have been buried with full military honors, among them being sets belonging to the King's Own Scottish Borderers and the 2nd Battalion Worcester Regiment.

Field beans planted in June mature a crop in ordinary seasons. Well-drained, limed loam soils of medium fertility produce the best crops.

CANADIAN ORDER OF CHOSEN FRIENDS

A fraternal and benevolent society that protects its members in accordance with the Ontario Government Standard. Sick and funeral benefits and cost rates.

A fraternal visit to a brother and charter lodges in every Province in Canada.

Purely Canadian, social and economical.

Redpath SUGAR

2 and 5 lb. Cartons—10, 20, 50 and 100 lb. Bags.

"Redpath" stands for sugar quality that is the result of modern equipment and methods, backed by 60 years experience and a determination to produce nothing unworthy of the name "REDPATH".

"Let Redpath Sweeten it."

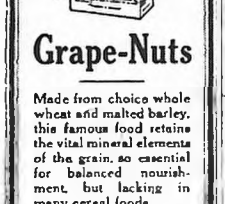
Made in one grade only—the highest!

"The Poor Man's Potato" has become the rich man's luxury. Whether at three dollars a bushel, or twenty-five cents a bushel, potatoes are not a complete food. Two or three **Shredded Wheat Biscuits** with milk furnish more real, body-building nutriment than a meal of potatoes or meat, are much more easily digested and cost much less. Shredded Wheat is 100 per cent. whole wheat, nothing added and nothing taken away—gives mental vim and physical vigor for the hot days. Delicious for breakfast, or any meal, with sliced bananas, berries or other fruits, and milk.
Made in Canada.

REIGN OF THE CROWN PRINCE.

Germany is Ruled by the Sentiments of the Degenerate Prince.

It is customary to look forward toward the reign of the Crown Prince of Germany with a certain amount of foreboding; but in essence, if not in fact, the Crown Prince is already on the throne, says Prof. Shaw, of New York University. It is as credible a belief that the kaiser did not want war as that the heir apparent did. The kaiser seems to have preferred his yacht to the U-boat, but the Crown Prince appears to have chosen more serious pastimes. Just when the kaiser abdicated psychologically in favor of his son is not a matter of recorded date, but the fact remains that Germany of to-day is ruled by the sentiments of the Prince.



The kaiser is a reminiscence, the Prince a harsh reality, and it is the decadent spirit of the Prince which appears, not only at Verdun but all along the Hindenburg line and in the wake of von Tirpitz and his U-boat-age Germany, then, is urged on by the thoughtless impulses of the Crown Prince, while the function of his father seems to consist in expressing regrets for German ruthlessness and in offering prayers for German success. The virtual and psychological ruler is a young man whose attitude toward life can hardly be understood by us without suggesting analogies to Harry Thaw and Dr. Waite.

Critics of national ideals will be unjust with Germany, which still has a place on earth, and false to themselves if they indulge the fond assumption that Germany is false and bad, while all other nations involved in the war are true and good. The difference between Germany and the other nations lies in the fact that the others went to war with the best that was in them to the front, the worst to the rear. France was ready to subordinate national levity to the serious business of defending its implicit ideals. After undue delay England decided to subsume snobbery and selfishness for the sake of thrusting forward its standard notions of civilization. In our own country, we have just begun to let the cardinal ideal of national life take the place of jingoistic talk, stock jobbery and stock robbery. That is, where the other nations have succeeded in fighting according to the best, Germany has taken counsel with the worst.

WOULD YOU HAVE HEALTH?

"Eat less and Breathe more.
Talk less and Think more.
Ride less and Walk more.
Clothe Less and Bathe more.
Worry less and Work more.
Waste less and Give more.
Preach less and Practice more."

Lead suitable for the casing of tea is needed at Amoy, China. European dealers formerly supplied this product.

Grape-Nuts

Made from choice whole wheat and malted barley, this famous food retains the vital mineral elements of the grain, so essential for balanced nourishment, but lacking in many cereal foods.

From every standpoint—good flavor, rich nourishment, easy digestion, convenience, economy, health from childhood to old age—Grape-Nuts food.

"There's a Reason"

WILL THE JEWS RETURN?

Under a Stable Government the Holy Land May Again Prosper.

If is one of the romances of history which will be noted more particularly when the hurly-burly of the war has ceased, that the advance of the British forces which took the town of Gaza was across the very wilderness in which the Children of Israel sojourned for forty years ere they reached the Promised Land. It is not improbable that the world will learn some morning of the fall of Jerusalem, the accomplishment of a task which has been in hand, off and on, for seven hundred years.

The present derelict state of the Holy Land must not be regarded as its natural aspect. There can be no doubt that in the Bible days it was one of the most fertile lands in the world. That was when primitive implements were used in agriculture. How much more fruitful might it be to-day under the stimulus of modern methods?

Ancient prophecy says that after Armageddon the Holy Land shall be restored to its ancient people, the Jews, and it certainly looks as if the fulfilment of this promise were at hand, or, at least, its practicability. If a stable government under the British or French be established, there can be little doubt but tens of thousands of Jews will return to the Old Country.

A NERVOUS BREAKDOWN

Can be Averted by Feeding the Starved Nerves With Rich, Red Blood.

Nourish your nerves that is the only way you can overcome life's worst misery—nervous exhaustion. The fits of depression and irritation, the prostrating heaviness, the weakness and trembling of the legs, the unsteady hand and the imperfect digestion that mark the victim of nerve weakness, must end in nervous breakdown if neglected.

Nourish your nerves by the natural process of filling your veins with rich, red, health-giving blood. Your nerves are crying out for pure blood and the mission of Dr. Williams' Pink Pills is to make new, rich blood. This explains why these pills have proved successful in so many cases of nervous disease that did not yield to ordinary treatment. For example, Mr. Wilfrid Donald, West Flamboro, Ont., says: "Before I began the use of Dr. Williams' Pink Pills I was in a serious condition. I was not only badly run down, but my nerves seemed to be completely shattered. I slept badly at night, and when I got up in the morning was as tired as when I went to bed. I seemed to be on the verge of a nervous breakdown. At this stage I began the use of Dr. Williams' Pink Pills. In the course of a few weeks I felt much relief, and continuing the use of the pills they completely restored my health. I can now sleep soundly, eat well, and am enjoying complete freedom from the old nervous troubles."

You can get Dr. Williams' Pink Pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

STRANGE JAPANESE CRAB.

A Remarkable Example of One of Natures Little Jokes.

Nature is not ordinarily to be accused of trying to be funny, but once in a while she seems to indulge in a bit of humor on her own account.

Of this a very remarkable example is found in a species of crab plentiful in Japanese waters. It bears on its back a Japanese face. It is the face of a fierce warrior of old Japan.

The Japanese have a tradition to account for this curious phenomenon. The story harks back a few centuries, to a period when the seas that wash the shores of their archipelago were much beset by ferocious pirates.

To put a stop to their depredations a fleet of fighting ships was prepared, and there presently ensued a battle of the most desperate kind with the pirate fleet—the buccaneers being formidably organized.

The pirates were defeated, their ships sunk; and, no quarter being given, they were wiped out to the last man. That was the end of organized piracy in those waters.

So far, the story is historically authentic. One is at liberty to believe or not the theory entertained by the Japanese to this day, that the souls of the men slaughtered and drowned in that battle entered the bodies of crabs.

If you discredit the idea, they will show you the crabs, every one of which has the face of a Japanese fighting man on its back. Further more, the face, with its bloated features, is that of a drowned man.

A curious point about this tale crab, as it is called, is that it has a set of supplementary legs, by the help of which, if it happens to be turned over, it can run swiftly on its back.

The Real Dress.

Whatever the fashionable tailor may say, the really well-dressed man of to-days wears khaki.

The needed repairs for the mower and binder will cost no more now than later, and may, if ordered now, saves costly delay.

A Great Remedy

DR. HENDERSON'S Herb Treatment (tablets), the great blood purifier, will cure rheumatism, constipation, eczema, kidney, liver, stomach and female troubles. Price $1, with guarantee, or 6 boxes for $5, postpaid. Henderson Herb Co., Dept. W., 179 Spadina Ave., Toronto.

For Play and Pleasure

In a short-sleeved shirt and a pair of overalls a small boy can start out to do most any of the things he wants to do, such as making a railroad, digging a trench or even fighting the enemy. The overalls illustrated are McCall Pattern No. 7824, Boy's Overalls, in two lengths. Cut in 6 sizes, 4 to 14 years. Price, 15 cents. Boy's Shirt Blouse No. 6420, in 8 sizes, 4 to 14 years. Price, 10 cents.

A fashionable combination of plain and plaid gingham is shown in this morning frock. This is a practical as well as a very smart model for a vacation frock for a small girl. McCall Pattern No. 7760, Girl's Dress, in 6 sizes, 4 to 14 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

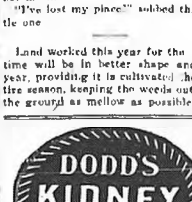
Glove Dust Cloth.

Make a new dust cloth with an attached glove and you will not have grimy fingers and nails after dusting. Sew a piece of the goods eight inches square in the center of the cloth, leaving one edge free. Mark the shape of your hand on this square with chalk or pencil and sew with the machine around the mark, having the wrist on the side left free.

I fell from a building and received what the doctor called a very bad sprained ankle, and told me I must not walk on it for three weeks. I got MINARD'S LINIMENT and in six days I was out to work again. I think it the best Liniment made.

ARCHIE LAUNDRY.

Edmonton.



Awful Loss.

Gertrude, aged 3, sat in her high chair at the dinner table turning about in her fingers a small ear of corn from which she had been nibbling a row at a time. Suddenly she burst into tears.

"What is the matter, dear?" asked her mother.

"I've lost my piece!" sobbed the little one.

Land worked this year for the first time will be in better shape another year, providing it is cultivated the entire season, keeping the weeds out and the ground as mellow as possible.

CHILD-LOVER'S SONG.

O Thou who giv'st what most I prize—
The love of little children;
No gem so precious in mine eyes—
The love of little children!
What hand but Thine could e'er impart
The love of little children?
No wealth an this can fill my heart—
The love of little children.
How fair the hour that first beget
The love of little children!
How drear the day that lighteth not
The love of little children!
Within mine inmost soul inwrought—
The love of little children;
Oh, sweet beyond my sweetest thought—
The love of little children!

—Gerald F. Joy.

GUARD BABY'S HEALTH IN THE SUMMER

The summer months are the most dangerous to children. The complaints of that season, which are cholera infantum, colic, diarrhoea and dysentry, come on so quickly that often a little one is beyond aid before the mother realizes he is ill. The mother must be on her guard to prevent these troubles, or if they do come on suddenly to cure them. No other medicine is of such aid to mothers during hot weather as is Baby's Own Tablets. They regulate the stomach and bowels and are absolutely safe. Sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Watch for overloading, overspeeding, ill-fed and badly harnessed horses, for warm weather is with us, and the horse feels these cruelties more than at any other season of the year.

A late spring, later shortage and the extra amount of land to be broken up for fall seeding will reduce the area planted to roots in Britain this year.

Minard's Liniment Cures Colds, Etc.

A Father's Influence.

The superintendent of a boys' reformatory characterizes the homes as the "first institution for the production of good citizens." He emphasized the influence of a father in the life of the boy, and declared that the mother can not discharge the duty of both parents. A medical examiner in another state declares that of ten cases of youthful delinquency nine can be traced to lack of parental control; the medical examiner finds it the same with accidents. Hanging around a railway yard and "cutting behind" a passing vehicle may be only what father did when he was active, but railway yards have grown more crowded since his time, and a high-powered automobile is not quite the same thing as the grocer's wagon.

MONEY ORDERS

WHEN ordering goods by mail, send a Dominion Express Money Order.

Learn to Swim.

Swimming is an accomplishment of more importance to men, women, boys and girls than any of the other sports, yet comparatively few can swim. As it is easier for children to learn than it is for adults, they should be given the opportunity whenever possible. They love the water as a rule, and if there is no body of water near at hand, let them don their bathing suits and go out into the summer rain for a-frolic. As the suits are easily made at home, the children could afford to have them ready for a rainy day, especially as they save good clothes and furnish so much genuine fun. On an extremely hot day, thus equipped, they may frolic in the back yard with the hose.

Minard's Liniment Cures Garget in Cows.

Good Citizens.

Oh, give us men with visions clear;
With rugged hearts, who know no fear!
Great men of prescience, brave and bold;
Unshaken by the lure of gold;
Who fight for truth, whate'er their fate;
The men, O Lord, to make a state.

When Your Eyes Need Care

For Pimply Faces Try Cuticura

Soap and Ointment

Samples Free by Post

A simple, easy, speedy treatment. Smear the pimples with Cuticura Ointment, wash off in five minutes with Cuticura Soap and hot water and continue bathing for some minutes. Use night and morning.

For pimples, redness, roughness, itching and irritation, dandruff, itching scalp and falling hair, red, rough hands and baby rashes, these fragrant emollients are wonderful as well as ideal for the toilet.

Minard's Liniment Cures Burns, Etc.

Cuticura, Dept. N, Boston, U. S. A. Sold by dealers throughout the world.

City Eye Specialists Tell How To Strengthen Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their sight wonderfully improved, and those who once wore glasses say they have thrown them away. One man says, after using the prescription a short time: "Could not see to read at all when I can read every word without my glasses, and my eyes do not hurt any more, as they would frightfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "Everything seems hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eye strain caused by overwork, tired eyes which induced frame headaches. I have worn glasses for several years both for distance and work, and without them could not read my own name on an envelope or the typewriting on the machine before me. I can do both now and have discarded my long distance glasses altogether. The annoying fluttering leaves on the trees across the street have gone, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Beck, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and ophiphenia. Her eyes when not congested had the dull, suffering appearance usual in such cases. Having run out of her medicine a friend suggested Bon-Opto. She used this treatment and not only overcame her distressing conditions, but strange to say not only my own, but strengthened her eyesight that she was able to discard her glasses for distance glasses and her headache and neuralgia left her. In this instance I should say her eyesight was improved 100%. I have since verified the efficacy of this use of Bon-Opto in many cases and have seen the eyesight improve from one to two lines in a remarkably short time. I can say it works more quickly than any other remedy I have prescribed for eye strain."

Dr. Smith, an oculist of wide experience, says: "I have treated in private practice a number of cases of opthalmic diseases with Bon-Opto and am able to report ultimate recovery in both acute and chronic cases. Mr. B. came to my office suffering with an infected eye, and after I had shown him that an operation for enucleation seemed inoperative. Before resorting to the radical treatment I prescribed Bon-Opto and in 24 hours the suppuration had ceased, the inflammation had begun to subside and in seven days the eye was cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) received the desired help by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instil Bon-Opto after removal of foreign bodies and apply it locally to all burns, ulcers and sores on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, for the number of cases of [illegible] glasses."

Dr. Tupper says: "My eyes were in bad condition owing to the excessive strain arising from protracted microscopical research work. Bon-Opto used according to directions rendered me surprising service. I found my eyes regained their strength and, as much as I have put aside my glasses without distress, I found I could do without them. I also used it and we are agreed as to its results. In a few days, under my observation, the eyes of a soldier in this case were so improved that glasses have been discarded by the patient."

Eye troubles of many descriptions may be wonderfully benefited by the use of Bon-Opto tablets. If you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With this liquid the eyes are bathed two to four times daily. You should notice your eyes clear up perfectly right from the start, and inflammation and redness will quickly disappear. If your eyes trouble you even a little it is your duty to take steps to save them now before it is too late. Many needlessly blind might have saved their sight if they had cared for their eyes in time.

Note: A city physician to whom the above article was submitted, said: "Yes, Bon-Opto is a remarkable eye tonic. Its constituent ingredients are well known to ophthalmic specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through exposure to smoke, etc. I can highly recommend it in case of weak, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, dust or wind. It is one of the very few preparations I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a secret medicine or patent remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time, or refund the money. It is dispensed by all good druggists, including special druggists, also by W. Tamblyn and A. Lyttle & Son, Toronto.

EATS DIRT
GILLETT'S LYE
CLEANS DISINFECTS

FRIENDS.

The friends that love us always,
When we go their way or not,
Are the friends that hearts remember
When the others are forgot.
The friends that stick the closest
When the trouble grows the worst;
The friends that love us always
Just the way they did at first.

Minard's Liniment Cures Diphtheria.

To Canada.

And thou, my country, write it on thy heart,
Thy sons are they who nobly take thy part;
Who dedicates his manhood at thy shrine,
Wherever born, is born a son of thine.

YES! MAGICALLY!
CORNS LIFT OUT
WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.

A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.

This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.

Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.

If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug store for you.

NOTICE TO SICK WOMEN

Positive Proof That Lydia E. Pinkham's Vegetable Compound Relieves Suffering.

Bridgeton, N.J.—"I cannot speak too highly of Lydia E. Pinkham's Vegetable Compound for inflammation and other weaknesses. I was very irregular and would have terrible pains so that I could hardly take a step. Sometimes I would be so miserable that I could not sweep a room. I declared part of the time but felt no change. I later took Lydia E. Pinkham's Vegetable Compound and soon felt a change for the better. I took it until I was in good healthy condition. I recommend the Pinkham remedies to all women as I have used them with such good results."—Mrs. Milford T. Cummings, 322 Harmony St., Penn's Grove, N. J.

Such testimony should be accepted by all women as convincing evidence of the excellence of Lydia E. Pinkham's Vegetable Compound as a remedy for the distressing ills of women such as displacements, inflammation, ulceration, backache, painful periods, nervousness and kindred ailments.

GLAMIS

The advance of the tanks and Canadians in action in France—Town Hall, Paisley, July 23rd.

The Mystic Tea given on Saturday evening in connection with the Red Cross Society was certainly a decided success. A large crowd attended, and all report a good time. Mrs Deehan, the president of the Society, and Mrs Jos Wrightson are to be congratulated upon the way in which they worked to make it so. The amount raised was about $50.

Miss Flossie McLennan left on Thursday last for the west, to visit her sister, Mrs Arthur Pinkerton, at Rocanville, Sask.

Mrs Wood and daughter, of Superior, Mich., are visiting at the home of the former's mother, Mrs K McLennan.

Mr Wm Cunningham has returned to his home in Alliston.

Miss Lily McKinnon returned to Brantford on Tuesday.

Mr and Mrs Burgess, Mr and Mrs Cunningham and Miss Laura spent Sunday at Mrs Alexander's, Bervie.

Mrs McCormick, who was anxiously looking for her son Tom since he was wounded in France, received a letter saying that he is now in a convalescent hospital, and doing nicely.

Mr and Mrs Alex Kippen and Miss Mary McDougall of Tiverton motored up to J C McIntyre's on Sunday afternoon.

Miss Pearl Francis and Miss Cuthbertson of Toronto are visiting at Angus Campbell's and Murdoch McKay's.

Mr Duncan Guest of Armow visited his uncle Jim Guest last week.

Mr and Mrs Pennabaker, of Hespeler, and their children are visitors at Mr. John Deehan's.

Dick Kirkton is unfit for work these days, owing to a kick from a horse, the results of which might have proved serious.

The many friends of Craig Tibb were very sorry to hear that he had fallen in action. Craig went overseas about the beginning of the war. He was twice wounded, and the second time he succumbed. His father, the Rev Mr Tibb, was pastor of St Paul's church here for a number of years.

Visitors at W J McKeeman's are Miss Lillico of Chesley and Miss Annie Hendry of Toronto.

Pte Roddie Thompson is home for a few days from Camp Borden.

Mrs Neil McFarlane returned from visiting her daughter in Meaford, accompanied by her son-in-law, Mr. Pocock, and little daughter.

Visitors at Jos Wrightson's on Saturday and Sunday were Mr and Mrs Gilchrist, Mr and Mrs Porter of Bradley, Mr and Mrs Semple of the B line, Kincardine.

Mrs. Astell of Saskatoon, Mrs. Grunder and daughter of 10th Kinloss were visitors at Neil McClure's on Sunday afternoon.

Miss Reta McKinnon is to be congratulated on the success of her pupils. The three who tried all passed the entrance examination.

Maggie and Walter Patterson visited Gillies Hill friends on Sunday.

Mrs A McFadyen spent a part of last week visiting her sister, Mrs D Allen, of this concession.

Miss Stewart, of Bluevale, has been engaged as teacher in S S No 12 for the coming year.

W J Allen has purchased a car.

Mrs M Morrison, of Toronto, is spending a few weeks with her aunt, Mrs D Allen.

Mrs Alex McGregor is seriously ill at present with typhoid fever.

The recent heavy rains did considerable damage to the grain and corn crops in this section. A culvert opposite lot 18 was washed out and W E Patterson's footbridge was carried about a mile down the stream.

Pte A Lillico, son of Mr and Mrs A Lillico of this con., is seriously ill with trench fever. Archie is having a rather hard time at the front, having only recently recovered from a dose of Kaiser Bill's gas.

A pretty wedding was solemnized at 5 p m on July 4th at the home of Mr and Mrs D Keith, when their daughter Mary became the bride of Herbert Fiddis, of Norwich, son of Mr and Mrs Geo Fiddis of Deant. The ceremony was performed by Rev J A Hills, in the presence of a large number of relatives of the contracting parties. The groom was supported by Geo Keith, brother of the bride, and Miss Daisy Fiddis, sister of the groom, was the bridesmaid. Mrs H Williams, of Toronto, a cousin of the bride, played the wedding march. The bride looked beautiful in a dress of white silk marquisette. Her travelling suit was navy blue duchesse satin with white panne satin hat. Mr and Mrs Fiddis left on the late train for Owen Sound on a short honeymoon trip, but have since gone to their home in Norwich.

TENTH CON. BRUCE

War pictures, comedy and western thrillers—town Hall, Paisley, July 23rd.

The farmers are anxiously looking for dry weather to start the haying. Roots are still unhoed, and in some divisions road work is still unfinished.

Mrs Bert Atkinson and children, of Wingham, are spending vacation at her old home here.

Mr Will McLean, of the Grove, Sundayed at Mr Alex McDonald's.

Rev Mr MacNab, of Underwood, got quite a surprise when his auto ran head first into a big open ditch opposite Mr J Irwin's on this line. A number of good Samaritans soon gathered around, hauled the machine out of the ditch, repaired the broken parts, replenished the rev. gentleman's failing energies with a good supper, and sent him on his way rejoicing.

We notice by the minutes of our Tp Council that the County rate for 1917 is not much in excess of that of last year, compared as follows:

	1916	1917
General Co. rate	$6552 00	$6720 00
Municipal equivalent	142 60	146 55
" war tax	3016 00	3016 00

While motoring from Kincardine last Sunday afternoon Mr J Caldwell, with his wife and two daughters, had an experience that will will serve to keep their nerves on edge for some time. When coming east on the 10th of Bruce, opposite Mr Howe's, they suddenly came up to two large pigs feeding quietly on the roadside. One of the porkers walked away with a grunt and a nod, as if to say, "You can have all the road, for my part." But the other one was a real road hog, and decided at once that he should have all the road. The first thing Mr Caldwell knew Mr Pig had charged the auto and swung the front end bodily off the road into a large bog hole. Mr Caldwell, with good presence of mind, turned the car as squarely as he could to make the plunge into the slime and mud. By applying the emergency brake he stopped his machine a few feet from a telephone pole. With the car sitting in about three feet of mud and water, and a pig running away none the worse of the collision, you can imagine the driver would not be in a very pleasant mood. With the help of a wire stretcher and a number of willing hands the occupants of the car were soon on their way none the worse for the accident, which might have had a more serious ending. As the reeve of the township was one of the rescuing party it should be vividly impressed on his mind that the laws governing live Stock running at large on the public highway should be enforced.

Underwood L O L held a bumper picnic at the lake shore on Saturday afternoon. A large crowd was present and thoroughly enjoyed the outing. A game of baseball was indulged in, the contracting parties being the boys from the 10th and 12th cons. Neither side scored a game when time was called, and the speaking of the afternoon commenced. Mr Peter Dobson, deputy-reeve of the tp, made an able chairman for the occasion. Speeches were delivered by Mr Sayles of Port Elgin, County Master Green of Southampton, Mr J Nuttall, Mr Howe and Mr McDonald. Music was furnished unstintingly by Messrs Snowdon and Vennard on the fife and drum, with our own Charlie McDonald on the bagpipes. Mr J Gregg also furnished music with the phonograph. A number of races were competed for and good prizes given. In the fat men's race Peter Dobson proved to be the winner with odds against him of 20 to 1; Peter is some sprinter, although he doesn't look it at the start, but he finished strong and half a neck in the lead. The women's race furnished some excitement, and it would not do to repeat all the funny incidents that happened. There was plenty to eat for everybody for dinner and supper, and all went home well pleased with the day except Julius Cope, who had a desire to see the baseball game finished. Julius makes a good umpire and shows no partiality.

Soldier Victim of Spinal Meningitis

Sergt. Michael McNab, of the 160th Bruce Battalion, died on July 1st, in the Westcliffe Canadian Pioneer Hospital, England, after a week's illness from spinal meningitis. The deceased was in his 30th year and was the son of Mr and Mrs Michael McNab, of Cheptowe.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

The most successful sale of shorthorns in Canada is a quarter of a century was held at Elora last week when Messrs Watt and Gardhouse sold sixty-three head exclusive of calves at foot, for $49,150.

PINKERTON

July 23rd, town hall, Paisley—moving pictures of tanks and Canadians in action, also thrilling western films and comedy.

Miss Mary McKee, of Stratford, is spending holidays at her home here.

Mr and Mrs Semple, Tiverton, visited at D Pinkerton's last week.

Rev and Mrs Gale and daughters Hattie and Gladys, leave this week for Alma, where they will spend vacation. Rev. A. Budge, who is well known here, will preach on Sunday next.

Mr Jas Gale, of Alma, spent Sunday at the manse here.

Mr Dennis Donnelly, of Denver, Col., renewed acquaintances in this vicinity last week.

On Sunday afternoon a memorial service in honor of the late Pte Edgar Garland will be held in the Aglicau church here.

Rev A Shore, a former rector of the Anglican church here, preached last Sunday to a large congregation.

Congratulations are due Miss Ethel Donnelly and Norman Alexander, as they have successfully passed the entrance examination.

Miss Ida Overand, of Stratford, visited at Alf Fiddis' on Sunday.

Miss Walker, of Parkhead, visited Miss Myrtle Garland last week.

Word was received by Jas Murray that his grandson, Colin Murray, and only son of Wm Murray, a former resident here but now of Vancouver, had been killed in action.

Mr and Mrs Herb Fiddis visited friends in the village last week.

At the regular meeting of the Red Cross Society the members sent the following motion of sympathy to Mrs S Garland:

Moved by Mrs T Birrell, seconded by Mrs Geo Bell, That we, the members of the Pinkerton Branch of the Red Cross Society, desire to express to Mrs. S. Garland the very deep regret with which we learned that her son Edgar had fallen on the battlefield in France, fighting for the cause of liberty and justice. Those of us who have known Edgar from his childhood have always admired him for his upright and manly qualities, and feel that his death is not only a great loss to his family but also to the community. We desire to convey to Mrs Garland our sincere sympathy with her in her sorrow, and also to express the hope that the knowledge that her son made the supreme sacrifice for such a noble cause will in a measure sustain her in this time of trial.

SECOND CON. ELDERSLIE

On Monday evening, July 9th, the residents of this locality to the number of about a hundred assembled at the home of Mr and Mrs E L Manley to honor their only son, who recently enlisted for overseas duty, and is now in training. Mr D Walks was appointed chairman by the gathering, after which Miss Eva Somerville read the following address:

Pte Clarence Manley.

DEAR FRIEND—We, your friends and neighbors, have gathered here this evening to spend a social hour with you, having learned that you have answered to the call to arms as many more have since that memorable day in August, 1914 when the Kaiser tried to crush humanity. You have grown up in the neighborhood and are known to all. We will miss your good comradeship and cheery ways during a favorite of all we could not let you go without showing our admiration of the stand you have taken in the world wide war. We ask of you to accept this watch and purse as a slight token of our esteem and friendship. We hope in the near future to have you back with us again on the floor and drum, with our own Charlie McDonald on the bagpipes. Mr J Gregg also furnished music with the phonograph. A number of races were competed for and good prizes given. In the fat men's race Peter Dobson proved to be the winner with odds against him of 20 to 1; Peter is some sprinter, although he doesn't look it at the start, but he finished strong and half a neck in the lead. The women's race furnished some excitement, and it would not do to repeat all the funny incidents that happened. There was plenty to eat for everybody for dinner and supper, and all went home well pleased with the day except Julius Cope, who had a desire to see the baseball game finished. Julius makes a good umpire and shows no partiality.

Pte Manley replied as follows:

DEAR FRIENDS—Words fail me to express my thanks for your kindness in presenting me with such a handsome watch and purse. I shall always keep them as a token of your esteem and friendship. I am glad to be able to do my bit for the Empire, and I hope to be back with you soon. Thanking you all once more.

Mr Manley then thanked the ladies for the refreshments they had provided, and the company dispersed after singing the National Anthem.

EBENEZER

Two big moving picture shows in one, Town Hall, Paisley, July 23rd.

Mr and Mrs Andrew Stephenson of Elsinore, visited at Mr Robt Quigley's on Sunday.

We are glad to report that Mr Robt Alexander, who has been in the Walkerton hospital for some time, is able to be around again and is visiting his friends here.

Mr and Mrs Dwight Potts spent Sunday with friends at Arran Lake.

Mr Walker and Jim Kirkland of Allenford and the Misses Kirkland of Montreal visited the Kirkland family here last week.

Mr and Mrs Sam Fleming visited Mr Joe Rathwell's in Greenock on Sunday.

Quite a few from here attended the Mount Hope garden party last Friday evening. Our baseball team were again victors over an all star team composed of players from the Paisley, Arkwright, Salem and Mount Hope teams.

Our Sunday School here united with the Mount Hope school, held their first union picnic on July 7th. Although the day was very unfavorable for picnicing a good crowd attended. The big rink proved to be not only good for winter sport but also turned out to be a regular gymnasium for summer sports. In the young married men's race Art Rushton won out. He was closely followed by Earle Grant. In the old married men's race Chas Thomas touched the tape first but was given a hard heat by Bob McKelvey. In the married women's race Mrs Sam Fleming was the winner. In the evening a short programme was given, the main feature of which was a presentation to the Martin boys. The following address explains it all:

To George and Wilbert Martin:

DEAR BOYS—We have learned of your enlistment for service of king and country. While we regret the necessity of the action we rejoice to think that you have made the sacrifice. The need is great, and we are proud to know that you appreciated the fact and responded to the call for help. Two of your brothers have answered the call already, one of whom is at the front in France, and the other by this time may be there also. Providence has protected them so far, may their good fortune continue. It is a great record—four sons from one home quite unlike our French-Canadian slackers, whose cowardice is apparent to the whole world. We will miss you much from our games, and will anxiously watch for the day of your home coming. Please accept from your loving friends here these two safety razors, also this purse, and from the hockey club these two fountain pens, with which you will not forget to correspond with the folks at home. Our sincere sympathy goes out to your parents, who have not hindered their four sons from doing their duty on the hour of national stress. We hope and pray that this cruel war will soon be over, and that He who rules over all will bring you back to us again.

Signed on behalf of your many friends.

CREEDS BECOME UNITED

One Effect of War Is Much Greater Tolerance

A mingling of creeds and a broader, more practical brotherhood mark the religion of to-day. Men of all creeds, Protestant and Catholic and other faiths—are together in the army. The illusion of separating secular and sacred no longer generally prevails. In the true life all things are sacred. So it is off duty in this great struggle. Hence it is that church auditoriums are thrown open for recruiting and national service meetings, and in these side by side may Catholic and Protestant speakers.

A great factor in all this has been the Y M C A in every camp from the Atlantic to the Pacific, with its broad programme centering about the "Red Triangle" and its almost endless ramifications. Here business of every kind is transacted for the soldiers, wholesome athletics fostered, and social, education al and religious needs ministered to. Here, too, under the same roof the Roman Catholics meet for mass, the Anglicans for Holy Communion, and battalions representing various faiths for church parade. Surely the outcome will be a religious brotherhood never yet experienced, with a full-orbed religion never before realized. The old narrowness and exclusion will be buried never to rise again.

A summary of all experiences, then, must show a magnificent ennobling of life and character. In claiming this there is no gainsaying the fact that the war is dehumanizing, brutal and all that is evil. In its support not a syllable of good can be uttered. The present awful struggle will more than ever brand it as a veritable hell. And yet because these conceptions prevail in Canada even in a much less intensified form than now, and because of an utter absence of the war spirit, it is possible, because of war's savagery, to reach out to a higher goal than before this cruel struggle was thrust upon the Allies. The goals already indicated in temperance and other things evidence this.

There have been untold sorrow and suffering, but out of the many, many times heated furnace of affliction is coming the refined gold. There have been inestimable sacrifices in the giving up of all that is noblest and best, but it is the giving which brings an increase more and more. Canada is surely reaching a higher and better life, and will continue on to yet nobler and more worthy goals and aims.—From "The Dominion in War Time," by J. P. Gerrie, in the American Review of Reviews.

Child's Leg Broken

Five year old Gordon Harwood, of Toronto, who with his mother has been visiting at Mr Sam Rae's, Elora road north, had his leg broken on Monday. He and his mother (formerly Miss Lily Hall), were driving on the Elora road with Miss McCurdy of Vesta, when the horse ran away, throwing the occupants of the buggy out.

Successful Garden Party in Town

It having become almost locally proverbial that a crowd cannot be attracted to a garden party unless it is held somewhere out in the country surrounding this hub of the universe, the Methodists had arranged to hold theirs at Mr Josh Bell's in the east town plot. The elements conspired against this, however, and the result of the plot was another torrential downpour of rain on the date selected July 19th, and it was called off until the next evening, and the place changed to the church grounds. Remarkable to relate, these changes in plans did not culminate in any misfortune, in fact the financial results seem to prove that a garden party can be made a success right in town after all. The proceeds amounted to $121. One of the chief attractions of the programme was the appearance of Wm McDonald, M.P.P., who delivered an excellent address and got a splendid hearing. The orchestra gave a number of selections. Solos were sang by Miss E McInnes and Miss Mabel Stanley, also a couple of numbers by a double-male quartette. The pastor, Rev Mr Crighton, was chairman.

—Miss Jean Hamilton is visiting friends in Ottawa.

—Mrs P. O. Hogan is up from Guelph for a few days.

—Mr J. E. Laidlaw is spending a vacation at Lion's Head.

—Pte W. S. Mitchell was home from London over Sunday.

—Mr and Mrs McInnes, of Chatsworth spent Sunday at Dr Allen's.

—Miss Mary Webb, of Glamis, is visiting at Mr J. McIlraith's 4th Elderslie.

—Mrs. Longheld, of Toronto, is visiting her parents, Mr and Mrs Donald Munn, Goldie St.

Miss Mary Kerr returns on Wednesday from a visit at St. Thomas and Courtright.

—Mr and Mrs Filshie, of Mount Forest, are spending a few days in town at Mr A. Fraser's.

—Miss L. Skelsby, of Toronto, is spending holidays at the home of Mr E. C. Wilkins.

—Miss Margaret Lamont, of Port Elgin, was visiting in Paisley, at Mrs J. McKinnon's and D. McKenzie.

—Mr and Mrs Dan Brown and son came up from Walkerville on Friday to visit their friends here.

—Rev and Mrs Neilson left on Monday for Liberty, N.Y. where they will spend a month's vacation.

—Mrs Aceltine and daughter of Mason, Mich. are visiting at the home of her cousin, Mr J. F. Richardson.

No Paper Next Week

THE ADVOCATE staff is overcrowded with work and also in need of a short vacation. For these two reasons only we will ask our readers to forego the pleasure of receiving a copy of this journal for the first week in August. Our next issue will be on Aug. 8th. The office will be open every day.

—Mr and Mrs Colbeck of Cairo, Mich. are over on a visit to the latter's sister, Mrs D. Hopper, at Ellengowan.

—Mr John A. Black and daughter Miss Jean, of Chesley, spent the week end at D. A. McGillivray's 12th of Bruce.

—The Williscroft Women's Institute intended holding a garden party on July 31st, but have postponed it to Aug 14th.

—Mr Rubi Irving was presented with a gold locket by the Oddfellows before leaving town for Toronto with his family.

—Mr Thos McIlrath, of Goldie St., has received word of the death of his son-in-law, Mr John Cranston, who lived near Olds, Alta.

—Mr Michael Sullivan, of Dawson Que., Col., is visiting friends in Brant and spent the week end at the Stothart homes in Elderslie.

—Mrs. Jas. McGillivray and Mrs John McKinnon were visiting in Port Elgin last week, guest at the home of Mr. Robert Chalmers.

Friends here have received word of the death of Mrs. Davidson, of Mason, Mich., which occurred suddenly. The deceased was formerly Agnes Rae, a daughter of the late J. P. Rae.

—The Red Cross Workers of No. 15 Bruce shipped this month to Red Cross headquarters in Toronto: 12 feather pillow, 18 pillow slips, 12 suits pyjamas, 15 flannel shirts, 84 pairs socks.

—Mr and Mrs John McInnes, 10th Bruce announce the engagement of their eldest daughter Katherine to Mr Howard Norris of Goldstone Ont., the marriage to take place quietly early in August.

Motor to Southampton for Picnic

To have their picnic postponed because of the heavy rain on July 12th, is not going to be much of a disappointment to the Sunday school pupils of Paisley after all. Instead of holding it in Riverside Park, as intended on date referred to, the pupils and teachers are to enjoy a much greater treat—a 35 mile motor ride and an afternoon at Southampton beach. This has been made possible by the generosity and kindness of 30 motor owners of town and vicinity who will form the transport service for the occasion. Teachers and pupils will meet at their respective churches at 12 o'clock, noon, and the autoists are requested to go to their own churches first to get their loads. Provisions will be taken to the town hall to go by truck.

Everything for the Bugs

Paris Green, Arsenate of Lead, Bug Finish, Bug Death, Bluestone, Hellebore, Insect Powder, Creolin, Sabidilla, Moth Balls, Instant Louse Killer, Fly Killer, Etc.

LOST IN THE DESERT

Strange Adventure of a Country Girl Alone in a Big City.

By Gertrude Mary Sheridan.

A lonely hour, a lonely spot, and the loneliest girl in the world looking out over the fast darkening lake in a dreamy, desolate way. Nellie Danvers had come to the beach of the great city's breathing spot after a hard day's work.

She had wandered purposely away from the crowds. A sense of utter friendlessness overcame her. A sad, far-away look was in her eyes. Life seemed very hard to the young girl. An orphan, leaving distant relatives in a country village a year previous, she had come to the city to and herself disillusioned, lost in a desert.

She had learned how to operate a typewriter and had secured a subordinate situation at six dollars a week. Humdrum, dragging labor. She felt that it was only a step to the sweat shop or the sales counter if she lost her present position.

"Perhaps I am worked out," she thought. "A week in the country might influence me to face the dreary winter with a brighter spirit. It is useless to consider that, so I'll try and be content. There are the books and my painting—oh, dear!"

Nellie drew back with a timid start. A man had come rushing from a line of bushes, two little children with him. In the moonlight glow his face showed pale, delicate and refined, but his eyes shone like living sparks of fire.

"Quick!" he said, his glance burning full into the face of the shrinking girl. "These two children—take them. Where do you live?"

Some influence Nellie could not resist compelled her to reply in a tremor:

"Twenty-two Borden place."

The man pushed the children towards her and then dashed down the beach. A second man came into view on a swift run. He approached the bewildered Nellie.

"The man who had these children"—he spoke rapidly—"which way did he go?"

Mutely Nellie pointed. The man ran on. He, too, disappeared. She looked down at the children. One had clasped her dress, hiding her face in its folds, and was sobbing wearily. The other stood staring about her as if half stunned by the alarming occurrences of the moment.

Amid her own friendlessness Nellie's heart went out to the deserted little ones. She sank again to the sand, drawing them towards her. They folded into her caresses like

"Lock the Door."

"Lock the door!" he said huskily. "The children—they are safe!"

storm-tossed refugees. First one and then the other of the little ones went to sleep, their heads pillowed in her lap as if from sheer exhaustion.

One hour drew. No one appeared. The dews were falling heavily and Nellie aroused the sleepers. The younger one she had to carry in her arms. Her sister she led by the hand, sleepy-eyed and tired.

There was nothing for Nellie to do but take the children to her room. She placed them on her own bed. She did not sleep the long night through. Every moment she expected a visit from the man to whom she had given her address.

He did not come. In the morning she interested her landlady in looking after the children while she was away. They were charming little ones who wound themselves about both hearts.

A week went by—two of them. Almost unconsciously, Nellie grew into loving the abandoned children.

The mystery surrounding them troubled her, but she found a new interest in life. Nellie had to make her little salary go a long ways now, but the children thrived, loved her and were happy as the day was long.

One evening Nellie had just put her charges to bed when a sharp tap came to the door. She opened it. A stranger hurried by her.

Then Nellie pierced the disguise of the man of the beach. He sank to a chair, breathless. A smile of gladness and relief crossed his face as Nellie took him of the little ones.

"Oh, you brave, true girl!" he said fervently. "I knew from your face I could trust you."

"Open this door!" sounded harshly, and with a crash the barrier burst in. Two men entered.

"We've caught you at last, have we?" said one of them in triumph. "You've led us a long chase."

"Wait," spoke the man; "I wish to make an explanation to this young lady, who has been a friend to my orphaned nieces. Miss, these men are arresting me for counterfeiting. I am innocent."

"It looks like it, when we have just recovered the two best counterfeit plates ever made," said one of the men.

"I made them," said the prisoner quietly, "but when you hear my story you may change your opinion of me. You say you have found the plates?"

"Yes."

"Then I am saved—it was all that I was waiting for," declared the prisoner. "My former business was that of an expert engraver. On account of an invalid brother, the father of two little girls, I gave up my business and bought Rose Cottage at Frampton."

"We know all about that."

"My brother died. I was taken ill and went out of my mind as a result. They placed me in an asylum and the little ones in an orphan's home. A year ago I was kidnapped and taken to a lonely building in the city here. My captors were a gang of expert counterfeiters. They set me at work making a counterfeit plate. Two months ago a complete return of reason came to me in the midst of my innocent mechanical work. I refused to proceed with it. My enemies threatened to kill my little niece if I did not go on with the work."

"Which you did?"

"Yes, and completed the plates the day you made the descent on their den. I escaped. Then, knowing the men had taken the plates with them, I sought to leave the country. I got the children from the asylum. You people found my trail. Since then I have been dodging you, but now—"

"Well, what now?" inquired one of the officers.

"Take a proof of those plates. You will find that the last work I did on them was to delicately trace over both plates one word."

"What was it?"

"'Counterfeit.'"

It took the police a week to verify the story of Adrian Noble, engraver. Then, overwhelming Nellie with gratitude, he went home to Rose Cottage.

A week later he reappeared. Nellie's mind had been full of him since she had first pitied his sufferings, and she was glad to see him.

"I couldn't stand it any longer, Miss Danvers," he said earnestly. "The little ones mourn for you all day, and I—dear young lady, whose goodness to me and mine will transfuse all my life, can I help but respect and—love you? Come home with us to the dear little ones, as my wife."

Peace after strife, love after loneliness, joy after gloom, and rest, glorious rest—heaven on earth seemed to come to the tempest-tossed Nellie at beautiful Rose Cottage.

A LINE OR TWO.

Send me a line or two,
Telling me how you do—
Send me a line or two,
I long to hear!

You are so far away,
I miss you every day—
You are so far away.
Once you were near!

Tell me the little things,
Nothing of wars or Kings—
Tell me the little things.
Dearest to me.

Do your thoughts ever turn
To the far hearts that yearn?
Do your thoughts ever turn
Over the sea?

I cannot let you go,
Because I love you so—
I cannot let you go,
Out of my life!

My love shall be a shield,
My prayers a blessing yield,
For you upon the field—
All through the strife!

Nina Moore Jamieson

The Making of a Genius.

O'er the horizon of earth's common souls,
A great man rises;
me cry, "A genius; favorite of the gods!"
Ah, vain surmises!
The lonely home-ideal and the quiet farm
Have made sublime Love's sacrifice,
'Neath his bright name;
A mother's sacrifice, a father's toil,
Have made his fame.
The lonely home-ideal and the quiet farm
Have made sublime Love's sacrifice.

PURE MILK SUPPLY OF DENMARK

CLEANLINESS OF THE DANISH DAIRY IS AN ART.

A Description of the System in Vogue in the Co-operative Dairies of Copenhagen.

Denmark has attained a distinction of which any nation might be proud—she ensures to her young children the daily, yearly supply of pure milk, says Marion Jameson in The World's Work. Since more than half of the farms of Denmark are associated with the co-operative dairies, it follows that ideal conditions for milking must obtain practically throughout the country.

Milk is the one essential human food. And yet no other factor contributes so heavily to mortality as tainted milk. Unfortunately this universal food is one of the best breeding grounds for good as well as for dangerous bacteria. Introduced into the purest milk, bacteria increase enormously—uncovered milk is always liable to infection.

Cleanly milking from the Danish point of view does not begin and end with a clean cow; it is a far cry from the cow to the child's mouth. The milkers, the pails, the sheds in which the cows are milked, even the walls and the floors; the transit of the milk from the farm to the retailer, and thence to the consumer, are all included in the Danish programme for pure milk.

The Life History of the Milk-Can.

The life history of the milk-can in Copenhagen is interesting. To start with, the cows are kept in bright, airy sheds all day; only in the summer months are they allowed open-air pasture, for the effects of cold and rain on the milk yield are well known. There are no fences in Denmark; the cattle are pegged down and moved systematically over certain restricted areas.

The beasts are examined by veterinary surgeons twice a month; twice a year they are tested with tuberculin, as in many cases tuberculosis of the udder is very rapid and its early detection imperative. These veterinary surgeons not only examine the animals, they also inspect the conditions of the cow-sheds, the food, the milk-pails, and report on the yield and quality of the milk of each cow.

The cows are never milked in the sheds; in the summer they are milked in the fields, where carts are stationed to carry the milk immediately to the refrigerators; in the winter they are milked in scrupulously clean rooms set apart entirely for the purpose. Even the milk-pails are specially constructed; they rest in an outer receptacle filled with crushed ice and salt, and in this way the milk loses its cow-heat, micro-organisms do not develop, and the milk keeps sweet longer than three days.

Refrigeration and Analysis.

The milk is conveyed at once to the refrigerators, where, by the unlimited supply of ice it is cooled to 50 deg. Celsius.

The milk begins to arrive at the premises of the company at Frederiksberg, a suburb of Copenhagen, at about 9 p.m. Upon its arrival it is sampled for subsequent analysis, tasted, and its temperature noted. The milk is analysed both on the premises and in the chemical laboratory of the university, the director of which publishes monthly the result of this daily analysis.

The skimmed milk and ordinary sweet milk are then placed in the cans (as they are) in large ice tanks, after being sampled and tested, there to remain till early next morning, when they are run through a filter, and tapped off into the vessels in which they are to be taken round the town.

The cream, after being weighed and sampled, is filtered, and then bottled in clear glass bottles, which are laid away in ice until delivery next morning. The "children's milk," so called on account of special precautions having been taken to secure its absolute purity and wholesomeness, is likewise put through another filter, and bottled.

The Filters.

The filter consists of two enamelled iron tanks placed at different levels; in the bottom tank are three layers of gravel, that in the lowest layer about half the size of a pea, in the middle layer somewhat smaller, and in the third or top layer a little larger than a pin's head. The layers are separated from each other by perforated tin trays, and on the top of the uppermost layer of gravel are six layers of fine cloth.

The Cans.

The cans, after being filled and weighed, are labelled, tied up with a thread, sealed with a leaden stamp, and taken off to the milk cart for distribution.

In the bottling room the milk is led by a pipe into a machine similar to that used for bottling beer, at just such a rate that it will keep six small taps going. From these taps a skilled bottler fills clear glass bottles, each of which holds an imperial pint; as these are filled, they are passed on to a woman, who corks them on to the necks, who first tie threads across the cork, and then put on a leaden seal, and the bottles are then placed in racks—in boxes put there by different women, each one of whom knows the number he requires.

It is interesting to note the difference between the "sealed" milk bottle of Denmark and that of England, where the milk is "sealed" with a small cardboard disc placed in the mouth of the bottle, which a dishonest dairyman can easily detach and replace. That dreadful, grey, greasy zinc can of the ordinary English dairy is unknown in Denmark.

The company's vans which carry the milk to the consumer are so constructed that the milk-cans are locked in the van, and can only be drawn through dust-proof taps. The man in charge of the vans cannot tamper with the milk at all. The sealed bottles of cream and children's milk are kept in another part of the vehicle in trays containing crushed ice.

Where Cleanliness Is An Art.

The cleanliness of the Danish dairy is an art. There is no superficial swilling of cans and pails. Floors and walls, cans, bottles, and pails all receive the most scrupulous attention.

The cans are cleansed in the following manner. They are first rinsed inside with a powerful jet of cold water, then they are washed with hot water and soda with a brush both inside and outside; after that they are forced through some strong lime and water, on a wheel, and finally they are placed over a jet of boiling water, which is injected upwards into each one.

The bottles as they come in are most carefully washed with hot water and soda; the inside is then scrubbed with a revolving brush and boiling water, and the outside is treated in the same manner with a small hard brush, after which they are carefully rinsed with clean cold water.

Order Fall Fertilizers Now
For Prompt Shipment

Two Reasons Why

A Transportation Reason—So the dealer can order out his fertilizer in cars loaded to full capacity, which hold twice as much as average-loaded cars. Just half as many cars are needed—the other half are set free for other uses. Freight congestion is relieved. You stand a better chance of getting your fertilizer.

A Patriotic Reason—So all our industries, all our national resources, all our efforts can give a full measure of war-time service, and so fertilizers can have a chance to increase our national food supply.

Write for Particulars

SOIL IMPROVEMENT COMMITTEE of the NATIONAL FERTILIZER ASSN.
Postal Telegraph Bldg., Chicago — Munsey Bldg., Baltimore

The gravel used in the filters is cleaned by boiling and stirring it about in hot water and soda till the water comes off quite clean. It is then steamed at a temperature of about 302 deg. Fahrenheit. The filth that comes from the gravel is astonishing and disgusting; yet more care and cleanliness than that shown upon the farms supplying the company could not possibly be observed.

Cleanliness of the Workers.

The personal cleanliness of the workers is no less insisted on; shower baths are provided, and the employes are expected to use them every morning; their clothes are constantly changed, and if any infectious disease occurs in any of the workers it is at once reported. Very wisely the workers are paid full wages while they are on the sick-list, and thus there is no fear of detection or attempted concealment of the complaint. Half washed pails, the breath of a consumptive milkman, or the dirty hands of a dairyman are not permitted in Denmark to carry death to hundreds of little children.

To walk through the airy and spacious rooms, to see the wet and shining floors and walls, and the lustre of glittering bottles and pails is to realize the beauty of cleanliness; and the fresh smell of the place, the white clean clothes of the workers and their well-scrubbed clogs, give one an idea of the purity of the milk that goes to Danish nurseries.

Cuban deposits are estimated to contain all the way from 2,000,000,000 to 3,000,000,000 tons of iron ore.

DOMESTIC SCIENCE AT HOME.

Second Lesson—Water, Its Source and Uses.

Water forms about three-fifths of the total weight of the human body, and on this account it is a necessary constituent of the blood stream.

The solvent properties of water are well known. Water acts as a carrier throughout the body and is an active participant in the process of digestion and elimination.

The temperature of the body is regulated by the presence of water in the blood. The blood flows from the warm interior to the cold exterior of the body, and the water in it acts as a distributor of heat.

The chemical processes of the body are carried on by the aid of water, and for this reason a large amount of it is necessary. Two quarts daily is the least amount that a healthy body can perform its duties on. This amount may be taken either plain or in beverage.

The presence of mineral deposits and gases in water determines its character. Where those substances are of a pronounced nature, we have the so-called mineral water and effervescent waters. These waters have a medicinal value and are very often prescribed by physicians for various derangements of the stomach, kidneys and liver. They are also ordered for use in eliminating the undesirable acids and deposits from the body.

Water can carry many infectious diseases, and for this reason, when the character and source are unknown, all water used for drinking purposes should be boiled.

To alleviate the flat and insipid taste of boiled water, it may be beaten with an egg-beater or filled into bottles and a space left for air at the top and then shaken. This will incorporate air into the water.

Distilled water is the valuable mineral elements removed, and because of this it should not be given to children. Do not use water from wells or springs unless you know that it is free from contamination. If there is an epidemic of any diseases in your locality, play safe: boil all your drinking water.

Drinking a glass of water before meal time stimulates the digestive juices and prepares the stomach to receive food. Drinking water with the meal depends entirely upon the individual; if the individual is stout, it will cause an increase in weight.

Drinking a glass of water after meals will help the process of digestion, as it is well known that all foods must be reduced to a liquid state before absorption can take place. The temperature of water should be from 45 to 55 degrees Fahrenheit. A glass of hot water acts as a tonic if taken upon arising in the morning.

Tested Recipes.

Strawberry Jam.—Hull and wash berries, then drain and cover with sugar. Stand over night. In the morning put in a saucepan and cook until thick. Stir constantly to prevent burning. Fill into glasses and, when cool, cover with paraffin. Store in a cool, dry place. Use three-quarters of a pound of sugar to one pound of fruit.

Cherry Custard.—Line a pie tin with good pastry. Fill with stoned and cooked cherries, well sweetened. Pour over them a custard made of one cup of milk, pinch of salt, one egg and four tablespoonfuls of sugar. Bake in moderate oven until the custard is well set.

Rhubarb Cheese.—Cut one pound of rhubarb in one-inch pieces. Place in saucepan with one-half cupful of water and steam until tender. Dissolve one-quarter ounce of gelatin in just enough water to cover, mix with the hot rhubarb and one pound of sugar, then bring to a boil. Cook for fifteen minutes, Stir frequently. Pour into molds that have been rinsed in cold water and set aside to mold. Fill center with custard made of yolk of two eggs, one cupful of milk, one-quarter cupful of sugar and one-half teaspoonful of vanilla. Cook until custard thickens, then set aside to cool. When ready to use unmold the rhubarb, pour the custard around it and serve.

Gooseberry Jelly.—Two quarts of gooseberries, two pints of water. Prepare the gooseberries and add the water. Then place in a preserving kettle and bring to a boil. Cook until very soft, then drain, using a jelly bag. Measure the juice and allow an equal measure of sugar. Now return to the kettle and boil for five minutes. Add the sugar and boil for five minutes until 221 degrees Fahrenheit is reached. Pour into sterilized glasses and store in the usual manner.

When Food Is Wasted.

When anything edible is allowed to go to the garbage pail or allowed to spoil for lack of proper handling.

When too much is served at a meal. Uneaten portions are left on the plate and later thrown into the garbage pail. Learn to know the needs of your family and serve each no more than you think each will want.

When too much is prepared for a meal. Unserved portions are likely to be thrown into the garbage pail or allowed to spoil. Many housekeepers do not know how to use leftover foods to make appetizing dishes.

When burned or spoiled in cooking. Improperly prepared or poorly seasoned food will be left on the table and probably wasted. Buy food wisely and then prepare it carefully.

When handled carelessly. Buy clean food, keep it clean until used, and be neat in all details of cooking and serving. This lessens waste, and is a valuable health measure as well.

THE COAL SHORTAGE

The anticipated shortage in hard coal affecting thousands of Canadian homes may become a reality next winter if consumers delay their orders to the dealers till fall.

This is the opinion of railway men who say that while they are doing everything possible to assist Mr. C. A. Magrath, Controller of Canadian Fuel Supply, the co-operation of the consumer also is necessary to meet an undoubtedly serious situation.

The hard coal used in the east for the average furnace is imported from the United States, and the problem of supply is largely a problem of transportation. Owing to the shortage of labor and a very hard winter, the Canadian Railways last year faced a severe congestion of traffic, which was accentuated during the winter months by the demand for furnace coal.

In order to prevent if possible a similar condition next season, the railways are concentrating every effort on the supply of coal-carrying equipment. The Canadian Pacific, for instance, has decided to adapt at once and concentrate a considerable portion of additional freight equipment for coal haulage, increasing its capacity during the next six months by cars capable of hauling over a million additional tons during that period. It is withdrawing a large number of cars from other services, is adapting other types of cars, and has just put into force a new rule under which every foreign coal car is at once returned empty to the mines for fresh coal instead of being delayed by loading with return freight, although this move means added expense.

Within a few days the coal merchants will thus have prospect of rapid deliveries, but unless consumers co-operate by giving their orders to the merchants now for their winter supplies, then unloading cars quickly, the congestion experienced last winter will be accentuated and prices may rise to unheard of heights. Consumers are also recommended to be exceptionally careful in the use of coal, avoiding waste and burning wood where possible. The merchants themselves are also being asked to co-operate by having cars loaded to the maximum capacity and by promptly unloading the cars as soon as received, thus releasing them for further service.

The situation apparently is more serious in the East then in the West, owing to the accepted use of box cars in the latter territory. The supply of the open cars required in the east is, however, limited, and unless deliveries are spread more than they have been over the summer months by the recommended co-operation of consumers, the approaching winter will come with tragic force upon the Canadians in Ontario, Quebec, and the Maritime Provinces.

The coal, according to Mr. Magrath, is available. The cars, according to the railways, are coming—but will carry the coal only if the orders are known before winter puts on the brakes.

Redpath SUGAR

Redpath refining methods produce no second grade sugar. We make and sell one grade only—the highest—so that you will never get anything but the best under the name of Redpath.

"Let Redpath Sweeten it."

2 and 5 lb. Cartons—10, 20, 50 and 100 lb. Bags.

Canada Sugar Refining Co., Limited, Montreal.

Strength in Summer

comes to the man or woman whose daily diet consists of cereals and fruits. Meat and potatoes are a heavy load on the digestive organs. The ideal Summer diet is **Shredded Wheat Biscuit**, a food that is 100 per cent. whole wheat and prepared in a digestible form. For breakfast with sliced bananas or berries, with milk or cream.

Made in Canada.

ST. DUNSTAN'S HOSTEL.

The Empire's Training School for Blinded Soldiers and Sailors.

St. Dunstan's Hostel, in Regent's Park, London, is under the direction of Sir Arthur Pearson (himself blind) and Lady Pearson. At the date of the last report, March 31, 1917, the inmates numbered 354 and included men from Canada, Australia, New Zealand, South Africa, Tasmania, and Newfoundland, as well as the British Isles. Already 224 men have passed out, having learned one, and sometimes more than one, of the following occupations: Massage, shorthand writing, telephone operating, boot repairing, mat-making, basket-making, joinery, poultry farming and market-gardening.

Besides the occupations learned, the men master Braille and typewriting and netting work of various kinds. Every man is given a typewriter as his own possession when he has passed the writing test imposed, and is well supplied with Braille literature.

Each pupil has an individual teacher. There are well over a hundred of these teachers, all of whom are voluntary.

Of the men who have left St. Dunstan's and have been settled at their work, provided with plant, given stocks of raw material, and otherwise started in life, the vast majority are earning sums which prove very handsome supplements to their pensions. Indeed there are quite a number of cases in which earnings are on a higher scale than before the men were blinded.

The men of St. Dunstan's are taught to play as well as to work. They have various sports games and debating societies and lessons in vocal and instrumental music.

An after-care scheme is now being planned for which donations will be gladly received. Arrangements are made under this scheme for supervising the men's work; providing their raw material of the best quality and at cost price, for marketing their goods and assisting them permanently all through their darkened life.

These men have given very much indeed for their country, and for you. The least that can be given them in return is to ensure by every possible means that they are placed in a position successfully to fight their stern battle against so terrible a handicap as the loss of sight.

By a Frenchman's invention as a language student hears a word spoken by a phonograph he also sees it appear on a printed roll in conjunction with its translation in his own tongue.

Instant Postum

A table drink that has taken the place of tea and coffee in thousands of Canadian homes.

BRITISH PEERAGES.

Noble Houses Suffer Because of Their Contribution to the War.

Eight peerages of the United Kingdom are in peril of extinguishment, writes the London correspondent of the New York Sun. No fewer than 120 sons of peers have been killed in the war, sixty-two of them heirs to titles. Not all, of course, were only sons, so that not all the titles are in menace. Before the war's end, without doubt, there will be other casualties in noble families, other threats of the extinction of titles.

So a weekly newspaper declares, "measures must be taken to continue" the peerage whose extinction is threatened. Probably there will be; the Englishman's love of a lord is getting to be more than a tradition and a sarcasm; for the noble houses have contributed magnificently of their sons in the fight for the nation's life. The Upper Chamber is an array of mourning these days, and it appeals more strongly to the sentiments and sympathies of the country than in many decades.

When a hereditary peerage confronts extinction by reason of the failure of male issue it comes within the prerogative of the Crown to determine whether it may be continued through the female line. The royal assent has been granted in many cases; it is customary, in fact, when the title is sufficiently old and revered to make it an institution, like London Bridge or the Tower, or afternoon tea. But there is the possibility also of titles becoming extinct through failure of both the male and female lines, and comparatively parvenu titles are by no means certain of maintenance through the royal prerogative.

Of course, the family estates are not dissipated merely because the title ceases. The estates may be disposed of by the usual processes of law.

HOW IS YOUR APPETITE?

Loss of appetite during the summer months is a common trouble, and indicates that the digestive system is out of order. Lacking a healthy appetite many people—especially women—go too long without food, or eat sparingly because food seems to distress them, and it is no wonder that they complain that they are constantly tired and unable to stand the hot weather. This simply means that the digestive system is not doing its proper work, and that the nutriment that should come from the food is not being distributed to the various organs of the body. In other words the blood is growing thin and watery.

You need a summer tonic, and in all the realm of medicine there is no tonic can equal Dr. Williams' Pink Pills. Take a short treatment with these pills, now and notice how promptly your appetite returns and your power to digest food improves. Your food will then do you good, your strength will return and you will no longer complain that the hot weather tires you out.

The best time to begin taking Dr. Williams' Pink Pills is the moment you feel the least bit out of sorts. The sooner you do so the sooner you will regain your old time energy. You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

A GOOD SET OF RULES.

Boys and Girls Would Do Well to Follow Them Out.

Here is a set of rules which every boy and girl would do well to follow:

Be brave. Courage is the noblest of all gifts.

Be silent while your elders are speaking, and otherwise show them deference.

Obey. Obedience is the first duty of every boy and girl.

Be clean. Both yourself and the place you live in.

Understand and respect your body. It is the temple of the spirit.

Be the friend of all harmless wild life. Conserve the woods and flowers, and especially be ready to fight wild fire in forest or in town.

Word of honor is sacred.

Play fair. Foul play is treachery.

Be reverent.

Be kind. Do at least one act of unbargaining service every day.

Be helpful. Do your share of the work.

Be joyful. Seek the joy of being alive.

The Jordan.

Religion, history and nature conspire to make the Jordan the most famous river of the earth. Across it the hosts of Israel were led into the Promised Land; in its waters the Christian rite of baptism had its birth; up and down its valleys many civilizations in the morning of history rose and fell. Perhaps the strangest thing about this famous river is that none of the ancients ever guessed that its mouth was below the level of the sea. It was not until 1874 that accurate measurements were made and the mouth of the river was found 1292 feet below the Mediterranean less than 60 miles away.

Manufacturers of artificial butter in Europe are now largely using oil pressed from copra, which is the dried meat of cocoanuts, instead of animal fat.

GEN. CADORNA GEN. PORRO

IN COMMAND OF ITALIAN ARMIES.

These portraits sent from Italian headquarters by Miss Rosamond Bacutbes, show His Excellency, General Luigi Cadorna, commander-in-chief of the Italian armies, and General Porro, second in command

"PRIVATE" MARY JANE—ARMY COOK

TWO THOUSAND WOMEN ARE NOW COOKING FOR TOMMY.

One of Them Tells of Her Work, Her Pay, and Her Prospects in the Women's Legion.

I'm in the Army, and yet I'm a woman. No, I'm not one of those Amazons you sometimes read about, though I do wear a khaki uniform drawn Army pay from the regimental paymaster's work in the Army, and live in a camp, writes an English woman.

It's a bit of a puzzle, isn't it, to find a woman doing all these things, which are supposed to be the exclusive prerogative of men alone. The secret is that I'm an Army cook.

The average man in the street only associates women's war work with bus-conductors, munition-makers, lift-girls, railway-porteresses, and so on; but, scattered all over the country —some in Army depots, and others in convalescent camps—there are over two thousand women like me, who are in the Army, actually and truly, in every sense of the word.

I've belonged to the Army now for over twelve months, and I'm proud to be able to say that I'm replacing at least one man for the fighting-line by being here. I used to be a cook in private service before I joined; but hearing that there was a scheme on foot to replace men-cooks with women, where they could be found, I offered my services to the War Office.

The Order of the Day.

I had to pass a medical examination, the same as any other recruit, only, instead of going out on a parade ground, and learning the way to march and turn, and performing the antics called Swedish drill, I started as an assistant-cook, working for the time being under a chief man Army cook.

Every morning at six I had to be in the kitchen, to prepare the food for the men's breakfasts, and after this had all been got ready we managed to get our own first meal. After that came the preparation for dinners. We peeled potatoes, cleaned cabbage and other green vegetables, and cut up the eight ounces of meat which is each man's allowance. Some cooks would be making the pastry for pies or puddings, while still others would watch the big joints for roasting, according to their several special abilities.

At about ten o'clock, and when the pots and pans are sizzling merrily, we set about clearing up the kitchen. At eleven we stop work in two batches for "Stand easy"—a quarter of an hour during which we go out for a walk to get fresh air, if fine, or chat under the verandah if it is raining.

At a quarter to twelve we get the dinners out of the ovens and coppers, ready for the orderlies of the messes when they call to collect them, and by noon every scrap of food—except our own dinners—has disappeared from the kitchen. Follows a little more clearing up, and at half-past twelve we dine.

A Dinky Uniform.

Half of us are off duty in the afternoon and the other half prepare the food which Tommy will have for tomorrow morning's breakfast, and see that the water is boiling for tea, and that any little luxuries, such as bloaters, or an occasional steak and tomatoes, and that sort of thing, is cooked and hot by four o'clock.

The evening, after tea has been sounded off, and the kitchen cleared up, is our own. We have half a day's leave each week, and once a month a full day, besides which, when the soldiers get their periodical leaves, we too, go for the same length of time, again taking it in batches, as there must always be someone in the kitchen to cook for the men in camp.

Our life isn't dull by any means, for we have our own quarters and our recreation-rooms, in which are installed games of all kinds, sewing machines for the industrious, and pianos. Besides this, we can attend the camp theatre or cinema, and sometimes one or more of our number figures on the programme at the former.

Two girls share a room, either in the camp itself or in a hostel near at hand, run by the Military Section of the Women's Legion, which is our real employer, and with whom we have contracted to serve.

The Women's Legion.

We wear a dinky uniform. A jacket and skirt of khaki, with a red shoulder strap, bearing the letters, "W.L.," as well as a Women's Legion hand, chosen by Lady Londonderry, who is the founder of the league, while a brown felt hat of the Canadian type completes the outfit.

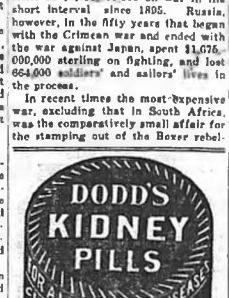
As assistant-cook I draw a salary of $100 per annum, with $6.50 extra per year for laundry, which is also the scale of pay for assistant-waitresses; but when I got promoted to head cook this was raised to $200 per annum, while the washing allowance remained the same.

There is one more step which I can take—that to superintendent cook, where I shall draw the princely sum of $500 per year, with all found, so that I am now getting, even as head-cook, a far greater salary than I should have ever reached in private service. And if I can only realize my ambition, and become a superintendent, I shall be able to put by a nice little sum to act as a nest-egg when I have to leave the Army—if ever I do—when the boys come home again.

This is to certify that fourteen years ago I got the cords of my left wrist nearly severed, and was for about nine months that I had no use of my hand, and tried other Liniments, also doctors, and was receiving no benefit. By a persuasion from a friend I got MINARD'S LINIMENT and used one bottle which completely cured me, and have been using MINARD'S LINIMENT in my family ever since and find it the same as when I first used it, and would never be without it.

ISAAC E. MANN.

Aug. 31st, 1908. Metapedia, P. Q.



THE COSTLIEST OF WARS

Previous Expensive Conflicts Do Not Compare With Present War.

It is certain that the present conflict of nations will place all other wars in the shade as regards expenses. The costliest war on record hitherto, that between Italy and Austria in 1866, only cost $50,000,000.

It was a record, however, because the war only lasted twenty days, or at a rate of half a million sterling per day. England's last war in South Africa cost her approximately $975,000 per day, and, excluding the present war, Great Britain has spent a trifle of $1,125,000,000 on war in the short interval since 1805. Russia, however, in the fifty years that began with the Crimean war and ended with the war against Japan, spent $1,075,000,000 sterling on fighting, and lost 864,000 soldiers' and sailors' lives in the process.

In recent times the most expensive war, excluding that in South Africa, was the comparatively small affair for the stamping out of the Boxer rebellion in China in 1900-1, for the public purse to be drawn on to the tune of $29,125,000; and in contrast to this it is interesting to note that England's campaign against the Zakk Khels ten years ago, only cost the Indian Government $285,000. This appears the merest trifle compared with the total cost of the great American civil war, which has been estimated at $10,000,000,000 sterling.

SAVE THE CHILDREN

Mothers who keep a box of Baby's Own Tablets in the house may feel that the lives of their little ones are reasonably safe during the hot weather. Stomach troubles, cholera infantum and diarrhoea carry off thousands of little ones every summer, in most cases because the mother does not have a safe medicine at hand to give promptly. Baby's Own Tablets cure these troubles, or is given occasionally to the well child will prevent their coming on. The Tablets are guaranteed by a government analyst to be absolutely harmless even to the newborn babe. They are especially good in summer because they regulate the bowels and keep the stomach sweet and pure. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Keep on Cultivating.

Constant tilage feeds growing crops, releasing the plant food which is taken up by the growing plants. All things being equal, crops that are frequently and properly cultivated will yield very much heavier than the same crops that are cultivated only occasionally.

Minard's Liniment Cures Diphtheria.

Many Millions in Sorrow.

The War Study Society, of Copenhagen, estimates the total loss of belligerents in dead, wounded and sick at 19,228,800, and counts about 5,000,000 missing. Each soldier represents on the average a family of five persons, so that the war has brought personal distress to a population greater than that of the United States. And this does not include the death and injury of non-combatants themselves.

After the Movies

You Know how a Lifeless Motion is for Tired Eyes. Read How Some Users Overcame Eyestrain. Learn to Look Forward to Tomorrow's Task with the Same Eagerness as Today's Pleasure. Your Comfort Depends Upon Your Eyes. Care for Them. You Cannot Buy New Eyes: Read Murine and Optical Booklet by Mail. Any Druggist Can Supply Murine. Also Write for Eye Book. The Murine Eye Remedy Co., Chicago, for Free Book.

If a healthy child has a quart of milk a day, besides an egg, and butter on his bread, he probably gets enough fat.

Minard's Liniment Cures Colds, Etc.

Rape is not only a land cleaner, but an excellent feed for dry stock.

Aphids, commonly called plant lice, are small, delicate, winged or wingless insects which feed upon plant juices, draining them from the foliage, fruit, twigs or roots through a beak pushed through the plant tissues. Contact sprays, such as kerosene emulsion, soap washes, nicotine solutions, etc., must be used to kill aphids.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If you druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

Little Son Was A Pitiful Sight

With Ringworm Which Turned to Eczema. Just One Mass. Cuticura Completely Healed.

"My little son, three years old, took ringworm on his left arm, and he scratched it so that it turned to eczema. It then spread to his back, chest, arms, legs and head. It was just one mass of corruption and it made my heart ache to see him scratch; he would just tear himself. He was a pitiful sight.

"I read about Cuticura Soap and Ointment. By the time I had used the second box of Cuticura Ointment with the Cuticura Soap he was completely healed." (Signed) Mrs. R. R. Peachey, R. R. 1, Waldemar, Ont., December 31, 1916.

Cuticura Soap daily for the toilet and Cuticura Ointment as needed prevent pimples, blackheads or other eruptions.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

BOOK ON DOG DISEASES And How to Feed

Mailed free to any address by the Author

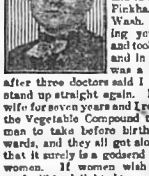
H. CLAY GLOVER CO., Inc. 118 West 31st Street, New York

Dr. Ferdinand King, New York Physician and Medical Author Says

EVERY WOMAN EVERY MOTHER EVERY DAUGHTER NEEDS IRON AT TIMES

To put strength into her nerves and color into her cheeks.

F. King, M.D.



There can be no beautiful healthy, rosy cheeked girl without iron. The trouble is the food we eat does not contain enough iron to feed the red corpuscles of the blood. Nature demands iron above all else, which often corroded the stomach and did more harm than good. To-day doctors prescribe organic iron or Nuxated Iron. This particular form of iron is easily assimilated, does not blacken nor injure the teeth but puts good, red blood in the veins. It will increase the strength and endurance of weak, nervous, irritable, overworn, haggard looking women 100 per cent. in two weeks' time in many instances. I have used it in my own practice with most surprising results.—Ferdinand King, M. D.

NOTE: NUXATED IRON recommended above by Dr. Ferdinand King can be obtained from any good druggist with an absolute guarantee of success or money refunded. It is dispensed by all good druggists.

BROKEN DOWN IN HEALTH

Woman Tells How $5 Worth of Pinkham's Compound Made Her Well.

Lima, Ohio.—"I was all broken down in health from a displacement. One of my lady friends came to see me and she advised me to commence taking Lydia E. Pinkham's Vegetable Compound and to use Lydia E. Pinkham's Sanative Wash. I began taking your remedies and took $5.00 worth and in two months was a well woman after three doctors said I never would stand up straight again. I was a midwife for seven years and I recommended the Vegetable Compound to every woman to take before birth and afterwards, and they all got along so nicely that it surely is a godsend to suffering women. If women wish to write to me I will be delighted to answer them."—Mrs. JENNIE MOYER, 342 E. North St., Lima, Ohio.

Women who suffer from displacements, weaknesses, irregularities, nervousness, backache, or bearing-down pains, need the tonic properties of the roots and herbs contained in Lydia E. Pinkham's Vegetable Compound.

The Paisley Advocate

PAISLEY, JULY 25th, 1917

—Seems to us, that if the censor would devote more attention to some of the public political speeches made in Canada he could do more towards removing hindrance to recruiting than has been done by putting the ban on Arthur Meech's book.

—Kerensky is doing his best to have his countrymen come back into the war game. We can't say the same of the Canadian parliamentary leaders. They are both interested in the game of politics, and both have a bunch of faithful lowers. Oh, for a Kerensky at Ottawa! In the meantime the miser must be relieved to learn that no Canadian reinforcements are in sight.

LOWER SCHOOL EXAMINATION RESULTS

The following candidates from High and Continuation Schools in Bruce County, have passed the lower school examination for entrance into the Normal Schools and Faculty of Education. Before being admitted to the Normal or Faculty these students must pass the Upper School examination:

A. Alton, M. Bonnyman, L. E. Bilger, D. M. Bell, B. F. Bowman, B. Buscallen, F. Bradley, S. Colwell, H. A. Campbell, M. Cameron, A. Carr, L. M. Errington, B. L. Emmerton, L. Finlayson (honors), E. J. Paisley Boy Gets Decoration

Pte Norval Kyle, son of Mrs Frank Purdy, has the honor of being the first Paisley boy to win recognition for conspicuous bravery as a soldier in France. The following letter from Capt (Rev) John McNeill tells the story: DEAR MRS PURDY—About ten days ago it was my great pleasure to award your son Norval, and to-day I had the good fortune to come across him again. In the interval since I first met him I was delighted to find that he had been decorated with the military medal for conspicuous bravery in carrying out his duty. I wish to send you my heartiest congratulations. I am sure that this honour bestowed on one of Paisley's sons will bring a just sense of pride to the home town, all the more because as I learn from his battalion, it was so well deserved. I am glad to assure you that I found him well and in good spirits. Our Paisley boys are giving a good account of themselves to every war. We pray that they may all return safely, and in the near future." No particulars of the brave deed that won the distinction have as yet been received. Pte Kyle is the son of a Penian Raid veteran. He is a bank clerk, having entered the employ of the Standard Bank at Tiverton, and when he enlisted in 1915 was on the staff of the Winnipeg branch. He is just 22 years of age, was born in Paisley, spent his school days here, and was a very popular boy in town.

DEAR EDITOR:

One day last week two children came to have teeth extracted, one aged ten, the other aged eleven. The one aged ten had his first experience with a dentist because of an aching tooth. The boy's parents thought it was a temporary tooth, but I found that it was a permanent first molar—the one coming in behind the baby set at six years of life and forming the centre piece of the five behind the eye tooth or cuspid. If that were extracted the jaw could never grow the natural length, causing a deformity to that extent. The articulation, or proper relationship to the opposing molars would be interfered with and the new position, or unnatural position of the others would not accomplish the mastication of the food so well. When the parent found out his mistake he wisely decided to save the tooth for proper development of the jaw. The other three were also decayed but not yet aching.

Much extra expense could be saved by having teeth examined frequently.

The other boy had had one of his temporary teeth, the molar nearest the eye tooth, extracted before time for shedding, and the permanent eye tooth, instead of waiting to cause by absorption the temporary eye tooth to loosen out, slipped out the easy way in the space left by the extracted one, and now there are two cuspids or eye teeth side by side and only room left for one permanent tooth where two should come. Result—crowded teeth, and ground left for the expensive process of straightening later.

In order to put up a good fight against our enemy, the germ, parents should teach their children the proper use of the tooth brush. The Tuft brush is designed by the Prophlactic Society of Toronto, composed of a body of dentists appointed by the Ontario Dental Association to study out best form of brush, best powder, paste, etc, for sanitation and prevention of decay.

While the species of germ that attacks and decays the teeth is at work there are other species floating around in the fluids of the mouth waiting to settle in the pockets made by allowing tartar to gather about the roots causing pyorrhoea. A. H. ALLEN.

LOCAL AND DISTRICT NEWS

Teachers Engaged

Miss Ethel Barnett has been engaged to teach a department in Port Elgin public school. Mr. D. D. Campbell will have charge of S. S. No. 7, Greenock (Bradley's), at the salary of $700. Miss Rose Bryce will hold forth at Locker by; Mr. John McLean at Dunblane, and Miss McCurdy at No. 1 Elderslie (McKay's).

Good Films at the Movies

The moving picture show in the town hall on Monday evening was the best ever seen here, and deserved a much larger patronage than was given. The war pictures were the real thing, showing Canadian and British troops at the front. You want to get acquainted with the work of Canada's soldiers at the front, you should see such pictures as these. The "Squaw Man" and "From Jungle to Monkeyville" pleased the grown-ups as more than delighted the children. The company intend showing in Paisley again soon.

Cargill Hotel Changes Hands

The Cargill Hotel, which is one of the biggest village hotels in Canada and which has been run by Mrs. Powers since the death of her husband some years ago has been leased to Tony Rosseau late of the Mansion House, Clifford, and formerly of the Eden Grove hotel. Tony is recognized as a first-class hotelman and will be welcomed back to these parts by many friends. Prior to taking possession on August 15th, he left yesterday by auto with his wife and child on a three weeks visit to his old home in Montreal—Herald and Times.

Died at Dryden, Ont.

Mr. Jas. Beattie, for many years a resident of the 12th con. of Elderslie, and very well known throughout the whole district, passed away at his home at Dryden, Ont., on June 21st, after a brief illness. He was 80 years of age. Born in the County of Armagh, Ireland, he emigrated at the age of 13 with his father to Canada and came to Bruce County. The family was one of the first to settle on the 12th con. Eighteen years ago the deceased went with his family to Dryden, Rainy River. He is survived by his aged wife, five sons and two married daughters, Mrs. John Fisher of Dryden, and Mrs. Thos. Thompson of Cargill; Mrs. H. Lemont, of Z[illegible], a sister of deceased.

The Late Mrs. Robb

On Tuesday, July 17th, an old and much respected resident of the Willisecroft section passed away in the person of Mrs. Wm. Robb. The deceased was a daughter of John Cordick, of Arkwright, and had lived at Willisecroft since her marriage about 40 years ago. Her husband predeceased her by twelve years. A family of two sons and five daughters survive, viz. John, of Swanlake, Man.; Alexander at home; Mrs. Harry Crawford, Swanlake, Man.; Lizzie, in Brantford; Olive and Myrtle at home. Mrs. Robb had been ailing for three years from hardening of the arteries and other complications. Although she had been confined to her bed for several months past, the end came suddenly and at an unexpected moment. The funeral on Thursday afternoon was very largely attended. The services were conducted by Rev. Wm. Stapleton, pastor of Mount Hope church, assisted by Rev. M. Neilson, of Paisley. Interment took place in Tara cemetery.

They Stole the Booze Away

There is no fother news as to where the two cases of liquor belonged that were seized at the station, and mentioned in our last issue. There is also no information available as to where the stuff has gone to. It was thought to be safely incarcerated in the village lock up, in the town hall basement, but it has disappeared. The fact that the lock of the door was broken is taken as substantial evidence that the wet goods were feloniously abstracted from the hiding place. Mr. J. C. Gibson, J. P., informs us that he issued a search warrant and searched his own stable, but nothing discovered. We presume he had a suspicion the boys might be playing tricks upon him. The position of this case seems to be that until some clue is discovered upon which to hang a charge, there will be nothing further heard of it, as the evidence for legal prosecution has been effectively destroyed or spirited away. One who may be considered to be some local authority on the subject as to what use such case goods are put to tells us that the seizure is probably barred for future use. Perhaps he knows, and perhaps he don't.

How Hymen Works in the West

The young lady mentioned in the following wedding notice has numerous friends in this locality: At the home of the bride's sister, Mrs Nelson Jimerfield, occurred the marriage of Miss Margaret E MacKinnon, daughter of Mr and Mrs John MacKinnon, of Vernon, B.C., to Mr Nelson H James. The bride is a most charming young lady, who has endeared herself to her many friends here. The groom is an estimable young man of steady habits, employed as a book-keeper with one of the refineries. The wedding was a quiet one, as the strictest secrecy had been maintained. However, it became noised abroad that there was something doing at Jimmerfield's and a tin pan brigade composed of members of the Baptist Sunday school class of which the bride and groom were members, was organized and proceeded to call upon them. The callers were invited in and treated to some of the bride's cake. After a pleasant time was spent the party disbanded, wishing Mr and Mrs James much success and happiness on their journey of life. Mr James took his bride to the home which he had prepared for her in the town of Greyhull, Wyoming.

Delightfully Cool on the Great Lakes

Port McNicoll, a short pleasant journey via Canadian Pacific Railway, is the Gateway to the Great Lakes. Steamship Express leaves Toronto 2.00 p m each Wednesday and Saturday, making direct connection at Port McNicoll with other steamship "Keewatin" or "Assiniboia" for Sault Ste. Marie, Port Arthur or Fort William. Particulars from Canadian Pacific Ticket Agents or W. B. Howard, District Passenger Agent, Toronto, Ont.

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHIP HARBOUR, N.S.

"It is with great pleasure that I write to tell you of the *wonderful benefits* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

Mrs. MARTHA DEWOLFE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

CHINA'S WONDERFUL CARRIERS OF NEWS

Spacious Land where Distance is Measured by Days not Miles, Possesses Wonderful Courier Service

Travellers who return from the remote interior of vast countries where telegraphs and railways are practically unknown will tell you of the astonishing swiftness with which news travels, despite the seeming absence of facilities. Away in the wilds of the Tibetan border, or in the Mongolian deserts, hundreds of miles from the nearest telegraph wire, the traveller will perchance hear of some momentous event in the outside world within an incredibly short while of its happening. This rapid transmission of news is the work of natives employed in courier services of higher organization than we have ever dreamed.

China Best Example

China, that spacious land where distance is measured by days, not miles, affords the best example. For, although the means of communication by rail and by telegraph have greatly developed there of late, the bulk of the interior is still virgin to these inventions of the "foreign devil," and China still maintains what has been from time immemorial the most wonderful courier service in the world. It is now mainly controlled by the Chinese Post Office, and the mileage of the courier lines has reached the stupendous figure of 150,000, or about five and a half times the circumference of the globe.

Couriers' Speed is Ninety Miles a Day

By road, river, and track, radiating from the capital of Peking, or other important centres, couriers are speeding without ceasing, night and day, to almost every corner of the 8,000,000 square miles of country which form the Chinese Empire. The couriers are all stalwart men especially chosen for their physique, powers of endurance, and knowledge of routes. They work in relays, ride as they go along, and are supposed not to stop until they have handed the mailbag to the next relay. An average speed of ninety miles a day is often maintained.

JAPAN'S RESOURCES

1,250,000 Acres Given to Cultivation of Mulberries

Japan has a forest area of nearly 50,000,000 acres, her corn crops cover 15,000,000 acres, her green crops 5,000,000 acres, while 1,250,000 acres are devoted to the cultivation of the mulberry tree. Copper, coal and petroleum are the chief minerals in copra of exploitation. Her chief imports are flour, raw cotton, machinery, railway rolling-stock, rice and oil-cake, while her principal exports consist of silk, cotton, copper, matches, straw-plait, sugar, coal, porcelain, bronze and lacquer ware.

Some Peculiar Wills

Among many curious wills may be reckoned that of the great Shakespeare, who bequeathed to his wife his second-best bed with the furniture, and that alone; whilst an old Provost of Eton left a sum of money sufficient to give every boy at Eton a half-sheep on February 27th of every year. Now-a-days, however, a threepenny-bit takes the place of the half-sheep.

Is there any reason why the farm home should not have a furnace, why the sleeping rooms should not be comfortable or why any part of the farm home should not be warm enough to sit in?

Flaked potatoes are used for human food and cattle fodder.

What It Means to You—to Your Pocketbook—to Your Personal Appearance—How It Conforms to Sound Business Judgment to Select from

Our Famous Line of

Men's and Ladies' Suitings

Taking for our text, "He profits most who serves most—he who serves best, serves most"—we put in force a plan of retailing that tends to centre more and more business here—by making it to the advantage of the public to give us their patronage.

We're selling clothes on a margin of profit heretofore regarded as insufficient. But we're winning business on the basis of volume.

Here are 200 patterns for selection. If there's a man who can't be suited we'd like to see him. If there is a man whose tastes can't be met he is a stranger to us.

G. B. IRWIN

AUGUST COSMOPOLITAN

The big feature in August Cosmopolitan is Robert W. Chamber's new novel, "The Restless Sex."

Another great story is "Blue Aloes," by Cynthia Stockley.

Other great writers and artists in this number are: Lillie Langtry, Herbert Kaufman, Ella Wheeler Wilcox, Jack London, John Galsworthy, Samuel Merwin, C. N. and A. M. Williamson, Mary Roberts Rhinehart, George Ade, Arthur Reeve, Howard Chandler Christy, G. Patrick Nelson, Will Foster, W. D. Stevens, George Gibbs, Anton Otto Fischer, James Montgomery Flagg, John T. McCutcheon and W. T. Rench.

A Yorkshire Sow owned by Mr. Norman Breckelenkamp of Brant township gave birth to 21 pigs 20 of which are still living. This is a record as far as we have been able to learn. With the price of pork now Norman will be able to go south this winter.

—"Advertising is the education of the public as to what you are, where you are, and what you have to offer in the way of skill, talent and commodity. The only man who should not advertise is the man who has nothing to offer the world in the way of commodity or service."—Elbert Hubbard.

COUNTER CHECK BOOKS

Bruce County Hospital

Walkerton

The annual financial report of the Bruce County Hospital recently issued, shows receipts for the year of $9,919.29, and expenditures of 11,869.91, leaving a deficit of $1950.62. There is also a mortgage due, on April 10th, 1918, of $2,000, leaving total liabilities of $3950.62. Since the report was published the County Council at its June Session has made a grant of $2,500.00 to the institution.

The free patients treated during the past year are:—Amabel Tp. 1 patient, 365 days stay; Brant, 1 patient, 10 days; Cargill, 1 patient, 365 days; Chesley, 1 patient 27 days; House of Refuge, 1 patient, 24 days; Paisley, 2 patients, 106 days; Teeswater, 2 patients, 387 days; Walkerton, 4 patients, 103 days; Wiarton, 2 patients, 266 days. A total of 15 patients, 1658 days.

The average cost per patient was $1.74 per day, making the cost to the Hospital for free patients, $2884.92.

Letters from the Soldiers

From Earle Tooke

Signaller Earl Tooke of the 160th Signalling Section, landed a first-class certificate upon his completion of the course in that branch of the training service at Witley Camp.

Speaking of the expected movement of the battalion to France, Earle says that it all depends upon how heavy the casualties are at the front, and how badly they need men. These are the main things that govern our stay in England. The fact that we have been here so long in England speaks well for the condition of the Canadian troops in France. However we are all fed up on this country, and want a change of scenery, as all good soldiers do. They get impatient waiting, and are anxious to go to France and do their bit in real warfare. We are tired of doing the same thing over and over again in training. But I think our turn is coming, and maybe soon. But we are not at all afraid of not being good soldiers when the time comes.

From Lieut. Babcock

After taking a course at Bexhill-on-sea, England, Lieut A E Babcock was given leave, and went for a trip to Scotland. He stopped at Edinburg and Glasgow, and intended going through to Loch Lomond, as the country is looking its best now. He was one of a hundred officers who went up from Bexhill to form a guard for His Majesty the King in London at the Canadian anniversary services in Westminister Abbey. The duty turned out to be "only a lot of heavy standing around. We attended the service afterwards, but could not hear a word, as we were in the back seats."

From Alex Blue

Somewhere in France, June 25.

DEAR FRIEND PAUL:—Just a few lines to let you know I am out here again. It is the same old thing, only a little hotter in weather and also the straffing. Don't know when this war will end, but we will not worry. I certainly did like to stay in England, but when I landed out again I had to cast those thoughts away, for I am with the old boys once more. The battalion is quite strange to me, for I don't know half of them, and I meet so many near all of them. Of course the old ones have not all been killed—most of them wounded, but even so, they are put out of action. I saw Jack Beaton in England. He certainly has grown and would do for the Guards any old day. I don't know when the 160th are coming out, but I believe they will make some showing when they do get here. S Tooke is looking well, and J McDougall is out again ready to face the enemy. How about this conscription in Canada? Is it going to go through? I suppose it is the only thing to do. Comb some of the young chaps out. The crops out here look fine. We have been having a little rest lately, but expect to go in soon now. And our battalion has skinned them all at football. Of course Hiney drops a few over but does not interfere with the game. It is always a kick in for us. We are taking prisoners every day and they are mighty happy to be taken, at least the expression on their face shows it, and I must say they are a fine body of men. Our artillery is a living hell to what it was when I was out here before, and they are good gunners. Well, Paul, I will say au revoir. PTE A E BLUE

From Nurse Dryden

In recent letters home Miss Mary Dryden, who is on the staff of a military hospital at Brighton, England, tells of her trip to Scotland in June. She says: "I certainly had a good time, and everybody treated me white in the land of the heather. Lizzie Leask's cousin was very friendly. She and her husband took me for a walk twice past the laird's home, "Langton House," which is supposed to be one of the finest buildings of the kind in the United Kingdom. I wish I could describe to you the flowers, both wild and cultivated, which grow in Scotland in profusion. Rhododendrons and shrubs are one mass of bloom, all colors and sizes. Mr Weir (who lived on the Brockie farm in Greenock about 25 years ago) is wonderfully smart and has to do a good deal of work, as men are scarce. Robbie was given exemption as a shepherd, as he has nearly 1000 head to take care of. He was doing all the shearing by hand himself. They have nearly 30 horses and colts. I was out driving nearly every day in the trap, as they have a pony to drive. They have many relations on the farms around them. Miss Rae said she remembered me. She can only say a few words at all. Has a maid and nurse to take care of her. What a blessing she has the means to do it. Effie is a very good housekeeper, and seems to take more responsibility than her mother in connection with everything. Mr Weir spoke a good deal about Tom and the things he had done for them. Mrs Weir came as far as Berwick with me. Tell Miss McCallum there are no Canadians in this hospital, but if they want to send some things to the Tommies and Australians it will be alright to address them to me. Kitchener's Hospital is where the Canadians are in this town. I have 19 patients in my ward now. I hope you all get some enjoyment out of the Ford car. One sees very few cars in this country. I think one sees almost more in Paisley than you would in spending a day in London. Sister Carey and I were up to London for the Canadian celebration there. At the Canadian service in Westminster Abbey we got a good view of the King, Queen Mary, Queen Alexandra and some others. As we were in uniform they let us in without a ticket. They sang "The Maple Leaf" and some hymns. Some one lectured and the band played.

EIGHT DOLLARS A MONTH.

Is This Adequate For a Returned Soldier Who Loses Use of Right Arm?

Pte D R McDonald, 15th Batt, one of four brothers, and son of Mr D S McDonald, 1st con Kinloss, was in town on July 12 h. Pte McDonald has been discharged from the service, his further usefulness as a soldier being gone on account of having his right elbow shot away. This practically leaves him unable to follow his old occupation as his right arm is useless. The Pension Board have dealt with his case and have awarded him the "magnificent" sum of $8 00 per month. This looks bad to the average citizen. $8 00 wouldn't go very far toward keeping a fellow from starving these days. As it is Pte McDonald is at home getting his bearings before he decides upon the occupation he is going to follow. His case will no doubt be taken up later and proper remuneration granted him. The Pension Board seem to be small and parsimonious and there is no reason why men who have staked life and limb should not be properly treated.

Other cases have come under our notice and the public will no doubt strongly protest if these returned soldiers are treated as Pte McDonald has been.—Kincardine Reporter.

GREEK'S QUAINT PASTIME

Boot Cleaning Is a Greek's Ideal of Enjoyment

Boot-cleaning, says a London paper, one of the indoor recreations that Salonica offers, ranks among the national industries of Greece. To sit drinking little cups of thick Turkish coffee, and having his boots cleaned at the same time, is the Greek's ideal of a pleasant afternoon. The "lustrer," as the Greek shoeblack is musically called, though usually of tender age, is a true artist. He first scrapes your boots clean of the smallest fragment of mud, then wipes them carefully so as to have a perfectly clean background to work on. After that he applies the blacking, got by dabbing the blacking-brush into the tin, but with a variety of little metal implements and sponges. When he has brushed this to a bright polish, you imagine that your shine is over, but it has really only begun, for the "lustrer" now goes on to bring the high lights by smearing your boots over with a colourless cream which he brushes again to brilliance, and finishes off by two or three minutes' friction with a velvet cloth. He completes his work by painting the edge of sole and heel with a sort of varnish. If you attempt during all this time to withdraw your foot before he is satisfied with the effect produced, the lustrer knocks imperiously with the back of his brush.

PERFECT HEALTH IS EVERY WOMAN'S BIRTHRIGHT.

A Prescription That From Girlhood to Old Age Has Been a Blessing to Womankind.

When a girl becomes a woman, when a woman becomes a mother, when a woman passes through middle life, are the three periods of life when health and strength are most needed to withstand the pain and distress often caused by severe organic disturbances.

At these critical times women are best fortified by the use of Dr Pierce's Favorite Prescription, an old remedy of proved worth that keeps the entire womanly system in excellent condition.

Mothers, if your daughters are weak, lack ambition, are troubled with headaches, lassitude and are pale and sickly, Dr. Pierce's Favorite Prescription is just what they need to surely bring the bloom of health to their cheeks and make them strong and healthy.

For all ailing women Dr. Pierce's Favorite Prescription is just the right medicine. During the last fifty years it has banished from the lives of tens of thousands of women pain, misery and distress. It makes weak women strong, sick women well.

If you are a sufferer, if your daughter, mother, sister, need help, get Dr. Pierce's Favorite Prescription in liquid or tablet form from any medicine dealer to-day. Then address Dr. Pierce, Invalids' Hotel, Buffalo, N. Y., and get confidential medical advice entirely free.

Every woman should be careful that the liver is active and the poisons are not allowed to clog the system—get rid of these poisons by taking Dr. Pierce's Pellets, which regulate and invigorate stomach, liver and bowels. Keep the body clean inside as well as outside!

How to preserve health and beauty is told in Dr. Pierce's Common Sense Medical Adviser. It is *free*. Send Doctor Pierce, Buffalo, N. Y., fifty cents or stamps to cover wrapping and mailing only.

SPRAYING POTATOES FOR BLIGHT

In some years the crop of potatoes is much lessened by the late blight disease and when rot follows little of the crop may be left. It is, therefore, very desirable to prevent this disease from spreading. This is done by keeping the plants covered with Bordeaux mixture from about the first week in July, or before there is any sign of the disease, until September. Sometimes the first application of Bordeaux mixture is made before the potato beetles are all killed when the poison for them may be mixed with the Bordeaux. While the disease is not very bad every year it is well to be prepared. There was an average increase per year of 82 bushels of potatoes from spraying with Bordeaux mixture in three years.

The formula for Bordeaux mixture for potatoes is 6 pounds copper sulphate or bluestone, 4 pounds freshly slacked lime to 40 gallons of water. While the bluestone will dissolve more quickly in hot water; if it is not convenient to get this, it may be suspended over night in a cotton bag in a wooden or earthen vessel containing four or five or more gallons of water. The lime should be slacked in another vessel and before mixing with the copper sulphate solution should be strained through coarse sacking or a fine sieve. The copper sulphate solution is now put into a barrel, if it has not already been dissolved in one, and enough water added to half fill the barrel; the slaked lime should be diluted in another barrel with enough water to make half a barrel of the lime mixture. Now pour the diluted lime mixture into the diluted copper sulphate solution and stir thoroughly, when it is ready for use. The concentrated lime mixture should not be mixed with the concentrated copper sulphate solution, as, if this is done, an inferior mixture will result. If the barrels are kept covered so that there is no evaporation, stock solutions of the concentrated materials may be kept in separate barrels throughout the season. It is important to have the quantities of lime and copper sulphate as recommended, but, in order to be sure that enough lime has been used and there is no danger of burning the foliage, let a drop of ferrocyanide of potassium solution (which can be obtained from a druggist) fall into the mixture when ready. If the latter turns reddish-brown, add more lime mixture until no change of color takes place.

White Shoes

Hot weather is here, and our stock of Canvas Shoes, for Men, Women and Children is still complete with High Cut, Oxfords, Pumps and Strap Slippers.

The AUTOMOBILE

High Speed Bad for New Cars.

"A high speed passenger locomotive offers an excellent comparison," says a motor car expert.

"The locomotive is built to run easily and pull a tremendous load at seventy miles an hour. But is that locomotive put at once into such service? Hardly. The superintendent or master mechanic who would permit such a thing would not be fit to hold his position.

"The locomotive is run 'dead' in a freight train to its point of delivery. Then it is easily and carefully 'broken in' by being given slow freight service before it is turned over to the passenger crews.

"It is a good deal the same in the case of a steamship. She is built under a contract guaranteeing so many miles per hour, but no shipbuilding concern would think of submitting a new boat to a trial run until after her engines had ample time to 'wear in.'

"It should be the same with motor cars. The better a car is built the more care should be exercised when the motor is new.

"Careful handling of a car when new means a better and smoother engine and fewer repair bills."

Two Simple Oil Tests.

There are two ways to test oil. One is gradually to heat a bottle of oil until a yellow vapor arises on the surface. Maintain this heat about fifteen minutes, then let the oil stand about twenty-four hours. If the oil is of good quality it will turn only a little darker than originally, but if it is not a good quality it will turn black and a certain amount of black sediment will be seen. This is exactly what happens is such oil is used in the engine.

Another test is to take an equal quantity of oil and water and shake them thoroughly together in a bottle. After standing for twenty-four hours the good oil will rise to the top of the water, showing a clear line of separation. A poor oil will have a considerable strip of milky fluid between the oil and the water, and if the oil is a poor grade most of the fluid will become this whitish substance. This test is important, because a slight amount of water might become mixed with any oil, and the oil should be of good quality to prevent serious damage in these circumstances.

WITH THE TRANSPORTS IN FRANCE

FOOD MUST BE BROUGHT UP UNDER DIRECT FIRE.

Every Night Goes on the Nerve-Racking Work of the Canadian Army Service Corps.

"Give the word to limber up, sergeant-major. And you might tell my groom that I shan't walk my horse this evening. I'll walk instead."

"Very good, sir," says the sergeant-major as he salutes and goes out.

There arises a clattering on the cobles of the French farmyard; voices call out orders; the watercarts are filled; horses are harnessed to their limbers; the mail and the rations are piled on their wagons; and ten minutes later the whole column is standing ready in the dusk, the transport men mounted, the quartermaster, the transport officer, and a sergeant on foot.

The sound of a whistle, a straining of horses, the cracking of a whip, and the transport rumbles and pulls out of the farmyard gate on its way towards the trenches.

Away ahead the first star-shells shoot up and sink slowly in brilliance to the earth again. All the way along the horizon little sudden pricks of flame come from the enemy's guns, the soft "pop" of bursting shrapnel sounds through the darkness—for it would be folly to set out before night hid you from German observers, and the "heavies" away on the right crash and rumble and then crash again, as they burst among the broken houses. The road—a narrow strip of pave with bottomless, clinging mud on either side of it—is thronged with limbers of other regiments, with cookers, ambulance, A. S. C. lorries laden with tools and trench stores and piles of sandbags, orderlies on bicycles, wounded men on their way down to the field ambulance, and men from hospital on the way back to their units. And through or with this stream winds the transport officer at the head of his column.

Danger on Every Hand.

Now and then there is a sudden halt—the enemy are shelling the road a little farther up and there is nothing to do but wait. The transport officer fumes to and fro, for he has under his command a dozen men, more horses, and six or seven limbers, all packed tightly together on a narrow road, with the Germans shelling in front and an interminable line of transport waiting behind. If the Boche gunners lengthen their range by a hundred yards or so—

"Lead on," comes the word from farther up, and the whole road is movement again. The laden limbers crawl along over the pave till they reach a battered old building that looms up through the night—the dumping ground where the supplies have to be left for the men in the trenches. Privates tramp to and fro with picks and shovels and ammunition; a sergeant is there to see that the rations for the different companies are placed in different piles; a postcorporal hurries hither and thither, in search of "D" Company's letters, which have been mislaid, and the transport officer and quartermaster supervise and control everything—always in the most impenetrable darkness, save when a star-shell lights up the white faces, the sweating horses, the gleaming mud.

The transport officer gives the word, and the empty limbers jolt out of the yard on to the road again to join in the stream that flows back towards the billets and sleep.

Nights after night there is the same slow crawl along the road pitted with shell-holes, and same halts, the same dead horse and broken limber in the ditch, and the same knowledge that, in a moment or so, your own horses may be struggling in their death agony, your own limbers splintered and smashed, your own men lying dead or wounded.

And when the wagons are once more ranged in line against the wall of the farms, when the last of the men has climbed up to the hayloft where he sleeps, the transport officer sighs with relief as he drags off his muddy boots. "Thank heaven, that's over till to-morrow night," he mutters.

FACTS ABOUT HUMAN BODY

Statistics Regarding This Marvel of Creation.

There are said to be more than two million little openings in the skin of our bodies to serve as outlets for an equal number of sweat glands. The body contains more than two hundred bones. It is said that as much blood as is in the entire body passes through the heart every minute, i.e., all the blood in the body goes in and out of the heart once every minute. The lung capacity of the average person is about 325 cubic inches, the Book of Wonders instructs us.

With every breath you inhale about two-thirds of a pint of fresh air and exhale an equal amount if you breathe normally.

The stomach of the average adult person has a capacity of about five pints, and manufactures about nine pounds of gastric juice daily.

There are over five hundred muscles in the body, all of which should be exercised daily to keep you in the best condition. The average adult human heart weighs from eight to twelve ounces, and it beats about 100,000 times every twenty-four hours.

QUEER BLUNDERS OF WRITER FOLK

SLIPS OF SCRIBES SERIOUS AND OTHERWISE.

Quaint and Curious Errors Into Which Novelists and Other Writers Have Fallen.

"All in the boat rowed splendidly, but none so fast as No. 6."

Fortunately, "No. 6" was only a hero in fiction—"Guida" was responsible for his extraordinary behavior in one of her novels—or one trembles to think what he would have suffered at the hands of the rest of the crew and the coach; and it is to minimize ridiculous blunders like this getting into print that a new profession of feminine adviser to men novelists has recently been created in Paris.

The idea has distinct points to recommend it, says a London writer. Everyone who writes much must frequently come face to face with difficulties owing to lack of expert knowledge of particular things and phases of life; and, although a writer must be a kind of jack-of-all-trades, in a sense, he—or she—would need to be a veritable walking encyclopaedia to avoid making blunders now and then.

Battleships at Pekin.

I know this to my own personal sorrow, as a rather prolific inflicter of stories and articles on a long-suffering public, for I have several times caused absurdities to get into print.

I recently, for instance, wrote a story in which a fleet of warships were supposed to visit Pekin. I do not know why I conceived this impossibility—any Chinese town would have done me quite as well as Pekin—but I suffered for my sins.

As the ninety-six correspondents who wrote sarcastic letters to the editor of the paper unfortunate enough to print my story pointed out, Pekin is about a hundred miles from the sea, and so how my battleships ever got there was a distinct mystery.

I am seriously beginning to think that I am not very good at stories with ships in them. A little while ago I wrote about a submarine. It was a thrilling story, but, in my misguided enthusiasm for "effects," I made a horrible slip. When, after a breathless adventure, the submarine came above water, she was flying the Union Jack!

It has been frequently impressed upon me since that this is not a way they have in the Navy with submarines.

Surfeit of Knowledge.

Apropos, I once read a story, written by a woman, in which a way they do not have at the Varsities was introduced. One of her male characters was very popular at Cambridge, and came away with a double Blue in history." I have often wondered how he managed it. I have always thought that Blues were given for athletic proficiency, and that they had no connection with history or other scholastic subjects.

Talking about history, when I was a reporter on a great London daily paper I was given a story to do on the subject of lampreys. There had been a glut of lampreys in the upper reaches of the Thames, and to the facts of the case I gaily started to tack on some observations concerning the habits, manners, and customs of lampreys generally.

Among other remarks I made was one to the effect that lampreys were the fish for which King John showed a fatal fondness. This, I considered, read extremely well; but, unhappily, as about half a million people proceeded to point out on the morrow, it was not King John, but an entirely different monarch whose death is popularly attributed to a surfeit of them.

An Admirable Crichton.

That, however, was a mild mistake compared with the following statement for which a woman novelist was once responsible:

"She came slowly into the paddock, leading in the winner of the Waterloo Cup."

The Waterloo Cup is run for by dogs, not horses, of course, so how "she" led the winner into the paddock, and what sort of paddock it was, it is difficult to understand.

Even this pales before the exploits of a gentleman—the figure of an authoress' imagination—who was alleged to have won the Derby one day, scored a century at Lord's the next day, and gone partridge-shooting on the third day.

Considering that the Derby is run on the first Wednesday in June, one wonders where he found partridges to shoot on the following Friday.

And perhaps you remember the great writer who made a P. & O. liner discharge its passengers at London Bridge, and the doctor's daughter who went to a dance wearing a coronet.

MORE THAN GOODNESS.

Preparedness and Practice in Good Works Are Also Essential.

"I don't see the use of it all," the young man said to his pastor. "Why should I go to all of those meetings at the church and to the Sunday school? I can be a Christian without doing all that. I can put in my time more usefully with books and outdoor life on Sunday."

"I don't say," his pastor replied, "that you cannot be a Christian unless you do all those things; but you cannot afford to neglect them if you are to be fully equipped for the best Christian service. The church is a training school for efficiency in religious activity."

Six years went by; then a letter came to the pastor from a Y.M.C.A. secretary, a part of which was as follows:

"Can you send us for the field out here a young man who can measure up to great things? We want a young man who loves men and boys, and has worked with them long enough to prove his power as a soul winner. Don't send us one who is simply a good young man. We want something more effective than mere goodness."

A few days after that came, the pastor received a call from one of the members of his church, the father of the young man who six years before had argued that he did not need to engage in the activities of church organization in order to be a Christian.

"John is a good fellow," said the father anxiously, "but he hasn't done as well as we had hoped he would. His mother and I want to get him into a better place than the one he has now. You couldn't recommend him to a position, could you? He would like church or association work."

"What can John do?" asked the minister.

"Well, he is a good boy."

"But what can he do? Has he had experience in teaching boys in the Sunday school?"

"No, I think not."

"Did he ever belong to a young people's society, and learn how to organize committee work or solve religious problems?"

"I'm afraid not."

"Could he fill a position like this one?" and the pastor read the Y. M. C. A. letter.

The father's face became thoughtful.

"I know John could not meet those requirements. They are too exacting. He hasn't fitted himself for them; he has missed his chance."

The father went away, pondering on his son's unusable "goodness"; and the pastor found among his active workers a young man who measured up to what is proving to be one of the greatest places of influence in the Chinese nation.

The time has gone by when any type of mere goodness will do for modern reform, or missionary or evangelistic service. It is even more true now than in Timothy's time that the gigantic task of Christianity calls for "Workmen that need not be ashamed, . . . prepared unto every good work."

Bordeaux For Beans.

Bordeaux mixture properly used checks anthracnose on beans and prevents the unsightly spots often seen on the pods and other parts.

Bordeaux mixture, made of four pounds of copper sulphate, four pounds of burnted lime and 50 gallons of water, kills the anthracnose fungus that attacks beans, as well as cucumbers and melons. The Agricultural Experiment Station advises its use for spraying when the plants are two to three inches high, about ten days later, again after blossoming, and repeated as necessary.

EUGENIE AT NINETY-TWO.

Near the End of Her Long Life Empress Sees Defeat of Germany.

When German prisoners of war are marched to a barbed wire enclosure near Frimley, Aldershot, England, they pass down an avenue below a beautiful mansion standing on a wooded hill. It often happens that as the Germans file past the gateway lodge, a sad-eyed venerable woman is standing or sitting there. It is doubtful if any of the prisoners know that she is the surviving consort of Napoleon III., who delivered his sword to the King of Prussia at Sedan, September 1, 1870.

Empress Eugenie celebrated her ninety-second birthday on May 5 by watching the sight of a new and large detachment of prisoners marching toward their concentration camp. It was a dramatic contrast to the events of many years ago which robbed her of her seat on the French imperial throne.

Surely there is not another woman in the world who has lived through such experiences as this one, who forms the link between the stately past of the French and the glorious present of united democracies. It was her beauty and popularity which aided Napoleon III. to establish himself as monarch. It was the interest aroused by her marriage with Napoleon III. which enabled him to bring about the Crimean war, although that war marked the beginning of his fall.

Eugenie's influence over her husband was well known and it is possible that her intelligence went far toward helping him to realize that Prussianism was the real menace of Europe. When the North German Bund was formed in 1866 he knew that here was his real rival. From the date of the formation of this bund Prussia has gone steadily forward with plans for world power which culminated in the present war, and it must be with feelings of joy that Empress Eugenie sees to-day the greatest countries on earth allied with France against the old enemies of Napoleon III.

Throughout England the name of Empress Eugenie is revered. Wherever charity and kindness were to be found it was almost certain that her name would appear in connection therewith. Throughout the years that have elapsed since she went to England with Napoleon III. after the defeat at Sedan, she has worked unceasingly among the poor and the sick. Her wealth has been at the disposal of charitable organizations. Her only son, Prince Louis, who went to England with her, died on the field of battle in Zululand.

Her home on Farnborough Hill has been transformed into a hospital for British officers. Since early in 1915 she has been using all of her means and what strength she has left in caring for those men who come to her from the battle fields of France.

TO CANADA.

Dear heart, my country, as I see thee stand
For the defence of nations great and small,
Responsive in a moment to their call.
When Odin's legions swarmed at his command
To crush their liberty and deeply brand
The horrid marks of servitude on all,
I thank thee for thy steadfast human wall
Formed to protect each holy struggling land.
No slavery hath vexed thee hitherto,
Nor must its slimy coils pollute thee now.
For thy true knights have sworn a solemn vow
That Allemaine's proud upstart soon shall rue
His mean ambition to possess the world,
Like that high rebel from the zenith hurled.

—O. McCullough.

A man we know went to town the other day and brought three bolts each of all commonly used sizes, a couple dozen screws of various sizes and lengths, and a pound of nuts for bolts of different diameters. "Now I am ready for anything that comes along," he remarked; and it wasn't two hours before a bolt was needed in the horse-rake, and he was able to lay his hand on the right one.

AN INCIDENT OF THE MARNE

A WAR CORRESPENDENT AND HIS AUTOMOBILE.

The Brave Spirit of a Soldier Who Stopped a Bullet and Said, "It's Nothing!"

In the course of the Battle of the Marne, the Germans fought a stiff, rear-guard action at Priez. At its height, Mr. Frederic Coleman, who narrates his experiences in his book, From Mons to Ypres, found himself and his automobile involved in the proceedings.

One of the Sussex men, says Mr. Coleman, came running back with the news of a general retirement. Rifle fire in front, rifle fire from our left, and shrapnel everywhere, made us wonder whether retirement was not less wise than staying where we were. But orders are orders; so we headed down the slope for the village, where I had left the automobile.

Presently we reached a fifty-foot gap in the bank at the roadside; that part of our journey must be taken in full sight of the enemy. Two soldiers rushed at it, only to fall before they had got across. While we paused, a herd of some twenty cows galloped, bellowing, down the hedge side in the field beside us. Blessed with an inspiration, we sprinted down the road in the lee of the barrier thus providentially provided.

"We're all right so long as the beef holds out!" panted a Tommy.

In a few seconds I had reached the car. A major asked me if I would take back a load of wounded. I believed that any occupant of a car that tried to pass through the village and up the slope in plain sight of the enemy would stand little chance of escape; but the wounded were tossed into the tonneau, into the front seats, on the folded top at the rear, wherever space could be found. I jumped into the driving seat. The running board of the car was lined with soldiers, and one, the only one unhit, was mounted on a mud guard.

He Held For His Life.

Up the hill we crawled. My load was eleven, some badly hit. Two cyclists in front gave promise of blocking the way as we gathered speed, but a shell that burst over us knocked one of the pair off his wheel, seemingly a few feet over us. Further from a group ahead of us were hit. Bullets sang all about. Some one hanging on the running board was hit, and cried out as he dropped off. As the slope became less steep, I overtook and passed an ammunition limber, with the team—minus a driver—in full flight toward the rear.

A mile or so farther on we found a hastily improvised hospital, where I delivered my load.

"Wounded?" asked an orderly as I drove up.

"Yes," I answered. "All but one," and I turned to look back at him.

"I stopped one, coming up the hill," he said, with a grin. "I stopped one proper, I did!" And he opened his tunic and showed me a blood-soaked side. "Might have got you if I hadn't been there," he added, "so perhaps it was just as well. I couldn't have brought the others back in this thing." And he grinned again.

"Good luck, son," I said, with a lump in my throat.

His teeth were set as he was borne away by two orderlies, but the corners of his mouth twitched in another half smile, and he said:

"Thanks. Don't you worry about me. I'm all right. It's nothing!"

I have often thought of him since, and hoped that he came through in good shape. His spirit was so very, very fine!

Before you begin making your jams and jellies, buy some small glasses—about two inches high and wide in proportion. Then as each variety is made, fill a few of these glasses. You will be glad to have them next winter when you want to send a little remembrance to a sick friend, or wish to pack a box for Christmas. The individual one is daintier in appearance than the larger-sized glasses and allows one to send several kinds instead of only one

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

Belle:—1. The family of the bride issues the invitations and announcements; the latter are sent out to all friends of both bride and bridegroom whom they wish to know of the event; they should be mailed on the same day the ceremony is performed. 2. According to an old superstition, a bride on her wedding day should wear "something old, something new, something borrowed and something blue" to insure happiness. 3. It is usual to give a fee to each of the clergymen who officiate at a wedding, especially as the one who is to pronounce the benediction is the rector of the church and is set aside, as it were, in favor of an old friend. 4. The bride's father (or family) pays for the church decorations and for the carriages to and from the church. In fact, the father stands all the expenses except the wedding ring, the clergyman's fee and the bouquets for the bride and bridesmaids. These are all paid for by the bridegroom.

F. R.—1. You can stir mixed paints more easily if the can is kept standing upside down for a few days before opening. 2. Add a teaspoonful of Epsom salts to each gallon of water when washing colored materials and the colors will not fade or run. 3. It is a good plan, when using a recipe for the first time, to write on the margin the amount it makes or the number that it will serve, as a guide in the future.

Summer Girl:—1. Try a "planting" game for your garden party. Cut from cardboard a number of little shovels and write on each a question, having them ready before the party begins. The following questions are suitable and you can think up several others: "When I planted a sweet and a bunch of grass, what came up?" (Candytuft). "When I planted a wild animal and a covering for the hand what came up?" (Foxglove.) "When I planted in the afternoon what came up?" (Four o'clock.) "When I planted Boreas what came up?" (Snowflakes.) "When I planted Chanticleer what came up?" (Coxcomb.) "When I planted Romeo on a dull day what came up?" (Love in a mist.) The leader reads out each question and the first one to answer receives the spade on which that question is written. A prize can be given to the one holding the greatest number of spades. 2. The guests on their arrival should enter the house. Set aside a room for the boys and one for the girls. 3. The pink frock will be quite the thing for the occasion.

Housekeeper:—1. Paraffin that has become unclean through usage in canning and preserving may be cleaned and reused. Don't throw it away because dirt and trash have become mixed with it. Many times paraffin can be cleaned with a brush in cold water. If this does not remove all the dirt, heat the paraffin to boiling and strain it through two or three thicknesses of cheesecloth placed over a funnel, or a thin layer of absorbent cotton over one thickness of cheesecloth may be used as a strainer. One straining should be sufficient ordinarily, but if the paraffin still is unclean heat and strain again. Any paraffin lodging in the strainer may be recovered by heating the cloth and pouring off the hot liquid to another strainer. 2. For sandwiches use bread a day or two old; fresh bread will always crumble. Then use a very sharp knife, dipping it in hot water to make the cutting easier. Trim off crusts and use butter that is slightly softened. When making lettuce sandwiches do not trim off the crust until you insert the lettuce, then cut it off with the crush. For filling, use chopped nuts and lettuce, chicken and lettuce, or chopped dates in brown bread, lettuce and mayonnaise, grated cheese, or minced ham and salad dressing thinned. 3. The problem of keeping linen or lace table centres from creasing when not in use is happily solved by winding them round long cardboard rolls covered with chintz. 4. To remove mildew spots, wet the linen with boiling water, wring dry; then dip in sour milk, lay in sun and cover thickly with salt. Or apply a raw apple crushed to a pulp and mixed with salt. 5. Burning sulphur in a room will disinfect it thoroughly.

Historian:—1. The Treaty of London, the "scrap of paper," as Von Bethmann-Hollweg called it, was signed on April 19, 1839, by Prussia, France, Great Britain, Austria and Russia. The Treaty of London declares:—"Belgium . . . . shall form an independent and perpetually neutral State." The implications of perpetual neutrality are well summed up in "A Short History of Belgium" by Leon Van Der Essen, at page 159. Permanent neutrality is established not so much for the peace of the country concerned as for the maintenance of peace between other countries. Therefore the violation of neutralized ground is a casus belli of the most open and unmistakable sort. 2. The Germans call their country the Deutsches Reich, or German Empire. By the "German confederation" do you mean the present empire? It consists of twenty-six States, four kingdoms, six grand duchies, five duchies, seven principalities, three free cities and Alsace-Lorraine. It is not a union of equals, for some of the States enjoy specific powers not possessed by others. Prussia is most highly favored. The emperor must come from her royal house and because of her large representation no change in the Constitution can be made without her consent. There is no parliamentary government of the empire in the sense in which it exists in Great Britain, for the Chancellor is not answerable to the Reichstag, or parliament, but only to the ruler. 3. Aisne is pronounced like "ain". 4. Cuba, Haiti and Santo Domingo are the West Indian republics.

Standard Reader:—1. Probably the cause of poor results with spinach is inferior seed. 2. Very often a child such as you describe grows up to be a very attractive and useful woman. It is all a matter of training. As a rule, punishment has not a beneficial effect upon a nature like this. Much depends upon your own attitude towards her. Always take for granted that she is going to do the right thing. Never for a moment imagine that she will do wrong. Hold up high ideals and let her see that noble conduct is expected of her. Most of us, young and old, try to live up to the high opinions our friends have of us. Never scold, nag, or preach. Never make comparisons between her conduct and that of some other little girl. Never tell her she is like Aunt so and so. Praise every right thing she does, no matter how small. This is very important. Give her good books to read, such as "Little Women". I shall be glad to hear from you again.

Sheep Notes

To get the flock safely through the winter, get the ticks during the summer.

One reason the sheep industry has shown a decrease in the last few years, is that wool buyers have paid no more for a good fleece than a poor one. There should be a premium on good wool.

Save all the good ewe lambs for breeders, for they will be in demand during the next few years. Take care of the breeding flock so that it will be in condition for breeding this fall. Keep a record of the ewes to be sure all are bred.

An old shepherd says that the feet need to be trimmed three times a year.

A cistern catching water from the barn roof furnishes a good supply of water for the flock, if the water is kept clean and cool.

Aim to make the lambs the chief source of income. Let the clip pay for the ewe's keep.

As soon as the grain is harvested, the sheep will clean up the waste grain and eat many weeds in the stubble if they are given a chance.

Shade makes sheep. Where there are no trees in the pasture it is a wise plan to put up a shelter of boards or canvas. When the sheep have shade they will graze in the evening and morning and lie in the shade during midday, chewing their cuds.

Harrow the corn land before and after the crop is up.

The Sunday School

INTERNATIONAL LESSON
JULY 29

Lesson V. God's Gracious Invitation.—Isaiah 55. Golden Text—Isa. 55. 6.

Verse 1. Water . . . wine. . . milk—The common drinks of the Orient; here symbols of the material and spiritual blessings promised in the preceding chapter. All these may be secured free of all cost. Wherefore do ye spend—Addressed primarily to the Jews in other lands, especially in Babylonia. Many of them had acquired wealth and adopted the customs and the religion of their new home. But, in the opinion of the prophet, all the wealth of Babylonia cannot satisfy; hence he urges the exiles to turn from the disappointing, material things to the enjoyment of the blessings of the kingdom of God.

3. Everlasting covenant—The enjoyment of material blessings is conditioned upon spiritual regeneration, the coming into vital, personal relationship with Jehovah (Jer. 31-34). Sure mercies of David—The loving-kindness promised irrevocably to David and to his dynasty (2 Sam. 7. 11-16). The new covenant will embody all the essential elements of the earlier promises, and will be as irrevocable as the earlier covenant.

4, 5. Comparison between David, a party in the earlier covenant, and the servant Israel, a party in the new covenant. As David occupied a unique position among the nations in his day, so Israel is destined to occupy a unique position in the future. A nation—Better, people. Foreign peoples, unknown to Israel, will flock eagerly to it and to Jerusalem (Zech. 8. 20-23). Glorified.—He has appointed to Israel a glorious position.

6, 7. Only those who are truly united to Jehovah can become partakers of the glorious promises, hence the prophet urges the indifferent and godless to repent and turn to Jehovah.

8, 9. The basis for the hope and faith he seeks to inspire, and, therefore, for the appeal to repentance. My thoughts . . . your thoughts—Men may see in the present condition nothing but ground for despair; Jehovah sees in it an opportunity for redemption.

10, 11. Void—There is no danger of the divine purpose being frustrated; Jehovah's thoughts, words, and purposes abide forever.

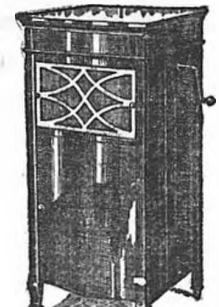
Protection of Crops.

Crop protection means crop production. Canada loses over one hundred million dollars worth of her staple crops every year through the depredations of insect pests. A large portion of this loss could be prevented. As we cannot afford to lose the smallest portion of our grain and other food crops during the present critical period when the production of food is of supreme importance, the Dominion Department of Agriculture is making every effort to prevent, so far as possible, losses due to insect pests. Crop protection must go hand in hand with crop production.

Insect pests are not usually noticed or reported until they have caused considerable damage. Therefore it is urged that the closest watch be kept on all crops for the first appearance of any insect pests or damage. Immediately such damage is observed steps should be taken to control the outbreak in its incipient stage. If the pest or the method of control is unknown specimens of the insect and its injuries should be sent at once to the nearest of the following sources of expert assistance: The Agricultural College, the Provincial Department of Agriculture or their local District Representatives, the officer in charge of the nearest Dominion Entomological Station, or direct to the Dominion Entomologist, Department of Agriculture, Ottawa, for examination; and advice in regard to control measures will be furnished without delay. Letters and packages up to 11 ounces in weight may be mailed to the Dominion Entomologist, "Free," but postage will be required on letters or specimens sent to the other sources of advice mentioned.

Do not delay reporting insect outbreaks or sending inquiries; delay may involve serious losses that could otherwise be prevented. Write immediately, or telegraph if the outbreak is serious. Clean farming, the securing of vigorous growth in young plants and good cultivation are the best protective measures against insect attack. Keep all crops constantly under supervision for the first appearance of any damage in order that it may be checked without delay. Increased crop production involves increased protection against pests.

Don't Wash Eggs!



Except for immediate use or for local customers who use fresh eggs soon after delivery, never wash eggs even if soiled. Egg investigations show that millions of eggs spoil unnecessarily because they were washed or in some way became wet before going into cold storage. Washing eggs dissolves and removes the natural gelatinous covering which prevents germs of decay from getting through the pores of the egg shells.

Neither should eggs to be stored in water glass or other preservative be washed. If shells are badly soiled, better use the eggs for cooking purposes and spend the time needed for washing eggs in keeping the nesting material clean and providing clean dry litter in the laying-rooms.

Apple paring machines are helpful to the busy housewife. It is a little early, but apple paring time will soon arrive.

Bread-Making 1917 Contests

At Rural School Fairs in Ontario

THE PATHFINDER

Five of these large cabinet phonographs, each with twelve records, given as first prizes in District Contests. Value, $140. Size, 20 in. x 20½ in. x 42 in. high

PRIZES: Five Large Phonographs
Five Sets of Dickens' Works
Girl's Own Annuals
Attractive List of Books
Canuck Bread Mixers

More than $2,000 worth of prizes for bread making will be offered at the rural school fairs this fall. Among the prizes are five large cabinet phonographs, fifteen Canuck bread mixers and many attractive books. These splendid prizes will make the contest the most stirring ever held at rural school fairs. Every girl between the ages of 12 and 18 should read all about this fine opportunity, and should begin now to prepare for it. The prizes, under the conditions explained below, will be awarded for the best loaves baked with

Cream of the West Flour
the hard wheat flour that is guaranteed for bread

—the flour that you will want to use always, once you have given it a good trial. We want you to know for yourself that it makes splendid big loaves of the lightest, most wholesome bread that good flour can bake. That is why we make it well worth your while to try it, by offering these attractive and costly prizes.

For this contest we have divided the Province into five districts, each with several counties. In each district we will give a large cabinet phonograph, a set of Dickens' Works and three bread mixers. These are called the District prizes and they are to be given in addition to the prizes offered at the local rural school fairs. (See list of districts below.) Be sure to compete at your local rural school fair. If you win first prize there, you will then automatically become a competitor for the phonograph and other district prizes.

The Prizes, remember, are offered for the best loaf of bread baked with Cream of the West Flour. No other flour will do. For local prizes we offer a number of valuable books. By local prizes we mean those given at the fair

1st Local Prize.—"Girl's Own Annual," a great big handsomely bound, illustrated book with 400 pages of stories and articles about people, art, animals, gardens, sewing, cooking, etc., etc., that every young girl and her mother likes. This is a wonderful book that you can treasure for years.

2nd Local Prize.—Stories of Princess Ida and Women," heavily cloth bound with gold titles, many beautiful pictures in colors, interesting life stories of Florence Nightingale, Grace Darling, Flora MacDonald, Jenny Lind, the late Queen Victoria and others.

3rd Local Prize.—"British Empire," a large handsome bound book with many colored pictures, interesting stories and descriptions of the countries and the peoples of Britain's world-wide Empire.

4th Local Prize.—"The Queen's Gift Book," a book of stories, pictures and special articles by Britain's best writers, the proceeds from the sale of this book are for the benefit of disabled soldiers in England.

Note.—Unless the entries number six or more only first and second prizes will be awarded. Unless the entries number ten or more no fourth prize will be awarded.

The District Prizes.—The winner of the first prize at each local fair automatically becomes a competitor for the following District prizes. One-half of the first prize loaf will be sent to the Ontario Agricultural College at Guelph, to compete in the District Contests. (See conditions below.)

1st District Prize.—The "Pathfinder" is the name given to the fine big cabinet gramophone we offer as first prize. It will give you endless pleasure and entertainment for a lifetime. It has special record-horn attachment so as if possible, enabling you to play 12 inch records as well as the ordinary records. The Pathfinder reproduces band music, orchestra music, songs and every sound perfectly; with it goes a dozen of the finest Pathe records. Total value, $140.00.

2nd District Prize.—Set of Dickens' Works, 10 volume fully bound volumes with many illustrations. Among the books in this set are "Oliver Twist" and "Old Curiosity Shop." These are two of the most interesting stories ever written.

3rd, 4th and 5th Prizes.—"Canuck" Bread Mixers. This simple, yet well-made machine takes all the hard work out of bread making. It is quick, clean and absolutely sanitary. All you need do is put in the ingredients, turn the handle and the dough is thoroughly and more evenly mixed.

FIRST PRIZE AT LOCAL RURAL SCHOOL FAIRS

CONDITIONS OF THE CONTEST

Every girl may compete at the rural school fair to be held in her district, whether or not she attends school, providing that her 12th birthday occurs before November 1st, 1917, or her 13th birthday does not occur before Nov. 1, 1917. One loaf or bread must be submitted baked in pan about 7 x 3 inches and 4 inches deep, and divided into little loaves so that they may be separated at the fair. The loaf must be baked with Cream of the West Flour. One loaf will be baked at the fair. The other loaf of the pair will be sent to Ontario Agricultural College, Guelph, for the District contests. The judging at the fairs will be done by Miss M. A. Purdy, of the Department of Provincial Agriculture. The local members of the fair will be conducted under the same rules as all the other regular contests at your fairs.

The Standard by which bread will be judged will be as follows:

1. Appearance of Loaf		45 marks
(a) Color	5 marks	
(b) Texture of crust	5 marks	
(c) Shape of loaf	5 marks	
2. Texture of Crumb		40 marks
(a) Lightness	15 marks	
(b) Thickness	15 marks	
(c) Color	5 marks	
3. Flavor of Bread		15 marks
(a) Taste	10 marks	
(b) Odor	5 marks	

Important.—Each loaf must be accompanied by the part of the flour bag containing the face of the girl miller, and an entry form must be signed by the girl and parent or guardian giving full name, P.O. address, and girl's age. Where can the name of the West Flour was purchased? The farm will state that the girl actually baked the loaf entered in the competition. The farm will be awarded at the same of the fair. The decision of the judges is final. Not more than one entry may be made by any child and not more than one local prize will be awarded to the same family.

Write Shorties to yours! This list shows you which counties you compete against if you become a competitor for the District prizes:

District No. 1.—Counties of Glengarry, Stormont, Dundas, Grenville, Leeds, Frontenac, Lennox and Addington, Carleton, Lanark, Renfrew.

District No. 2.—Counties of Hastings, Prince Edward, Peterboro, Northumberland, Victoria, Durham.

District No. 3.—Counties of York, Ontario, Peel, Halton, Wentworth, Oxford, Brant, Waterloo.

District No. 4.—Counties of Welland, Haldimand, Norfolk, Elgin, Kent, Essex, Lambton, Middlesex.

District No. 5.—Counties of Bruce, Grey, Dufferin, Simcoe, Districts of Muskoka, Parry Sound, Timiskaming, Algoma, Sudbury, Manitoulin.

THE RESULTS of the contests at the fair will be made known in the usual way as in the case of all the other regular contests. The District results will be announced as soon as possible after the conclusion of the Rural School Fairs in the Province.

DO NOT MISS THIS GREAT OPPORTUNITY. Every girl between the ages of 12 and 18 years should enter. What's more, it is only an honorable contest in which it is possible for every girl to win a prize. Practice baking bread at home. Do as other girls are doing. Do as your mother does. Do as she tells you. Do as she suggests to increase the chances of winning. If your mother has not used it to date, write to the Campbell Flour Mills Co., Ltd., Toronto, and we will promptly send you a copy of the Canuck Cook Book.

NO COMPETITIONS IN COUNTIES NAMED BELOW. The competition is open to all parts of the Province where Rural School Fairs are held, except the Districts of Rainy River, Kenora and Thunder Bay. These districts are the only parts of the Province where Rural School Fairs are not held by the Department of Agriculture in which this competition will not be a feature. There are no Rural School Fairs in the Districts of the Department of Agriculture in the Counties of Huron, Perth, Wellington, Waterloo and Lincoln. Unfortunately, the Rural School Fairs are held in these Counties by the Department of Agriculture. There are, however, a few good school fairs held in these seven counties, and we are opening the competition to these fairs. We will announce later the districts in which each of these Counties will be included.

The Campbell Flour Mills Co., Limited
(West) Toronto, Ontario

(Keep this announcement for reference)

To Dealers:

The above preliminary advertisement is inserted to inform the Public about our Bread-making Competition. We will shortly advertise in the home print pages of local weeklies the names of dealers handling Cream of the West Flour.

Horse Sense

Harness leather cannot be neglected without injury that lessens its durability. It should be washed and oiled frequently. The washing should be done in tepid water with a neutral soap and a sponge or stiff brush. After rinsing in clean tepid water the harness is hung up to drain a little while before oiling.

For driving harness neatsfoot or castor oil is best, but for heavy harness there may be some tallow in the oil. The applications should be light for driving and liberal for heavy harness. The oil, warm to the hand, is rubbed thoroughly into the leather while it is still wet from the washing. Except all which the leather is unable to take up should be removed with a clean, dry cloth.

Pulling the binder is harder work than drawing the cultivator, especially if there is no truck to support the weight of the binder tongue. Occasional rests and airing the shoulders by pulling the collars up on the horses' necks will help to prevent galls and sores. Wash the shoulders and apply some liniment at night.

It will pay to give the colts a small amount of grain once a day, although they are running with the mares in pasture.

Swill the sink thoroughly well down with boiling water daily. A whole kettleful isn't a drop too much to use, and you must take care to have it boiling.

Most of the peas sent to market are picked when too old and tough. If you want to build up a high-class trade, pick peas when they are young and juicy.

Keep the cultivator going in the corn until out in tassel. But shallow toward the last, please! About two inches deep is right. Muzzle the horses and they'll work better and not eat the precious corn.

It is some work to do it, but if your well has been in the habit of going dry in summer, take the wall out and dig down deeper till you strike water; or dig just inside the old wall and stone the smaller well up afterward.

A neighbor of ours has one field that has never been manured. Great, you say? But let's finish the story. His yield of wheat on that piece of land has been nineteen bushels to the acre, while on land which has been manured he has averaged twenty-six bushels to the acre. Which is the better farming?

The young bired man said that he never heard of such a thing when we spoke the other day about filling a hoe. Maybe your men folks are the same way. Show them how, right off. But do you know yourself? Fits the hoe on the edge farthest away from you when you hold it ready to clip off a weed. Good plan to take a file with you when you go to the field and use it once in a while, before your tool gets "duller than a hoe."

CANTIRE

Haying and hoeing have both been delayed by the continued wet weather. If this week should keep drier hay cutting will be in full swing. But as for the hoeing, there will be a lot that will be felt undone.

Mrs Wm Anders and children, Freda and Willie, were recent visitors at the home of the former's brother, Mr Angus Taylor.

Tena and Bert Walpole, of Wilkiscroft, are spending holidays at the home of his grandparents, Mr and Mrs Geo Walpole.

Master Harry Lyon, of Paisley, is spending holidays at the home of his uncle, A D McKay.

Three out of four of Miss Keith's entrance class were successful at the recent examination, which is a very creditable showing. The successful candidates are John McIntyre, Maurice Gowanlock and Jean Reid. Congratulations all around.

And Gowanlock and his cousin, Leo Chappel of Saugeen, were week end visitors at Alex Gowanlock's.

Mr and Mrs Barfoot and family, of Shallow Lake, were a party of motorists who spent Sunday at Mr Geo Walpole's.

Lily Stoddart is visiting in Paisley this week.

The trustees of this section have engaged Miss Elizabeth McCurdy, of Vesta, as teacher for next year. Miss McCurdy comes highly recommended.

Laura and Peter Reid are spending vacation with friends at Glenhuan.

WILKISCROFT

The Baptist Church here was the scene of a very pleasant gathering on Friday evening last. The guest of honor was Mrs J Smart of Paisley (nee Miss Myrtle MacArtney), who was presented with a handsome clock, accompanied by the following address, read by Mr Alex Marshall:

DEAR FRIEND—We the members and friends of Wilkiscroft Baptist Church, have gathered here this evening to spend a social hour with you and to place on record our appreciation of your valuable services as organist of the church. We will miss your cheery presence and companionship but could not let you go without showing, in some tangible way, our appreciation of your valuable services. We therefore ask you to accept this time-piece as a slight token of our esteem and friendship. Wishing you much happiness and God's richest blessing in your new home. May your future be full of sunshine. Signed on behalf of the members and friends—Thos Powell, R J Bell, Alex D Marshall.

The chair was occupied by the pastor, Rev M Neilson. An excellent programme was rendered during the evening, the numbers including recitations by Calvin Crawford, songs by Mr E McArtney and the chairman, duet by Mr and Mrs Robt Bell, speeches by Messrs Thos Powell and John Bell, and selections by the choir. Mention must not be omitted of the very nice reply made to the address by Mrs Cavill. Refreshments were served by the ladies.

PINKERTON

Mrs W Mutrie and children, of St Louis, are visiting at Mr J Mutrie's.

Mrs N Garland visited in Harriston on Saturday.

A memorial service in honor of the late Pte Edgar Garland, who died of wounds a few weeks ago, was held in the Anglican church on Sunday afternoon. A large congregation listened to an excellent discourse by Rev Mr Homer.

Rev Mr Budge occupied the Presbyterian pulpit here on Sunday morning and preached an excellent sermon.

Mr and Mrs J A Gregg and family have moved to their summer cottage at Inverhuron for the summer.

Mr R L Garland, of Palmerston, spent Sunday at his home here.

Mr Adam Foreman lost a valuable horse on Saturday night.

Mr Tom Pinkerton, of Toronto, is visiting his sister, Miss Lena Pinkerton.

Another shipment was made by the local Red Cross last week consisting of 55 grey flannel shirts without collars, 16 pairs socks, 11 suits pyjamas, 2 pillows, 3 wash cloths.

TWELFTH CON. BRUCE

Mrs Jno A Howe happened with an accident last week, which although she did receive a severe shaking up, might have proved fatal. While raking hay the horses went too near the fence and caught a post. The horses taking fright, became unmanageable and Mrs Howe was thrown off under the rake and dragged a few rods. She received some bad bruises, but we are pleased to report she is getting along fine again.

Master Milton Scott is visiting with his uncle at Elsinore for a few weeks.

Miss Moulton was successful in putting through her four Entrance scholars.

Mrs Geo Ribey was visiting at Jno A Howe's this week.

Mrs Shields and two children from London are visiting at the home of her brother, Mr Wm Kissack.

Miss Bertha Reptke of the 6th is spending a few days at Mr H Neilly's.

TURNER'S

Henry Dier, of Parkhead, was visiting his mother, who has been in poor health.

Miss M McTaggart, of Burgoyne, was visiting her sister, Mrs And Miller.

Miss Karcher is visiting with friends in Port Elgin.

Mr and Mrs T A McCarrol, of Meaford, visited with Mr and Mrs Adam Cairns.

Roy Pollock has purchased a fine new driver from N McGillivray.

Adam Munro has given up storekeeping for a short time and has gone home to help with the hay.

Haying has started and farmers will be glad to have fine weather.

WALKERTON

At a joint meeting of the 24th of May Celebration Committee, 1916, and the Walkerton branch of the Bruce Preparedness League held in the Town Council Chamber on Tuesday night, it was decided to donate two of the large mess tents, which the 166th were using, to the military authorities at London Ont. for the use of returned consumptive soldiers who have been invalided there for treatment.

County Treasurer Norman Robertson, received word on Tuesday morning that his youngest son, Capt. Eric Robertson, who had recently been promoted to the position of Flight Commander in the Royal Flying Corps, on the Western Front, had been officially reported as "missing." The message, which was cabled to Canada from England, by Mrs. Eric Robertson, wife of the missing captain, contained no other particulars and needless to say the parents here are putting in some anxious moments awaiting further news regarding the probable fate of their son. As an aviator, Eric was one of the most daring on the Western front, and in his flights over the German lines had on more than one occasion experienced hair-breadth escapes, his machine being fairly riddled with bullets from anti-aircraft guns and from attacks by superior numbers of Hun fliers. It is likely that during one of these excursions over enemy territory that his machine was brought down, and that the gallant airman, if he escaped uninjured, is now a war prisoner in a German camp.

On Monday afternoon of last week, while Mrs. John Belbeck and her daughter, Ada, were picking strawberries in their pasture field near Eden Grove they noticed two strangers walking along the opposite side of the fence, near the edge of the clearing, a short distance away. Presently they were startled by a volley of shots from something in the revolver line. Thinking, however, that the pair were shooting at birds or squirrels the women kept picking to the tune of the pistol's ring. A rainstorm suddenly breaking, they reached for their granite berry pail, which they beheld it full of holes. It was then they realized that they were dancing with death by moving among the bushes nearby while all around them the air was full of lead. Looking around for the jays who nearly put the crope on their front door, they espied the pair, whose heads were as free from brains as a desert is of icebergs, doing the getaway act over the adjacent landscape. —Herald and Times.

FOR FLETCHER'S
CASTORIA

SIXTH CON. BRUCE

On June 29th, some of the parents of the children of S. S. No. 9 met in the school to spend a few social hours and bid the teacher farewell previous to her departure. There was a short program prepared. Master Chambers McKinnon was chosen as chairman. The first on the program called was our worthy trustee, Mr. Joe Hyde. He spoke very highly of the year's work done in the school. After a few readings and songs by the school children, Miss Megraw was asked to come forward and an address was read by Chambers McKinnon, while Floyd Wrightson made the presentation of a beautiful necklace.

The address was signed in behalf of the section by Floyd Wrightson, Wm. Smith, Howard Smith and C. McKinnon, and set forth the appreciation of the parents and the love of the scholars for Miss Megraw, who has proved a highly efficient teacher.

Mr and Mrs G B Irwin have returned from spending holidays with Ripley friends.

—Mr and Mrs J Sutherland and family are at the Winch farm for the balance of the summer.

—Miss Ruby McBride, of OwenSound, is a visitor at the home of her cousin, Mr G B Irwin.

—Mr Peter Fisher, of Regina, was a recent visitor at the home of his cousin, Mr J P Fisher.

Mrs Last, of Woodstock, is visiting her sister-in-law, Mrs F Last, Goldie St., and other friends.

—Miss Munn, of Toronto, has been spending vacation at her parents' home on Goldie St.

—Mr and Mrs R H Pickard are spending a months with friends with friends in Owen Sound.

—Mr and Mrs F Spieran, of Walkerton, were guests at Mr J A McNeill's, Lockerby, over Sunday.

—Mr Thos G Brown, of the Royal Bank staff here, has been transferred to the Toronto office.

—Mrs Roscoe Teeple, Greenock, has been visiting her sister at Pickering for a couple of weeks.

—Mr Rendall, formerly of the Paisley Continuation School staff, is visiting in town for a few days.

—Miss Ethel Kennedy, of the Deseronto P. S. staff, is spending part of the vacation at home here.

—Mr Wm Tooke has moved into the brick residence on Duke St., which he recently bought from Mrs A Sinclair.

—Mrs Clarke and daughters, Misses Coral and Constance, of Brampton, are visiting their relatives and friends here.

—Mrs T B Head, a former resident of Paisley, is up from Toronto on a visit at the home of her sister, Mrs Thos Collins.

—Mr A A McDermid, from Montana, arrived here Monday on a visit to his aged father, Mr John McDermid of Elderslie.

—Florence, Ethel, Tena and Willie Wagner, of Newton, are visitors at the home of their grandmother, Mrs Storie, Ross St.

—Rev Malcolm A Campbell, D D, of First Presbyterian Church, Montreal, visited his mother, Mrs A Campbell, 2nd Saugeen.

—Mr W J Ellis came up from Toronto for a couple of days and was accompanied to the city by Mrs Ellis, who is remaining for a couple of weeks.

—Mr and Mrs David A Keith, of Owen Sound spent a few days visiting at the home of the latter's parents Mr and Mrs John McBeath, 4th con Elderslie.

—Miss Isabel Sinclair and Miss Effie Bain are up on vacation from Toronto, where they have been for the past year "doing their bit" in munition factories.

—The Misses Watson, Victoria St., with their sister Mrs Morton and children of Winnipeg, are spending a few weeks in the Patterson cottage at Port Elgin.

—Rev A H McGillivray, of Hamilton, is spending vacation at Port Elgin, and was calling on his friends in Paisley for a few hours, while on his way to preach in Chesley on Sunday.

—Mr A J Edwards, of Peterboro, was up visiting his brother and other friends in Elderslie. Mr Edwards, who is in the baggage department at the C P R station, Peterboro, says the U S tourist traffic to Canada is greater than ever this season, on account of the war.

—Mr Geo B Smiley, of Boston, Mass, is visiting at the home of his aunt, Mrs R H Cann. George has been away from Paisley since his school days. For 22 years he has been employed with a shoe factory where 5,000 people are at work. He is head of the cutting department, and has 1,300 persons under his direction.

—Among the names in the recent casualty list was that of Norman McLeod, formerly of Paisley, who was reported wounded and seriously ill.

CARBOLA

is a disinfectant that dries white, not dark or colorless like other disinfectants, so that with it, one disinfects and paints at the same time, with the same labor and at no greater cost than is required for whitewashing and disinfecting only.

Carbola is made of a finely powdered mineral pigment, the same as used by many paint makers, combined with a germicide

20 times stronger than carbolic acid

but non-poisonous and non-caustic. Comes in convenient size packages, does not spoil by standing, so can be kept on hand ready to use when convenient or on a rainy day. Applied with either a brush or a spraying machine. Will not clog the sprayer or blister, flake or peel off, no matter how many coats are put on.

It is neatly prepared for use. Just put the powder in a pail and stir in either cold or hot water.

Used and endorsed by thousands of poultry and breeding farms and by experiment stations and agricultural colleges.

PROVIDING FOR HARVEST HANDS

The Quantity and Kinds of Foods Required for Harvesters as Estimated by An Expert in Household Science.

For an accustomed cook, the work of preparing meals for the extra harvest-hands, presents no special problem. It is a matter of assembling food and promptly preparing it in appetizing ways.

To nearly every farm woman, however, comes an appalling first time when she finds herself faced by the question of how much she must prepare for a given number of men. To this question is now added our national duty of economy. We are asked to prepare for our tables not so much what we best enjoy as what will most acceptably and economically nourish bodies for the work they must do.

In view of this situation, many of my readers may welcome an estimate of the amount of food needed for one meal by one man employed at severe work such as threshing.

I am reproducing here the table which gives in ounces a balanced ration for a man of one hundred and fifty-four pounds. A little study of the table as a whole will help the housewife to understand how this balance is preserved and how to estimate what she will need to furnish for five men or twenty-five.

Man at Severe Work

Kind of Food	Ounces
Breakfast:	
Apple sauce	4.00
Oatmeal	2.00
Cream	2.15
Sugar	0.56
Sausage (pork)	2.00
Bread	2.60
Butter	0.60
Potatoes	4.00
Tea (1 cup)	0.40
Sugar	0.28
Cream	1.07
Total	19.66
Dinner:	
Boiled ham	3.00
Potatoes	4.00
Carrots	4.00
Turnips	4.30
Corn bread	5.20
Bread	1.30
Butter	0.75
Cold slaw (cream)	1.33
Pie, mince	4.00
Tea (1 cup)	0.40
Sugar	0.28
Cream	1.07
Total	29.63
Supper:	
Dried beef (creamed)	1.00
Cream	1.07
Fried potatoes	2.40
Bread	1.30
Butter	0.75
Apple sauce	4.00
Ginger bread	4.00
Milk, skimmed	9.40
Total	23.92
Total for day	73.11

Feeding the harvest helpers is hard for the woman who cannot have suitable appliances and has to depend on makeshifts.

Among the helpful utensils is a three or four gallon double boiler for making soups, gravies and puddings; also a large steam cooker which will take care of fifteen or twenty loaves of brown bread or steamed puddings at once.

A good homemade fireless cooker will help in cooking ham or boiled beef.

Beware of trying to fill up hungry men with foods that take much time to prepare. One should not try to serve pies often, unless there is plenty of help. Rolling crust is slow work even for a swift pie-maker.

Three gallons of tapioca cream can be made at once in a big double boiler, almost as easily as one quart. When milk is available, it is no more expensive than pie and is as nourishing.

In the same way, a large quantity of berry pudding may be mixed at once. A shortcake is more quickly handled than pie crust.

When it is possible to buy bread from a bakery during harvest time, the women of the farm should not be expected to make it. Doughnuts require considerable handling but little more than biscuit or muffins, and usually are more satisfactory.

The aim in trying to guard against taking proper care of the food in the hot weather. For that reason it is best not to keep much over from day to day.

The more variety we can give in the grain foods, the less meat will be required. Try to serve biscuit, dumplings or squares of pie crust and stuffings with meats and fish to make a less quantity satisfying.

Food must not be greasy. Bake and broil and steam meats rather than fry them. By planning ahead and starting in season, the tougher portions of meats may be cooked till tender.

Fruit and shade trees, bush fruits and roses will be benefited by receiving a good spraying of Bordeaux mixture.

This is a crisis which calls for the elimination of all selfishness. Men "on the junke" or with axes to grind should be marched to the rear.

From paper made of the fibre of the mulberry tree, a Japanese naval officer has invented a lifeboat that can be folded into a space of about a cubic foot.

Head Office: 43 Imperial Life Bldg., Toronto

Alleged Profits of The William Davies Company in 1916 on Bacon, as Indicated by Department of Labor to be Five Cents per Pound, Untrue:

Actual Profits Two-Thirds of a Cent per Pound

THE statement issued by the Department of Labor concerning the business of The William Davies Company Limited has been given widespread circulation throughout the country and provoked public unrest.

Whatever the technical wording of the report was, the effect has been that the newspapers have published that "the profits on Bacon alone" of this Company "for 1916" were about "five millions of dollars." This interpretation of the official report is not surprising in view of certain statements that the Commissioner of the Cost of Living makes. The Commissioner is reported as saying that "There were two individual cases of profiteering in 1916 and that had these cases occurred since the passage of the cost of living Order-in-Council, he would consider it his duty to recommend that the facts be laid before the Attorney-General for consideration as to their criminality." The situation created by such erroneous and damaging statements is serious as emanating from a Government official, from whom one looks for not only accurate statements but correct conclusions.

The William Davies Company, being a private concern, has followed the practice of all private corporations, except when it made a bond issue in 1911, in that it has not published reports of its assets and liabilities or profit and loss. The present circumstance, however, in which a Government Official has led the public to false conclusions, makes it advisable for this Company, for both the public interest and its own interest, to publish particulars of its business as well as point out the error of the statement of the Government Official.

For the last fiscal year ending March 27th, 1917, The William Davies Company bought and killed 1,043,000 head of Live Stock (Cattle, Hogs and Sheep.) This, plus purchases of outside Meats, produced 160,000,000 pounds of Meats. The Company handled 6,350,000 pounds of Butter and Cheese, 5,050,000 dozens of Eggs, and manufactured 26,500,000 tins of Canned Goods.

The net profits on these were .08 cents (or two-thirds of a cent) per pound on meats, 1.04 cents on Butter and Cheese, 1.04 cents per dozen on Eggs, and .47 cents (or slightly less than one-half a cent) per tin on Canned Goods. These profits include profits on all By-Products derived from these accounts.

During the year the Company served at its retail stores 7,500,000 customers, the average purchase of each customer was 53c., and the net profit upon each sale was 5-8 of 1 cent.

The turnover of the Company from all its operations for the last fiscal year ending March 27th, 1917, was $40,000,000. The net percentage of profit upon this turnover, after deducting war tax, was 1.09 per cent., or including war tax 3.45 per cent.

The William Davies Company has assets of $19,385,000 of which $3,805,000 is tied up in fixed investments.

To provide the necessary facilities for the increased volume of business the Company expended $750,000 in buildings and equipment during the year.

Companies of other character present no more reasonable statement of profit and loss based upon the investments made in the business.

The William Davies Company offered to the Imperial authorities, as well as to the War Office Service (which represents the Imperial authorities in Canada) to place the output of its Factory with respect to Bacon supplies, Canned Beef and Pork and Hams at the service of the authorities, on the basis of cost plus an agreed percentage. These offers were successively declined as the authorities evidently desired to purchase in the open market, and on this basis The William Davies Company has secured War Office business by open competition with the world.

Respecting the Report of the Commissioner on the Cost of Living:—

Last Winter the Commissioner, under authority of Order-in-Council, required packers to submit statements under oath for same years back and up to December 1st, 1916, of incoming stocks of Meats and the cost of such, as well as statements of outgoing product and the selling value. This Company represented in writing at the time that the information as specifically required was not in accordance with Packing House Accounting methods, and invited the Commissioner to send an Officer to the Head Office of the Company to examine the books for any information desired, and to secure a viewpoint as to the best way of collecting data which would be of use to the Government. This offer was declined, and there was nothing to do but fill in the information required as literally as we could determine it. For example, there was no recognition of the fact that a raw product may enter a factory under a specific classification and leave the factory as a finished product under some other classification.

We submitted a series of accurate figures based upon our interpretation of the official requirements which made no provision for charges of any description other than incoming freight and unloading charges to be included in the cost or to be deducted from the selling price. There was nothing in the report which could be read so as to determine a profit and loss statement. The very fact that with only a statement based upon cost of raw products and value of sales in Great Britain a Government Official has declared "Large margins," "Profiteering" and "Criminality" if it had occurred since the passage of a recent Act, shows too dangerous a trifling and incapacity to be permitted to deal with any important situation. The statements of this Company have been treated by the author of this report as if the outgoing product was identical with the incoming product, and from the series of reports he has singled out two items—the Bacon and Egg reports—and from them deduced an erroneous "margin" which the newspapers have interpreted as "profit." The author of the inquiry shows a strange lack of even a fundamental knowledge of simple bookkeeping and a dangerous inability to co-ordinate figures. The following are specific and outstanding errors in the report.

The principal item that is causing excitement deals with cold storage bacon. The term "cold-storage" is not defined, and the public is allowed to make its own definitions. As all Bacon in a packing house is under refrigeration it is really all cold-storage, and therefore this Company's figures of cold storage Bacon represent the complete quantity of Bacon handled in its entire Plant, whether in freezers or in process of cure for immediate shipment. That some companies interpreted cold-storage product as "freezer" product only is evidenced by the smallness or entire lack of figures on the Bacon list for some Plants, indicating that many Firms did not submit statements of their complete stocks, as did this Company. An Official of this Company pointed out this cold-storage distinction to Mr. O'Connor and Miss McKenna in Ottawa a few weeks ago, and the failure to make the distinction after having had it pointed out evidences lack of desire for accuracy of the real information desired.

It is true The William Davies Company, in 1916, exported 97,791,000 pounds of Bacon, but we do not know how the margin of 5.05 cents per pound is arrived at by Mr. O'Connor, as there were no figures to justify such a conclusion. The probabilities are that the margin is arrived at by taking the average cost per pound of incoming product from the average selling price per pound of outgoing product. This may be a rough way of estimating the gross margin when dealing with small figures, but when dealing with figures the size that Mr. O'Connor has to deal with, a very small fraction of a cent per pound of error makes a most important difference in the total, and one must be careful to make sure that the outgoing product is the same finished merchandise of the incoming product reported on.

Allowing it to pass, however, as a rough estimate, we wish to point out—(first)—the inquiry of the Commissioner allowed only for incoming freight and unloading charges, and made no provision whatsoever for operating charges of any kind, such as labor, curing materials, refrigeration, et cetera. Such actual charges on the 97,791,000 pounds totalled were $1,102,000—or 1.2 cents per pound. This amount covered all charges up to the point of placing the Bacon on cars f.o.b. packing-house. In addition to this was the actual cost to land and sell this 97,791,000 pounds in England after leaving the packing house, which involved charges of 2.9 cents per pound—or $2,836,000. Thus 2.9 cents per pound included inland and ocean freight, landing charges, war and marine insurance, cables, and selling commission to agents. The ocean freight and war risk alone would make up 2.4 cents of the charge of 2.9 cents per pound. This 1.2 cents, plus 2.9 cents—a total of 4.1 cents—must be deducted from Mr. O'Connor's margin of 5.05 cents per pound, leaving a margin of .95 cents, or slightly less than a cent per pound, which still has to be reduced because of the error of premises and because of further factors which have to be considered to determine net profits.

It is quite evident some of the other packers did not show selling values in the country in which the goods were sold—a proceeding quite proper, as the forms submitted to be filled in were indefinite and ambiguous, thus permitting without charge of evasion a variety of interpretation as to the information required. It is thus possible that of all the figures submitted by the different packers that no two sets of costs and sales prices are determined at the same common point. It is this difference of interpretation of what was required that accounts for the difference of the alleged "margin" made by the different companies. Common conclusions, however, have been drawn by the author of the report from varying bases of premises.

The figures of the Egg business were submitted on the same basis as Bacon, and similar deductions must be made.

(Second)—The above margin is further reduced in that the author of this inquiry singled out the Bacon figures as an item in which the selling price shows an alleged improper advance over cost, but he did not give us credit for the statements of other products, of which figures were submitted the selling prices of which were under cost. The reason of this was that through failure to inquire the Department entirely overlooked the fact that product may come in as pork and, through the process of manufacture, go out as Bacon or, in another instance, enter the factory as beef and go out in the form of canned meats; for example: much of the product which came in as pork, and which was entered on the pork sheet submitted to the Commissioner—about which he makes no mention—was cured and left the factory in the form of Bacon and was, therefore, entered on the outgoing side of the Bacon sheet—the result is that the Bacon sales are increased by this amount over the incoming stocks of Bacon, and, likewise, the sheet showing sales of pork is reduced by the amount that went out in the form of Bacon. If the Department takes one set of figures that show favorable to the Company they should take another set of figures that show unfavorable, as the principle in either case is the same, and failure to do so looks as if the author of the report was exercising more enthusiasm than sound judgment in his investigations.

(Third)—It is queried in the report, that "if the margin of 3.47 cents" alleged to have been made in 1915, "was satisfactory, why was it necessary to show increased margin in 1916?" Assuming again for the moment the soundness of the premises in asking such a question based on an erroneous "margin", it will be found that the increased margin is chiefly absorbed in increased ocean freight rates and war risk insurance in 1916, of which apparently the author of the report was in ignorance.

The Company does not challenge either the legal or moral right of the Government to investigate business enterprises when public interests directs such an investigation should be made. If an investigation of the packing and meat business is ordered, the Company will place at the disposal of the Government not only the data it would be required to supply under Order-in-Council directing that inquiry be made, but will place the experience of its officers at the disposal of the investigating committee, if it is considered they can render any service which will be of value. The Company has not now—nor at any time during the fifty years of its operation—anything to conceal in method or practice of carrying on its business. It does, however, claim the right to conduct its export business without abusive comment from Government civil servants—especially when the conclusions drawn from the data asked for are improper and false.

One of Canada's chief export industries is the packing business. It is essential to the live stock industry, and, along with other export industries, it maintains the financial stability of this country, and should, providing it is on a sound basis, receive encouragement and not slanderous abuse. In view of the publicity given to the report of the Commissioner on the cost of living, the Company demands the same publicity in having an official Government investigation of this report to determine the truthfulness or untruthfulness of its conclusions. We do not seek public consideration as a company, but we do say that untruthful official statements, or statements the effect of which is to create an untruth, adversely affect the live stock industry of this country, which is so valuable and essential a wealth-producing power and, in the long run, are harmful to the very people that the statement seeks to benefit.

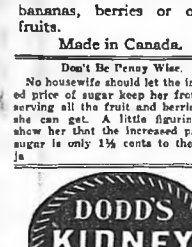
If the passing out of existence of a corporation such as The William Davies Company, or if nationalization of packing houses would materially and permanently reduce food prices, then in view of the present world tragedy it ought to be consummated without delay. The fact of the matter is, however, that with millions of people in Europe turning from producers into consumers because of the war, and the tremendous destruction of food products incident to war, there is no remedy for the high prices of food while such conditions last, except the remedy of thrift and increase of production.

Long before there was talk of a Food Controller in the United States or Canada The William Davies Company urged the Government at Ottawa, in writing, to appoint a Food Controller with full power to do what he saw fit, as we realized at that time the upward tendency in the price of food commodities unless checked by official effort. At the most a great deal cannot be done in reducing food prices while currency is inflated and until the scale of prices of all kinds of commodities declines also. What can be done can only be done by a Food Controller. We wish to point out that nothing at all can be accomplished unless the data secured are accurately and clearly made and the deductions therefrom sound. Only public harm arises from dangerous incompetency in the haphazard collection and careless use of important figures.

As far as The William Davies Company is concerned this terminates all public statements of the Company, and it will pay no more attention to speculative and haphazard statements made either by newspapers or civil servants. The only further statement that will be made will be at an official investigation.

E. C. FOX, General Manager

Toronto, July 17th, 1917



THE WILLIAM DAVIES COMPANY, LIMITED

The Waste of War is terrible, but the waste of food in times of peace is colossal. Rich and poor alike eat tons of food that has little food value—and this useless food breaks down the so-called eliminating organs and depletes the physical and mental powers. **Shredded Wheat Biscuit** is all food, prepared by a process which makes every particle thoroughly digested. It is 100 per cent. whole wheat. Two or three of these Biscuits with milk, make a nourishing meal, supplying the greatest amount of energy at lowest cost. Delicious with sliced bananas, berries or other fruits.

Made in Canada.

Don't Be Penny Wise.

No housewife should let the increased price of sugar keep her from preserving all the fruit and berries that she can get. A little figuring will show her that the increased price of sugar is only 1½ cents to the quart ja

PAIN? NOT A BIT!
LIFT YOUR CORNS
OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house

AN OPERATION AVERTED

Philadelphia, Pa.—"One year ago I was very sick and I suffered with pains

in my side and back until I nearly went crazy. I went to different doctors and they all said I had female trouble and would not get any relief until I would be operated on. I had suffered for four years before this time, but I kept getting worse the more medicine I took. Every month since I was a young girl I had suffered with cramps in my sides at periods and was never regular. I saw your advertisement in the newspaper and the picture of a woman who had been saved from an operation and this picture was impressed on my mind. The doctor had given me only two more days to make up my mind so I sent my husband to the drug store at once for a bottle of Lydia E. Pinkham's Vegetable Compound, and believe me, I soon noticed a change and when I had finished the third bottle I was cured and never felt better. I grant you the privilege to publish my letter and am only too glad to let other women know of my cure."—Mrs. Thos. McGowan, 2422 Hartville Street, Phila., Pa.

VISITED BY A LION.

Only the Good Temper of the Animal Averted Serious Consequences.

There is plenty of danger in training wild animals; nevertheless, in many cases those who work among the carnivores owe their lives to the good temper of their charges. In that connection Mr. Carl Hagenbeck records in Beasts and Men an adventure that would alarm even the most courageous.

In the beginning of the sixties, writes Mr. Hagenbeck, I was bringing from Cologne to Hamburg a large collection of animals. Among them was a four-year-old lion. It was placed in a great kennel and, together with all the other animals, was installed in the railway van. A man named Druard was in charge of the animals during the journey. When everything was satisfactorily arranged, he closed the door of the van and made himself comfortable.

The train rumbled on through the night and the unsuspecting keeper dozed peacefully. Suddenly he felt a great weight upon his chest, and woke with a start. In the darkness, not a yard from him, there shone two greenish lights, and he could dimly see the shaggy outline of the lion's mane. In some way the fastening of its cage had become disarranged and the huge beast had escaped.

Druard was a trainer of long experience, and he knew that this lion was good-tempered. So he decided at once that the best thing to do was somehow or other to tie the animal up. For the rest he must share the place with the lion until the next station, and make the best of his awkward situation.

Fortunately, no trouble broke out between the lion and the other animals. Had anything of that sort occurred, the man would never have lived to tell the tale. Druard quietly untied a sash that he wore round his body and placed it round the lion's neck. Then groping his way through the dark and fighting not he succeeded in fastening the other end of the sash to the handle of the door. At the next station he sounded the alarm, and when lights were brought led the lion back to its cage.

SUMMER HEAT HARD ON BABY

No season of the year is so dangerous to the life of little ones as is the summer. The excessive heat throws the little stomach out of order so quickly that unless prompt aid is at hand the baby may be beyond all human help before the mother realizes he is ill. Summer is the season when diarrhoea, cholera infantum, dysentry and colic are most prevalent. Any one of these troubles may prove deadly if not promptly treated. During the summer the mothers' best friend is Baby's Own Tablets. They regulate the bowels, sweeten the stomach and keep baby healthy. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Buy by weight. Disregard the measure. Insist upon correct weight. Patronize a responsible merchant. By insisting on full weight you obtain the full amount of food for which you are paying.

"This is to certify that fourteen years ago I got the cords of my left wrist nearly severed, and was for about nine months that I had no use of my hand, and tried other Liniments, also doctors, and was receiving no benefit. By a persuasion from a friend I got MINARD'S LINIMENT and used one bottle which completely cured me, and have been using MINARD'S LINIMENT in my family ever since and find it the same as when I first used it, and would never be without it.

ISAAC E. MANN.
Aug. 31st, 1908. Metapedia, P. Q.

IN BLIGHTY.

Oh, to be in Blighty.
Now that summer's there!
But I can't get back to Blighty,
For the U-boats won't play fair.
So I lie in this long, white ward, and dream
Of the old home farm and the ploughing team,
And the sweet flowers starring the hillside brow
In Blighty—now!

Oh, to be in Blighty!
I'm broken, blind, and sore.
My heart sure aches for Blighty,
And I'm tired of blood and war.
And I think of the stone-paved village street,
And the bright-faced lassies so trim and sweet,
And the old man driving the soft-eyed cow
In Blighty—now!

Oh, to be in Blighty,
Now that summer's there!
But I can't get back to Blighty,
For the U-boats won't play fair.
So I'll shift the arm that they're trying to mend,
And doze awhile, and just pretend
That when I wake I'll find me—how?
In Blighty—now!

—Eileen Smith.

A French electrician's wireless receiver is small enough to be carried in a pocket, yet will pick up messages when connected with almost any metal surface.

RICHES.

You can be rich in friends,
And rich in kindly graces,
And draw great dividends
In smiles on many faces.

You need not wisdom great
Nor feats of glory;
Kindness will better state
Your splendid story.

The long-remembered dead
Lived not in splendor,
Their records can be read
In memories tender.

WHEN YOUR COLOR FADES

When a girl—or a woman—finds her color fading, when her cheeks and lips grow pale, and she gets short of breath easily and her heart palpitates after slight exertion, or under the least excitement, it means that she is suffering from anaemia—thin, watery blood. Headache and backache frequently accompany this condition, and nervousness is often present.

The remedy for this condition is to build up the blood, and for this purpose there is no medicine can equal Dr. Williams' Pink Pills. They build up and renew the blood, bring brightness to the eyes, color to the cheeks, and a general feeling of renewed health and energy. The only other treatment needed is plenty of sunlight, moderate exercise and good, plain food. The girl or woman who gives this treatment a fair trial will soon find herself enjoying perfect health.

You can get Dr. Williams' Pink Pills from any dealer in medicine, or by mail post paid at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

RUSSIAN ROYALTY IN PRISON

How the Deposed Czar and His Family Spend Their Time.

The former czar of all the Russias is not a man of resource, says the London Mail, and he is feeling horribly bored with nothing to do but to water his flowers and talk to the wife of his bosom on the telephone—in the presence of a guard. He is allowed to see his children, but also only under supervision. One of his girls became so unhappy at his plight—it is the Grand Duchess Marie, who dotes on him—that she had a nervous breakdown.

The other girls, with the czarevitch, try to keep up their spirits with tennis and lessons and music. Tatiana, the second girl, has quite a lovely voice and is as musical as her brother. Had her lines been cast in other places she might have made her fortune as a prima donna. As it is singing means good fun to her.

Those who have come in contact with the czarevitch feel very sorry for the poor little chap for he has change in his life. He was patriotic above all things, and it was a passion with him to stay with his father at headquarters. Although he had been rather a terror as boys go before the war, his keenness to serve made him believe well, and the officers of the chief staff, instead of finding him a nuisance, say that he was as willing to do his bit as any common or garden scout boy.

He was found one day tearing up the photographs of all his German relatives. When he came to that of the Grand Duke of Hesse he sent for his youngest sister, who is his chief pal. "Look here, Nastia," he said, "can I tear up mother's brother?" "Of course," said Nastia, "as he's a German!" Together the two children tore the photograph to bits and stamped them under foot, cheering wildly as they did so.

Wanted to Be There

"I like to have vacation," said Tony. "We can't get along very well without you," said the boss. "You don't need a vacation. You'll only blow in your money and come back broke." "I like to have vacation," persisted Tony. "I get married, and I kinda like to be there."

Cavalry Wireless Equipment.

There are several forms of wireless equipment used in warfare, and under favorable conditions a range of from 150 to 200 miles is possible with one of them. The most portable "station," however, is the cavalry type, which weighs 640 pounds, and is carried about in equal proportions by four horses. Its range is not a wide one; it works over a distance of from twenty-five to thirty miles.

Next to its unique flavour, the great economy of Salada Tea has been the reason for its enormous sale.

Saving the Glove.

When one or both fasterners of a glove have pulled out, darn the hole and sew an ordinary dress snap near the old fastening and the glove is useful again.

Like A Boy at 50 Bubbling Over With Vitality--Taking Iron Did It

Doctor says Nuxated Iron is greatest of all strength builders—Often increases the strength and endurance of delicate, nervous folks 100 per cent. in two weeks' time.

NEW YORK, N. Y.—Not long ago a man came to me from the country half a century old and asked me to give him a preliminary examination for life insurance. I was astonished to find him with the blood pressure of a boy of 20 and as full of vigor, vim and vitality as a young man. In fact a young man he really was notwithstanding his age. The secret he said was due entirely to Nuxated Iron. I filed him with remarkable. At 50 he was in bad health and run down, tired easily and nearly all in. Now at 50 after taking Nuxated Iron a measure of vitality and his face flushes with health and youth. As I have said a hundred times before in the past few years, all strength builders. If people would only take Nuxated Iron when they feel weak or run down with nerves, before they become habit-forming drugs, stimulants and alcoholic beverages are resorted to in this way they could ward off almost preventing it becoming organic in thousands of cases and thousands more thousands might be saved who now die every year from pneumonia, grippe, kidney, liver, heart trouble and other dangerous maladies. The real and true cause which started such a case was nothing more nor less than a weakened condition brought on by lack of iron in the blood. Iron is absolutely necessary to enable your blood to carry food into living tissue. Without iron, matter how much or what you eat your food merely passes through you as oil forms and does any good. You don't get the strength out of it and as a consequence you become weak, pale and sickly, like a plant trying to grow in a soil deficient in iron. If you are sick or well you owe it to yourself to make the following test: See how long you can work or how far you can walk without becoming tired. Next take one to two 5-grain tablets of ordinary Nuxated Iron three times per day after meals for two weeks. Then test your strength again and see for yourself how much you have gained. I have seen dozens of nervous run-down people who have taken the all the while, double their strength and endurance and entirely get rid of all symptoms of dyspepsia, liver and other troubles in from ten to fourteen days' time simply by taking Iron in the proper form. And this after they had been variously doctoring for months without obtaining any benefit. But don't take the old forms of reduced iron, iron acids or tonics, as they rarely if ever do you a few cents. You must take Iron in a form that can be easily absorbed and assimilated like Nuxated Iron. If you want it to do you any good otherwise it may prove a severe burden. Many an athlete or schoolgirl has won the day simply because he knew the secret of great strength and endurance. Iron in the blood with Iron before he went into battle. Many a woman has had gone down to premature defeat simply for the lack of Iron in her blood. [illegible]

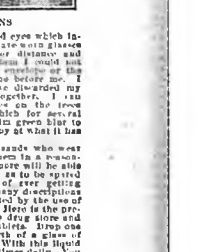
[illegible] recommended above by Dr. E. Sauer, is not a patent medicine nor a secret remedy, but one which [illegible] druggists and is used and prescribed by many physicians in their regular practice. It is easily assimilated, does not injure the teeth, cause constipation or upset the stomach, and the manufacturers have such great confidence in its merits that they have agreed to forfeit $100.00 to any charitable institution if they cannot take any man or woman under 70 who lacks iron and increase their strength 100% or more in four weeks' time, provided they will strictly follow the plain directions. They also offer to refund the money paid for the first bottle if it does not prove entirely satisfactory in every respect and conform in [illegible] to the above statements. It is dispensed by all good druggists.

Dr. Beck, The Well Known Eye Specialist and Doctor Judkins, The Medical Author, Publish Astonishing Report on Wonderful Remedy To Strengthen Eyesight

Say it Strengthens Eyesight 50% in One Week's Time in Many Instances

DR. BECK

A Free Prescription You Can Have Filled and Use at Home.



New York—Dr Beck, a New York state eye specialist, and Dr Judkins, a Massachusetts physician, were asked to make a thorough test of the popular eye remedy, Bon Optic. Their reports were most interesting. Here they are:

Dr. Beck reports, "When my attention was first called to the wonderful eye remedy, Bon Optic, I was inclined to be skeptical. To make it a rule to test every new treatment which is brought to my attention. Having specialized in eye work for the past twenty years, I believe I am qualified to express an intelligent opinion on remedies applicable to the eyes. Since Bon Optic has created such a sensation throughout the United States and Canada, I welcomed the opportunity to test it. I began to use it in my practice a little over a year ago and I can frank to say that the results obtained are such that I believe for many eye sufferers far fear it will sound incredible. Some of the results I have accomplished with Bon Optic not only satisfied myself but also other physicians with whom I have talked about it. I have had many individuals who had worn glasses for years for far sightedness, near sight, focus, astigmatism and other eye weaknesses, tell me they have dispensed with them through the adoption of the Bon Optic principal. Many eye troubles can be traced directly to muscular contraction and relaxation and since Bon Optic marks both how to exercise and develop the eye muscles, it reaches conditions not possible through other means. I advise every theoretical physician to study Bon Optic principal, give it the same careful trial I have and there is no doubt in my mind they will come to the conclusion I have, namely, that the Bon Optic method opens the door for the cure of many eye troubles which have heretofore been impossible to cope with. The treatment is so simple in its application that it can be used at home by anyone of average intelligence. In my own practice I have seen it strengthen the eyesight more than 50 per cent in one week's time. I have also used it with surprising effect in cases of work strained eyes, pink eye, inflammed lids, catarrhal conjunctivitis, sneezing, painful, a sting, itching eyes, eyes weakened from colds, exposure, dust and wind, watery eyes, blurred vision, and in fact many other conditions too numerous to describe in this report. A new and startling case has just come under my observation, which prompted Bon Optic in order to save the sight of her right eye, the lid eye must be removed. Before permitting doctors to be operated on. The young girl's father decided to use Bon Optic. In less than three days a marked improvement was noticed. At the end of a week the inflammation had almost disappeared, and at the end of six weeks the eye was saved. Just think what the saving of that eye means to the little girl. Another case is that of a lady forty-three years old. She came to me with dull vision and extreme inflammation of the lids and the conjunctiva was a mass of [illegible]. After two weeks' use of Bon Optic the lids were absolutely normal and her eyes are as bright as many a girl of sixteen."

Dr. Judkins, Massachusetts physician, formerly Chief of Clinics in the Union Orthopedical Hospital, Boston, Mass., and formerly House Surgeon at the New England Eye and Ear Infirmary of Portland, Maine, and medical author for many years, reports:

"I have always been willing to prescribe and use medicines too willing to prescribe glasses and prescribing the simple formulas which form the basis of that wonderful home treatment for eye troubles, Bon Optic. This, by applying it as remarkable a remedy for the cure and prevention of many eye disorders. Its success in developing and strengthening the eyesight will soon make eye glasses old fashioned and the form of eye specialists, which I predict will be obsolete, will make its use as common as that of the tooth brush. I am thoroughly convinced from my experience with Bon Optic that it will strengthen the eyesight at least 50 per cent in any case of near sightedness. In fact, Dr. W. H. Devine, director of medical inspection in the Boston schools, in his report published January 15, 1917, states that only 11,014 out of 48,118 examined, need to wear glasses now, a marked decrease over the previous year. Use Bon Optic in bettering the eyeglasses age in bespectacled Boston."

Victims of eye strain and other eye weaknesses and those who wear glasses will be glad to know that, according to Dr. Beck and Dr. Judkins, there is real hope and help for them. Many whose eyes were failing and they have had their eyes restored by this remarkable prescription and many who wear eye glasses say they have thrown them away." One man says, after using it: "I was almost blind. Could not see to read at all. Now I can read everything without my glasses and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses but after using this prescription for 18 days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eye sick-

DR. JUDKINS

ness by overwork, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and close work and without them I could not read a word, same as examples of the typewriting on the machine before me. I can do both now and have discarded my long distance glasses altogether. I can count the flattering leaves on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

"It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more can be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by the use of this prescription at home, Here is the description: Go to any active drug store and get a bottle of Bon Optic tablets. Drop one Bon Optic tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two to four times a day. You should notice your eyes clear up perceptibly right from the start and inflammation and redness will quickly disappear. If your eyes bother you even a little, it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

NOTE—Another prominent physician to whom the above article was submitted says: "Bon Optic prescription is truly a wonderful preparation for sensitive eyes. Many people who have to ruin their eyesight specialists and wonder why, instead by using Bon Optic. I have used it very successfully in my own families and friends with the most remarkable recoveries of many diseased eyes. I predict that in a few years Bon Optic will be used in almost every family, as Bon Optic referred to above, is not a patent medicine or a secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances or refund the money. It is dispensed by all good druggists, including [illegible] Co., Toronto, also by D. Tambeln and T. Eaton & Co., Toronto.

The Paisley Advocate

PAISLEY, AUG. 8th, 1917

—The Liberal party of Canada seems to be very much divided yet as to what policy to pursue. Will the majority continue to follow the white plume or not? One thing they are very well united on, is a determination to stay out of coalition with Rogerism, whitewash or no whitewash.

—A step towards nationalizing our railways is to be taken by the Dominion Government. The decision has been made to buy up the C.N.R. There is a wide field of opportunity for our statesmen in he railway problem, and it looks like wisdom to rise to it now rather han wait until years later, when would cost the country a great deal more to acquire the whole of the roads.

—The "Win-the-War Convention" in Toronto last week resolved in favor of conscription of men and wealth, also for a national government for war time. No candidate for election is to be supported who is not out-and-out in favor of Canada continuing to support the Allies in prosecuting the struggle against German militarism. It was also desired that an election be avoided at present. A delegation was sent to press these views upon the Government at Ottawa. Premier Borden assured the delegation in his best words that party differences must be sunk and all forces united in the effort to win the war. "It is my desire," he said, "that not only shall both political parties be fully and fairly represented in the government, but that it shall also include special representation of the great agricultural interests and of labor. You have my pledge that no future effort shall be wanting to consummate this great purpose." An election could on y be avoided by a practically unanimous support of such a resolution in Parliament.

LOCAL AND DISTRICT NEWS

Went West

Mr and Mrs John Bryce left for Yellow Grass, Mr and Mrs Fred Watson for Edmonton, and Mrs Dasroch for Arcola, on the C P R excursion to the west this week. Mr and Mrs D McKay of Medicine Hat on Thursday for Ewing, Alta., going by boat from Owen Sound.

Died at Cleveland, Ohio

Mr Henry Petrie has received word of the death of his cousin, Mr George Nicol of Cleveland. The deceased was the eldest son of the late Andrew Nicol, and was a graduate of Paisley school. He became a lawyer by profession and had a large practise at Ashland, O., for many years, but later moved to Cleveland. He is survived by his wife, two sons and two daughters.

Wins the Military Cross

Capt (Rev) John McNeill, a former Paisley boy, now pastor of Walmer Road Baptist Church, Toronto, who has been overseas on Y M C A work for several months, is mentioned in the list of those who are to receive the Military Cross for great bravery in bringing in the wounded on the front lines in France. Capt McNeill is reported to have rescued wounded soldiers under the fire of the enemy's guns

Brant Man Accidentally Killed

Mr Adam McCordy, of township Elderslie and Brant, met with a fatal accident on Tuesday. He was having a new driving shed and implement house built, and while assisting to lift a heavy piece of timber it fell across his body, crushing his bowels. The accident happened about 7 o'clock in the morning and he lived until 3 in the afternoon. The deceased was a very well known and prosperous farmer, and his death has caused a shock to the whole countryside. He was about 50 years of age, and leaves a wife and four children.

Horse Case at Underwood

A horse case of interest to the farming community was tried at the July sitting of Division Court at Underwood. Mr Thos Currie, Bruce Tp., sold a horse that was suffering from ophthalmia (periodic blindness) to Mr Hugh Smith, Kincardine Tp. At the time Mr Smith purchased the horse he apparently was all right but in a short time developed symptoms of the disease. Smith wanted Currie to take the horse back but Currie refused. Smith advertised the horse and sold him and sued for the difference $86.50 which amount with costs was awarded him by Judge Greig.

Fined for Speeding

Before magistrates Gibson, Ballachey and George on Saturday, Mr E F Weiss of Walkerton made the attempt to prove that he did not exceed the speed limit while motoring through Paisley recently. The evidence of the defendant, his wife and son was submitted, but was not accepted as reliable when Constable Leitch gave his statement as to having timed them with a stop watch, and that they sped each at something over eighteen miles per hour. A fine of five dollars and costs was imposed. With a stop-watch on the job the only thing for motorists to do is to slow down on the streets of this burg.

Norris—McInnes

A quiet wedding was solemnized at the Methodist parsonage, Paisley, at 10 a m on Thursday, August 2nd, when Katharine McInnes and Howard C Norris were united in the bonds of matrimony, by Rev Mr Crighton. The bride wore a dress of French crepe, with trimmings and shadow lace. Later in the day the young couple left by motor for Toronto, thence to Muskoka Lakes, the bride travelling in a smartly tailored suit of navy blue serge with white satin and milan hat. The groom's gift to the bride was a dainty wrist watch. On their return, they will reside in Goldstone.

160th Champions

In the wrestling competitions held at Witley Camp, England, on July 20th, our own George Stewart won the heavyweight championship, and Harold Miller won the featherweight championship. Both these men are in the signal section

Big Crop of Hay Nearly All In

The favorable weather has allowed the farmers to get the greater part of the big hay crop safely housed. The yield is better in quality than last year, and in the whole perhaps fully as much in quantity. Fall wheat is ripening very fast, and some is already cut. Spring grain is looking A1, and all that is wanted for is fair harvest weather.

Broke His Leg

Rev D McIntosh, pastor of the Presbyterian church at Nairn Centre, had his leg broken while helping his brother-in-law, Mr Kirkconnell, at Tiverton, with the barping. Tot 1 bones are broken, and the rev. gentleman will be laid up for a couple of months. He and Mrs McIntosh were visitors at the home of his cousin Mrs J A McArthur, Paisley, on Sunday week.

Bowlers Win Trophy and Prizes

Messrs W Rae, L C Spofford, Thos Muir and I Shoemaker went to Owen Sound bowling tournament last week and won the Pankers' Trophy, also a set of cut glass prizes. At Hanover tournament this week W Rae, Geo Craig, Dr Allen and I Shoemaker were the runners up for the consolation, and brought home silver tipped umbrellas.

Prize Lists Ready

The prize lists of Paisley Fair for 1917 are now in the hands of the secretary and being mailed to members. In the revision of the list this year there have been numerous changes made which greatly improve it in various departments. The list of specials contributed by individuals is longer than ever. Entirely new features are the Banker's Association competition for boys and girls, and the club swinging, physical drill, and patriotic singing by school children. If you are not a member, get a prize list from secretary Barnett, and be prepared to do your bit in making the Paisley Fair of 1917 a greater success than ever.

Bruce Old Boys at Vancouver

The old boys and girls from Bruce County held their annual association meeting recently. In addition to the election officers and a musical program a dance was held. Not all the former Bruce Co residents in Vancouver were present, for it is doubtful if the hall would have held them all had they been there, for Bruce county people boast of a larger representation in the city than any other of the counties in old Ontario. Officers were elected as follows, Hon President, Mayor McHeath; President Ald Hamilton; Vice Pres J Nelson; Sec Treas, H Mitchell; Committee, A D Gunn, T F Patterson, P Hamilton, C E Stein and Horace McChimpson.

Methodist Church Finances

The annual financial statement of Paisley Methodist church has just been issued and shows liberal increase in the givings by the membership. As in the case of many other congregations in small towns, the number on the roll is inclined to decrease from year to year, but despite this the amount of money raised must be higher yearly to maintain the various departments of denominational work. Paisley congregation raised $1,497 61 for church revenue, $253 75 for general missionary fund, $38 75 for educational, $72 82 by women's missionary society, $156 63 by Epworth League, $24 70 by Ladies' Aid, $90 by Sunday School, and a bale valued at $100 was sent to New Ontario—total for all purposes $2,240 30.

Food Control Pledge

The Executive Committee of the Women's Auxiliary to the Organization of Resources Committee, after consultation with the Hon W J Hanna, the Dominion Food Controller, has adopted the idea of a pledge to be taken in a house to house canvass from each individual housewife to do her best to prevent food waste and to encourage thrift and economy in the home. Where pledges are given the Food Controller will provide a card to be placed in windows, showing that the house is pledged to save food for the Canadian soldiers and our Allies. The Executive of the Auxiliary has also been assured by the Institutes Branch of the Department of Agriculture that they will send a demonstrator in canning to any centre upon application.

Centre Bruce Garden Party

The annual garden party at Mr Geo Brown's, 8th Bruce, under the auspices of the ladies of Centre Bruce church, is one of the established events in the big township, and each succeeding season attracts a larger number of people from far and near. Tuesday evening, although threatening, was an ideal one for such an outing, and the crowd that thronged the place was greater than ever. The gate receipts amounted to $153, and $93 was taken in at the refreshment booth—total $286. Kincardine pipe band was the leading attraction, and a good programme was rendered by other talent—Messrs I. C Spofford, Neil McArthur, P McKinnon and Art Pfaff of Paisley, gave male quartette selections; solos by Miss Cole, Miss Jean Fullerton, Wat McKay and Art Pfaff; string band music by Messrs Brown, McKay and Avis, accompanied by Mrs Brown; selections by the church choir; addresses by C M Bowman, M. P., Rev McLean and E R Sayles. The chair was occupied by Mr J J Hunter of Kincardine.

COSTS $350,000 TO STAGE EXHIBITION

Special Attraction at the Canadian National above the Ordinary

It cost upwards of $350,000 to stage and prepare the Canadian National Exhibition each year. Much of this is spent on special attractions for which the Exhibition is famous. No expense or effort has been spared in securing for Confederation Year the finest array of acts for the Hippodrome Show that will be given as usual in front of the Grand Stand every afternoon and evening. There will be a gallery of pictures of the show world filling three stages at the one time. One of the outstanding features will be the Al Golem Troupe, court artist to the Shah of Persia who present the most picturesque and sensational acrobatic novelty now before the public. The remainder of the programme will be in keeping with this wonderful attraction.

MISERABLE FROM STOMACH TROUBLE

Felt Wretched Until He Started To Take "Fruit-a-tives"

594 CHAMPLAIN ST., MONTREAL.

"For two years, I was a miserable sufferer from *Rheumatism and Stomach Trouble*. I had frequent *Dizzy Spells*, and when I took food, felt wretched and sleepy. I suffered from Rheumatism Dreadfully, with pains in my back and joints, and my hands swollen.

A friend advised "Fruit-a-tives" and from the outset, they did me good. *After the first box, I felt I was getting well* and I can truthfully say that "Fruit-a-tives" is the only medicine that helped me". LOUIS LABRIE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Good Roads Commissioner for Bruce Country

Reeve Wm Hunter, of Kincardine town has been appointed by Warden Izard as superintendent of good roads for the county. Mr Hunter has been in the town council for 18 years, 12 years as reeve. The Reporter says: "In accepting the position of superintendent of good roads he does so from a sense of duty, as he was one of the originators of the movement and is conversant with every municipality in the county. He has ample knowledge of the work needed, and will at once proceed to organize it on proper basis."

Competitions for Boys and Girls

Through the action of the Minister of Agriculture, arrangements have been made to have the Canadian Bankers' Association co-operate with the Department of Agriculture in providing a liberal sum of money to be offered in prizes for calves and pigs exhibited by boys or girls under 17 years of age, at county or township fairs. These competitions are known as the "Canadian Bankers' Competitions," and are linked up with the activities of the Live Stock Branch of the Dominion Department of Agriculture. The generous support accorded to the movement by the Canadian Bankers' Association affords a practical demonstration of the attitude of the banks towards the live stock industry, and the active participation of the Association in this campaign is bound to strengthen and create general interest in farm live stock. Canadian Bankers' Competitions will be held in connection with Paisley show this year, and boys and girls should lose no time in finding out all about them. The calves and pigs must be fed at least six weeks by the boys or girls who exhibit them, so that it is very important to act promptly in securing a copy of the rules and other information. Full information regarding the competitions can be obtained from the managers of the local banks in Paisley.

VILLAGE COUNCIL

Met on Aug 2nd at 8 p m. Absent—the reeve and councillor Logie. Mr Logie took his seat later.

Houston—Pearce—That D Sparrow act as reeve, pro tem—Carried.

Minutes of last meeting read and confirmed.

The Paisley School Board's requisition for levy of the current year is $3,000, of which Paisley contributes 74 per cent, Elderslie 20 per cent, and Greenock 6 per cent.

Pearce—Houston—That the clerk be empowered to collect $3 40 from Mrs Devine, expenses of her transportation from Walkerton Hospital to Paisley.—Carried.

Houston—Pearce—That the clerk instruct James Beaton that this council will not be responsible for any debt incurred by Mrs Devine now residing at his house.—Carried.

Payment of accounts was authorized, as follows:

M Leitch	$48 00
E C Wilkins	45 76

What it Means to You—to Your Pocketbook—to Your Personal Appearance—How it Conforms to Sound Business Judgment to Select from

Our Famous Line of

Men's and Ladies' Suitings

Taking, for our text, "He profits most who serves most—he who serves best, serves most"—we put in force a plan of retailing that tends to centre more and more business here—by making it to the advantage of the public to give us their patronage.

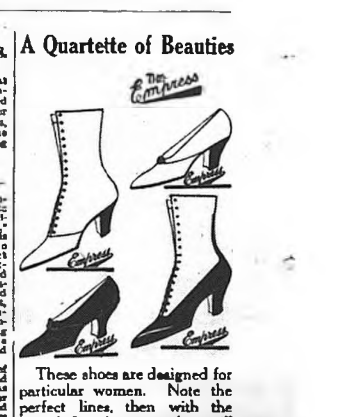
We're selling clothes on a margin of profit heretofore regarded as insufficient. But we're winning business on the basis of volume.

Here are 200 patterns for selection. If there's a man who can't be suited we'd like to see him. If there is a man whose tastes can't be met he is a stranger to us.

BACKACHE, LUMBAGO AND RHEUMATIC TROUBLES.

Dear Mr. Editor—I wish to state that I suffered greatly from backache, lumbago and rheumatic troubles. I used "Anuric," the latest discovery of Doctor Pierce for backache and kidney troubles, and I can cheerfully recommend the "Anuric Tablets" to anyone suffering from any of these maladies.

Yours truly,



J. F. GARNER.

NOTE: It is now asserted with confidence that these painful effects due to uric acid in the system are entirely eradicated by a remedy, called "Anuric," has been discovered by Dr. Pierce, and is the cause of drainage outward of the uric acid with which it comes in contact within the body. It will ward off backache, headache, and the darting pain, and aches of articular or muscular rheumatism—of those diseases which are caused by too much uric acid, such as gout, asthma, sciatica, renal calculi. "Anuric" prolongs life because old people usually suffer from hardening and thickening of the walls of the arteries, due to the excess of uric acid in the blood and tissues.

Dr. Pierce, who is director and chief physician at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., has been testing this wonderful medicine for those afflicted with over-worked and weakened kidneys. The relief obtained by sufferers has been so satisfactory that he determined to place "Anuric" with the principal druggists in town where people could get this ready-to-use medicine. "Anuric" is not harmful or poisonous, but aids nature in throwing off those poisons within the body which cause so much suffering, pain and misery. Scientists assert this remedy is 27 times more potent than lithia. Send 10 cents for large trial package.

"Anuric" is building up a reputation as good as Dr. Pierce's other well-known medicines which have been proved reliable during nearly fifty years, such as Doctor Pierce's Favorite Prescription for the ills of women, Doctor Pierce's Pleasant Pellets, the liver regulator, and Doctor Pierce's Golden Medical Discovery for bad blood.

A Quartette of Beauties

These shoes are designed for particular women. Note the perfect lines, then with the knowledge that your feet will be entirely comfortable. This is assured with every pair of "Empress". We are agents for this high-grade shoe which is made in Canada by Canadian artizans.

A MEMORABLE OCCASION AT BRAMSHOTT PARISH CHURCH, ENGLAND

Proclamation

To the Citizens of Bruce County:

In connection with the request of the Lieut Governor of the Province of Ontario, I hereby call upon the loyal citizens of the County of Bruce, to again, on the third anniversary of the war, solemnly pledge ourselves as to the righteousness of the Allied cause;

To record our inalienable loyalty to our beloved Mother Country.

To acknowledge and impress upon our children and all people that though this war is fought upon a foreign land, it is our fight, and one in defence of our homes.

To honor the heroes who have fallen in defence of our country

To support and assist those who are bereft of heroic men, who have laid down their lives in our behalf.

To thank those on land and sea who are prepared to give up their lives in our defence.

To pledge ourselves to give assistance to every cause and work which may bring victory to the Allied cause.

And to pray that Almighty God may aid the cause of the Allies for universal peace.

AN OLD SEA CHEST

IT CONTAINED TREASURE WHICH BROUGHT HAPPINESS TO BOTH OLD AND YOUNG.

By Genevieve Ulmar.

"It's the law or proverty—take your choice," was the stern dictum of obstinate, self-opinionated James Ross, uncle of Philip Carle, who stood before him.

"I am sorry, uncle, but it's not the law for me," came the clear, definite response. "I'm not cut out for it, the business is distasteful to me, and I would rather have a crust of bread and my artistic ambitions, than the solemn judicial sense and a fortune."

"So much the poorer you, so much the richer I," quoted the old money grabber. "You need bank on me dependence on me hereafter. Wait." And the speaker snapped open a drawer in his desk and took from it a small package. "That belonged to your father. It is legally mine, but I give it to you, as a memento or to waste, as you like. I wash my hands of you."

Philip Carle made his exit feeling that he had made a pretty bad mess of his affairs. There was no help for it, however. The artistic impulse in him was strong, and uncertain as seemed the field he was bound to stick to it.

He had not gone to his self-centered relative to ask money for himself. While he had very little of that commodity personally, the needs of another had urged him to apply for assistance. He undid the wrappings of the little parcel. It contained a diamon ring, probably a remnant of the wealth he knew his dead father had once possessed.

"I will never sell it," he said, walking on thoughtfully, "hell"— and he stopped at the first pawnbroker's shop he came to.

"I will loan you three hundred dollars," its proprietor said, and Philip nodded with a lump in his throat, trying to believe that what he was doing was right.

He at length turned into a small tailoring shop. Its show windows were neat as a pin. A rather unique sign swung over its doorway. It read:

"Only the lilies of the field can clothe themselves cheaper than you can in this shop."

"Well, how is business, Mr. Garland?" inquired Philip of an old man

"What About This?"

with the worried yet expectant face of a person waiting and hoping for work.

"Getting worse, if possible, all the time," was the reply. "I'm afraid my venture is a poor one. Locality bad, or else I do not know how to win trade. There's the mortgage, too. They have given me a bare twenty-four hours to settle or give up possession. Why does not my brother come on?"

"There is the money to relieve your present necessities," said Philip, handing over the proceeds of the loan.

The old man stared; quick tears arose to his eyes. He waved back the generous hand extended, but philip persuaded him with success. He indeed his friend to make one more trials of his business experiment, and left him with encouraging words.

"I had to do it," Philip told himself. "I can't see Mr. Garland lose his all, if it be only for her sake—dear Isabel! How he had struggled to give her a musical education. So near to acquiring it, too. I won't regret a good act."

It was Philip's first picture, the portrait of this Isabel, that smiled down from an easel as the young artist entered his studio. Quite incidentally he had become acquainted with Mr. Garland and then with his ward. Isabel was the daughter of the closest friend of the old man who had started him in life, lost his own wealth, and a more loyal guardian never lived.

Isabel was perfecting a musical education and Garland never let her know how hard he was pressed. For over a month she had been in an optimistic mood. He had received a letter from a brother, a sea captain who had been off on a two years' cruise. It came from a distant city and on its heels a large seaman's chest. The letter announced that very soon its writer would follow, and that he had come to share a royal fortune with his brother.

But since then not a word had been received from the sea captain. Business had fallen away, and now the generous-hearted artist had sacrificed his all to assist his friends.

No love word had been spoken between Philip and Isabel. Evenings when he visited the neat parlor behind the little shop, however, and the happy twain conversed of art, music and of all things beautiful, both felt that their souls were in complete harmony.

One week later Philip visited the Garland place to find the old man immersed in the deepest gloom. He had received a telegram announcing the death of his brother in a hospital. The last words he spoke were transmitted: "Tell my brother that the chest and its treasure is all his own."

Its "treasure," according to Garland, consisted of some sailor clothes, a few nautical instruments and a keg containing some oily compound of the deep.

"It's the end," said the old man dejectedly. "My main worry is that your generous loan is lost. They threatens to sell me out to-morrow."

Philip could do nothing further in a money way. He was resolute not to abandon his friends, however. That afternoon he made a contract with a picture house to do some copying. The recompense was not large, but it would fit into a plan he had for taking care of Garland until the latter could find new employment.

He was greeted with a sad spectacle when he reached the Garland place that evening. The old man was pacing the floor distractedly. Isabel, pale and distressed, was seated on all that had been left in the place by the ruthless creditors—the old sea chest.

"It will be easy to arrange for your care until you get on your feet again, Mr. Garland," said Philip cheerfully. "What are we going to do with the chest though? Let us open it and select what is worth while."

They set aside a compass and some other few things out of the heterogeneous contents of the chest.

"What about this?" inquired Philip, lifting out the keg. "Why, Mr. Garland"

Reversing the keg, the young artist uttered a very startled exclamation. Across one end there was traced in ink the word: "Ambergris."

One hour later the happy old man knew that the old sea chest had contained treasure, indeed. Worth more than its weight in gold, the ambergris, rare and readily salable, represented over twelve thousand dollars.

"Now Isabel can finish her music!" cried the old man joyful. "and you, oh, my dear friend! command the fortune you have discovered to assist you in any way in your artist's career."

Isabel clung clove to the arm of the young man who had so loyally shared their troubles, as he escorted them to a near hotel. The pressure of that dear hand thrilled Philip Carle. The old man walked prudently ahead of the happy pair.

And when they parted for the night, the decision had been reached that the musical and the art careers should be pursued—together.

Home Bank Enjoys Steady Progress

Has Added $5,000,000 to Its Assets in Past Fiscal Year—Thrift Campaign Resulted in Gain of Over $2,000,000 in Deposits—Large Increase in Earnings. Earned 11.14% on Capital Against 7% Last Year.

In its annual statement for the fiscal year to May 31st, 1917, the Home Bank shows that rapid progress has been made during the past twelve-month period.

The Home Bank has for some time past been strengthening its organization and the benefits it has derived therefrom are shown in the growth and expansion of the general business of the bank, a healthy growth in deposits and an ability to carry out its entire share of all Government financing brought out during the year. In addition, it is evident that with its present effective organization and connections, the bank will be able to play a still more prominent part in the financing of Canada's industrial requirements in the post-war period.

The confidence the Canadian public have in the Bank is reflected by a gain of over $2,000,000 in deposits, these now reaching a total of over $12,600,000 compared with $10,133,735. At the same time there has also been a very large gain in deposits by and balances due to the Dominion Government, as they have advanced to $3,360,355, as against only $500,000 the previous year.

With the larger business which the bank has handled, there has been a gratifying increase in the net profits which amounted to $217,689.52, equivalent to 11.14 per cent. on a paid-up capital as compared with $133,406.26 in the previous year. After the payment of dividends and subscriptions to Red Cross, Patriotic and other funds, a balance was carried forward of $140,238, against $42,790 in the previous year.

About the House

DOMESTIC SCIENCE AT HOME.

Third Lesson—Inorganic Salts.

The chief salts found in food are sulphur, iron, sodium, magnesium, phosphates, potassium; they constitute about five per cent. of the body's weight.

The process of digestion does not change the nature of these salts because they are largely absorbed in the form in which they are eaten. Chlorides and soda, which are essential for the body fluids, are derived from animal foods. Phosphates, potash and lime are necessary for the solid tissue of the body and they are found chiefly in vegetable foods and water.

Salts are used in the body to regulate the density of the body fluids, to promote digestion, to harden ossious tissue, to give tone and vigor to the muscular tissues and to supply acidity and alkalinity for the digestive juices and other secretions.

Mineral salts are necessary for health. Disease results from an insufficient supply of them. Mineral salts have no food value. Some of them enter the body as essential constituents of organic material but they become inorganic after the organic matter is oxidized. Many other salts enter and leave the body in inorganic form. Therefore it is necessary for us to eat foods that are rich in these vital life-giving elements if we wish to enjoy good health.

Sodium is needed for digestion and is a necessary constituent of the blood. Potassium gives life to the nervous system and it assists the heart in the performance of its duties. It also keeps the tissues soft, flexible and active.

Iron combines with oxygen. Therefore if iron is in the blood it carries the life-giving elements through the body.

Magnesium, phosphate and calciums are required for bone and tooth structure.

Meat is deficient in mineral salts, particularly lime, which is extremely important for the vital processes of the body.

Mineral salts abound in vegetables, fruits, whole grain, legumes, milk and eggs. This is not a condemnation of a meat diet, but a reasonable argument for a larger and better diet of whole wheat bread, corn, peas, beans, fresh vegetables and fruits, milk and eggs.

Tested Recipes.

Cherry Meringue.—Line a pie tin with good pastry and fill the plate with stoned and cooked cherries. Bake in a moderate oven for twenty-five minutes. When cool cover with a meringue made of one white of egg and four tablespoonfuls of sugar. Put in oven to brown.

Corn Muffins.—One and one-quarter cupfuls of white flour, three-quarters of a cupful of corn meal, five teaspoonfuls of baking powder, one teaspoonful of salt, four tablespoonfuls of shortening, one egg, one and one-quarter cupfuls of milk.

Raspberry Custard.—Two cupfuls of milk, five tablespoonfuls of cornstarch. Dissolve starch in milk and bring to a boil. Cook for three minutes. Remove from fire and add: yolk of one egg, one-half cupful of sugar, one-quarter teaspoonful of salt. Beat well, then pour into individual molds. Set aside to cool. To serve, turn from molds and cover with crushed and sweetened raspberries; garnish with meringue made from the stiffly beaten white of one egg and three tablespoonfuls of pulverized sugar.

The Womanly Woman.

To-day there exists, as there always will exist, a woman who is striving to reach the highest pinnacle of success as a home-maker. She has never wavered from her true course of duty or swerved in life's purpose and plan. She is not a myth, this little womanly woman, but she is as actual and as real to-day as she ever was. She is the woman to whom we are willing to trust the welfare of the nation, for she has not run after false gods, or been lured by the siren voice of the outside world, but she has gone back to nature and has listened to the call of a man and the voices of little children, and she admits that there is nothing as satisfying or worth while, in the whole wide world, as the making the home and rearing of children.

Keep The Child Busy.

A child must be kept busy. It is his very nature to be busy and it is our duty to provide him with something that will keep him busy. As soon as the child knows the name of familiar objects, and can walk, he can be taught to do little things for mother, such as bringing her thread or thimble, dust pan, rubbers, etc., and these duties should enlarge as the child grows older. The child enjoys doing this, and it is training him to know he is not living for himself alone.

Bestow plenty of praise; children like to be told they have done a thing well, and it stimulates them to greater effort. Be careful not to praise work that you know has been carelessly done. The child knows that he has not put forth effort, and generally your look of disappointment is not forgotten, and the careless work is not repeated. But his activity should not be all work. The child needs more hours for play than for work, and it is our duty to furnish him with toys and books suitable to his age and taste.

A ROGUE BISON.

Exciting Adventure With the Dreaded Savage Beast of India.

Next to a man-eating tiger there is nothing that the natives of India dread more than a rogue bison. One of these beasts frequented a hillside in the Western Ghats near which Mr. Edwin L. Arnold, who tells his experiences in the Cornhill Magazine, had camped. The bison slept in the woods during the hot hours, and came out to feed only at morning and at night. One day it chased and nearly killed the wife of a native.

"Unless the sahib helps us we shall all be killed," the people complained, and Mr. Arnold, determined to kill the bull, set out at dawn the next morning. He followed the jungle path up the hill for a mile, and there climbed a lookout point and sat down to wait for daylight. Half an hour had gone by when he looked to the north, and there, not a quarter of a mile away, standing on a rocky bluff, a huge form was silhouetted against the sky. Just below where the hunter was sitting ran a shallow stream, and two hundred yards down its course grew a clump of bushes.

Sliding into the watercourse, the hunter crawled on hands and knees until the bushes were between him and the bison. Then, scrambling up the bank, he ran to the clump and peeped through the bushes. The bison had gone. Thinking that his quarry must be on the other side of the bluff, Mr. Arnold ran to the summit; but the bull was not in sight. For several minutes the hunter lay breathless looking this way and that. Then he turned round and saw the huge bison glaring at him only thirty yards distant.

The hunter fired hastily. The bullet struck high between neck and shoulder, and the next minute, with a tremendous bellow, the bull charged full tilt. He came down in a storm of dust and rattling stones; as there was no possibility of cover, the man waited until he was nearly within arm's reach and then jumped aside. Unfortunately his foot slipped, and, as the animal went blundering by, he fell heels over head. The beast shot past fifteen yards or more before it could pull up. The man came to a stand first, and opening the breech of his rifle, slipped in another cartridge.

Again they stood facing each other. Then, catching his breath, the man fired. The shot struck fair in the breast and the animal fairly reeled. But he charged again with extraordinary swiftness. The hunter stepped aside and the beast lunged at him with his horns as he passed. As the bull floundered by, another shot struck point-blank behind his ear. He went down with a tremendous thud, turned over, kicked once or twice and was dead.

That evening there were great rejoicings in the village, no end of chattering round the big fir tree, and a great amount of drum beating and garland weaving.

ANCIENT CANOPUS FOUND.

Excavations in Egypt Uncover Ancient City of Ptolemy.

The site of Canopus, one of the most ancient cities of Egypt, has been found, according to Daninos Pasha, who claims the honor of making the discovery. For many years he has maintained that its ruins lay somewhere in the region of Aboukir Bay, and apparently his contention is now proved to be correct.

Before the foundation of Alexandria, Canopus was the commercial capital of the country and the most important religious centre in lower Egypt.

Excavations have already brought to light a great public bath of the Ptolemaic period, about 150 feet in length. It is divided into twenty chambers, of which the largest is about 24 feet long and of the same width. There are rooms for various forms of baths, such as hip and mud baths, and a large hall which was evidently used for massage purposes and the preparation of aromatic oil.

Bronze coins found in various rooms bear the effigies of Ptolemy Soter, Ptolemy Energates and Queen Berenice. Of the several statuettes unearthed, the most interesting is that of a Chinese figure, which shows, it is contended, that in the dim past relations must have existed between China and this ancient capital of Egypt.

The worst kind of failure is the failure that is the result of only half trying.

Get Your Boy A

"NUGGET" Outfit

Teach him to take care of his shoes. No muss or dirt and in three minutes "Nugget" gives a shine that will last all day.

"Nugget" outfits in handy cardboard boxes 40c., or neat metal boxes 50c. If your dealer cannot supply you send us cost of outfit and we will mail same post free.

THE NUGGET POLISH CO., LIMITED
8 DAVENPORT ROAD TORONTO, ONT.

JUST POUR IT OVER YOUR JELLIES AND PRESERVES

That is the end of the sealing process when you use Parowax. No papers or strings to bother with—no irksome labor with jar tops. Just pour

Parowax
PURE REFINED PARAFFINE

over your jellies and they will be kept absolutely air-tight. No mold—no fermentation—and no trouble.

FOR THE LAUNDRY — See directions on Parowax labels for its use in valuable service in washing.

At grocery, department and general stores everywhere.

BRANCHES IN ALL CITIES

Not His Name.

In Dublin a zealous policeman caught a cab driver in the act of driving recklessly. The officer stopped him and said:

"What's yer name?"

"Ye'd bethter try and find out," said the driver peevishly.

"Sure, and I will," said the policeman, as he went round to the side of the cab where the name ought to have been painted; but the letters had been rubbed off.

"Aha!" cried the officer, "Now ye'll git yersel' into worse disgrace than ever. Yer name seems to be obliterated."

"You're wrong!" shouted the driver triumphantly. "'Tis O'Sullivan!"

Have you running water in your home, or is your wife always running to the well or spring for it?

Never wash a sieve with soap. Soda or ammonia will clean it with the help of a brush.

Redpath SUGAR

has sweetened half a century with the same crystal purity that makes it the favorite to-day. Buy it in original packages and be sure of the genuine,

"Let Redpath Sweeten it."

Made in one grade only—the highest!

The AUTOMOBILE

To Reduce Upkeep Bill.

A car which lasts with ordinary care one or two years if given intelligent care by the owner might be made to last three to five years. This means taking extraordinary care and a thorough knowledge of the working parts and how to keep them in condition, and it means doing faithfully and persistently the things necessary to keep everything in order.

Take tires, for instance. The cost due to neglect is often greater than the cost of actual wear. Some of the things which cause excessive wear and deterioration of tires are: Driving into holes in the street or in deep ruts; turning corners at too high speed; stopping the car so quickly with the brake that the wheels slide on the pavement, and a harsh clutch which jerks the car suddenly from a standstill, causing needless wear.

Then there are such things as letting the front wheels get out of alignment so that they do not run parallel, or nearly so, the action being that the tire is slid instead of being rolled over the road. There should be a slight toe-in for mechanical reasons, but if this is allowed to go beyond the proper limit it costs money.

Adjusters tell us that a very large percentage of tire failures is caused by underinflation, which allows the tires to flatten and breaks the side walls. Every tire should be tested with a gauge and not with the eye or hand, and kept to the pressure named by the tiremaker.

To get the greatest life out of a tire it should be watched continually for small cuts through the rubber to the fabric. Most tires will be found after a short service to have from two to a dozen such cuts. These will allow sand to work in and loosen the rubber and then moisture gets in and rots the fabric. There are preparations with which these cuts may be healed in a few minutes; serious cuts, especially where the rubber is loosened from the fabric, should be taken at once to the vulcanizer.

While oil and grease of good quality cost money, their proper use will save many times their price in replacement of parts. On the other hand, a waste of lubricant makes unnecessary expense. Especially with a new car, oil and grease should be watched carefully until the bearings have had time to work in. That is the time when expense for replacement of bearings is most likely.

It is not generally realized that a large number of things enter into the economical use of gasoline. To get the most out of a gallon of gasoline all moving parts must work properly. This means proper lubrication. The brakes should not drag; each cylinder of the engine should fire properly; the clutch should not slip, and the carburetor should be in proper adjustment.

It is not well to adjust the carburetor unless sure it is at fault. Excessive carbon in the cylinder causes a decided loss of power, due to back pressure on the piston, and the partial clogging of the muffler indirectly consumes extra gasoline. The importance of keeping the muffler free is not usually understood.

To insure each cylinder getting its proper power without waste, the engine should be driven with the spark lever advanced as far as possible without causing back pressure. The spark plug gaps should be adjusted properly to insure a thorough ignition of the charge; the spark plugs should be kept clean to prevent the loss of a charge of gas through nonignition, likewise the interrupter points of the distributer should be kept clean and properly adjusted.

To use all the gas that is taken into the cylinder there should be no loss of compression through leaky valves or weak valve springs, or poor gaskets on spark plugs or valve caps, and it is equally important that pet-cocks, cylinder head, where there is one, and piston rings are tight, so that gas will not be wasted.

TEACHING A DOG.

How to Train Your Dog to do Clever Tricks.

The best kind of dogs to train to perform tricks are the smaller ones, such as terriers, poodles, spaniels, collies and dachshunds. The poodle is the cleverest of all.

Kindness, firmness and patience are necessary qualities in teaching a dog. Nothing can be done by cruelty, and if you lose your temper you will never teach him anything. It is very little use trying to teach an old dog. Begin when he is young and do not overtire him. Also do not overfeed him, for most of the lessons have to be taught by a system of small rewards in the shape of titbits of food.

First of all teach him to beg by propping him up on his haunches in a corner. You can then teach him to shake hands when sitting up. Take hold of his right paw gently and shake it. Then give him his titbit. Now hold out your hand again to him. If he does not put his paw in it gently touch it and hold out your hand again till he does it. Then reward him at once. Don't forget in all cases to say the word of command whenever you want him to do anything.

To teach a dog to dance is not so difficult as you might suppose, but you should only try it with a dog that has learned some of the simpler tricks. The whole secret consists in getting him to keep on his hind legs. Hold a titbit so high that the dog will have to stand on his hind legs to get it. Do not let him have it till he remains on his hind legs for a second or two, and gradually increase the time. Next move along a step or two before you let him have it, so that he is compelled to hop a few paces. He will soon learn to do this, and you can gradually increase the distance till he is able to hop across the room. Be very careful that you do not attempt too much at first.

It appears rather wonderful to see a dog shut the door at a word of command, but it is quite a simple trick. It works best with a rather large dog. Go to a door that swings easily and set it about six inches open. Then balance a biscuit on the handle and draw the dog's attention to it, saying, "Shut the door." He will naturally jump against the door to get the biscuit, and his weight will shut it. Then praise him for it. By doing this several times a day he will gradually get to associate the action with the words, "Shut the door," and will do the trick when told, even though there is no biscuit in evidence.

WHAT TO DO WHEN LOST,

The Best Thing To Do Depends On Circumstances.

If you are lost in a strange city you ask a policeman.

If you are lost in the woods the thing to do is to keep going down hill. Whichever way is down hill that is the way to go. That will fetch you out, because you will arrive in a valley, and valleys are open spaces, usually inhabited. If on the way down hill you come across a stream follow it down. It will probably bring you to a house.

But if you are lost in your bedroom, what then?

It is a very curious experience and may happen even in a bedroom that you have occupied for years; though, of course, it is more likely to happen in a strange bedroom. You get up in the night and suddenly discover that you have lost your bearings. It is a most discreditable sensation.

To be lost in your bedroom is unsafe; it may be even dangerous. For the moment it is a strange country. You may fall over something and hurt yourself badly. If the door happens to be wide open you may wander into the hallway without knowing it and tumble downstairs. This very thing has happened, absurd though it seems, many a time.

The best thing to do under such circumstances is not to grope about trying to orient yourself, but to call out. Somebody will come with a light, and then you can go to bed again, feeling sheepish, but safe.

New potatoes are more delicious baked than old ones.

THE NEW PERIL FROM THE AIR

IT IS A VERY REAL THING IN ENGLAND NOW.

An Englishwoman Describes the Awful Scenes Which Follow a Hostile Air Raid.

To be bombed in broad daylight by hostile aircraft!

In London we are growing accustomed to that highly unpleasant sensation.

The Germans are determined that "frightfulness" shall hold away over the London streets, writes an Englishwoman.

Last year we Londoners could look up on fine days into a sky of limitless blue. We could dream very pretty and quite harmless dreams of freedom matching that infinite space. The town might be stuffy. The streets might be dusty. The noise of the London traffic might be nerve-racking. But there was the sky.

Now, however, we live in times of progress. As we look up into the sky, and see a white woolly cloud drifting idly across it, we remark: "I wonder if that's a Hun aeroplane?"

There's a horrid little shiver back of our question, too.

For the peril from the air is very real and very potent these days.

We watch the little harmless-looking cloud for a few minutes. Then—bang! bang! bang! Yes, sure enough, it holds a hostile aeroplane.

Perhaps, when evening comes, we feel a little safer. We gaze up at the deep blue sky and watch the little stars come out, one by one.

How pretty and innocent they look! But—is that a star?

"I say, you people there, is that a star, or a Zepp?" The question comes nervously.

Bang! Bang! Bang! It's a Zeppelin, after all!

Progress? What next?

More progress, I suppose. And that means still less peace.

"As for us in England to-day, we are no longer in a 'nice little, tight little, safe little island'—as the old song says. Even in broad daylight, when the summer sun beams cheerfully down upon us, the enemy aeroplanes come hovering over our heads, and work their havoc in our midst.

What a Day Attack Is.

"The people of Canada cannot comprehend the awfulness of a daylight air attack. Night raids are bad enough—but somehow one feels 'safer' during the night. But to be caught in the full light of day—to be forced to witness the most horrible scenes of carnage and of death right in one's midst—words can't express the feeling.

In the heart of London, for instance, I witnessed the removal of some of the victims of a daylight raid. They were about a dozen young girls and children. The pavement literally ran with blood. A handsome motorcar hurried up and the chauffeur and the owner helped to lift three of the girls into the car. The delicate gray leather cushions and fittings of the car turned into crimson and apparently two of the girls were dying. A third was conscious—her arm had been completely severed and the chauffeur tied his leather belt round what was left of it very tightly, so that the poor child might not bleed to death before they got her to the hospital.

It's the easiest thing in the world to read about such things. It's the most heart-rending thing in the world to watch them actually happen.

I was walking in —— street (the censor will not let me mention names) in the heart of London, when a daylight raid occurred. At first we thought that the whirring aeroplanes were British and stopped in the street to admire their graceful flight.

Bang Bang! Bang! The detonations were terrific. Children screamed with fright as the bombs fell. The crowds had no time to get to cover. And the enemy aircraft hung over our heads, dealing death out with a terrible hand. Scenes of slaughter followed which I would willingly forget—if I could.

The Trail of Murder.

In the poorest quarter of London there was a veritable trail of murder. I think the crowning infamy was the killing and maiming of many little children in an infants' school.

In the roof of the school there is a hole about two feet across, as clean as though made with a knife. The bomb dropped from the German airplane went through two floors, killing and wounding several children on each floor, but it was on the ground floor that it exploded and worked its most terrible havoc. About forty little tots between the ages of five and seven were at work here, and virtually none escaped.

All that was left of the classroom was a mass of blood-spattered debris—desks reduced to matchwood, with here a book and there a slate showing.

In the front part of the room, where the bomb exploded, was a hole three feet deep. Everything was smashed to atoms. Most of the little children were terribly mutilated. The teacher—a young woman—escaped with some slight injuries, and at once gathered together the few who could walk, and marched them out of the room over the debris of smashed furniture and the remains of their little school-fellows.

The body of a pretty little fair-haired girl was found on the first floor beside a piano. The overturned piano stool was beside her. She had been having a music lesson and was killed instantly.

Courageous Children.

In the hand of another little seven-year-old was found an exercise book, in which she had done her last sum. It was a simple little thing in addition and had been marked "Correct." The anguish of her mother as she held the child in her arms, still grasping her exercise book, was dreadful to witness.

Homus fell close beside another school. "I never saw such a sight," said an Australian soldier home from the front, who had gone to the school to bring home three nieces. "There were the teachers coolly standing in front of their classes, while the youngsters sang lustily. One bomb fell with a deafening crash close by, and there were signs of panic among the smaller children, when the headmaster, pushing me into the classroom, said: "We're all right, children. See, here's a soldier! Who's afraid?" Then he shouted, "Are we downhearted?" The reply came immediately, in a thundering 'No!'"

THINGS THAT COUNT IN LIFE.

Impossibility for War to Destroy Life's Real Possession.

One of the most profound truths brought out by this war is the indestructibility of things that count in the life of a people. This is the great fact emphasized by Dr. C. W. Saleeby when he says:

"Not the least iota of any of these things has the war destroyed:

"Knowledge is unimpaired.

"Not one scientific truth, not one power based upon such truth, is lost.

"Not one tiniest fact ever observed and recorded about the tiniest subdivision of beetles or variety of chemical compound has been lost.

"Not one fragment is touched of the invisible, which is the invaluable and the invulnerable.

"No principle of duty, no law of kindness, no secret of service, no key to the hearts of men or the heart of Nature, is lost or can be lost.

"Not one architectural idea has been lost, or injured by a hair's breadth, for all the 'triumphs' of the German guns.

"Not one line of poetry, not one lovely tune in all our precious legacy from the genius of the past, is injured in any way."

Brute force has its limitations. It may destroy a beautiful work of art that has stood for ages, but it cannot rob the world of the inspirations and ideas that create art. There are some things beyond the reach of the biggest guns. The immortality of a nation does not lie in its architecture, or industries, or in the things that men call wealth, but in its power to preserve and perpetuate its own spiritual kingdoms. What of those who yield their bodies a willing sacrifice on the battlefield? These, in the words of Pericles, will never die. They live on, "far away, without visible symbol, woven into the stuff of other men's lives." They live on in the freedom their death has brought to others—

"Naught broken save the body, lost but breath."

In normal times the Spice Islands of Zanzibar produce about 90 per cent. of the world's supply of cloves, an average crop approximating 16,000,000 pounds.

DAYLIGHT SAVING IN EUROPE.

Has Proved a Success and Means Saving in Many Ways.

Daylight saving has been a success in Europe. Twelve countries are working and resting with the clock turned forward. The system is in effect in Great Britain, France, Germany, Austria, Italy, Holland, Denmark, Norway, Sweden, Portugal and Iceland.

According to the London Times, inquiries in the leading centres of industry indicate that the operation of the Summer Act is, among other results, having the effect of increasing the output in shipyards and engineering works.

Additional evidence of the benefit of the Act from the industrial standpoint comes from the railways. It has been stated in the official publication of the railway men in England that the alteration of the clock has been followed by an improvement in the working of long distance night goods trains. It has been found that the extra hour of daylight has enabled the trains to be made up and loaded in less time.

As a step in national economy it has proved a great saving in lighting and heating. The special committee appointed by the Parliament of Great Britain to study the results of the system reported that an average reduction of 20 per cent. for lighting purposes was given by the power companies; thirty-one private companies estimated a reduction of 23 per cent., and sixty-four municipal plants reported a reduction of 18.3 per cent.; the percentage individual cases ranged from 1 to 55.

In France an inquiry into the effect of daylight saving on the consumption of gas revealed the fact that an economy was being effected in coal or gas light of 18,000 tons a month, or more than 200,000 for the entire year. The savings for electricity, placed at 100,000 tons, thus give a total saving of $6,000,000 for gas and electricity.

It is calculated that in Vienna alone the people consumed 158,000,000 cubic feet of gas less and saved $142,000. The city of Vienna required 14,000,000 cubic feet of gas less for street lighting.

From Berlin comes the report that the municipal gas works experienced a decrease during May and June, 1916, to 505,506 cubic metres, notwithstanding the fact that 18,000 new gas meters were put up during the first six months of 1916, and the record from January to April showed an increase of 2.4 million cubic metres output of gas as compared with 1915.

A WONDERFUL CLOCK.

Has Ninety-five Dials and Supplies Much Information.

Petrograd boasts what is in many respects the most wonderful clock in the world. Its magnificence may be imagined from the fact of this colossal timepiece having no fewer than ninety-five faces. It indicates simultaneously the time of day at thirty different spots on the earth's surface, beside the movement of the earth round the sun, the phases of the moon, the signs of the zodiac, the passage over the meridian of more than fifty stars of the northern hemisphere, and the date according to the Gregorian, Greek, Mussulman, and Hebrew calendars. The works took two years to put together after the clock had been sent in detached pieces from Switzerland to Russia.

A Glasgow watchmaker told recently about a watch that was brought to him for repairs and surpassed in interest all others that he had seen during his forty-two years of business. It was self-winding. The case was that of the regular hunting watch and every time it was opened it partly wound the watch by closing of the lid.

Where the lid joined the watch there was a little lever, to the free end of which was joined a scythe-shaped rack, which worked into a wheel with ratchet-shaped teeth. Instead of the ordinary fly spring there was a spring fixed to the plate, and attached by means of a short chain to the lever. As this spring pulled the cover open the teeth of the scythe slipped over the teeth of the winding wheel and by closing the cover the wheel was partly pulled round. To wind it completely the watch had to be opened and closed eight or nine times a day.

If your pride doesn't keep you honest it's poor stuff.

FLYER TELLS HOW HE SHELLED ESSEN

AIR TRIP TO GERMANY TOOK SEVEN HOURS.

France's Latest Aerial Hero Describes His Daring Raid on the Krupp Works.

France's latest aerial hero is a territorial, a stolid, substantial individual thirty-eight years of age, formerly a prosaic hardware merchant. He is Sergeant Gallois. The feat which brought him fame was his flight to Essen, centre of Germany's great Krupp works, and bombardment of that industrial city.

There could be no more apt illustration of the military value of France's territorials—the men originally discarded for military service because of age—than Sergeant Gallois. Called from his store at the start of the war, Gallois was mobilized into the dragoons and given charge of a hospital for sick horses. He was dissatisfied. He wanted a more belligerent job. So he pleaded for a chance to enter the aviation corps. French officers flatly rejected him because he was "too old." But Gallois kept pleading and a year later he finally got into the air service. He was efficient and courageous in scores of raids as soon as he began to fly.

It was Gallois's own idea to bombard the Krupp works. He volunteered for the flight with three aviators. The army officials approved the scheme as a reprisal against German raids.

Crossing the German Lines.

The four aviators started Friday night.

"We flew a third of the way across France in order to reach a favorable starting point," Gallois said. "We started at 2:15 Friday evening, and crossed the German lines at an altitude of 600 feet, under heavy bombardment. I first sighted Metz, then Thionville. At the latter place an aeroplane going in my direction passed me. He was undoubtedly one of the Frenchmen going to bombard Treves. Owing to the fog I lost my way shortly afterward and steered by compass until I approached a city where scores of anti-aircraft guns were bombarding the air furiously. I guess this was Treves, where the French air squadron had evidently just finished bombarding.

"A moment later this French squadron passed me, returning to France. All of us were terrifically bombarded. It wasn't very long until I lost my way again in the fog, but finally I saw the flash of moonbeams on water and knew it was the Rhine. I followed this until I reached Coblentz, which appeared illuminated like a triangle. From there north the flight was easier because my route was endlessly illuminated by fires of hundreds and hundreds of factories and furnaces. The latter's fires were often red, green, blue or white in the intensity of their hurry to produce German military supplies. I went from Coblentz to Bonn, Cologne, and Dusseldorf, then headed eastward, the flaming factories and furnaces constantly increasing in numbers.

The Countless Furnaces of Essen.

Then I came to Essen. It was unmistakable in its countless furnaces turning night into day and making it impossible for me even to see the flashes of guns which were constantly aimed at me. I was obliged to ascend to 6,000 feet there and, selecting the point where the furnaces seemed densest, I dropped my ten bombs and headed for home via the Rhine and the Moselle.

"I got back just seven hours after starting."

Gallois said he drank "alcoholized coffee" and ate some sandwiches and chocolate during his flight. He landed almost blind from the pressure of the wind on his eyes, having lost his goggles early in the flight.

One of the fear who started out with Gallois has not yet returned. He was with a squadron of three which got lost in the fog and stopped to bombard Treves.

It is not strictly accurate to say that the Prussians have thrown out the rules of civilized warfare. They still believe in them for the fleets and armies of the other side.

The Doings of the Duffs.

GLAMIS

July 23rd.

Mr and Mrs L MacIntyre of Calgary and Master Campbell MacIntyre of Toronto are visitors at J C MacIntyre's.

Pte Reddie Thomson of Camp Borden, who spent a few days at his home here was presented with a wrist watch by some of his young friends in St Paul's church.

The ice cream social held in the basement of the Presbyterian church last Thursday evening was a success. There was a good crowd and the night was favorable.

Mr and Mrs Burgess and daughter Dorothy, Miss Ethel McEachren and Mrs Keeke and Mrs Moulton motored to London, Ingersoll, Hamilton and Toronto.

Rev Mr and Mrs Rock of Walkerton spent Sunday here. Mr Rock took the service in the Baptist church both morning and evening. Mr McCauley supplying for him in Walkerton.

Mr Coll McLean is visiting his mother Mrs Kate McLean on the boundary.

Mr and Mrs Allen McKinnon of North Bruce were in Glamis on Sunday.

The Young people of the B Y P U held a social evening at the home of Mr and Mrs William Cook on the 9th of Kincardine on Friday last.

Mr Fish of Walkerton Sundayed in Glamis.

Miss Laura Cunningham, Miss Margaret Currie, Messrs McCauley and Young motored out to Walkerton on Sunday.

Mr Albert Pickard of Wiarton called on his friends on Sunday.

Mrs Nesbitt and little daughter Dorothy who has been laid up for the last few days is quite a bit better.

Rev De Mille preached his farewell sermon on Sunday night. He has been pastor of the Free Methodist church for three years, and was highly thought of. His people are sorry to part with him.

Messrs Dick and Alex Kirkton and Roy Kennedy and wife and Miss Mabel Kirkton motored to Markdale on Saturday and will spend a few days with friends.

Miss Edith Howson left on Monday for Clifford where she will spend a few days before leaving in company with Miss Zeta Mack for Muskoka where they expect to spend a few weeks.

July 30th.

Mr and Mrs Burgess and daughter Dorothy, Mr and Mrs Cunningham and Miss Lela motored to Goderich on Sunday and spent the day with friends.

Mr and Mrs Matthews of Port Arthur, are visiting relatives and friends in and around our burg.

Mr and Mrs Pannabeker and family, who spent some time at Mr John Deehn's have returned to their home in Hespeler.

Miss Norah McNally returned from Owen Sound where she was visiting friends.

Mr and Mrs Harry Stevenson of Detroit and his nieces the Misses McNally and Barnes from near London, motored up and spent a few days with the former's parents Mr and Mrs Steve Stevenson.

Mr and Mrs Tafford motored from Beamsville and will spend their holidays in the McKeeman cottage at Inverhuron.

Miss Lizzie McCormick of Detroit is visiting her parents.

Miss Pearl Francis returned to Toronto after spending holidays with her friends.

Mrs Woods spent Sunday in Kincardine.

Pte Jas McKeeman is home from Toronto.

Rev De Mille and family left on Saturday for Sarnia. They intend taking in the Camp meetings at Niagara before taking a charge. They won't know where they are to be placed until their conference meets.

Mrs Nesbitt is not improving as was reported in last week's items. She is still bed fast but we hope to see her around once in her usual health.

Miss Margaret Campbell has returned to Harrison.

Aug 7th

Miss Jessie Brewer, of Kincardine, is visiting at Mr Jas McLennan's and at Mrs Catherine McKinnon's.

Mr McKeeman's family are occupying their cottage at Inverhuron.

Misses Isabel and Archetta McKinnon, of North Bruce, are visiting at Joe Cunningham's.

Mr and Mrs Tafford, Mr and Mrs McKeeman left on Monday for Detroit, with their car, and will spend a few days there.

Mrs Tom Cuttick of Stoney Creek, is visiting her sister, Mrs W J McKeeman.

Mrs Benton and two children, of Toronto are spending some time at Jos Thompson's and Mr Alex McKeeman's.

Miss Margaret Campbell and Miss Weatherway of Harrison, Sundayed at Mrs H Campbell's.

Mr and Mrs Morrison and daughter of Harrison spent the week end at Mrs Stratford Bell's and Tom Cuttick's.

Mr Harry Pocock and wife, of London, visited Mr and Mrs Stev Stevenson's.

Mr Albert Pickard spent a few days with his friends here.

Anniversary services were held in St Paul's church on Sunday. Rev Mr McArthur of Kincardine preached both morning and evening.

Miss Mary Clark of Alpena, Mich, is visiting her friends on the south of Kincardine.

Children Cry
FOR FLETCHER'S
CASTORIA

THE LATE JOHN COBEAN

The passing of John Cobean on July 19, in his 86th year, took from this community another of the pioneers. He was born in Mono township, Dufferin county in 1835, being of Irish decent. In 1863 he was married to Mary Lewis and farmed in Dufferin County. About 42 years ago they moved to Saugeen.

The late Mr Cobean was a very likeable man. He was always of a jovial spirit, and enjoyed the friendship and fellowship of hosts of people. He served in the Saugeen council for some time, assisting his community in many ways in a public capacity. For thirty years he has served Bangoyne Presbyterian church as elder. He was a kindly man, and honest man and a neighbor whose hospitality and willingness to assist anyone was counted much in the early days. For a number of years he has not been well, and the past few months has been very feeble.

He is survived by his wife, four daughters and one son, Mrs Piper, Mrs Beatty in Michigan; Mrs J Ross Munro, Ottawa; Mrs Rowand, Saugeen; and Lewis, on the homestead, who will have the sympathy of all. He leaves also a sister in Rodney, and a brother in North Dakota. The funeral was held on July 21st, from Bangoyne church to Bangoyne cemetery, and was very largely attended.

WALKERTON

License Inspector White has been working on a rather strong case in Ripley, where large quantities of liquor had been consigned through the express office to a certain name. Thinking it was a big supply of moisture for one party to put getting, the Inspector visited that territory and found the tangle foot had been consigned to one of the elders of a Presbyterian church in Huron Township and who was as adverse to booze as the devil is to scripture. On quizzing him on the subject the churchman got so insulted that the Inspector fell, as it were, that he had been treading on holy ground. It was evidently a pure case of impersonation, some scamp having ordered a heavy supply of the thirst quencher in the name of one of the greatest wielders of the temperance club that Huron Township knows. As the culprit who tried to put one across hasn't yet showed up for the stuff, which if mopped up in a given period by one man, would give him such a dose of delirium tremens that he would think he had cornered up all the snakes on the map as the culprit was expected hasn't showed up, the Inspector will in all likelihood seize the shipment and confiscate the moisture.

Diphtheria, which has broken out in some sections of Greenock, has already proved fatal to one victim, William Cassady, the 13 year-old son of Mr Martin Cassidy, near Riversdale, having succumbed to the disease on Friday. The home of Mr Roger Clancy, near Chepstow has also been quarantined for the malady two of his children being laid up with the disease. The outbreak, which is of a rather virulent type, is we are informed confined so far to only these two homes, and the Greenock health authorities are enforcing a rigid quarantine and taking other drastic measures to prevent a further spreading of this ailment.

Mr R P Weiss, the Walkerton painter, who has been charged with exceeding the speed limit by driving his auto through Paisley at a faster rate than fifteen miles per hour, is, we understand taking steps to fight the case. The Walkertonian, it seems, maintained that he was not going at the rate he is accused but was rather driving in a careful legitimate manner through that burg. The Paisley constable, who has been furnished by the village council with a stop watch, is reported to be doing a land office business off the automobile route.

Inspector Mc ... and son, Brian, returned on Friday from an auto trip to Michigan. They were accompanied back by the former's nieces Misses Ruth and Gladys McCreary of Tyre, Mich, who will visit here for a time.—Herald and Times.

RECEPTION AT MT. HOPE

A reception was held at the home of Mr and Mrs R Oldreive of Mt Hope on Thursday, July 26th, at seven o'clock, in honor of the marriage of their youngest daughter Laura, to Mr Neil McPhee, of Cochrane, on July 19th. Only the immediate relatives of the bride and groom and the members of Mt Hope Methodist choir of which the bride was a member were present. The bride wore her wedding dress of white silk and georgette crepe with trimmings of beads and lace, also the groom's gift, a pretty necklace of pearls and opal.

After the usual greeting, the guests numbering about forty partook of a dainty dinner. The company spent an enjoyable time in social chat and music through the entire evening. During the previous week the young couple has been on a trip to Toronto, Niagara and other points. The bride travelled in a smart suit of mustard poplin with hat to match. They leave shortly for their home in Cochrane, Ont. where the best wishes of their many friends follow them.

TWELFTH CON BRUCE

Haying is the order of the day. The hay is heavier if anything, than it was last year, and we hope for some cooler weather to finish it.

Miss Anita Lutterell, from Elderslie, spent last week visiting her friends in Bruce.

Mr Edwin Barnes Sundayed last week at his home here accompanied by his friend Miss Hinds from Port Elgin.

Mr and Mrs Eloy from Port were calling on Geo Scott's last week.

Everybody and his mother are picking raspberries, but it is different to what it used to be. They can afford to auto to the berry-patch now.

Mr Bert Dunlop Sundayed in Walkerton.

Misses Esther McGillivray and Annie McArthur were visiting the former's sister in Dornoch for a few days.

UNDERWOOD

Mr Will Drummond, of Toronto, who spent a week or so with friends here returned to that city Saturday.

Messrs George and Simon Boppel who have been in North Dakota on a visit to their brother, Christian, returned on Monday.

Mr and Mrs Alex McDougall of Hamilton are holidaying with friends in this locality.

Miss McKay, of Owen, is visiting at her home here.

Mr Albert Coleman motored up from Clifford on Saturday to spend the week and at his home here.

Rev D Martin of Knox Church, Stratford, will conduct the services in the Presbyterian Church here on Sunday morning in the absence of Rev McNab who will be away during August on his holidays.

PINKERTON

Rev Mr Thynne, of Palmerston, occupied the pulpit here on Sunday last. Rev Mr Stevenson will preach next Sunday in the interests of the Dominion Alliance.

Rev Dr Scott and daughters, of Kitchener, are holidaying at the Manse.

Mr Wm Alexander purchased a new touring car last week.

Miss Isabel Walker, of Parkhead, is visiting her cousin, Miss Myrtle Garland.

Miss Florence Welsh, of Harriston, is spending holidays at Mrs N Garland's.

Mr Cecil Garland is recuperating after his severe sickness. He is at Mr Jas Thompson's at Glamis.

Miss Clara Campbell is the new assistant in the store here.

THE LATE MALCOLM McALLISTER

The death of Mr Malcolm McAllister of Gillies Hill, on July 25th, at the age of 74 years, removes one of the old pioneers of the township of Elderslie, he having resided continuously on the 6th concession for sixty years. His illness was prolonged, which he bore with christian fortitude and although for some weeks death clouds at times obscured his visions, in his lucid moments, he prayed,

"Great being in whose presence
Ere morning, I may stand,
Reach from the dark, Thy guiding me through,
Thine everlasting hand."

His life was an consistentious one. His pleasures were in making his home life comfortable and happy. He was respected by all who knew him for his rugged honesty, his word being his bond. He despised everything that was mean and crooked. For many years he was a consistent member of the Paisley Baptist Church. In the absence of the pastor, Rev Mr Neilson, Rev Mr Wilson of Salem conducted the funeral services. Along with his parents Mr McAllister came to Canada from the land of the sturdy thistle and winsome heather when he was thirteen years of age, and after a slow sea voyage reached Montreal. The steamboat on which he sailed went from Montreal, was discovered to be on fire. The captain headed her from the shore but a panic ensued and many emigrants were burned and many drowned. The deceased held on to a rope hanging over the side of the boat and was rescued unhurt. His father, a brother and only sister were drowned, the mother floated to shore and although unconscious, was resuscitated. A girl child was clinging to her breast, another to her skirts, their parents being amongst the lost, and none of the survivors claimed them. The authorities proposed to Mr McAllister to take one of them, but she was so distracted over the loss of her only daughter that she did not accept the offer, and it was a source of regret to her afterwards. Mrs McAllister, (Sarah Munn) predeceased her husband in March, 1916. Their family are Neil, in Paisley; Archie and Malcolm in Saskatchewan, on Con 4; John and Angus, Marion and Barbara on the homestead at Gillies Hill. Interment was made in Salem cemetery on the 10th concession. The pall bearers were his four sons, Neil, Peter, John and Angus, his brother-in-law D McKechnie of Walkerton and his cousin Neil Murdock of Lucknow.

Children Cry
FOR FLETCHER'S
CASTORIA

A Difficult Task Splendidly Performed

Messrs Joseph Wrightson and James McKinnon, of the 6th of Bruce, accomplished a wonderful piece of work the other week, says the Port Elgin Times.

It will be remembered by many in the district that the large iron cross on the Catholic church at Formosa was struck by lightning and brought to the ground. The church officials were some time looking around for men who would undertake to put the cross back to its proper place.

Finally Mr J Wrightson and Mr J McKinnon went down and took a look at the job. They agreed that they could do the work, and said they would do it for a thousand dollars. The church officials accepted the offer and the two men went at it. The first thing to be done was to get the cross repaired as it was broken. By the aid of antees it was conveyed to the Hunter Bridge Co. at Kinrardine, there repaired, and then taken to Formosa. Then the tug of war began. It had to be put on the high steeple which was over 200 feet from the ground and the cross weighed 1200 lbs. By the use of scaffolding which reached up 200 feet and gin-poles beside the church and steeple the huge cross was successfully landed to its proper position and acurely fastened without accident of any kind.

The work is considered quite wonderful, since it was done by two men who had no previous experience in that class of work. Mr Wrightson is an expert carpenter and framer, while Mr McKinnon is experienced in cement and bridge work.

Two Paisley Members of the 160th Bruce Battalion—Edmund Dobson and Wm. Stafford.

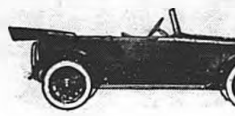
Letters from the Soldiers

FROM A LIVELY SECTION OF THE FRONT

Driver Jas M Sparrow, of the 3rd Can. Divisional Train, writes to his parents, Mr and Mrs M Sparrow, Elora Road north:



Somewhere in France.
July 2nd, 1917

Dear Folks,—Thought I would try and drop you a line tonight. It is the first chance I have had for several days, as we have been on the move steady for the past ten days. Have seen more of France and Belgium in the past two weeks than in all the rest of the time I have been in France. Of course, I can't tell you where I am located, as it is against rules, but believe me, we are up where things are lively. A fellow goes to sleep at night to the sound of the big guns and wakens in the morning to the same sound; that is if a fellow is able to sleep at all through the noise. This afternoon we had the pleasure of seeing the British aeroplanes chase back three German airships after a fine little scrap almost directly above our dug-out. At the beginning there was just one British aeroplane, and a small one at that, one of those they use for scouting purposes, and this was attacked by the three German planes. Then some British anti aircraft guns came to the rescue by firing bombs into the midst of them. We could see them exploding in the air all around the aeroplanes but none of them registered a hit as far as we could see, and neither the German or the British aviators seemed to pay any attention to them. The little British scout planes took to the heels flying back to its own lines followed by three German planes at the same time playing a machine gun steady on the three planes. By this time three more British aeroplanes appeared on the scene and after a few minutes of fighting the three German planes beat it back across their own lines. Two of the German machines were damaged, but they managed to get away after all. It was certainly a wonderful sight and it is simply marvellous the control these men have over their machines. They swoop and duck and turn all kinds of shapes in the air and look just as natural and graceful as a bird. You have seen three or four small birds attack a hawk in the air. Well, that is just what that little battle reminded me of. Since starting this letter, which I am writing lying on the grass outside, at least fifty aeroplanes have passed over my head going toward the German lines. They have been going in sixes and eights and ones and twos, etc. Some are overhead all the time. From where I am writing I can also see five observation balloons which are stationary, fixed at certain distances apart and used entirely for taking observations. It is simply awful the condition of some of the villages and towns around here. About a quarter of a mile from here in what is left of a small town. There is actually not a single building left standing. It has been blown to atoms. A few bits of the walls of some of the buildings are all there is left to show that a town once stood there. And that is just one of the many places which have been destroyed. I could name you a good many more that I have been in. Some of them have a few buildings left although there are practically no civilians living in them. I haven't had any word of any kind from Canada for a long time and think you had better change the address. Am quite well and hope you are all the same at home. How is conscription going in Canada?

CASTORIA

Little pigs sell on the market for $8 now. They used to be $2. Have you increased in value to that extent? A good slogan for the money grabbers would be: "Keep pace with the swine."

Overland
Fours

Simplified Driving

THIS MODEL is a great family car because it is so easy to handle. All electric controls are on the steering column—within natural reach. The wheel is large and easy to steer with. The shifting lever and emergency brake can be reached without changing your driving position.

So it is just as easy for your wife or daughter to drive this Overland Eighty-Five Four as it is for you. And as you know, that cannot be said of all cars.

Step in, today for a demonstration.

$1250

Overland Model Eighty-Five Four

35 horsepower	4-inch tires
112-inch wheelbase	Brewster green body
Cantilever rear springs	Auto-Lite starting and lighting system
Vacuum gasoline system

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—H.S.S.:—Can I sow acid phosphate with a force feed grain drill? It has no fertilizer attachment but I thought possibly it might work.

Answer:—You can sow acid phosphate with a force feed seed drill if the acid phosphate is dry and finely ground. Such a method of application would not allow you to sow but a very light application. Be very careful to thoroughly clean out and oil the drill after use for acid phosphate sowing, otherwise, the metal part will rust. If you have a lime spreader I would advise your spreading the acid phosphate with this implement and then thoroughly work it into the soil by disking and harrowing. This will give a better application than applying acid phosphate through the seeding attachment of the seed drill.

Question—J.R.S.:—I have eighteen acres of oats. I intend to sow wheat after oats. The field is somewhat run. I have plenty of marl near the river. Would it pay me to top-dress the wheat with marl? If so, how much to the acre? Would it be all right to spread with a shovel? Sand isn't heavy nor light.

Answer:—Would advise you, after the land is plowed, to top-dress it with marl at the rate of about two tons to the acre. If you have a lime spreader and the marl is dry, after it has been pulverized it can be spread with the lime spreader to best advantage. You can spread it fairly well with a shovel but you will not get it sufficiently evenly distributed. After the lime has been spread work it into the ground by thoroughly disking at least a week before the wheat is planted.

At the time of sowing wheat I would advise adding 200 to 300 pounds of fertilizer to the acre in order to give the young crops a vigorous start. The fertilizer should contain from 2 to 3 per cent. ammonia, 8 to 12 per cent. phosphoric acid and from 1 to 2 per cent. potash would be valuable if it can be obtained. This fertilizer can be applied at the time the wheat is sown or spread in the same way as is advised for lime and worked into the soil thoroughly just before the wheat is sown. If the grain is seeded to a mixture of clover and grass seed the addition of the marl will make the soil sweet in reaction and the fertilizer will have a very beneficial effect in insuring a good stand of grass.

Poultry

Market Calendar.

In August all surplus Leghorn cockerels and cockerels of other light weight breeds should be marketed as broilers. They are of little value as roasters.

Green ducks are young ducks from 8 to 12 weeks old. They should be sold before they moult.

Ducks on the Farm.

The keeping of ducks calls for little outlay in the matter of building houses. Any kind of a house, so it has a good roof, and dry floor, will do. A plain shed with dirt floor, and having the south side entirely open makes an excellent duck-house.

The floor of the duck-house must be kept dry and should be well littered with clean, dry straw. Strange as it may seem, while ducks will thrive if they have access to a stream of water or pond, they must have dry quarters at night. Ducks compelled to spend their nights on damp floors or on damp litter, will surely contract rheumatism.

Ducks are conveniently kept in flocks of about thirty. A house fifteen by ten feet is large chough for this number. When kept in flocks of thirty or more one male should be allotted to each seven or eight females.

It is never advisable to keep ducks and chickens in the same house or run, for the reason that the ducks will keep the drinking water in such a constant state of filth that the health and life of the chickens are endangered.

Ducks require a much more bulky ration than hens. A good ration is as follows: Two parts bran, one part each of middlings and corn meal, one-half part of beef scrap and five parts of green food. This green food may be most anything —chopped turnips, beets, pumpkins, or clover, etc. As the breeding season approaches it would be advisable to increase the beef scrap to one full part. Little whole grain should be fed. If on range during the spring and summer months ducks require little feeding.

Any of the larger breeds of ducks will yield quite a great deal in the way of feathers in a year's time. Feathers should not be plucked during the cold weather. When ready for picking, the feathers will pull easily, without leaving blood on the end of the quill. If not picked when "ripe" the feathers will fall out and be wasted.

Earning Money at Home.

Very often a girl who has been wishing for some way in which to earn a little money suddenly finds a good idea close at hand in homely disguise. Not long ago one girl noticed, in wandering about the home farm, that a large amount of the fruit on the trees was dead ripe and about to go to waste. She went to her father with a question:

"May I have one box of berries out of every four that I pick, and one basket of plums, one of peaches and one of apples of the same basis?"

He was skeptical but also a little relieved, for the prospective loss of the small fruit was worrying him. "Go ahead and see what you can do," was his reply.

What the girl did was to get down to business at once. She gathered and sorted diligently, with a well-defined scheme in view for every pound of her own share. The fruit that fell to her lot she put up in the form of jelly, apple butter, and peach and plum marmalade, which found a ready market. The project is still flourishing. She buys her jars and glass at wholesale prices, and makes a point of getting such an assortment of odd, attractive shapes. On each one she pastes a label bearing her name and guarantee. She has never yet had anything returned as inferior or spoiled—a fact that, taken in connection with her success, is quite significant.

By picking the fruit at just the right time and handling it carefully, she has greatly increased her father's sales, while her own income from the business is forty dollars, a month, earned, for the most part, out in the sunshine and open-air.

An Illinois inventor has patented a harrow attachment for gang plows to enable a farmer to do his plowing and harrowing at the same time.

The Dairy

Steers which have been kept on a low plane of nutrition (maintenance) for a considerable time make more economical gains when put upon a full feed ration than steers which have been upon full feed for some time. However, steers receiving more than a maintenance but less than a full-feed ration make no more economical gains when put upon full feed than steers which have already been on full feed.

Whenever beef advances in price a demand goes out for action that will stop the slaughter of young animals. Since the reason always given for high-priced meats is the decreasing number of beef animals, it would seem the wise thing to bring more beeves to maturity. And so legislatures and congress debate the advisability of prohibiting the killing of calves under a given age.

Would such action bring the desired results? Would the passing of veal from our tables make meat any cheaper? Would an order to the farmer to mature his calves stimulate him to raise beef or would it result in his selling off his dairy or feeding fewer animals than ever?

In all probability the latter is exactly what would happen. The milk business and raising calves are incompatible. The milk that calves use is also needed by milk consumers, many of whom are babies. And so the calves must go. There is another reason why the farmer knows better what to do with his young animals than the public, or even the legislator.

It takes pasture and feed to mature beef. Every successful dairyman is using all his land to feed his cows. If he were compelled to feed calves he could keep fewer cows and beef would be grown at the cost of a scarcity in milk.

More calves should be grown to maturity. There is no doubt of that. But legislation prohibiting the killing of young animals is not the way to increase the supply of beef animals.

During the summer while cows are in pasture or on green crops a balanced ration can be maintained by combining with the green food the following concentrated feed mixture recommended for summer feeding: Three hundred pounds wheat bran, two hundred pounds gluten feed, one hundred pounds hominy, corn-meal or ground oats. Mixed wheat feed may be used in place of wheat bran. More gluten might well be added to the combination when cows are carefully watched.

KEEP THE POTATOES GROWING

Notes on the Cultivation of This Valuable Crop and How to Protect It From Its Enemies.

Many are growing potatoes in Canada this year, for the first time and, as a result of the greatly increased number of growers the crop will probably be greatly increased. But to insure a good crop there must be an abundance of moisture in the soil and the tops must be protected from insects and disease.

CULTIVATION:—The soil should be kept cultivated with the cultivator or hoe until the tops meet sufficiently to shade the ground. As most of the tubers develop in the three or four inches of soil nearest the surface, and as the tubers will not develop well in dry soil, quite shallow cultivation is desirable at this season of the year. In soil which is dry there can be good development of tops but there will be few tubers. The roots in such cases have gone down deep into the soil to obtain moisture but the tuber-bearing stems, which are quite different from the root system, do not develop well. Where the soil is a loose, sandy loam, hilling is not necessary and may be injurious, as the soil dries out more than if left on the level. In heavy soils it is desirable to hill the potatoes as it will loosen the soil and the tubers will be shapelier than when the ground is left level. When there is sufficient rainfall and moisture in the soil hilling is likely to give best results in all kinds of soil as the soil will be looser and the tubers can push through it readily. As a great development of tubers takes place during the cooler and usually moister weather of the latter part of summer, it is very important to keep the plants growing well until then. In one experiment it was shown that during the month of September there was an increase of 119 bushels of potatoes per acre.

PROTECTION OF POTATO TOPS FROM INSECTS:—It is very important to prevent the tops of potatoes from being eaten by insects, particularly by the Colorado Potato Beetle. The old "bugs" do not do much harm to the foliage, as a rule, and usually the plants are not sprayed to destroy these, although the fewer there are to lay eggs the less difficulty there will be in destroying the young ones. These begin to eat rapidly soon after hatching, and close watch should be kept so that the vines may be sprayed before much harm is done. Paris green will kill much more rapidly than arsenate of lead but does not adhere so well, and in rainy weather it is desirable to have something that will stay on the leaves so that they will be protected until it stops raining and thus prevent the tops being eaten. At the Central Experimental Farm a mixture of Paris green and arsenate of lead is used in the proportion of 8 ounces Paris green, 1¼ pounds paste arsenate of lead (or 12 ounces dry arsenate of lead) to 40 gallons of water in order to get the advantage of both poisons. It may be that it is not convenient to get both poisons when either 12 ounces of Paris green or 3 pounds paste arsenate of lead (or 1¼ pounds dry arsenate of lead) to 40 gallons water could be used, or in smaller quantities, say 1 ounce Paris green to 3 gallons or 2¼ ounces paste arsenate of lead or half that quantity of dry to 3 gallons of water. An experiment conducted for six years at the Ontario Agricultural College, Guelph, showed that, on the average, where the tops were sprayed to kill "bugs", the yield was 186.9 bushels per acre, while when the tops were not sprayed and allowed to be eaten, the yield was only 98.2 bushels per acre. It is desirable not to stop with one spraying which usually does not kill all the bugs but to spray several times, if necessary, so that as little foliage as possible is eaten.

PROTECTION OF THE POTATO PLANTS FROM LATE BLIGHT AND ROT.—In some years the crop of potatoes is much lessened by the Late Blight disease and when rot follows little of the crop may be left. It is, therefore, very desirable to prevent this disease from spreading. This is done by keeping the plants covered with Bordeaux mixture from about the first week of July, or before there is any sign of the disease, until September. Sometimes the first application of Bordeaux mixture is made before the potato beetles are all killed, when the poison for them may be mixed with the Bordeaux. While the disease is not very bad every year it is well to be prepared. There was an average increase per year of 94 bushels of potatoes from spraying with Bordeaux mixture in three years.

The formula for Bordeaux mixture for potatoes is 6 pounds copper sulphate or bluestone, 4 pounds freshly slaked lime to 40 gallons of water. While the bluestone will dissolve more quickly in hot water; if it is not convenient to get this, it may be suspended over night in a cotton bag in a wooden or earthen vessel containing four or five or more gallons of water. The lime should be slacked in another vessel and before mixing with the copper sulphate solution should be strained through coarse sacking or a fine sieve. The copper sulphate solution is now put into a barrel, if it has not already been dissolved in one, and enough water added to half fill the barrel; the slaked lime should be diluted in another barrel with enough water to make half a barrel of the lime mixture. Now pour the diluted lime mixture into the diluted copper sulphate solution and stir thoroughly. The mixture is now ready for use. The concentrated lime mixture should not be mixed with the concentrated copper sulphate solution, as, if this is done, an inferior mixture will result. If the barrels are kept covered so that there is no evaporation, stock solutions of the concentrated materials may be kept in separate barrels throughout the season. It is important to have the quantities of lime and copper sulphate as recommended, but in order to be sure that enough lime has been used and there is no danger of burning the foliage, let a drop of ferrocyanide of potassium solution (which can be obtained from a druggist) fall into the mixture when ready. If the latter turns reddish-brown, add more lime mixture until no change of color takes place.

The Sunday School

INTERNATIONAL LESSON AUGUST 19.

Lesson VIII. Finding The Book of The Law—2 Chron. 34. 14-33. Golden Text.—Psa. 119. 16.

Verses 14-18. Finding of the law in the course of the repairs described in the preceding verses. Book of the law—Deuteronomy, though in somewhat briefer form than we now have it. Most scholars believe that it contained what is now Deut. 5 to 26, or 12 to 26, plus chapter 28. (For a fuller discussion, see F. C. Eiselen, The Books of the Pentateuch, Chapter XII.)

19. Rent his clothes—A symbol of grief or horror. Verse 21 shows that the book contained threats of terrible punishment for disobedience, which made a profound impression on the king. Such threats are found in Deut. 28.

20-28. Full of fear and terror, the king makes inquiry of Jehovah through the prophetess Huldah. She reports that the book contains the law of Jehovah, and that the people must suffer the consequences of their sins. She promises, however, that the calamities will not fall during the lifetime of Josiah.

29-32. The assembly and the covenant. On receipt of the reply of the prophetess the king called a religious assembly. Elders—The leading men, heads of families and clans. Levites—According to the Chronicler, no important function could be held without Levites. Covenant—The basis was the newly found book, hence it is called the book of the covenant. The agreement included the promise to observe the law. Before Jehovah—Everything was done as in the sight of Jehovah. Stand to it—Be willing to observe the law.

33. Abominations—The things described in verses 3-7. Israel—Josiah extended the reforms to the territory which had formerly belonged to Israel. His days—The Chronicler knew that after Josiah's death, under Jehoiakim, the old abuses returned.

Cheaper Poultry Feed.

On account of the scarcity and high price of feed the poultry industry of this country is threatened by the prospect of the wholesale slaughter of laying stock and a serious falling off in the number of pullets to be matured.

The necessity for retaining for milling every possible bushel of wheat suitable for that purpose need not be emphasized. To provide poultrymen with feed for rearing their young stock without unnecessarily lowering the supplies of milling wheat, the federal Department of Agriculture has requested millers throughout Canada to put on the market the cracked and shrunken wheat removed from grain before it is milled.

In addition to small and broken wheat these cleanings consist chiefly of the seeds of wild buckwheat, a near relative of the cultivated buckwheat. The Poultry Division of the Central Experimental Farm has used wild buckwheat in feeding experiments and reports it to be a highly satisfactory poultry feed and has ordered two cars of buckwheat screenings for the Central and Branch Experimental Farms from the Canadian Government elevators at Fort William. Fowls used to good grain do not take to it at first but when they become accustomed to it they eat it readily and do well on it.

The mill cleanings from local flour mills also contain traces of many other weed seeds, including several kinds of mustards. These, however, would not as a rule amount to more than two or three per cent. of the cleanings in the case of the standard grades of Western wheat. This material is specially recommended for backyard, suburban and professional poultrymen. On farms the cleanings from yards and poultry houses where it has been fed would have to be disposed of so as not to disseminate noxious weeds in grain fields.

Those interested in obtaining this class of feed should immediately arrange with local mills or feed dealers for a supply. The mills cannot be expected to keep this material for poultry unless it is demanded for that purpose and that rests with the poultrymen themselves.

Your Problems

Conducted by Mrs Helen Law.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

E. L.:—1. A wrist-watch with an illuminated face, a pocket flashlight, a pocket drinking cup or a solidified alcohol burner are useful gifts for a man who has left for a military training camp. 2. To disinfect a room thoroughly proceed as follows: If possible, mattresses and comforts should be burned. Wet everything else well with a bichloride solution, boil and sun the blankets. Scrape the walls and ceiling, wash with bichloride; also the floor and woodwork, then scour with carbolic soapsuds. Fill cracks with fresh putty, shut the doors and windows tight and paste strips of paper around them. Closet doors should be taken off the hinges, but left inside. Place three bricks in the middle of the floor, put an iron pan on them, into which a pound of flowers of sulphur has been placed, wet the sulphur with alcohol, stick in a short length of fuse, light it, then go out quickly, being careful to see that the door is also made tight. Leave undisturbed for twenty-four hours. The fumes will bleach any colors in the room. Dishes may be disinfected by boiling for 5 minutes.

H.R.:—1. Bureau drawers which stick can be made to slide easily by first rubbing over the edges with sandpaper, then soaping them. 2. A garment that has had an overdose of bluing may be whitened by boiling. 3. Brown sugar can be substituted for white in pickling. 4. Try benzine to remove the tar stains from your silk dress. 5. To make oatmeal gems, soak one cup oatmeal over night in one cup water. In the morning sift together one cup flour and two teaspoonfuls baking powder; add a little salt. Mix meal and flour together, wet with sweet milk to a stiff batter, drop in gem pans and bake immediately. 6. It is said that before eating is a good time to sleep, but not immediately after a meal. 7. Yes, raw tomatoes are good for almost everybody who does not have ulcer of the stomach so that the use of the tomatoes gives him pain. If they do not cause pain one need not be afraid to eat them. 8. The diet of a child of two years should consist of fruits, grains, a moderate allowance of pure cream and cow's milk and vegetable purees. Purees of spinach and other "greens" are particularly good.

Eva:—1. It is said that freckles can be bleached out by applying the following mixture to the face, being careful to keep it away from the eyes: two ounces of buttermilk or sour milk, two drams grated horseradish, six drams cornmeal. Spread the mixture between thin muslin and allow it to lie on the face at night. 2. The following method of cleaning black satin is given by some authorities: Boil three pounds of potatoes to a pulp in one quart of water, strain through a sieve and brush the satin with it on a board or table. The material must not be wrung, but folded down in cloths for three hours, then pressed on the wrong side.

Reader:—1. Bavaria is the largest state in the German Empire after Prussia. 2. "Sinn Fein" is Gaelic for "For Ourselves". 3. Inflamed eyelids should be bathed several times a day with a solution of half a teaspoonful of boracic acid in a cup of hot water. 4. To test nutmegs, prick them with a needle; if they are good, the oil will spread around the puncture. 5. "Neither he nor I were there" should be "neither he nor I was there." 6. The 250th anniversary of the Reformation will be celebrated October 31.

Cook:—Perhaps the following notes may be of assistance: Salads and vegetables neutralize usual tendency of the body toward acidity, facilitate the elimination of waste products and poisons, and thus incidentally postpone the coming of old age. Salads cool and purify blood and freshen complexion, give jaws and teeth exercise necessary to development without which latter decay, facilitate digestion by encouraging mastication, promote oral hygiene by leaving mouth and teeth physiologically clean at end of meal, counteract tendency to anaemia, scurvy, gout, rheumatism, are rich in lime, so necessary to bone-building; also valuable laxative. Green vegetables are particularly valuable in cases of anaemia and of other diseases which are ascribed to diet deficiencies.

Vegetables are deteriorated by the loss of their salts in boiling water. Not only do potatoes lose much when peeled, but carrots, as usually cooked, lose nearly 30 per cent. of their total food material when cut into small pieces. Cabbage thus treated loses about one-third of its total food materials, especially its ash or mineral matter. On the average 30 per cent of the total salts is extracted when vegetables are boiled in water for thirty minutes. When, on the contrary, they are steamed they lose only 10 per cent. Hence vegetables should be either steamed or stewed in a casserole or covered earthenware vessel, so popular in France. If boiled the water should be saved for soup or sauces.

Beetroots, carrots and parsnips contain a large amount of sugar, and when served at a meal there is less of a desire for excessively sweet desserts. Cabbage I was taught could not digested for some five hours, but eaten uncooked in salad it takes less than three.

Salads, like vegetables and fruits, have little body-building and tissue repairing material, hence require to be supplemented by foods rich in these and in fat, such as eggs, meat, cheese (grated by choice or the cottage variety) and nuts.

Bedtime Stories

The Vain Crow.

One day a fox that was very hungry was passing through a field. He saw a crow on the limb of a tree busily eating a piece of cheese, and at once trotted to the tree and sat down beneath it.

"Mr. Crow," said the fox in harsh and unfriendly tones, "you must share your cheese with me."

The crow looked down at the fox, but answered not a word as he took a peck at the piece of cheese.

"Mr. Crow," said the fox, in a voice that was still more harsh and unfriendly, "if you do not give me part of your cheese I shall climb the tree and take it all away from you."

The crow looked down at the fox, but answered not a word. He knew very well that the fox could not climb the tree, and so he took another peck at the piece of cheese.

The fox, finding that he could not get the cheese by threats, bethought himself of using the craft for which the fox family is famous. He remembered how a fox once got a piece of cheese from a crow by telling the crow what a sweet voice she had and then begging her to sing. That crow was holding the cheese in her bill, and when she opened her bill to sing she dropped the cheese to the ground, whereupon the fox seized it and ran away. Since that time all crows have carried their food in their claws and not in their bills. Therefore, the fox knew well that it would do no good to beg the crow to sing. How, then, could he get that cheese? He thought hard and looked hungrily up into the tree.

"Dear Mr. Crow," said the fox at last, "I was only joking when I spoke before, for I am your best friend. Only yesterday I was telling both the woodpecker and the blue jay how much more beautiful your plumage is than theirs."

The crow answered not a word, but looked down at his glossy black sides with great pride. Then he held his head a little higher and forget to take a peck at the piece of cheese.

"And to-day I was telling both the kingfisher and the hawk how much sharper and more graceful your claws are than theirs," went on the fox in very pleasant tones.

The crow answered not a word, but lifted first one claw and then the other from the limb of the tree and looked at each with great pride. But when he lifted the claw that did not have the cheese and tried to cling to the limb with the claw that did have the cheese, he dropped the cheese to the ground. Whereupon the fox laughed loudly, seized the cheese and ran away to the woods, where he ate every morsel of it.

And the crow cried "Caw! Caw!" in very angry tones, and flew off to find a dinner to replace the one that he had so foolishly lost.

The moral is that, if a vain person is on guard at one point of attack, there are always other points of attack that are not guarded, and a crafty flatterer will have little trouble in finding a way to reach them.

Electric Plants For The Farm.

One of the recognized necessities in connection with our increased agricultural production is better and more attractive conditions on the farm, and among the many suggestions the use of electricity should be considered. Electric power is a great convenience in the farm home, and saves much time to the farm help. The farm or country home situated within the area of an electric system of transmission or distribution is fortunate, but the vast majority must look to the small isolated plant. This alternative, however, is now much more promising than a few years ago. Many factories manufacture this type of equipment, the operation of the plants has been simplified and cost has been much reduced. These small plants may be advantageously used for many domestic purposes in addition to lighting, such as ironing, washing, toasting, pumping water, etc.; and also for the very important use of charging storage batteries.

Why Wait for War to learn real food values? It is what you digest, not what you eat, that furnishes strength for the day's work. Many foods tax the digestive powers to the utmost without supplying much real nutriment. **Shredded Wheat Biscuit** is all food and in a form that is easily digested. It is 100 per cent. whole wheat. For breakfast, dinner or supper it takes the place of meat, eggs and potatoes. You don't know how easily you can do without meat or potatoes until you try it. Delicious with sliced bananas, berries, or other fruits, and milk. Made in Canada.

HANDS ACROSS THE BORDER

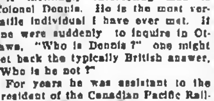
The Physical Union of the Fighting Strength of Two Nations.

You wouldn't exactly call it hands across the sea, because Canada is only across a lake; but Canada is part of England, which is a long way from South State Street, says a Chicago writer. Anyway, what I'm driving at is this:

Lieutenant Colonel J. S. Dennis, officer commanding the western division of the British Recruiting Mission, recently clasped hands with Captain F. H. Kenney, officer commanding the recruiting district of Northern Illinois for the United States army.

When two belligerent parties shake hands there are only two things which the referee or third party can say—either "Take your corners" or "Bless you, my children."

I said neither. But I held my breath, for it was an impressive moment, the formal enactment in Chicago of immortal history; the physical union of the fighting strength of two great nations. And the spirit of patriotic co-operation in the common cause of justice sanctified the alliance.



Colonel Dennis and Captain Kenney joined in plans. What they want is men to send to the front. Neither has any choice as to whether the men go in Canadian kilts or American khakis. At every one of the dozens of scattered stations under Captain Kenney's command volunteers of Canadian citizenship were taken for the expeditionary forces of the Dominion; at every headquarters over which Colonel Dennis has control volunteers of American allegiance were taken for our own National Army.

Captain Kenney is credited with being a bit of a bearcat on the science of recruiting. But he was immensely impressed with the policies and ideas expressed by the distinguished Canadian man of war.

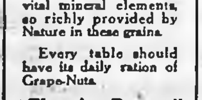
Colonel Dennis says that there are 157,000 Canadians in Chicago. Calgary, with a total population of 60,000, sent 16,000 soldiers to the front. What then might Chicago yield? There are about 350,000 British subjects here, and some sixty-five St. George and Maple Leaf societies. There is no shortage of material hereabout for the British recruiting mission.

A thrillingly interesting man is Colonel Dennis. He is the most versatile individual I have ever met. If one were suddenly to inquire in Ottawa, "Who is Dennis?" one might get back the typically British answer, "Who is he not?"

For years he was assistant to the president of the Canadian Pacific Railway, Lord Shaughnessy. He has fought Indians, is a veteran with honors of the South African expedition, has engineered road building where Indians had to be killed as regularly as ties had to be laid in the progress; but he is more—he is a dilettante journalist, a devotee of art, a snappy after-dinner talker, an occasional enthusiastic Broadwayite, a raconteur of modest but fascinating personality. Robust and mighty of stature, he rings with military melody all over.

A Perfect Day

should end—as well as begin—with a perfect food, say—



Grape-Nuts

with cream.

A crisp, delicious food, containing the entire nutriment of whole wheat and barley, including the vital mineral elements, so richly provided by Nature in these grains.

Every table should have its daily ration of Grape-Nuts.

"There's a Reason"

HARNESSING VOLCANOES.

Natural Supply of Steam Tapped to Run Small Engine.

Volcanic heat is actually being used to run an electric power plant furnishing electricity to a number of towns near Volterra, in south-western Tuscany, according to an interesting article in the Annalist.

In that region various volcanic fissures exist, hot with escaping steam. From using this to operate a small horizontal engine came the idea of using it on a larger scale. Borings were therefore made in the vicinity and a plentiful supply of steam with good pressure tapped. Because of its impregnation with boracic acid it is not used directly, but employed to vaporize pure water. This is used to run a plant which furnishes power to five near-by towns.

Now that volcanic heat has actually been made commercially profitable we may look to see efforts made to utilize this power source elsewhere. Aetna and Vesuvius may yet be yoked to a municipal lighting plant. Italy's lack of coal renders experiments in this direction unusually valuable.

MAKE YOURSELF STRONG

People with strong constitutions escape most of the minor ills that make life miserable for others. Don't you envy the friend who does not know what a headache is, whose digestion is perfect, and who sleeps soundly at night? How far do you come from this description? Have you ever made an earnest effort to strengthen your constitution, to build up your system to ward off discomfort and disease? Unless you have an organic disease it is generally possible to so improve your physical condition that perfect health will be yours. The first thing to be done is to build up your blood as poor blood is the source of physical weakness. To build up the blood Dr. Williams' Pink Pills is just the medicine you need. Every dose helps to make new blood which reaches every nerve and every part of the body, bringing color to the cheeks, brightness to the eyes, a steadiness to the hands, a good appetite and splendid energy. Thousands throughout the country whose condition once made them despair, owe their present good health to this medicine. If you are one of the weak and ailing give Dr. Williams' Pink Pills a fair trial and note the daily gain in new health and abounding vitality.

You can get these pills through any medicine dealer or by mail post paid at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

THE GREAT TONNAGE PROBLEM.

One of the Most Vital Questions in the World To-Day.

How long can Allied shipping withstand the hideous submarine sap at its tonnage? This is the question on the answer to which hinges the very fate of world freedom. Let us look at the facts.

At the outset of the ruthless submarine campaign, Vice-Admiral Capelle announced that 1,000,000 tons a month would bring England to her knees. It is generally conceded that, in the last ten weeks, the submarine has done its worst because the submersible fleet has been increased by the addition of the supersubmarine. Yet the average loss per month has never exceeded 450,000 tons of British shipping, and it was John Bull's boats the Germans have set out to eliminate.

Up to the 1st of June Great Britain had lost approximately 9 per cent. of her ocean-going tonnage of ships of 1600 tons and over. On May 1, according to Lord Curzon, she had more than 15,600,000 tons of shipping in vessels of this unit and over. She could afford to lose 1,000,000 tons per month for the next six months and still have 9,000,000 tons left if she did not build a single new ship in the meantime.

Looking at it from another angle, if Germany persists in her ruthless submarine warfare at the highest rate of destruction that has been registered since February 1, it would take 160 weeks, or more than three years, to wipe out British shipping, again on the assumption that her shipyards would be idle all that time.

But England can easily build—and is building—600,000 tons a year. She can gain a million additional tons by altering the so-called loadline of her ships. Likewise, she can further supplement this tonnage by converting her passenger liners into cargo vessels.

This program, it must be remembered, does not take into consideration the huge merchant marine project, of the United States, which will eventually add 8,000,000 tons of new steel shipping and 2,000,000 tons of wooden. Thus, if the U. S. vessels are ravaged by submarines at the same rate as the British, there will still be immunity against any permanent impairment. The food lanes of the world will remain open.

Paper clubs for policemen, practically indestructible, have been invented by an Englishman.

Minard's Liniment Cures Distemper.

BABY'S GREAT DANGER DURING HOT WEATHER

More little ones die during the hot weather than at any other time of the year. Diarrhoea, dysentery, cholera infantum and stomach troubles come without warning, and when a medicine is not at hand to give promptly the short delay too frequently means that the child has passed beyond aid. Baby's Own Tablets should always be kept in homes where there are young children. An occasional dose of the Tablets will prevent stomach and bowel troubles, or if the trouble comes suddenly the prompt use of the Tablets will cure the baby. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Mistaken Hint.

A countryman journeyed to London to visit some relatives and to see the sights. Fascinated by the metropolis, he remained until patience on the part of his hosts, a married couple, had ceased to be a virtue.

Too polite to openly remonstrate, they both threw out many hints, but all in vain. "Don't you think," remarked the husband one day, "that your wife and children must miss you?"

"No doubt. Thanks for the suggestion: I'll send for them."

HARVESTERS READ THIS

The best way to the Harvest Fields of Western Canada is by the Canadian Northern Railway, whose lines serve the newest and most productive districts of Alberta, Saskatchewan and Manitoba. These run for the most part to the northward, where experience has shown that crops are least variable, which means a consequently steady demand for labor and correspondingly high average wages.

The C.N.R. has made exceptional arrangements for handling the Farm Laborers traffic, and is introducing lunch counter cars, which will permit Excursionists to be comfortably fed in transit—a welcome relief from the jostling and vexatious delays of station lunch counter service. Special through trains will be run from Montreal, Ottawa and Toronto to Winnipeg on excursion dates, to be announced shortly. The equipment will consist of electric-lighted colonist cars and lunch-counter cars, together with special accommodation for women.

All particulars from nearest C.N.R. Agent, or General Passenger Depts., Toronto, Ont., and Montreal, Que.

Spraying with Bordeaux mixture and destroying diseased parts will check the spread of celery blight.

Minard's Liniment Cures Colds, Etc.

A little flour spread over the top of cakes before they are iced will prevent the icing from running off.

MONEY ORDERS

Send a Dominion Express Money Order. They are payable everywhere.

Regularity in milking time is one of the most important elements in keeping up the flow.

Paper shirts have been issued to Japanese soldiers as a protection against cold.

Montreal, May 29, '09

Minard's Liniment Co., Limited,
Yarmouth, N. S.

Gentlemen,—I beg to let you know that I have used MINARD'S LINIMENT for some time, and I find it the best I have ever used for the joints and muscles.

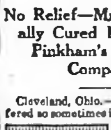
Yours very truly,
THOMAS J. HOGAN.
The Champion Clog and Pedestal Dancer of Canada.

Cultivate corn as soon after rains as the soil has dried sufficiently. Keep the soil surface well stirred and light. This lets rain soak in quickly, thus preventing waste, and it keeps the soil warm. Keep all weeds down, as they rob the corn plants of moisture needed to make corn kernels instead of weed seed.

ISSUE No. 32—'17.

A Useful Model

For summer outings, the thing you need is a linen frock. It may be pink, or blue, or green, as you please, but by all means you want it cut on very smart lines. The pretty model shown above is in one-piece style and slips on over the head like many of the latest designs. McCall Pattern No. 7884, Misses' One-piece Dress (suitable for small women); in two lengths. In 4 sizes; 14 to 20 years. Price, 20 cents.



This pattern may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Minard's Liniment Cures Garget in Cows.

A Californian has patented a hammer to which nails are fed from paper strips, enabling a man to nail laths at many times his usual speed.

FOUR WEEKS IN HOSPITAL

No Relief—Mrs. Brown Finally Cured by Lydia E. Pinkham's Vegetable Compound.

Cleveland, Ohio.—"For years I suffered so sometimes it seemed as though I could not stand it any longer. It was all in my lower organs. At times I could hardly walk, for if I stepped on a little stone I would almost faint. One day I did faint and my husband was sent for and the doctor came. I was taken to the hospital and stayed four weeks but when I came home I would faint just the same and had the same pains.

A friend who is a nurse asked me to try Lydia E. Pinkham's Vegetable Compound. I began taking it that very day for I was suffering a great deal. It has already done me more good than the hospital. To anyone who is suffering as I was my advice is to stop in the first drug-store and get a bottle of Lydia E. Pinkham's Vegetable Compound before you go home."—Mrs. W. C. BROWN, 2844 W. 12th St., Cleveland, Ohio.

The sustained production of milk is well known to depend largely on the comfort and contentment of the dairy cow. Flies not only cause direct loss of blood and poisoning from their bites, but also keep stock from feeding properly. The loss of milk from this cause is one of the serious problems that face the dairy farmer.

Minard's Liniment Cures Diphtheria.

Add a few bread crumbs to the scrambled eggs for breakfast; they improve the dish and make the eggs go further.

When buying your Piano insist on having an **"OTTO HIGEL" PIANO ACTION**

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

Doctor Says Nuxated Iron Will Increase Strength of Delicate People 100% in Ten Days

In many instances—Persons have suffered untold agony for years doctoring for nervous weakness, stomach, liver or kidney disease or some other ailment when their real trouble was lack of iron in the blood—How to tell.

New York, N. Y.—In a recent discourse Dr. E. Sauer, a Boston physician who has studied widely both in this country and in great European medical institutions said: "If you were to make an actual blood test on all people who are ill you would probably be greatly astonished at the exceedingly large number who lack iron and who are ill for no other reason than the lack of iron. The moment iron is supplied all their multitude of dangerous symptoms disappear. Without iron the blood at once loses the power to change food into living tissue and therefore nothing you eat does you any good; you don't get the strength out of it. Your food merely passes through your system like corn through a mill with the rollers so wide apart that the mill can't grind. As a result of this continuous blood and nerve starvation, people become generally weakened, nervous and all run down and frequently develop all sorts of conditions. One is too thin, another is burdened with unhealthy fat; some are so weak they can hardly walk, some think they have dyspepsia, kidney or liver trouble; some can't sleep at night, others are sleepy and tired all day; some fussy and irritable; some skinny and bloodless, but all lack physical power and endurance. In such cases it is worse than foolishness to take stimulating medicines or narcotic drugs, which only whip up your fagging vital powers for the moment, maybe at the expense of your life later on. No matter what any one tells you, if you are not strong and well you owe it to yourself to make the following test. See how long you can work or how far you can walk without becoming tired. Next take two five-grain tablets of ordinary nuxated iron three times per day after meals for two weeks. Then test your strength again and see for yourself how much you have gained. I have seen dozens of nervous, run-down people who were ailing all the time double, and even triple their strength and endurance and entirely get rid of their symptoms of dyspepsia, liver and other troubles in from ten to fourteen days' time simply by taking iron in the proper form, and this, after they had in some cases been doctoring for months without obtaining any benefit. You can talk as you please about all the wonders wrought by new remedies, but when you come down to hard facts there is nothing like good old iron to put color in your cheeks and good sound, healthy flesh on your bones. It is also a great nerve and stomach strengthener and the best blood builder in the world. The only trouble was that the old forms of inorganic iron like tincture of iron, iron acetate, etc., often ruined people's teeth, upset their stomachs and were not assimilated and for these reasons they frequently did more harm than good. But with the discovery of the newer forms of organic iron all this has been overcome. Nuxated Iron for example is pleasant to take, does not injure the teeth and is almost immediately beneficial.

NOTE: The manufacturers of Nuxated Iron have such unbounded confidence in its potency that they authorize the announcement that they will forfeit $100.00 to any charitable institution if they cannot take any man or woman under sixty who lacks iron and increase their strength 100 per cent. or over in four weeks' time, provided they have no serious organic trouble. Also they will refund your money in any case in which Nuxated Iron does not at least double your strength in ten days' time. It is dispensed by all good druggists.

Doctors and Eye Specialists Agree That Bon-Opto Strengthens Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and many who once wore glasses say they have thrown them away. One man says, after using it: "I was almost blind. Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eye strain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the fluttering leaves on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Heck, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, chronic conjunctivitis and ephiphora. Her eyes when not congested had the dull, suffused expression common to such cases. Having run out of her medicine a friend suggested Bon-Opto. She used this treatment and not only overcame her distressing condition, but strange and amazing as it may seem, so strengthened her eyesight that she was able to dispense with her distance glasses and her headache and neuralgia left her. In this instance I should say her eyesight was improved 100%. I have since verified the efficacy of this treatment in a number of cases and have seen the eyesight improve from 25 to 75 per cent in a remarkably short time. I can say it works more quickly than any other remedy I have prescribed for the eyes."

Dr. Smith, an oculist of wide experience, says: "I have treated in private practice a number of serious opthalmic diseases with Bon-Opto and am able to report ultimate recovery in both acute and chronic cases. Mr. D. came to my office suffering with an infected eye. The condition was so serious that an operation for enucleation seemed imperative. Before resorting to the operative treatment I prescribed Bon-Opto and in 24 hours the secretion had lessened, inflammatory symptoms began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) escaped the surgeon's knife by the timely use of your collyrium. The tightened external muscles yielded to the soothing and anodyne effects of Bon-Opto. I always instil Bon-Opto after removal of foreign bodies and apply it locally to all burns, ulcers and spots on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions rendered a surprising service. I found my eyes remarkably strengthened, so much so I have put aside my glasses without discomfort. Several of my colleagues have also used it and we are agreed as to its results. In a few days, under my observation, the eyes of an astigmatic case were so improved that glasses have been discarded by the patient."

Eye troubles of many descriptions may be wonderfully benefited by the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

Note: A city physician to whom the above article was submitted, said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or misfit glasses. I can highly recommend it in case of weak, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, sun, dust or wind. It is one of the very few preparations I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including general stores, also by G. Tamblyn and T. Eaton & Co., Toronto.

The Paisley Advocate

PAISLEY, AUG. 15th, 1917

—Guelph Mercury: "It is hard to imagine what answer an anti-conscriptionist might make to the statement of Rev. Capt. MacIntosh, who said at a meeting at Fergus, 'I have seen your Canadians, on account of the shortage of reinforcements, have to spend as long as 100 days in the trenches without a rest and without a chance to change their clothing.' If Canada can find a better solution than conscription for such an unthinkable state of affairs, it is the plain duty some person to come forward ith it at once."

—The Canadian quartermaster general in England has introduced changes in feeding our soldiers over there that will result in a large saving of money. The Canadian School of Cookery has been opened in London, under Major E W Ross of Calgary, chief inspector of army catering. The men are sent there in parties of eighty to undergo a three weeks' course as company cooks. Others take six weeks to become sergeant's cooks, and others again, take a course as cooks for officers' messes. From the messes of this school are also issued diet sheets which are distributed to every Canadian training area, and have to be strictly adhered to. Special endeavor is made to include as many Canadian dishes as possible. Inspectors from the school are constantly visiting Canadian training areas. This new system among the Canadians has created considerable interest among the Imperial staff.

—Since the publication of the Report of the Commissioner on the Cost of Living in which the profiteering of certain pork packing concerns was exposed, the Wm Davies Company have carried out a campaign of publicity also, in which they endeavored to put the public mind to sleep. In a large advertisement the Company laid their side of the subject before the readers of nearly every paper in Ontario, claiming that their profits were actually only 1 69 per cent after deducting the war tax Toronto Saturday Night has dug up some old court records that go a long way towards supporting the Food Commissioner's statements. The following is from Saturday Night:

"An interesting sidelight on the past profits of the Wm Davies Company is obtainable owing to there being court records. Some years ago there was a friendly action at-law, brought by the executors of the estate of Mrs Wm Davies against several interested parties. As a result it was shown that the capital stock of the company was then valued at from three to four hundred dollars per share (par value $100) and that the dividends over a period of fourteen years, 1893 to 1906, inclusive, ranged from 15 to 120 per cent. the average over the entire period being a little over 50 per cent. which seems enough under the circumstances.

"A table was placed in evidence, showing the dividends which the stock paid during these fourteen years to be:

"For the year ending March 31, 1893, 65 per cent; 1894, 34 per cent; 1895, 40 per cent; 1896, 45 per cent; 1897, 100 per cent; 1898, 120 per cent; 1899, 82 per cent; 1900, 60 per cent; 1901, 27½ per cent; 1902, 27½ per cent; 1903, 15 per cent; 1904, 30 per cent; 1905, 41 per cent; 1906, 25 per cent.

FOOD CONTROL

(Toronto World)

When Hon Mr Hanna returned from the United States after the appointment as food controller, we were told that he would co-operate with Mr Hoover in all respects. As he has done comparatively little in actual controlling since his appointment, now that the food control bill has been passed by the United States, we may hope for more drastic action. We have had a good deal of excellent advice, which most sensible people had already anticipated in practice, and few more will accept it without compulsion. It is capital to appoint meatless and beanless days, but unless penalties are imposed the self-willed will disregard advice.

The same element that balks at compulsory thrift and what they object to give or do under compulsion they will refuse to do voluntarily. This is the weakness of a kid-gloved administration. It isn't respected and it gets nothing done.

The new law in the United States stands for control, not for talk. Foods, feeds, fuels, fertilizers, farm tools and implements used in food production all come under control Drastic penalties are imposed, and a licensing system is radical. Executive authority to buy and sell wheat, flour, meal, beans and potatoes puts the staples under government control. Wheat is given a minimum price of $2 until May 1, 1919. Prohibition of the use of grains in making whiskey and, if desirable, similar prohibition of the use of food material in making beer and wine is imposed. All distilled spirits may be seized for war purposes.

In Canada we have a new regulation for Tuesdays and Fridays which barely touches the fringe of the case. The few tons of fish sent to Toronto does not touch the lake fishery situation at all. It merely sets free so much more Canadian fish for the United States. What we need is control that will reach our white fish and lake trout and bring them to a reasonable price—say fifteen cents a pound. Twelve would give the dealer profit, but the public would take courage if they saw the food controller swinging his axe and cutting the price to fifteen cents.

He ought to do something with bread. A minimum of $2 a bushel will have a marked effect on the maximum price of wheat. Ten years ago not a farmer in the country but would have hailed $2 wheat as a millennial. With the certainty of $2 the lanes and side roads will be sown with wheat next year. Wheat at $2 is a gold mine. We have established $2.40 as the price of wheat in Canada for the crop on hand. At these prices bread is too high. It ought to be lower. Hon Mr Hanna was appointed to bring it lower. He dallies with his job. There ought to be ten to twenty per cent off the price of bread, and the public will not feel any control over food until the price of bread comes down.

We believe Mr Hanna can control bread prices and the prices of other food just as he can control the use and waste of food. But he must be speedier or the people will lose faith in him and in those he represents.

LOCAL AND DISTRICT NEWS

—Mrs Troughton, Misses Mildred and Fern Troughton and Mrs Halmon and little daughter Elspie, of Brampton, were week end visitors at W G Reid's for t

—Mr Jas McLellan has sold his fine farm near Glanis to his son Robert and is retiring to a residence he bought in Glanis village. The farm is valued at $6,000. Last week Mr McLellan sold a bunch of twenty head of cattle for $2,000.

—Gnr Wm Johnston, son of Mr and Mrs D Johnston, of Con A Elderslie, who has been at Witley Camp, England, was sent to the Canadian School of Cookery in London, and enjoyed the change in routine of soldier life. He was in the city on July 17th, when the fleet of 30 German airships made a raid, dropping bombs in the great metropolis. The raiders had flown to within a short distance of the Schools, when they were attacked by the anti-aircraft guns and compelled to retreat. They could see the shells explode and also some of the airships come down.

—Wiarton School Board are petitioning the Department of Education to have the entrance papers of the school there re-examined, owing to the large number who failed to pass the entrance examination. The Board also desires an investigation as to the promotion of pupils from one class to another without examination, on presentation of doctors' certificates as to illness. To make matters more interesting, the local doctors are threatening to sue the School Board for libel unless the latter retract their statements regarding the medical certificates and make ample apology.

—There are numerous people really in doubt as to the reports through the press concerning the cruel tortures imposed upon the Belgian people by the Germans, but a letter received last week by Miss Platt, from her brother in Montana, states that there has arrived in Anaconda, Montana, sixty Belgian children, and every girl in the lot has either an ear or a hand cut off, while the boys are even mutilated worse. He states that the people of Butte City, previous to the arrival of these children, would never believe the reports, but now they are death against the German population, for seeing is believing. —Phrip[aton correspondent to Elmvale Lance.

Arm Broken

Mr John Young, of Greenock, had the misfortune to break his arm. He fell from a load of hay to the barn floor owing to the trip rope breaking. His mother, Mrs Henry Young, of Chepstow, is a visitor there at present.

Paisley Fair

Sept 25 and 26 will be here before you are ready with your list of exhibits unless you begin planing now. Boys and girls should be interested in the Bankers' Association stock prizes. Get full particulars from the Prize List.

Paisley Boys Wounded

Pte Vic Smeaton, of Abbotsford, Que., but formerly of Paisley, is among the recent casualties. Vic went over with reinforcements for the Princess Patricias, and has been in a good deal of real action at the front. Mr Wm Rae has received official intimation that his son, Pte Wm Rae, is wounded in the leg. Pte Rae went overseas with an infantry battalion from Winnipeg in March last, and has been in France since the middle of June.

Horse Killed

Mr Thos Switzer, of Saugeen, lost a horse in a peculiar manner on Thursday. His team took fright as they were hauling a load of hay to the barn. They went up the gangway at top speed, continued across the floor of the barn and went crashing through the other side of the barn, smashing off the boards, and dropped to the ground, which there is about ten feet down. One steed was killed in the drop. The waggon remained on the barn floor. Mrs Switzer was the driver, and she jumped off the load safely.

RHEUMATISM WAS MOST SEVERE

Dreadful Pains All The Time Until He Took "FRUIT-A-TIVES".

MR. LAMPSON

Verona, Ont., Nov. 11th, 1915.

"I suffered for a number of years with *Rheumatism and severe Pains in Side and Back*, from straining and heavy lifting.

When I had given up hope of ever being well again, a friend recommended "Fruit-a-tives" to me and *after using the first box I felt so much better* that I continued to take them, and now I am enjoying the best of health, thanks to your remedy".

W. M. LAMPSON.

If you—who are reading this—have any Kidney or Bladder Trouble, or suffer with Rheumatism or Pain In The Back or Stomach Trouble—give "Fruit-a-tives" a fair trial. This wonderful fruit medicine will do you a world of good, as it cures when everything else fails.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

REDUCED FARES ON ALL LINES OF TRAVEL

A Big Family of Little Pigs

Mr H J Thornburn, 10th Bruce, has a nice increase in his list of live stock. One of his brood sows this week gave birth to a litter of 20 young ones, all very well developed. One of the lot has since died—found the dining room somewhat crowded, no doubt—but the others are all able to be around and struggle for their share of nourishment. If every farmer's mother pig could rear a family like this one there should be a drop in the price of fresh bacon and no rooms to let in the packing houses.

Auto Accident

Four Paisley young people had a thrilling and dangerous motor trip on Wednesday night. In the vicinity of North Bruce the Ford turned a complete somersault. The driver was pinned under the car. Although not seriously injured, he was cut and lacerated so that he shed blood very freely. One of the young ladies also sustained wounds that bled profusely, while the other got off with a black eye. The other young man in the party had his ankle sprained. They all can thank their stars that they escaped the morgue. They were brought home to Paisley by a North Bruce man, and the injuries received the attention of a surgeon.

CARD OF THANKS

The officers and pupils of the Sunday Schools desire to publicly thank the auto owners for the very generous way in which they responded to the request for their services in carrying the picnicers to Southampton on Aug 3rd.

Our Famous Line of

Men's and Ladies' Suitings

Taking for our text, "He profits most who serves most—he who serves best, serves most"—we put in force a plan of retailing that tends to centre more and more business here—by making it to the advantage of the public to give us their patronage.

We're selling clothes on a margin of profit heretofore regarded as insufficient. But we're winning business on the basis of volume.

Here are 200 patterns for selection. If there's a man who can't be suited we'd like to see him. If there is a man whose tastes can't be met he is a stranger to us.

G. B. IRWIN

The Ladies' and Gents' Tailor

Bell 'Phone

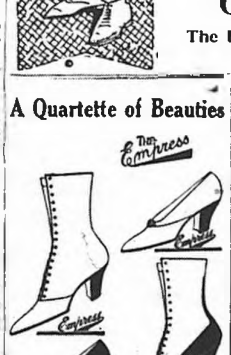
DEAR EDITOR—

Most people fail into the error of thinking dentistry is like merchandise that you simply buy your silver or gold or porcelain and that is all only stick it in without hurting, if possible, and the man who can do this the quickest and easiest is the one to be patronized, especially if he makes out he is cheaper than his neighbor. I will try to show you as well as I can just how it works out:—

A person feels he has neglected his teeth and is, perhaps, made to realize this by unpleasant sensations.

He consults his dentist who, if he is conscientious and efficient, will carefully examine and will find one or two exposed nerves and other cavities of various sizes and shapes, also gums receded and inflamed from tartar irritation.

These decayed teeth, he advises, can all be restored. Some will cost more than others because to do them properly they will take more time, labor and material, more wear on the fine instruments used, &c.



To do this work properly the dentist must remove all decay, not only directly in the cavity but all beginnings adjoining the cavity. He must remove all sore nerves and see that the nerve canals are properly treated and filled before the crown cavity is filled. Every cavity must be disinfected before filling. With these precautions and care many cavities would be filled permanently. Occasionally have the opportunity of seeing fillings that I put in about 30 years ago looking just as good as when they were put in. Now, let us take the man who looks after the filling but will not have the tartar attended to. It is only a matter of time until gums are receded and pockets are formed which collect all kinds of germs, decayed food, etc., and in the end teeth loosen and drop out after affecting the stomach adversely for years.

When a man thinks of consulting a dentist is it wise to consult a man who pretends to do as good work but does it cheaper than his neighbor. I will endeavor to show you in my next how these men deceive the public.

Yours truly,

A. H. ALLEN.

WHAT ONTARIO FOLKS SAY.

Hamilton, Ont.—"This is to state that I have received great benefit from the use of Dr. Pierce's Favorite Prescription. Some time ago I was run down and weak, suffered loss of appetite and was miserable. Four bottles of the 'Prescription' cured me up in fine shape; it did wonders for me and I can recommend it very highly to women who are ailing."—Miss MARY MILLER, 127 Hess St., Hamilton, Ont.

Brantford, Ont.—"Some few years ago I got in a very much run-down condition. Was very weak; could not do anything; had no strength at all. I began taking Dr. Pierce's Favorite Prescription; I only took five bottles and it put me in splendid condition. I felt better than I had for years. Other members of my family have used this medicine and found it equally as beneficial. I can highly recommend it to weak women."—Mrs. A. GILMOUR, 71 Brighton Row, Brantford, Ont.

The use of Dr. Pierce's Favorite Prescription makes women happy by making them healthy. There are no more crying spells. "Favorite Prescription" makes weak women strong, sick women well.

Like an open book, our faces tell the tale of health or disease. Hollow cheeks and sunken eyes, listless steps, sleepless nights—tell of wasting debilitating disease some place in the body. It may be one place or another, the cause is generally traceable to a common source.

Get the "Prescription" to-day—either in liquid or tablet form—if you want to better your physical condition speedily.

Dr. Pierce's Pellets regulate and invigorate stomach, liver and bowels keep the body clean inside as well as outside.

THE PATHEPHONE

Five of these large cabinet phonographs, each with twelve records, given in first prizes in District Contests. Value, $350.00.

Enter the Bread Making Contests

at Rural School Fairs in Ontario

The Campbell Flour Mills Company's great offer of the big One-Hundred-and-Fifty-Dollar Pathe phonographs (Five of them!) and other valuable prizes, for the best loaves of bread baked with Cream of the West flour, is stirring up tremendous interest all over Ontario. Many girls are already busy as bees practising with Cream of the West flour. Last year many girls declared, "Oh, if I had only practised, I'm sure I could have won!" Don't wait another day. Decide right now! Practise, Practise, Practise with

Cream of the West Flour

the hard wheat flour that is guaranteed for bread

Every time you bake with it you find out new qualities in this flour that makes such splendid big loaves of delicious light bread. Practise!

In five districts, each comprising several counties, we will give away free to the winner of the first district prize a large cabinet phonograph. At each fair there will be given a fine list of local prizes.

Prizes Worth Trying Hard For

1st Local Prize—"Girls' Own Annual," a great big beautifully bound, illustrated book with 800 pages of stories and articles about people, art, nature, gardens, sewing, crocheting—everything that particularly interests young girls, older girls and their mothers. This is a wonderful prize that you can treasure for years.

2nd Local Prize—"Stories of Famous Men and Women," heavily cloth bound with gold trimmings, many beautiful outlines in colors, enlarged life pictures of Florence Nightingale, Grace Darling, Flora MacDonald, Jenny Lind, the late Queen Victoria, and others.

3rd Local Prize—"British Overseas," a big handsomely bound book with many colored pictures, interesting stories and descriptions of the countries and the peoples of Britain's world-wide Empire.

4th Local Prize—"The Queen's Gift Book," a book of stories, pictures and special articles by Britain's best writers; all proceeds from the sale of this book are for the benefit of disabled soldiers in England.

Note—Unless the entries number six or more only first and second prizes will be awarded. Unless the entries number ten or more no fourth prize will be awarded.

The District Prizes—The winner of the first prize at each local fair automatically becomes a competitor for the following District prizes.

1st District Prize—The "Pathephone" in the name given to the fine big mahogany phonograph we offer as first prize. It will give you endless pleasure and entertainment for a lifetime. It has special sapphire-ever attachments and sensitive, enabling you to play all kinds of disc records of no matter what make. The Pathephone reproduces band music, orchestra, minor songs and fancy pieces perfectly. With it goes a dozen of the famous Pathe records. Total value, $350.00.

2nd District Prize.—Set of Dickens' Works 18 splendidly bound volumes with many illustrations. Among the books in the set are "Oliver Twist" and "Old Curiosity Shop." These are two of the most interesting stories ever written.

3rd, 4th, and 5th Prizes—"Canuck" Bread mixers. This simple, yet well made machine, takes the hard work out of bread making. Instead of laborious kneading of the old method, you just put in the ingredients, turn the handle, and the dough is thoroughly and more evenly mixed.

Read Carefully Conditions of Contest

Every girl may compete at the rural school fair in her district, whether or not she attends school, providing that her 12th birthday does occur before November 1st, 1917, or her 18th birthday does not occur before Nov. 1, 1917. One loaf of bread must be submitted baked in pan about 7 x 5 ½ inches and 3 inches deep and divided into twin loaves, so that they may be separated at the fair. The loaf must be baked WITH Cream of the West Flour. One half will be judged at the fair. The other half of the pair must be sent to Ontario Agricultural College, Guelph, to compete in the District Contests. The judging will be done by Miss M. A. Purdy, of the Department of Household Science. The local contest at the fair will be conducted under the same rules as all the other regular contests at your fairs.

The standard by which bread will be judged will be as follows:

1. Appearance of Loaf	15 marks
(a) Color	5 marks
(b) Texture of crust	5 marks
(c) Shape of loaf	5 marks
2. Texture of Crumb	40 marks
(a) Lightness	15 marks
(b) Texture	10 marks
(c) Color	5 marks
3. Flavor of Bread	45 marks
(a) Taste	25 marks
(b) Odor	20 marks

Important.—No loaf must be accepted by the part of the flour bag containing the face of the Old Miller, and an entry form must be signed by the girl and parents or guardian stating date of birth, P.O. address, and giving name of dealer from whom Cream of the West Flour was purchased. The form will state that the girl actually baked the loaf entered in the competition. The forms will be provided at the time of the fair. The decision of the Judge is final. Not more than one entry may be made by each girl and not more than one local prize will be awarded to the same family.

Which District is Yours?—This list shows you which counties you compete against if you become a competitor for the District prizes:

District No. 1.—Counties of Glengarry, Stormont, Dundas, Grenville, Leeds, Frontenac, Lennox and Addington, Carleton, Lanark, Renfrew.

District No. 2.—Counties of Hastings, Prince Edward, Peterboro, Northumberland, Victoria, Durham.

District No. 3.—Counties of York, Ontario, Peel, Halton, Wentworth, Oxford, Brant, Waterloo (with a few fairs in Wellington and Perth).

District No. 4.—Counties of Welland, Haldimand Norfolk, Elgin, Kent, Essex, Lambton, Middlesex (with a few fairs in Huron and Lincoln).

District No. 5.—Counties of Bruce, Grey, Dufferin, Simcoe, Districts of Muskoka, Parry Sound, Timiskaming, Algoma, Manitoulin.

THE RESULTS of the contests at the fair will be made known in the usual way as in the case of all the other regular contests. The District results will be announced as soon as possible after the conclusion of the Rural School Fairs in the Province.

DO NOT MISS THIS GREAT OPPORTUNITY: Every girl between 12 and 18 years should compete. What a splendid way to stir up increased interest in breadmaking! Use a liberal supply of Cream of the West flour at your fairs and practise using it as often as possible to increase the chances of winning. If your dealer cannot sell it to you, write to the Campbell Flour Mills Co. Ltd., Toronto, and we will promptly tell you the nearest place to get it.

NO COMPETITIONS IN COUNTIES NAMED BELOW: The competition is open to all parts of the Province where Rural School Fairs are held, except the Districts of Rainy River, Kenora and Thunder Bay. These districts are the only parts of the Province where school fairs are held by the Dept. of Agriculture in which this competition will not be a feature. There are no district representatives of the Department of Agriculture in the Counties of Muskoka, Haliburton, Perth, Wellington, Prescott, Russell or Lincoln, and no rural school fairs are held in these Counties by the Dept. of Agriculture. There are, however, a few fairs held by local schools in Wellington, Perth, Huron and Lincoln, and these are included in the competition.

The AUTOMOBILE

You May Not Know..

If you use an enamel cover for your tires, be sure you put it on right side up. Sometimes we find one put on upside down, which will cause it to hold the rain instead of shedding it.

Keep watch on the spokes of the wheels, especially if the car is an old one. If spokes can be shaken, tighten the bolts on the flanges of the hub. If they are still loose, consult a wheelwright, as your life may be endangered by the breaking of a wheel.

Do not neglect to take a few spark plug cores with you on your trip. The metal parts of a spark plug will last almost indefinitely, but the cores must break in time, and that usually means buying a new spark plug. As the cores can be bought for a fraction of the cost of a new spark plug, it means economy to carry a few with you. Also carry a few extra gaskets. Occasionally the interrupter becomes loose, and it is important that the beginner should learn to set it. This trouble is shown by the fact that the engine will not start when cranked, but gives only one or two explosions. Where an engine has been running properly and the above trouble develops, inspect the interrupter immediately.

Spark plug porcelains crack from a variety of causes. A chance blow from a wrench while tightening, pulling too hard on the ignition wire, dropping the plug or a defect in manufacture are frequent causes. But the usual trouble is from screwing them too hard into the cylinders. As the plug heats up and expands it cracks the porcelains.

Do not wipe dust from your car with a cloth or a piece of waste. It grinds the dirt into the varnish and will ruin the finish in short time. Have the car washed if you want the finish to last.

It should be remembered that in the event of running short of gasoline in a locality where the supply cannot be replenished, "stove naptha" and even kerosene oil can be used if mixed with as large a proportion as possible of the gasoline remaining in the tank.

The one precaution to be observed is to keep the engine running and to keep it hot, even if running with a retarded spark is necessary in order to prevent the cylinders from becoming too cool to vaporize the charges properly.

Difficulties with the mixture are sure to occur, but can be remedied by careful attention to the regular adjustments.

Remember that chains are needed in summer as well as in winter. A heavy rain will soon make the streets and roads dangerous. Some people carry only one chain, on the right rear wheel, away from the curb. Two are better, both on the rear wheels, but it is best to use four and have one in reserve.

All new cars and those which have been run a few hundred miles should have the cylinder oil drained from the crank case. It is good economy to have this oil drained after the first 500 miles, on account of the accumulation of grit, particles of carbon and dirt from bearings in the oil. This grit is kept in circulation and acts in the same manner as emery, cutting the bearings.

WOMEN'S WORK IN THE ARMY

REPLACE SOLDIERS IN MANY DEPARTMENTS.

Altogether 27,000 Are Doing Hospital Work as Doctors, as Nurses and Orderlies.

When war broke out there were 290 nurses in the Imperial Military Nursing Service and 173 in reserve. Besides these, 800 were called up at once from civilian hospitals for duty with the expeditionary force. Small as this number now seems, it was sufficient to staff the twelve hospital units which went overseas with that first army, and also the permanent military hospitals in Great Britain.

Behind this regular nursing service was the Territorial Service, the second hospital line. All its nurses were in civilian work and drawing no army pay, but were pledged at the outbreak of war, to come to the call of the State.

Such were the preparations for war already made in time of peace, and they were complete and ample for the old army. But the nursing service, like the army itself, had suddenly to grow beyond all that had ever been expected of it, with this difference, that while the first of the new armies were set to train themselves in six months, and in that time had become soldiers, no nurse was accepted unless she had had three years of service in a large hospital.

13,000 Trained Nurses.

Even with this standard set the needs of the great armies have been met, and now after two and a half years of war, that service of 300 with its 170 in reserve, and the 800 civilian nurses attached to it has grown to close on 7,000, and is steadily growing. At the same time the territorial nurses have increased to close on 5,300, and they, too, enlisted originally for service only in the hospitals of Great Britain, are to be found at all the fronts.

These women, nearly thirteen thousand in number, are all fully trained nurses, but besides them it has been found advisable to recruit a certain number of partly trained and untrained women who work under the nurses as probationers. These number nearly 8,000.

Arduous and Difficult Tasks.

These twenty-one thousand women are in the Army Nursing Services, but there are abroad, besides, those trained nurses, some in British hospitals, some in the hospitals of the other allies, who work under the Red Cross and the Order of St. John of Jerusalem. These two bodies have under their joint control all those nurses who are not under the War Office, and they, like the army, insist, in their choice, on a full three years' training and take only those who are fit for the work.

Far, in the first enthusiasm of the war, unauthorized units had gone abroad often hastily equipped and with staffs half trained. Such untried workers broke under the strain.

It was found the more necessary to have vigorous tests, as the Red Cross was choosing women not only for hospitals at home, but the most arduous and difficult work overseas, for Serbia, devastated with typhus, and for the army in Gallipoli. For such work only the best would serve.

Take Places of Men.

It was a little later that the War Office decided to employ women in place of men in many of the duties of the army hospitals, as clerks, as typists, as telephonists, as store-keepers, as laboratory assistants, as X-ray attendants, as cooks, as dispensers, and as cleaners.

All these were duties that had before been performed by the orderlies of the Royal Army Medical Corps. But since November, in 1915, not a man fit for service at the front has been enlisted in that corps, unless by reason of some special qualification, and now, neither in hospitals at home, nor in the base hospitals overseas, nor on the lines of communication are any men, fully fit, to be employed. It is by the service of women that this has been made possible. There are now 6,000 in the army hospitals taking the places of men.

And even this does not end the tale of the work women are doing in the army. There are the hundreds who work in the Army Postal Service, there are the thousands who work in the paymasters' departments, there are the trained masseuses in hospitals at home and abroad, there are the 6,000 who are required by the Royal Flying Corps. Each week the number grows.

Of women working under the War Office alone as doctors, as nurses and orderlies there are 27,000, in place of the 4,000-odd at the beginning of the war.

The Russian government has authorized the cultivation of the poppy for the production of opium and oil for domestic consumption.

GEN. KORNILOFF: MILITARY GENIUS

HE IS RUSSIA'S MOST BRILLIANT GENERAL

With Premier Kerensky He Constitutes the Mainstay of Russia's Share in World War.

Gen. Korniloff has lost no time in applying the "blood and iron" tonic so sadly needed by the Russian armies. He is said to have turned his artillery on one division that showed cowardice. The armies under him will have either to fight the Germans or fight each other, but Korniloff is determined that they shall fight.

This brilliant soldier, who was almost unheard of outside of Russia until a few weeks ago, constitutes with Kerensky the hope of the Allies that Russia will continue to do her share of the common task. He has the confidence of his men and the confidence of the loyal element everywhere in Russia. Kerensky believes in him. He is the most brilliant of the generals who under Brussiloff conducted the sensational campaign last Summer. His own recent drive in Galicia resulted in the capture of 35,000 Teutons, and according to the usual average, this means 100,000 were put out of action.

Comes of Fighting Family

Korniloff is in his 47th year. He was born in Siberia and, it is said, in a log cabin. From this it must not be inferred that he belonged to the peasant class, for the log cabin style of architecture is popular in Siberia.

Korniloff comes of a fighting family, for he is a grandson of Vice-Admiral Korniloff, one of the most illustrious of Russian sailors. It was Vice-Admiral Korniloff who was entrusted with the defence of Sebastopol in the Crimean War. In the neck of the bay protecting this port he sank the five warships under his command, and, taking his men ashore, laid the foundations of that defence which held out for nearly a year against the com-

General Korniloff

bined cannonade of the British and French guns. Subsequently the Admiral died as the result of a wound incurred on Malakoff hill.

The present general was destined for the army almost from birth, and after passing through the Siberian cadet Corps he picked up one scholarship after another that made his path easy and plainly marked him out for an unusual military career.

Brilliant Soldier and Linguist

He obtained a commission in the Siberian army, which was at that time a distinct organization from the Russian European army and the army of the Caucasus; but when the war between Russia and Japan broke out the Siberian army was taken over by Kuropatkin. The young officer advanced rapidly and to him fell the dangerous task of fighting rearguard actions as Kuropatkin put into execution his famous strategy of "luring them on." So well did Korniloff discharge his duties that at the end of the war he was awarded the Cross of St. George of the Fourth Degree, and presented with a golden sword. His next appointment was to the Russian military staff at Pekin, where he continued his studies and incidentally acquired the Chinese language. It might be remarked that the Russian gift of tongues is brilliantly exemplified in Korniloff, who speaks most European languages, besides Persian and Chinese.

He was a brigadier general when the present war broke out, and was put in command of an infantry division, the same one which has won great fame in this war, the noted Forty-eighth, called by the enemy the "Iron Division." This division took part in the memorable sweep through the Carpathians under Russky and Brussiloff in September, 1914.

The Russians held their positions through the Winter, but by the time the snow began to melt the shortage of ammunition had become acute. Military Commanders who fired more than half a dozen shells a day were called on for explanations. The Russian position was undoubtedly well known in Berlin, and so Mackensen seized the opportunity for his famous drive. When it began at least one Russian division, the Twelfth, had penetrated the Dubla Pass, and had advanced some 20 miles along the plains of Hungary. Had there been plenty of ammunition the whole Russian army would have streamed after it, and the end of the war would have been in sight.

Captured by Austrians

However, there was nothing for it but retreat, and again Korniloff distinguished himself by the desperate delaying actions he fought. He hung on so long that on April 28 a part of his division was cut off and captured. Korniloff was made prisoner and sent to an internment camp about 500 miles from the Russian frontier.

Here he remained until last September, when he escaped with the help of a Bohemian soldier. This man gave his life for Korniloff, for he threw himself between the fleeing general and his pursuers and his own body stopped the bullets that otherwise would have brought Korniloff down.

He wandered on foot for three weeks, living for the most part on herbs and wild berries. On returning to headquarters he at once resumed command of a division, but was summoned to Petrograd to take charge of the military garrison when the revolution broke out.

Sympathetic though he was with the revolutionary movement, he saw that the action of the Workmen's and Soldiers' Committee was bound to destroy the discipline of the army, so he resigned, and begged to be given a command at the front. He was sent to Brussiloff, whose armies still retained most of their discipline and at the beginning of July began the sensational advance toward Halicz.

A FEATURE OF NATIONAL FAIR.

Loading of Transports at Quebec to be Shown at Grand Stand.

A National Spectacle will be the Grand Stand production at the Canadian National Exhibition this year, planned on a scale calculated to write a new page into the history of patriotic pageantry. The Heights of Quebec are to be reproduced on a mammoth scale, with the St. Lawrence and its burden of battleships and fighting craft in the foreground.

The story will deal with the half century from Confederation to the present day, and pageantism and infectious faith in Canada will dominate the giant-sized panorama, which will achieve a thrilling climax when file after file of Overseas Troops embark on huge transports and proceed down the river behind a convoy of destroyers on their way across the submarine-infested seas to the battle fronts "Over There."

THE LADIES' ROAD.

How the Shell-Torn Highway Got Its Romantic Name.

No doubt a good many readers who have seen references in the newspapers to the fierce fighting between the French and the Germans along the Chemin des Dames, or Ladies' Road, have wondered how that shell-torn highway got its pretty and romantic name.

The road, dates from the time of King Louis XV. It begins at the Paris-Maubeuge Road, about ten miles northeast of Soissons, and crosses the plateau of Craonne, a distance of about twelve miles. It then descends into the valley of the Ailette, to cross the Vaucleres Woods to the domain of the ancient Chateau of Bove, near Bouconville, where the Princesses Adelaide, Sophie and Victoire, daughters of Louis XV, used to visit one of their ladies of honor, Mme. de Narbonne, every summer.

The roads of the region were detestable in those days. Out of consideration for the princesses a new paved road was built along the crest of the plateau, and ever since it has been called the Chemin des Dames.

NEW GERMAN DECEPTIONS.

Which Increase the Difficulty of Fighting the Submarine.

The whole campaign against the German submarine is becoming increasingly difficult because of a characteristic succession of deceptions now widely practiced by the enemy. It has cost the British many ships and lives to find out that the Hun stops at nothing to make his undersea operations ruthless and successful.

First of all is the new practice of rigging up a submarine with sails so as to give the vessel the look and character of an innocent and respectable craft. In more than one instance an unarmed merchant vessel has encountered this trickery upon the seas and was on the point of giving a friendly hail when a torpedo shot out from beneath the canvas, bringing death and destruction to the victim of the trick.

One of the latest German devices calculated to lure ships to their death is to set lifeboats, manned by dummies, adrift in the open seas. Of course, the moment an Allied vessel sees these boats a course is steered for them. Humanity could not dictate otherwise. It is then that the inhumanity of the submarine asserts itself, for no sooner is the victim started on its mission of mercy than the submarine arises from beneath the water and discharges its torpedo.

A third device which has proved to be successful is the sending out of fake S O S messages. The captain of a certain American passenger vessel showed the writer the transcript of such a radiogram which was afterward proved to have been sent out by a German submarine. It read, "S O S. American vessel sinking. Latitude —, longitude —."

Under ordinary circumstances this skipper would have turned his boat about and rushed to the scene. Had he done so in this instance he would have gone to his death. By this procedure the German not only violates every tradition of the sea, but seriously interferes with the rescue of ships in actual distress whose appeals for help are legitimate. S O S signals cannot be safely heeded.

A further evidence of German treachery is the sending up of fake distress rockets at night. More than one ship has been lured to her grave by responding to these signals of trouble.

Now you begin to see why the crusade against the submarine is attended by hazard and hardship. Yet despite these handicaps the British navy is making headway against the pest of the sea and accounting for more than is generally believed.

WAR BREAD POPULAR IN U. S.

Stale Bread Soaked, Strained and Rebaked With Added Yeast.

In the face of a serious food shortage occasioned by the war, American housewives, bakers and hotel chefs are discovering that there are many satisfactory ways of making bread by which a saving of wheat flour can be effected. An effort is also being made to check America's wastefulness in the matter of food products. Bakers are trying to educate the public to the fact that stale bread is as wholesome as fresh bread, and in many cases more digestible. At present vast quantities of stale loaves are collected periodically from the bakeries and sold at a fraction of the original price, as a base for stock foods. With a view to utilizing clean stale bread in making new loaves, an organization representing leading hotels has issued a "war bread" recipe which calls for a thorough soaking of stale bread and crusts in water. This base, after it has been properly salted, is strained through a flour sieve and to it are added yeast and enough flour to make a very stiff dough.

A prominent New York hotel has recently added to its menu a bread containing rye flour and whole-wheat flour in addition to white flour. Another method of saving wheat flour which is being well received is to use one part of cottonseed meal to four, five or six parts of wheat flour. A United States Senator not long ago served bread made from these ingredients to several of his colleagues in Washington, and they seemed much pleased with it, Government chemists have demonstrated that flour can also be made from peanuts, dried peas, sweet potatoes, etc., and that such flour can be mixed with wheat flour to make excellent bread.

Canada has not one tree too many for present and future needs. We own just one quarter of the timber possessed by the United States.

SUB. BARRIER IN ENGLISH CHANNEL

THE BARRAGE IS CONSTANTLY PATROLLED.

Series of Obstructions Stretched From the British to the French Coast.

Across the eastern mouth of the English Channel there still stretches the Great Barrier, which is one of the principal defenses of the Allies' vital Channel traffic against the visits of the German submarines.

The "barrage," they call the barrier in naval phrase. It consists, in general terms, of a series of "obstructions" stretched from huge steel buoys, shore to shore, twenty odd miles. Any craft which strikes one of these obstructions straightway explodes a group of mines which spell finis to the intruder.

A whole fleet of naval shipping is constantly engaged in maintaining and patrolling the great barrier. Its existence is no secret to the Germans, for they are constantly sending over airplanes to chart the buoys and mark any changes that may have been made since their last visit. And changes are constantly being made.

Futile Attempts to Break Through.

Here and there along the line are secret openings through which naval pilots may guide legitimate craft on their way, but these openings are frequently altered, and not even the airplanic eye of the German can tell which buoy marks safe passage and which marks destruction. If his mine-laying submarines wish to enter the channel they must take their chances. They must cross submerged, for the patrol boats are on constant duty, and if they escape the traps while submerged it can only be said that another miracle has happened.

Such miracles seldom happen. Sometimes twice a week, sometimes oftener, explosions are heard at night from the great barrier, indicating that "something" has touched off a group of mines. Immediately the patrols hurry off in the direction of the explosion. What they find there is a well-kept secret.

Last week the Germans tried a new plan to break the barrier. They sent over three seaplanes with orders to descend low over the barrier at any risk and shoot their machines into the buoys thus sinking them and the barrier with them. But the patrol boats were on hand, and two of the three seaplanes never returned to their German home.

FRENCH WOMEN ECONOMIZE.

Aristocrats of Paris Still Charming in Their War Poverty.

In the old residence quarters of Paris there are hundreds of women of aristocratic connections and moderate means who before the war had several servants and who now have none or perhaps one, says Leslie's Weekly. And to women of all degrees of wealth there could scarcely be a more interesting study than to see how these gentlewomen and their humble helpers give a charming touch to hard economy.

A representative household is one where the regular income has suddenly stopped, but leaving a little more than the small Government allowance. The ingenuity of housekeeper and cook accomplishes wonders. In many a home butter may now be served once a week, and perhaps with only one course. Perhaps three large strawberries must suffice for each serving at dessert, but they will be served with a grace that makes the eating of them a pretty ceremonial.

If gooseberries and currants are inexpensive they will combine remarkably with other berries for a compote. Perhaps dessert will be a spoonful of jelly with a simple little cake; or perhaps dessert will give way to cheese, taking on a new attractiveness on its plate of green leaves.

Absent-Minded.

An absent-minded man came home one evening triumphantly waving his umbrella to his wife. "Well, my dear," he said, "you see I didn't leave it anywhere to-day."

"I see, dear," said the wife. "The only trouble is that you didn't take one from home this morning."

China has no forests.

The Doings of the Duffs.

Moving Picture Clew.

HAPPY REUNION OF FAMILY AND LOVERS FOLLOWS CHANCE VISIT TO MOTION PICTURE SHOW.

By ALAVAH JORDAN GARTH.

A drama of tears, almost a tragedy—the gloomy, heartbroken refrain of an old, old man. With it the mournful cadence of a girlish voice, pure and liquid as silver beads dropped into a crystal dish.

It was a strange and striking picture in the library of Geoffrey Durbin. An invalid, almost helpless, his withered hands were outstretched piteously, the tears rolling down his anguished face.

"You are our last hope," he said brokenly to the young man standing with head bent reverently. "I must see my boy before I die. Spare no money — only bring me word that he is alive."

"The law firm with which I am connected has explained every detail of the case to me explicitly," said Adrian Wilbur. "Believe me, sir, outside of our interest in you as an esteemed client, our deep sympathy will impel the most loyal, friendly service. I shall find Oscar Durbin, if he is on earth."

"If you find him—" the quivering voice of the girl with jeweled eyes and face almost angelic thrilled the young attorney—"if you find him, there is no boon we could not grant you."

She had seized both his hands in her own. Just one glimpse into the beautiful white soul, and the young man registered a secret vow that he would bring hope and joy to that waiting heart, if it cost him his life.

When his law firm had advised him that they wished him to fathom the motives underlying the mysterious disappearance of young Durbin, he had experienced the zest and novelty of an amateur detective. As he looked deeper into the case, he realized that he had been set no easy task. Now, after seeing the beautiful Mabel Durbin, he felt a double interest in the strange venture.

Briefly, a student at a leading college, one day Oscar Durbin had faded from view as suddenly and completely as though the earth had opened and swallowed him up. A note came to his sister. It read simply: "To avoid deep trouble and distress, I must disappear." That was all.

And during a year money, time, advertising, detective skill had failed to evolve a single clew to the missing student. The old home had become a house of mourning, the sister had retired into a sad, secluded life.

One month before the disappearance of young Durbin, his closest chum, Willis Hope, had left the college, never to return. He turned up at the home of his wealthy widowed mother suffering an entire loss of memory, wounded in the head by some terrible fall. He had lingered along, in his lucid moments calling for his friend, Durbin. Tracing some possible mysterious connection between the two cases, the first move Wilbur made was to visit the Hope home.

He had arrived too late. Willis Hope had died the day previous. Somehow Wilbur connected the two friends in the case in hand. That theory brought no light, however. Beginning at the college the young lawyer started the slow, patient trail already twice followed by expert detectives.

He had a photograph to go by. Once or twice during the ensuing 90 days he fancied he had found clews to the object of his search. These run down, amounted to nothing.

At the end of three long months Wilbur found himself one evening in a little western town. Many times a memory of the beautiful face of Mabel Durbin had inspired him to go on with the search. Now he felt that to do so would simply be a further waste of time and money. His spirits were at their lowest ebb. He strolled down a business street and mechanically turned into a moving picture show, seeking some influence to drive his gloomy thoughts away.

Wilbur only casually noted the pictures flashing across the screen. A border incident was being shown. Suddenly, as its delineation a young man attired as a miner came upon the scene, Wilbur arose to his feet with an echoing exclamation. The picture faded, and people stared at his strange excitement. Then he made a wild dash for the door, hoarsely whispering to himself:

"At last—found. It is Oscar Durbin!"

So sure was the excited young lawyer that the original of the miner in the moving picture was the man he was looking for that he neither rested nor slept that night.

The first thing he did was to locate the man who owned the picture show. He obtained the number of the film, and learned that it came from a city firm a hundred miles away. The first train took him thither. Then, step by step he advanced in his investigation, to learn that the group who had acted the frontier series of pictures made their headquarters at Denver.

Then three days more of travel, a search in Denver—only to ascertain that the group had gone to the railroad depot less than an hour previous, to proceed en route on the Overland Limited for Alaska, where they were to remain making pictures clear through the winter season.

Wilbur ran all the way to the railroad depot. He reached the great iron gate bearing the sign "Overland Express" just as the guard closed and locked it. Slowly, but steadily, gilding out upon the rails, he saw the last observation car of the disappearing train with its red lantern.

"One minute too late!" cried the breathless runner. Then he set his lips. A run, a leap. His flying feet just cleared the spiked top of the iron gate. With a thud they struck the planking beyond. A dash down the platform, and, almost exhausted, Wilbur caught at the railing of the last car of the train.

It was ten minutes later when he reached a section of a tourist car occupied by the moving picture party. It was one-half an hour later, after a long, difficult conversation, that he got the original of the miner character to acknowledge that he was Oscar Durbin.

It was only when Wilbur chanced to remark that young Hope was dead, that Oscar Durbin was willing to discuss a return home. Then he told his story.

It was a strange one. Hope, his closest chum, had married a woman secretly. He had done so wildly and recklessly unite the name of Oscar Durbin. A week had convinced him that he had wedded a person far below his station. He had deserted her, shortly after meeting with the accident that caused his death. A few days later his wife had died from an overdose of a drug to the use of which she was addicted. Her brother had learned of the marriage. Believing that the husband had basely deserted his sister, he swore to kill him. He started out to find "Oscar Durbin." To save his friend, whose true identity must inevitably be disclosed, young Durbin disappeared.

Now that Hope was dead, an explanation would satisfy the vengeful brother.

There was a happy reunion at the Durbin home. As upon the first evening she had met him, the beautiful Mabel again placed her hands within those of Adrian Wilbur to thank him. His glance reminded her of her promise, and she blushed sweetly as she, too, remembered, and in the lovelight of her beautiful eyes there was no shadow of another parting.

Rose to His Feet.

"IVORY" NUTS.

Many Articles of "Ivory" Are Made From South American Nuts.

The present prosperity of Esmeraldas, in South America, is entirely dependent on nuts which are as hard as bone and as impossible to digest as a piece of chromium steel. These tagua nuts are called ivory nuts in America, and it is from them that most of the buttons and "ivory" we use are made.

The ivory nut, when shelled, looks like a Brazil nut, except that it is larger, and when it has been through the drying process at the button factory it looks like ivory and is just as hard. Large articles cannot be made from the nuts, because they are too small, yet $1,500,000 worth of them was imported into the United States last year.

Imitation ivory in larger pieces is made from rubber that has been treated with chloroform.

Still another substitute is made from milk, but this has not been produced on a commercial scale.

To distinguish vegetable ivory from the genuine material allow the doubtful article to soak for fifteen minutes in a little concentrated sulphuric acid. If it is a product of the ivory nut it will become rose tinted. Real bony is untouched by the acid. The tint can be washed off with water.

Given plenty of range turkeys find grasshoppers and other insects, green vegetation, weed seeds, waste grains, acorns and nuts of various kinds. The cost of raising them where they can have proper range is small and the profits are satisfactory. Grain and stock farms are particularly well adapted to turkey raising.

About the House

DOMESTIC SCIENCE AT HOME.

Fifth Lesson.—Combustibles.

Proteins are necessary for building and repairing of tissues. Carbohydrates, which consist of starches and sugar, are needed for heat and energy. Fats are needed for energy, and lubrication. Mineral salts are necessary for regulating the body processes. Water is necessary for the blood stream and the elimination of the waste.

The necessity for each of these food elements in our daily diet will readily be seen when it is understood that if a person eats a large amount of the food containing an overabundance of protein the excess will not be retained in the body, but only the amount that is needed and actually necessary for the body. The excess is eliminated, and frequently overtaxes the liver and kidneys, whereas if too little protein is provided the body will lose weight and the person will become anemic.

Carbohydrates, which are starches and sugars, come chiefly from vegetables, and if they are supplied to the body in larger amount than the body requires for its daily use they are stored in the form of fat.

Fats, while they furnish heat, energy and lubrication, should be eaten very sparingly during the hot weather.

Mineral salts are necessary for the teeth and bone structure. For this reason they are provided for in the proper amounts in a well-balanced diet.

The necessary for water can best be understood by the statement that it comprises nearly three-fifths of the weight of the body. It is an active participant in the blood stream and also regulates the temperature of the body.

Age, condition and occupation play a very important part in the amount of food that must be supplied for combustion. The young and growing child will need the largest amount of food. Persons at heavy outdoor occupations will need a greater amount of food than those people whose duties entail less physical exertion. The middle-aged and elderly person requires less food than the people of the above-mentioned type.

The average adult will require daily from 2500 to 3000 calories or heat units of food. A calorie is a term used in food chemistry to designate the amount of heat necessary to raise one pound of water four degrees Fahrenheit.

One-tenth of the total amount of food required by the human body for daily consumption should be protein. Food required by the body is burned; i. e., united with oxygen. That this may be accomplished, the food, by the process of digestion, is rendered entirely soluble. It is then, in this soluble form, absorbed by the intestines.

The blood also carries oxygen, which we breathe from the air; this is carried by the blood to all parts of the body. That the processes of the body may by satisfactorily accomplished, it is necessary that the adult drink three pints or six glasses of water each day. It is by this combustion and assimilation of food in the body that we live.

How To Can Corn.

Select young, tender ears of corn, husk and remove the silk from the ear by brushing with a whisp brown. Plunge into boiling water and cook for six minutes. Now dip into cold water at once. With a sharp knife cut the corn from the cob. Using the back of the knife, press the milk from the cob. Pack at once into sterilized jars, have a fork to assist with the filling. Fill only to the neck of the jar with the corn. Care must be used so that the corn is not packed tightly in the jar.

Now fill it to overflowing with boiling salt water. Place the rubber and lid in position and partly tighten; process in hot-water bath for three and a half hours after the boiling starts.

Remember that peas, beans, corn and asparagus are vegetables that must be worked up very carefully, owing to the fact that the proteins of these foods will turn sour and start fermenting under certain conditions. This causes the flat, sour taste that occurs frequently and is called lactic acid ferment.

So, to have success with canning corn, the work must be done in a quick and thorough way. The kitchen should be kept as cool as possible. The corn should be stored in a place where it will not become heated while waiting for the canning process.

When starting to blanch, place the corn in a piece of clean muslin or cheesecloth and plunge into boiling water. Cook for six minutes after the boiling starts and then remove and plunge into cold water. Cut the corn from the cob at once. Pack into jars as soon as a sufficient amount of corn is cut. Finish each jar separately, placing it at once into the prepared water bath.

Pint jars are best for corn, peas and beans.

Usually four ears will fill a pint jar if they are a good size, so that when blanching if this amount of corn is placed in the cloth at one time, there need be no delay in filling the jars. After processing, remove them at once from the bath and fasten the lid securely. Invert to test for leaks.

Remove the jars to a cool room, free from draughts, to let them cool. Label and date them, then store them in a cool, dry place.

When canning vegetables, success depends on speed and thoroughness. Keep the temperature of the room in which the preparing of the vegetables is done below 85 degrees Fahrenheit, and then promptly remove the jars from the water bath when the time limit expires. Do not use any preservatives as they are dangerous. Foods containing them cannot be sold.

Do not stretch the jar rubbers. This will ruin them. When ready to use the rubbers, pour over them plenty of boiling water to sterilize them. This also permits the rubber to slip over the jar without stretching.

NEW LIFE-SAVING NOVELTIES

DEVICES INVENTED FOR THE SUBMARINE ZONE.

Description of Some of the New Lifeboats and Preservers for the U.S. Transports.

That German U-boats try their best to sink transports carrying troops to Europe, even at utmost risk to themselves, goes without saying. It is marvellous that our Canadian troops have, up to the present time, been transported in safety. The United States, fully alive to the great perils is introducing some new life-saving devices for the use of their troops.

As a first precautionary measure, the United States War Department is getting ready to provide for each transport a sufficient number of lifeboats to hold all hands in the event of a sinking. The vessel will be convoyed by warships, which, it is thought, can at least prevent the Huns from shelling the boats.

The lifeboats will be of a new pattern, of steel and collapsible. That is to say the steel hull (remarkably flat) is supplemented by a canvas "freeboard," or bulwark, that folds like an accordion. The arrangement does not make the craft any better, but it keeps out the waves.

These boats will be of different sizes, so as to fit conveniently in such places on board as happen to be most suitable for their stowage. The smallest, twenty-two feet long, will hold twenty persons; the largest, twenty-eight feet long, will hold fifty-four comfortably. Along the gunwales hang outboard a series of rope loops (with cork floats attached) which may in an emergency be grabbed and held on to by men who cannot be taken aboard a crowded boat.

A lifeboat of this pattern cannot be sunk. Before the U.S. War Department will accept one of them, it is tested by throwing it overboard from a ship, and, if it does not right itself instantly it the water, it is rejected. Its hull, being of metal, may be bent more or less out of shape, but is not easily punctured or broken. The twenty-eight foot size costs $300.

Life-rafts As Well.

A serious difficulty about lifeboats of any kind is that if a sinking vessel is heeled over to port or starboard (as is likely to happen), the boats on her uplifted side cannot be lowered from the davits. But, to overcome this trouble, our transports will have tracks laid athwart their decks (or in some instances overhead trolleys), so that they can be run across if necessary and dropped overboard on the opposite side.

The U.S. War Department, however, is not content with providing lifeboats. There will also be plenty of rafts, likewise of a new pattern; two hollow-steel cylinders serving as floats, with a wooden grating extending between them on top and bottom. Thus either side (top or bottom) is right side up, no matter how the raft may chance to land upon the water when thrown overboard.

Such a raft, eleven feet long, will carry twelve persons; a larger size, eighteen feet long, will accommodate twenty-three. On board a transport they take up little room, several being stacked on top of another and lashed securely. In case of emergency the lashing can be cut at a moment's notice, and, even though the ship were to sink before they could be thrown overboard, they would float free on the surface of the sea.

Life-Preserver Mattresses.

But this is by no means all. Every mattress on each transport will be available for instant use as a life preserver, being filled with a peculiar kind of vegetable fibre called "kapok," which, derived from a palm of the Philippines, serves the purpose of cork and much better. In calm water a man can stand on one of these mattresses without submerging it, or it will sustain three or four men clinging to it.

Every soldier's and sailor's pillow on each transport will be stuffed with "kapok" and will be utilizable as a life preserver. How excellent for the purpose such a pillow is may be judged from the fact that (as proved by experiment) one of them will float for forty-eight hours with a 150-pound sounding lead attached to it.

Acetylene Life Buoys.

The transports will also carry acetylene life buoys—a novel and most ingenious contrivance consisting of a large hollow ring of copper with a small pipe hinged on each of the two opposite sides, each pipe terminating in a cylinder filled with calcium carbide.

Suppose that a man falls overboard at night. One of these buoys is quickly thrown into the sea. The ring of course floats horizontal on the waves. But the weight of the cylinders causes the pipes to stand vertical. Meanwhile water has found its way into the cylinders, causing the carbide to give off acetylene gas, which takes fire of its own accord.

The drowning man sees two jets of flame burning brilliantly at the top of the two pipes. He swims toward the buoy and gains it, clinging to it while the transport lowers a boat and the latter, guided by the acetylene lights, comes to his rescue.

THE FLAG THAT ALWAYS WAVES

Clever Electrical Device To Impart a Waving Motion to Flag.

One of the most talked of features at the recent electric railway convention at Atlantic City, N. J., was a waving flag which fluttered from a twenty-seven-foot flagstaff in front of the General Electric Company's booth inside the spacious convention hall. Not a breath of air was stirring, yet the flag stood out on the pole as if a thirty-mile gale was blowing.

The flag pole was of ordinary dimension and there was nothing visible to betray the source of the breeze. The base of the pole was surrounded with banked palms.

The whole device is really quite simple in construction and easily explained, for the flagpole is a metal tube and an electric blower at the base shoots a strong current of air through the flagstaff. The air escapes through perforations in the top of the flagpole and imparts a waving motion to the flag.

There is only one chance in 17,000,000 for a mistake in finger prints, according to a French scientist.

POWER FROM IRISH RIVERS.

A Plan to Harness the Shannon and Erne and Strangford Lough.

Ireland, driven to act by war prices for coal, is figuring on cheaper power by developing the rivers of the island.

One plan proposed is to utilize the flow of the Rivers Shannon and Erne. A second is to harness the tidal movements of Strangford Lough.

The rivers would each, it is believed, furnish 50,000 horse power for eight months of the year and 20,000 to 40,000 horse power for four months, and it would be a simple engineering matter to transmit the power from the Shannon to Dublin and Limerick, or from Erne to Belfast and Derry.

The tidal scheme for Strangford Lough is a different matter. The lough is an east coast arm of the sea with an area of about twenty square miles and a narrow inlet, varying from one-fourth to one-half mile in width for four miles. This channel is swept by tides of from eleven and one-half to fourteen and one-half feet rise, running about six hours each way. With a storage system for slack hours 32,000 horse power could be developed. The scheme calls for an expenditure of $6,000,000.

Plenty of silage and good legume hay will help keep the high feed bills away.

HELP WIN THE WAR

It is the duty of every subject of the Allies to help win the WAR, and they can best do it by preventing WASTE and storing up for the COMING WINTER all food products, especially those perishable foods such as fruits and vegetables.

This can be accomplished easily by using one of the NATIONAL CANNING OUTFITS. With the aid of one of these all kinds of fruits, corn, peas, tomatoes and beans can be cooked, which will keep indefinitely when properly prepared.

Our No. 1 JUNIOR NATIONAL for family use has a capacity of from 200 to 400 cans daily or glass jars of proportionate amount. These outfits can be put right on a cook stove. Price $25.00, f.o.b. Hamilton.

We have larger sizes for hotel use, and still larger sizes for commercial use.

We have also Evaporators of various sizes for evaporating every kind of fruit, apples, peaches, pears, berries, potatoes, etc.

Write for full particulars, giving size required, to

The Brown, Boggs Co., Limited, Hamilton, Ont.

CANADIAN ORDER OF CHOSEN FRIENDS

A fraternal and insurance society that protects its members in accordance with the Ontario Government Standard. Sick and funeral benefits optional.

Authorized to plant members and charter lodges in every Province in Canada.

Purely Canadian, safe, sound and economical.

If there is no local lodge of Chosen Friends in your district, apply direct to any of the following officers:

Dr. J. W. Edwards, M.P., Grand Councillor. W. F. Montague, Grand Recorder.
W. F. Campbell, Grand Organizer. J. H. Bell, M.D., Grand Medical Ex.

HAMILTON - ONTARIO

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

has never been offered as "just as good" as some more famous brand; for Sixty Years it has itself been that more famous brand—and deservedly.

"Let Redpath Sweeten it."

Made in one grade only—the highest!

GLAMIS

Mr and Mrs Barrass, of Cabric, Sask, who were visiting at Jos Cunningham's and other places left for their western home on Friday last.

Mr Jos Cunningham accompanied his neice, Miss Ada Cunningham, to Woodstock where she was placed in a Home.

The Young People's Bible class of the Baptist Church spent a social evening at the home of Mr Geo Webb on Monday.

Mrs Outnett, of Toronto, is visiting at Mrs Allen McKinnon's, on the 10th.

Mr and Mrs Fisher of Paisley, Sundayed at J K McLennan's and at the Misses Howson's.

Melville Brown, of Paisley, is spending part of the vacation at his grandparents', Mr and Mrs Stev Stevenson.

Miss Lily Chittick, of Stoney Creek, is visiting among her friends.

Mr Jim Gilchrist, of Kincardine, Sundayed at his home here.

Mr and Mrs Jas McLennan are leaving the farm and moving to our burg they having purchased the house owned by Bill McKenzie. We welcome new citizens to our village.

Mr and Mrs L MacIntyre of Calgary and Master Donald MacIntyre of Toronto left for their homes on Thursday last.

Miss Jean Robitson is visiting her friend, Miss Mary McKinnon.

Miss Kate McDermid, of London, is visiting her mother.

Mr Tufford, who was holidaying at Lake Huron, left on Sunday for his home in Beamsville.

Mrs Everett and family of Port Elgin spent the week end at Mr Alex McSween's.

Quite a number from our village attended the garden party at Centre Bruce.

Misses Laura Cunningham, Reta McKinnon and Dorothy Burgess are holidaying at Inverhuron. They are stopping in Mr Buckburrough's cottage.

SECOND CON ELDERSLIE

Mrs Geo Weir and Mrs Good and children, of Gore Bay, are visiting relatives on this Con.

Mr and Mrs. Robt Bell, of Paisley, visited friends here on Sunday week.

D C Lillico, of West Toronto, spent a few days last week under the parental roof.

The farmers of this section are well pleased with the prospect of a bumper crop this season. The hum of the binder is once more heard.

Pte Clarence Manley, of London, is home to assist with the harvest.

Mr and Mrs W E Lubbock, of Mimico, spent last week visiting at the home of Mr and Mrs J B Allen.

Mrs A McGregor, who has been seriously ill with an attack of typhoid fever, is able to be out again.

Mr and Mrs Dr Hall and son, of Little Britain, visited their Aunt, Mrs Henderson, last week.

The raspberry pickers are coming from the four corners of the earth, to fill their pails in Alex McGregor's bush, and very few go away disappointed as the delicious fruit is a bountiful crop this season.

Wonder where the Tp daddies are who should oversee the cutting of noxious weeds on the highway? It is high time it was attended to on some parts of this Con.

Miss Walpole, of Caistire, visited her friends Misses Mabel and Maude Dawson on Sunday week.

WILLOW CREEK

One day last week three carloads of young people belonging to the Y P A went over to Chesley to spend an afternoon and evening with ten other Y P A's which were at that place. One item on the program which caused a great deal of excitement was a tug-of-war between the different societies. It takes the Bruce boys to come out on top. The champion pullers were Messrs Milton Dahmer, Wm Gottschalk, Ed Kopas and Fred Schnittker in the anchor. Just the man for the job.

Most of the farmers are through with the hay, which was a good crop. Wheat is a fair crop in this part of the country, while oats and barley are looking well.

Ms Fred Schnittker has potato vines 4 ft 2 inches in height.

TURNER'S

Mrs McLennan of Toronto is visiting her brother, Mr D McCrae.

Mr Albert Dier has the Bell phone installed in his house.

A number from here took in Centre Bruce garden party.

Mr Earl Hyde is spending holidays at the home of his uncle, Archie Pollock.

J Shrank has purchased a new car.

Mrs Aseltine and daughter of Mason, Mich, have been visiting with friends here.

Inspector Christie, of Sudbury, has been visiting with his brother Reeve Christie.

EBENEZER

Miss Ida Burns, of Toronto, has been visiting friends here.

Mrs Duncan, of Detroit, is a visitor at Mr Wm McKelvey's.

Miss Ella Grant, of Tara, who has been attending University in Toronto, is spending part of the vacation here.

Miss Frances Haubidge, of Port Elgin, visited her cousin, Miss Anna Haubidge.

Allan, Olive and Pearl Quigley have been spending a few days with friends in Sullivan.

Ptes George and Wilbert Martin, who are training at London, have been granted a month's leave to assist in the harvest.

John, son of Mr Robt McKelvey, was taken seriously ill last week, and the family physician when called pronounced the trouble to be acute appendicitis. Dr Lucey, of Guelph, was summoned to perform an operation, which proved very successful, and the patient is recovering nicely.

Mr and Mrs Vanslyke, of Port Elgin, were guests at Mr J H McFadden's on Sunday.

Dudley Ward and Jack McEwan, students at Toronto High Schools, who have been working on farms here this summer, returned to the city Tuesday. These city boys made excellent workers, and applied themselves steadily.

The Epworth League here are joining with Mount Hope League and holding a picnic at Southampton on Thursday.

PINKERTON

Rev Mr Steveson preached on Sunday in the interests of the Lord's Day Alliance. Rev Dr Scott of Kitchener will occupy the pulpit next Sunday.

Pte Russel Birrell of the Divisional Signal Corps at Ottawa is spending a few days' leave at his home here.

Mrs Geo Chick returned home from Toronto last week.

Mr R L Garland, of Palmerston, spent Sunday at his home here.

A large number from here attended the Centre Bruce garden party last week.

An oleander tree which was kindly donated by Mrs H Lamont to the local Red Cross Society was disposed of at the last meeting. Miss Jennie May Carr held the lucky ticket and the sum of $4 65 was realized in this way.

Miss McNab, of Toronto, who has been visiting her cousin, Miss Mertis Donnelly, returned to the city on Monday on receiving word that her brother had been dangerously wounded.

TWELFTH CON BRUCE

Mr and Mrs Rankin, Mr and Mrs Levins of the 8th line of Sydenham, motored over to Mr John Dunlop's last week.

Mr John A Howe sold eight head of cattle for which he received $1200 and now has treated himself to a new car.

Mr Alex McGillivray, ex-Reeve, has sold his threshing machine, so that will be one less on the 12th.

Miss Wagner, of Newton, is visiting her friend Miss Essie McGillivray.

Mr Eli Barnes Sundayed at his home here.

Quite a number took in the Centre Bruce Garden Party and report a good time.

Miss Libbie McGillivray has gone to Toronto on a visit.

Miss Stella Cumming has returned from a three months' stay in Paisley.

Delightfully Cool on the Great Lakes

Port McNicoll, a short pleasant journey via Canadian Pacific Railway, is the Gateway to the Great Lakes. Steamship Express leaves Toronto 2.00 p.m. each Wednesday and Saturday, making direct connection at Port McNicoll with other steamship "Keewatin" or "Assiniboia" for Sault Ste. Marie, Port Arthur or Fort William. Particulars from Canadian Pacific Ticket Agents or W. B. Howard, District Passenger Agent, Toronto.

WALKERTON

Mr. Dan Madden of Chepstow brought a sample of oats to this office which had a head over 21 inches and a stalk 5 feet 10 inches long. As Mr. Madden has ten acres of this kind, an average stand man could easily get lost in such a field.

The following is an extract from a letter received by Mr. Norman Robertson, County Treasurer, from a fellow officer in the same squadron of the Royal Flying Corps as his son, Capt. Eric Robertson, giving the only particulars of his loss received since the first cable message saying that he was "Missing."

"On the evening of July 11th about 6.30 we left for the lines. About an hour later, when over the lines, an anti-aircraft gun struck your son's machine, who was leading the formation. The machine was so damaged it went down out of control, from over thirteen thousand feet."

The above meagre details tell the probable fate of Capt. Eric Robertson, the heroic Flight Commander of the Royal Flying Corps, who has now been "missing" almost a month. The terrible height from which his machine was brought down leaves room for little hope that he may have landed safely within the German lines. However, his relatives and friends are, as it were, hoping against hope that the gallant Walkerton officer, who has so distinguished himself at the front, may in some manner or other have escaped the terrible doom that falling in his machine from such a height would suggest.

License Inspector White, with his solicitor, O. E. Klein, had a few busy days last week rounding up alleged offenders and fighting the illicit booze game in this district. The Inspector, it seems, had seized six parcels of whiskey addressed to H. Lambertus of Teeswater, but whom on being arraigned before the police court in Teeswater on Thursday last denied ordering the stuff and disclaimed any ownership in the goods. As a result the beverage was confiscated by the court and turned over to the Inspector. The following day Jos. Goetz, butcher, of Hepworth, was brought before Magistrates James Douglas and Jas. Atchison of that village on a charge of unlawfully keeping liquor on his premises and was fined $300 and costs, and the five gallons of booze in store was seized and confiscated. On Saturday a case of liquor addressed to Wm. Lyons, hostler at the Commercial Hotel, Southampton, was seized, but when the Inspector went to look him up he learned that he had been wised up to his coming and had fled the burg. The moisture was seized and confiscated. The same day Moses Johnston, a one-armed fisherman of Southampton, and who had two cases of liquor buried in a field, was hailed before Magistrates Andrew McIntosh of Southampton and James Chapman of Port Elgin and fined $200 or four months in jail for unlawfully keeping liquor to other than a private house. The booze was confiscated, and Moses was brought to Walkerton on Saturday to serve time. The following day, however, his son and brother-in-law autoed to town, whacked up the fine and costs, and released the prisoner from the cells. —Herald & Times.

FOR FLETCHER'S
CASTORIA

THE FARMER AND CONSCRIPTION

There is probably no class in the community that will benefit more by Conscription than the farming class. The lack of proper help is the greatest difficulty with which the farmer has to contend, and in this time of increased demand for products is more acutely felt than even in ordinary times. Prices are good, the demand for farm produce is unlimited, but the farmer is often obliged to forego the opportunity which these advantages offer because of the lack of labour. Conscription, if properly enforced, should prove a remedy for this need. It may at first sight appear paradoxical to suggest that the withdrawal of men for the Army will enable the farmer to obtain more help, but a right appreciation of the facts will explain the seeming paradox. The fact is that there are plenty of men to supply both reinforcements to the trenches and help to the farmer, but they are at present so distributed as to deprive both the trenches and the farmer of the needed help. Conscription will give the Government such a power of redistribution as to enable them to put the man power of the country where it properly belongs. At present the military authorities are obliged to take men where they can get them and they sometimes take them from the farms where they are most needed. On the other hand many young men who were brought up on farms and who have the necessary knowledge of farming operations are engaged in non-essential occupations. The production of munitions, for example, is an essential occupation but there are many young men working in munition plants not as expert mechanics but at work which could be just as well done by older men or by women. The enactment of the Military Service Bill will enable the Government to bring all these young men under control and to put them where their energy will be used to the greatest advantage for the welfare of the State. There is no lack of material in the country for there are at least a million, probably a million and a half, men of military age and many a man who is working in a lawyer's office, a motor garage, a shoe shop or a dry goods store has had a farm education and should be in the trenches or on the farm. It is, therefore, to the interest of the farmer and to the interest of every essential business that the Government should be in a position so to co-ordinate all the forces of the country as to obtain the best results. No doubt the majority of farmers would welcome conscription apart from any question of self interest, but it happens that in this case duty and enlightened self interest march together.

OBITUARY

The Late John Young

On Tuesday morning of last week one of the best known, most genial and respected residents of the 8th con of Bruce passed away very suddenly. Ten years ago Mr Young had a serious attack of heart trouble, when his life was in danger. In the course of a few months, however, he seemed to recover very nicely, and although feeling the effects of the trouble upon his energy, he has been so well of late that his death came most unexpectedly to every one. He was about early on Tuesday morning, most cheerful and ready for the day's work in the hayfield, but after getting the team he came back to the house and asked Mrs Young for some medicine, stating that he was not feeling right. Then he laid down for a few minutes until breakfast would be ready, as was his habit. Within a few minutes Mrs Young went to the bedroom door upon hearing sounds like hiccoughs and was shocked to find that her husband had passed away. Mr Young was born in Perth, Ont., of Irish parentage, and was the fifth son in a family of eleven. The family came west in the early fifties of last century and settled in Kinloss Tp, near Kinloch. John went to school there, and in early manhood he and his brother William, between whom there was a very strong attachment, started out in life together. For some time Young Brothers were engaged in the grain and meat buying business in Kincardine, where they became very well known. Later they bought lot 14, con 9, Bruce Tp, where William still resides. In 1884 John Young and Jessie McLean were married and established their home on lot 21, con 8, which he bought from his brother Robert. Of this happy union three sons and four daughters were born —John H Young, B A, of Hefford, Sask; I. McLean and Hugh at home; Isabel, Lettie, Bessie and Jessie. The mother and family are grief stricken by the sudden death of the beloved husband and father. Isabel and Lettie were at Port Arthur when they received the sad message, and although they started at once, did not reach home until after the funeral. Bessie, who is a nurse in training at the Wesley Memorial Hospital, Chicago, reached home a day after receiving the telegram. The late Mr Young was a Presbyterian in religion and a Conservative in politics. The funeral on Thursday afternoon was very largely attended. The services were conducted by Rev G C Little, B A, of Paisley, in the absence of the pastor of Centre Bruce church. Interment took place in Willow Creek cemetery at Lovat. Two brothers and a sister of deceased are living—Robert and Miss Young in Kincardine, William, 8th Bruce. Mr Young was a big man physically, also large in heart and sympathy, most companionable, genial and witty, of strong intellect and good business ability, deeply interested in both his community and the bigger world outside—altogether a man whom it was a pleasure to meet at any time. He will be very much missed among his friends and acquaintances. The sympathy of all goes out to the bereaved ones.

The Late Mrs Rose

On Saturday, July 28th, there was called to her last rest Mrs Jas Rose whose maiden name was Margaret Ethel McIntyre, being the second eldest daughter of the late Rev Robt McIntyre. Of a family of seven sisters and four brothers there are now only three sisters and three brothers left—Mrs Calker, of Vancouver; Minnie, at present at deceased's home in Bruce; Mrs Chas Ferguson, of Egremont; James and Dan in U S; Norman on the homestead. The deceased was born in Scotland sixty-two years ago, and came to Canada in early childhood with her parents who settled in Glenelg township, where she lived until her marriage with Jas Rose in the year 1887. To her husband she was a true and faithful helpmeet, a loving mother to her family, and was in turn much loved by her family. She was cheerful in disposition, a kind and thoughtful neighbor ready to sympathize with those in trouble. For the last three years she had been an invalid and received all the care that loving hands could give from her two daughters. She was an earnest Christian, a lifelong member of the Baptist church and took an active part in missionary work, being a member of the W M S of Centre Bruce. Besides the bereaved husband she leaves to mourn her loss one son, Ernest, and two daughters, Irene and Ethel, all at home. The funeral took place on Sunday afternoon to Lovat cemetery, the remains being laid to rest in the family plot. Rev W S Buckburrough, of Port Elgin, conducted service at the house and also officiated at the burial. Many beautiful floral tributes were laid on the casket. The family have the sympathy of the entire community in their bereavement.

Overland

Model Eighty-Five

The Car Ahead

HERE IS the Overland Model Eighty-Five—the low-priced quality car that has been the choice of thousands.

Drive where you will, you are sure to see an "Eighty-Five" and more often than not it will be pointed out as the car ahead. For this Overland Eighty-Five has power and plenty of it.

Moreover, it is a smooth-running, easy-riding family car, one that will accommodate five people comfortably without crowding.

You can have your choice in this model of either a four cylinder engine or a six. The wheelbase of the Four is 112-inches—the Six 116-inches. Both are exceptional values.

A demonstration will convince you.

The Walkerton High School

will re-open on

TUESDAY, SEPT. 4th, 1917

Students are prepared for the following examinations:—ENTRANCE TO NORMAL, ENTRANCE TO FACULTIES OF EDUCATION, MATRICULATION—either in pass or honors—into any University in Ontario.

This School has been, for many years, very successful in these examinations. The record this year fully maintains this success. All the teachers are University Graduates or Specialists.

The equipment for teaching Science and Art fully meets the requirements of the Education Department, and there is a good Reference Library.

Full attendance is given to Physical Culture, and an efficient Cadet Corps is maintained.

Board can be obtained at reasonable rates.

More Bowling Prizes

Alan Shoemaker, L C Spofford, W Rae and I Shoemaker comprised a rink who were the runners up in the Association event at Wiarton bowling tournament last week. This is the third win for Shoemaker's rink this season.

PRACTICAL FARMING

DAIRY COWS' SUMMER RATION.

By Earl W. Gage.

One of the most common mistakes in the feeding of dairy cows on the farm is that the good cows are not given a sufficient quantity of feed above that required for their physical maintenance, to obtain the maximum quantity of milk they are capable of producing. Successful feeding of dairy cows involves the provision of an abundance of palatable, nutritious feed at a minimum cost, and feeding this in such a way as to receive the largest milk production from the feed. One successful dairy farmer defines feeding for profit as liberal feeding, or feeding to the full capacity of the cow.

From the standpoint of economical milk production, a dairy cow should not be fed more than she will consume without gaining in weight. But there are times when it is desirable to make exceptions to this. Practically all heavy milk producers lose weight in the early part of their lactation period; that is, they produce milk at the expense of their body flesh. When such cows approach the end of their milking period they normally regain the flesh they have lost, and the dairyman can well afford to liberally feed them, with the assurance that he will be repaid in the form of milk when the cows again freshen.

Pasture is the natural feed for cows, and for average conditions, with ample pasture of good grasses, or legumes in good succulent condition, good production can be secured.

Experts advise us that grain should be fed to heavy-producing cows under all pasture conditions. Variations should be made to meet different conditions and individual cows. Grain-fed cows on pasture need not contain the same percentage of protein as for winter feeding. Pasture being an approximately balanced ration, the grain ration should have about the same proportion of protein to other nutrients. The following mixtures are suggested for supplementing pasture without other roughage:

Mixture No. 1. Ground oats, 100 lbs.; wheat bran, 100 lbs.; corn meal, 50 lbs.; per cent. of digestible protein, 10.3.

Mixture No. 2. Wheat bran, 100 lbs.; corn meal, 100 lbs.; cottonseed meal, 25 lbs.; per cent. of digestible protein, 12.7.

Mixture No. 3. Corn-and-cob meal, 250 lbs.; cottonseed meal, 100 lbs.; per cent. of digestible protein, 15.5.

Mixture No. 4. Wheat bran, 100 lbs.; gluten feed, 50 lbs.; corn meal, 50 lbs.; per cent. digestible protein, 13.6.

To carry the dairy herd over a period of short pasture without falling off in milk, soiling crops are growing in favor. For this purpose, second-growth red clover, alfalfa, oats or peas are excellent. Corn is also available usually in August and September. What may be a disadvantage in the use of soiling crops is the extra labor required to cut and haul these crops from day to day, when field work is pressing hard.

The summer silo is gaining in favor in many sections. An acre of corn in the form of silage will provide succulent roughage for several cows for a season. During periods of drought, when both pastures and soiling crops fail, a silo filled with well-matured silage grown the year previous is most valuable.

In planning a summer silo, the farmer should keep in mind that its dimensions should be in relation to the number of cows fed daily. As a usual thing, under summer conditions, a cow will consume about twenty pounds of silage. Therefore, silage enough must be provided daily to prevent excessive surface fermentation. On this basis, a summer silo for twenty cows should be eight feet in diameter; for thirty cows, ten feet; and for forty cows, twelve feet. As eight feet is about the minimum diameter of a silo for best results, a summer silo is most applicable for twenty or more cows.

The Dairy

In the management of the dairy cows it is very important that the milking be done at regular periods. That is at the same hour night and morning as nearly as possible. The more equally the twenty-four hours are divided in which the milking is done twice, the more uniform will be the quantity and the quality of the milk produced.

Do not expose calves to heat and flies, but during extreme heat keep them in a dark, cool place until four months old.

Free access to water and salt is essential for the best results in dairying.

A belt of trees adjoining the pasture field in which cattle pasture is a real comfort to the animals in hot weather.

Spraying with some preparation to keep flies off cows is the price that must be paid for a normal milk flow from now on. Unchecked attacks by flies may easily reduce production twenty-five per cent.

We find that cows like our milking machine better than hand milking, especially young cows, says a writer in Nor'-West Farmer. So far we have found only two cows that object to it seriously, and that only when it is placed on the left side. We have two cows that hold up their milk, but they do the same with a hand milker. Since we have been using the machine have not had a single sore teat or udder. One man can milk from 30 to 35 cows in one and a half hours, do the stripping, feed his calves, and take the skim milk from the separator. The washing and care of the outfit would not average more than thirty minutes per day.

Individual records of each day's milk and the amount of butter produced will show up the questionable animals.

Wheat bran and ground oats have usually been considered to have approximately equal values in the dairy cow's ration, but the cost of oats as compared to the market value of bran has usually been prohibitive, so that oats have been much less widely used than bran.

Silage helps the dairyman supply his herd with succulence in winter as well as in summer. It helps to keep the cows healthy and productive in the winter when green feed is lacking and dairy prices are highest.

Inferior cows lower herd profits, but they can be detected by individual milk and butter records. Low yields mean small profits or more often actual losses.

Hogs

Dusty feeding floors or sleeping quarters cause the pigs to cough much of the time. The floors should be swept or flushed off with water every day.

Take no chances with a sick hog. Act quickly. Get a veterinarian or a trained man immediately. Use the telephone or send to town at once. Only prompt action will stop hog cholera losses. Every hog saved will help win the war.

Feeding unpasteurized whey from the factory to calves or pigs is a excellent way to spread tuberculosis.

Breeding ewes require at least twelve square feet of floor space in the shed.

Skim milk and grain can be fed to much better advantage to hogs than to mongrel dairy calves.

Rape seeded at the last cultivation of corn will furnish abundant nitrogenous feed for hogs in fall.

The only way to improve the hog on the farm at the lowest cost is by using pure-bred males on well selected sows.

A pig that has been stunted in the early stages of its life should never have a place in the breeding herd.

The hog makes a mature product quicker than any four-legged animal, and in these strenuous times should be the mainstay in our efforts to increase meat supplies.

Horse Sense

Care of Horse's Hoofs.

The hoof is more exposed to wear and tear than any other portion of the horse's body. The hoofs correspond to the claws of other creatures. The outside is of hard, dense, compact, insensible horn in thin layers. The inner hoof is supplied with blood vessels and nerves, indicating sensitiveness.

If nails are directed wrongly in shoeing and penetrate this sensitive part of the horse's foot, they cause pain, inflammation and possibly lockjaw and death.

If the hoofs dry up or become brittle there are many remedies, but none better than nature. The dew is cooling and softening and will heal hoofs much better than bathing in hard water. Many horse owners laugh at the idea of nature taking care of the hoofs. They are wrong.

Travelling on hard, dry roads, standing on dry floors, bathing with hard water are all destructive to the hoof. If you must help nature it is beneficial to fill the hollow of the foot or the cavity of the shoe with one part tar oil and two parts whale oil, which will feed the hoof. A brittle hoof must have, in any case, food and the proper moisture.

The horse's hoof is made up of hidden springs, self-acting pulleys and cushions ever soft. These all have to be watched.

It is an exception to find an 8-year-old horse with a healthy set of hoofs. Nearly all are brittle, shelly-dished or the frogs are cut away or the heels are high and inelastic.

I've heard owners complain or blame the smith. But in the majority of cases it's the treatment the horses get in the stable that is to blame. The horses are left to stand all year around on a dry, hard floor or in the manure or be washed in hard water or driven barefooted on gravel roads. Overfeeding or anything that injures the horse's general health also affects the hoofs.

WHEN THE THRESHING MACHINE COMES

To Assist The Housewife in Her Task of Preparing Meals For the Harvesters.

Not so much what to serve as what not to serve needs to be considered in preparing meals for threshing crews. Variety must be worked into all meals rather than into one meal. One error that we women too often make is the custom of serving more than one kind of dessert. Another, is the duplication of the same type of food as, potatoes, rice and spaghetti, all of them starch foods which should be substituted one for the other, not all served at one meal.

The menus given here can be modified to suit local conditions.

The use of the fireless cooker is strongly recommended for cereals and such foods as need long, slow cooking.

The evening meal should be anticipated and everything prepared in the morning that can be so prepared thus saving strength, time and fuel.

Cookies, cake, salad dressing, beet pickles and other items may be prepared the day before the first meals are served.

Breakfast: Fruit, cereal, creamed dried beef, poached eggs, potato cakes, hot biscuit, jelly, coffee or milk. Dinner: Pork, apple sauce, rice, boiled beans, boiled cabbage, fresh onions, corn bread, bread, caramel-custard ice cream, coffee or milk. Supper: Cold sliced pork, fried potatoes, baked beans, cottage cheese, corn bread, bread, baked apples, whipped cream, tea or milk.

Immediately after breakfast put the beans on to cook and when parboiled once, divide and prepare half for baked beans and allow the remainder to cook with the pork until tender. Make cottage cheese.

Caramel-custard ice cream is made by combining three cups of milk, two eggs or four yolks, one and one-half cupful sugar (one-half caramelized) and making a steamed custard. When this is cooled, add three cupfuls cream and freeze. This may be made early in the morning and packed.

The baked apples should be prepared during the morning. Extra rice should be cooked and all that is left from dinner should be put into a pan and molded ready to slice for breakfast.

Put breakfast cereal in fireless cooker after supper.

Breakfast: Fruit, cereal, minced ham, scrambled eggs, creamed potatoes, hot biscuit, jelly, coffee or milk. Dinner: Boiled dinner, horse-radish sauce, lettuce, corn bread, jelly, tapioca pudding, coffee or milk. Supper: Corned-beef hash, poached eggs, greens, sliced tomatoes, corn-bread, fruit, cake, tea or milk.

The boiled dinner should be started early in the morning. The tapioca pudding should be made soon after breakfast and thoroughly chilled.

For the boiled dinner wipe carefully a piece of well corned beef, plunge into boiling water and let simmer four or five hours until the meat is tender. A piece of salt pork from which the rind has been removed may be added and the two cooked together. About one and one-half hours before time for serving prepare carrots, turnips and beets. Add the turnips and carrots to the stock and after the meat is tender remove until nearly time to serve. Cook the beets separately, using some of the meat stock to cover them. Prepare onions and cabbage, and parboil each separately to take away some of the strong flavor. Cook the onions separately in the meat stock and after the cabbage has been parboiled put it in the kettle with the turnips and carrots. About one-half hour before serving add pared potatoes. The meat may be returned to the kettle to be reheated. Serve the onion and beets in separate dishes. Place the meat in the center of a large platter and arrange the vegetables attractively about it. Horse-radish sauce is made by soaking one-half cupful of soft bread crumbs in milk, and mix with one-half cupful of well-drained horse-radish. Whip one-half cupful cream and fold in carefully the mixture of bread crumbs and horse-radish. The greens should be soaked and thoroughly washed ready to cook in the evening. Boil potatoes for breakfast the following morning. Put breakfast cereal in fireless cooker before bedtime.

Breakfast: Fruit, cereal, bacon, eggs, fried rice, muffins, syrup, coffee or milk. Dinner: Baked ham, gravy, boiled potatoes, creamed peas, fried apples, radishes, bread, lemon pie, tea or milk. Supper: Cold sliced ham, mustard, potato salad, buttered beets, pickles, bread, preserves, baked custard, tea or milk.

At dinner time cook extra potatoes for the evening and breakfast the following morning. Cook the beets which may be reheated and buttered for the evening meal. Prepare the baked custard.

At night put breakfast cereal in fireless cooker. Mix and mold biscuit for breakfast. Keep in the refrigerator over night. Bake as usual in the morning.

The Sunday School

INTERNATIONAL LESSON AUGUST 26.

Lesson IX. The Captivity of Judah—2 Kings 25. 1-21. Golden Text—Ezek. 33. 11.

With the lesson text should be compared Jer. 39. 1-10; 52. 4-16. Kings tells nothing of Zedekiah, the last king of Judah, except the events connected with the siege and fall of the city. Jer. 27, 28 suggests that he became involved in treasonable negotiations as early as his fourth year, but no serious harm resulted (compare Jer. 51. 59). Finally he yielded to the pressure of the pro-Egyptian party and revolted.

Verses 1, 2. Siege of the city. Ninth year—Tenth month—The siege began in January, B. C. 587. Nebuchadnezzar—The greatest king of the Chaldean empire, B. C. 604-562. Forts—Better, a siege-wall. Eleventh—The siege continued for a year and a half, also partly to the natural strength of the city, partly to the interference of Egypt (Jer. 37. 5).

3-7. Capture of the king. Fourth—Supplied from Jer. 52. 6, July. B. C. 586. Famine—Compare Jer. 37. 21; 38. 9. Men of war—The text seems to have suffered in transmission. Compare Jer. 39. 4; 52. 7. Perhaps we should read: "And when the king and all the men of war saw it, they fled and left the city by night:" Gate—Near the pool of Siloam. The expression "Between the two walls" is not quite clear. Arabah—The Jordan valley. Jericho—Evidently the king and his companions broke through the Chaldean army and tried to escape across the Jordan, but they were overtaken near Jericho. Riblah—A city in the far north, in the Orontes valley. Put out eyes—A form of punishment frequently applied by the Assyrians to rebellious vassals.

8-12. Destruction of Jerusalem. Burnt all the houses . . . brake down the walls—The attempt was made to blot out the city entirely. Captive—It would seem that the entire population of the capital, and of the rural population all but the poorest were carried away. Fell away—Deserters in the course of the siege. Multitude—Perhaps better, artisans. Compare "craftsmen and smiths," in 2 Kings 24. 16. Poorest—Men without influence, and, therefore, not dangerous.

'Tis Quality Always Counts.

The farmer has need to be the most pragmatical of all men. He must put everything to the test. There are few fixed values on the farm. Some Jerseys give thin milk, and some Holsteins give small quantities. One ton of silage may not be half as good as another ton. One pure bred hen will lay twice as many eggs as another pure bred hen of the same name. There is often as much as fifty per cent. difference in the producing qualities of two lots of seed corn of the same variety.

You can not take anything for granted, but must watch and weigh, and measure and test. It is a fortunate thing that nearly all farmers are unconscious scientists. They have the gift of "sizing things up." They know by instinct and judgment many things that may not be acquired in books. Sometimes this makes them impatient of book knowledge.

But the book farmer, who also has practical knowledge, has the better of it, usually, and it is every man's privilege to avail himself of the current technical attainments of his trade.

Fresh or Rotted Manure.

Perhaps one of the most remarkable results obtained in our experiments with fertilizers has been the discovery that, as far as ordinary farm crops are concerned, fresh and rotted manure, applied at the same rate, have given practically equal yields. The explanation for this is not easy to find, since rotted manure, weight for weight, is very considerably richer in plant food than fresh manure. It probably lies in the better inoculation of the soil with desirable micro-organisms for the assimilable forms by the fresh manure and the greater warmth set up by its fermentation in the soil affecting beneficially the crop in its early stages.

Poultry

Egg eating is a habit frequently started by a broken egg in the nest.

To prevent: Have dark nests; keep nests clean, and avoid feeding egg shells. Change of pens will sometimes stop the habit.

Mark the pullets this fall so that you will know just how old your hens are. A leg band on the right leg one year and on the left leg the next will assist in culling the flock.

If your chicks are not doing well something is wrong. Look out for lice, and for worms in the intestines.

Two-year-old hens that feed be sent to the market. They seldom pay for their feed if kept over a third season.

Supplement the regular feeds of the hens with a wet mash—fed crumbly. Feed all the chicks will clean up before going to roost, but none should be left in the trough, for it will sour.

Chickens will do better if not compelled to pick their living with the old fowl. There will also be less trouble from lice.

A growing chick will not thrive on short rations. If the right kind of food is fed, there is little danger of overfeeding, especially if given plenty of range.

Your Problems

Conducted by Mrs Helen Law.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Knitter:—Bright colored cretonne is perhaps the most popular material for a knitting-bag, though goods of all sorts from khaki to silk can be used. Cut a seven-inch circle of cardboard for the bottom and cover on both sides with plain sateen. Cut cretonne a yard and a quarter by 16 inches, seam up and join to the circle. Cover four or five-inch embroidery hoop with ribbon and to this attach a band one and one-half inches wide by eight long, sewing the lower end of the band across the seam of the bag near the bottom. This bag is roomy and can be easily closed by gathering up the top and slipping through the ring, and conveniently carried by slipping the band over the arm. It may be lined with plain sateen like the bottom. Khaki colored linen makes a serviceable bag.

B.H.:—It is very difficult to remove paint, but you might try turpentine or benzine.

R.D.:—The only safe and permanent cure for superfluous hair is treatment by electrolysis. This can be given only by an expert.

Housewife:—As you will notice in the splendid course in Domestic Science now appearing in the Household Department, there are five types or groups of foods:

1. Foods depended upon for mineral matter, vegetable acids and body-regulating substances, such as fruits and succulent vegetables.

2. Foods depended upon for protein, such as milk, eggs, meat and dried legumes.

3. Foods depended upon for starch, such as cereal breakfast foods, flours, meals and foods made from them.

4. Foods depended upon for sugar, such as sugar, molasses, syrups, honey, jams, thick preserves, dried fruits, sweet cake and desserts.

5. Foods depended upon for fat, such as butter, cream, salad oil and other table fats, lard, suet and other cooking fats and oils, salt pork and bacon.

In order that the meals may supply all the needed nutritive elements, they must make sure that all groups are well represented; not necessarily at every meal, but when the family diet is considered day by day and week in and week out. Quantities should vary, particularly of the energy-yielding foods, for persons engaged in different pursuits necessitating different amounts of exercise. The heavier the work the more food is needed. In planning meals in accordance with the method here suggested, choose only a few dishes and make sure that the different groups are represented in the daily fare.

Foods in groups 1 and 3 are less expensive, as a rule, than those in group 2, and for this and other reasons should be used freely as the basis of the diet, with sufficient amounts of foods from groups 2, 4 and 5 to round out the meals. Remember that the materials used in cooking or served with foods (flour, eggs, milk, fat, sugar, etc.), add their food value to the diet. Remember, also, that it is not necessary to supply all the types of food at every meal, providing enough of each is supplied in the course of the day. For example, if the foods which are depended upon for nitrogen (meat, eggs, milk, etc.) are found in abundance at breakfast and dinner, it is not necessary to include them at supper or lunch, or if a person prefers a light breakfast he may leave out the nitrogen-rich food and perhaps some of the other foods in the morning and make up for it at the noon and evening meals.

Detecting Stale Eggs.

Since stale eggs contain substances deleterious to the health, it is advantageous to test their condition before serving them as food.

Eggs purchased at the average city grocery store are in varying degrees of freshness, from those guaranteed to have been laid within twenty-four hours to those which have been in the hands of farmers and merchants for weeks and perhaps in cold storage for months.

It is a simple matter to test the age of an egg by holding it in front of a lighted candle in a dark room. The eye should be shielded from the flame by a cardboard or other material. In this a hole should be cut slightly smaller than the egg, against which hole the egg should be placed where the light may penetrate and reveal the position of the yolk and of the little air chamber which exists at the larger end. If an electric light is available, or a bright gas flame, these are, of course, much more effective in showing up the condition of the egg.

When an egg is fresh the air chamber is small and the yoke is visible in the middle of the shell. When an egg is advanced in age, the air space is increased in size, and the yolk sinks out of place, sometimes sticking to the side of the shell on which the egg has been lying.

At a still later stage in its deterioration, the egg shows one or more distinctly dark spots, due to the growth of a fungus, in addition to an increased air space, and the outline of the yolk is no longer definite. A decayed egg shows a greatly increased size of the air space, due to the shrinking of the shell contents, and a general running together of the white and yolk, no central dark nucleus outlining the yolk being visible.

Another method of testing an egg to find out whether or not it is a storage egg, and if so how long it has probably been held, is to place it in a 10 per cent. solution of salt at 70 degrees Fahrenheit. If the egg is absolutely fresh, it will sink. But if it is old, it will not do so, even if it is only a few days old.

The age of the egg can be determined to some extent, by the position at which it floats upon the water.

Spraying potatoes once with the Bordeaux mixture is not sufficient. Spraying should be kept up at intervals of two weeks until the end of August.

Bedtime Stories

Bed Time.

"Story time and bed time, kiddies!" called Aunt Barbara.

"Oh, Aunt Barbara," pleaded Bobby, "mayn't we stay out a little longer? It isn't very dark, you see, and we're having such fun playing tag with the fireflies."

"And the birds haven't gone to bed yet," added Bluebell.

"The baby birds are all tucked in," answered Aunt Barbara, with a laugh.

"But they're in bed all the time," argued Bobby. "We mean those that go upstairs to bed, same as we do."

"Well," said Aunt Barbara, smiling, "it is certainly a beautiful evening; so you may have fifteen minutes more of it, if you like."

"Thank you, Aunt Barbara!" cried Bluebell, and off ran the children to make the most of their extra freedom.

"Birds don't go upstairs," mused Bluebell, as she skipped across the large grassy triangle in front of the old house in which she and Bobby were spending the summer with Aunt Barbara. "They just fly into the trees and cuddle up on a branch, don't they?"

"Oh, I suppose so," answered Bobby. "But what's that out in the road, Bluebell?"

"Where? Oh, that funny thing bobbing along by the edge of the grass?" returned Bluebell. "Why, why, it's a—a—a sort of a big little bird, I think!"

"It is a bird," declared Bobby, "and it's pretty big, but I don't believe it can fly. Maybe it's hurt in some way."

"No," objected Bluebell. "It doesn't act hurt. I guess it's young and its wings aren't very strong."

"Oh, that's too bad!" sympathized Bobby. "It will have to stay on the ground all night, and a cat or a weasel may catch it."

"Let's call Aunt Barbara," proposed Bluebell. "She'll put it into a basket and take it into the house where it will be safe."

"That might frighten it," said Bobby. "Let's watch it a minute."

"It's brown and long-looking," whispered Bluebell. "I wonder if it's a quail."

Bobby shook his head. "No, quails are fatter," he replied.

Along the road, in the twilight, hobbled, the clumsy little creature until it reached the grass that bordered the roadside. It wriggled up on the grass and kept on in the direction of the tree.

"If we had a ladder, Aunt Barbara might put it up in the tree," said Bobby.

But, to the children's surprise, the little traveller did not wait for a ladder or for any help. Without any pause for thought it began to go straight up the tree trunk toward the leafy shelter above.

"Look! Look!" cried Bluebell; but Bobby was already looking with all his eyes.

With its tail for a prop and with a little lift to its wings the bird hitched along its strange stairway.

"Its wings are yellowish underneath," remarked Bobby. "I'm going to get Aunt Barbara."

"Aunt Barbara! Aunt Barbara is so educated at the side door. "There's a bird here going upstairs all by itself!"

Aunt Barbara hastened after Bobby.

"It's a young flicker," she told the children. "He knows how to take care of himself, doesn't he?"

"And he goes upstairs to bed without having anyone call him," said Bobby, laughing, with a shy glance at Bluebell.

"And now we'll go, too," said Bluebell, and slipped her hand into that of her aunt.

In These War Times you want real food that contains the greatest amount of body-building material at lowest cost. The whole wheat grain is all food. **Shredded Wheat Biscuit** is the whole wheat in a digestible form. Two or three of these little loaves of baked whole wheat with milk and a little fruit make a nourishing, strengthening meal.

Made in Canada.

A STRANGE PICTURE OF WAR.

Solemn and Awe-inspiring Was the Sight of Ypres in Flames.

On a perfect night, brilliantly clear and absolutely still, what Stevenson would call a wonderful clear night of stars, Dr. William Boyd, author of "With a Field Ambulance at Ypres, determined to climb, with some of his companions, a hill that overlooked the battle front. That was a strange ascent, he says. For the greater part of the way it lay through the woods, and we were continually falling over tree trunks, tumbling into shell holes, running into telephone wires and extricating ourselves from barbed wire. Not a sound was to be heard except the croaking of the frogs.

Suddenly we emerged from the tangled undergrowth on the bare summit of the hill and sat down at the foot of the ruined tower. The scene that met our eyes was so solemn, so awe inspiring, that all conversation between us ceased. At our feet lay Ypres, burning furiously. The great cloud that hung above it was now glowing as if some vast furnace were burning in its midst, but the cloud itself appeared motionless. Now and then great tongues of flame would leap up from the doomed town, but apart from them the whose impression was one of rest, immobility. We felt that we were looking at a painted scene, or watching a vast stage where some lurid Mephistophelean drama was being enacted.

Here and there along the line a star shell went up and, bursting, lighted the landscape with a garish flare. Overhead were the quiet stars. Nothing broke the quiet silence except now and then the deep, rich, solemn b-o-o-m! of a big gun far away up north, with perhaps an occasional crackle of rifles near at hand. But, as we sat, the silence of the night was broken by the song of a bird, faint and hesitating at first, but gradually gathering volume, until the whole air throbbed with the melody. It was a nightingale singing in the wood below.

We sat on, and on, and on. The whole town was glowing like the mouth of hell. Now and again a roof fell in, and the great hungry tongues of fire licked the sky; but at our distance no sound broke the awesome stillness—only the song of the nightingale and the booming of guns.

Really there is nothing to canning fruit and vegetables except care, cleanliness, fresh products, jars and heat.

Establish a home canning firm, "Father, Mother & Co." Don't forget the little "co.'s."

An Australian claims to have discovered a new rapid tanning process with which sole leather can be tanned in seven days, calf-skin in six hours and other skins proportionately quickly.

INSTANT POSTUM

instead of tea and coffee on the family table, makes for better health and more comfort.

Preferred by Thousands

"There's a Reason"

WAR SUPPLIES.

A Few Figures Regarding the Present World-wide Conflict.

Since August, 1914, British destroyers and airplanes have conveyed across the English Channel 8,000,000 men, 10,000,000 tons of explosives and war munitions, 1,250,000 sick and wounded men, 1,000,000 horses and mules and 50,000,000 gallons of gasoline.

In munitions alone the Allies have used 200,000 tons of ammunition in five weeks.

That is shooting away metal at the rate of 6,000 tons a day, 250 tons every hour, forty tons a minute, 1,500 pounds every second.

The British War Office tells how the Allies at first used 60,000 pairs of horse-shoes a month. This supply was inadequate—they are now using 1,500,000 every month.

In filling one order from the front the London office had to provide 25,000,000 gas helmets, 250,000,000 sand bags, 105,000,000 yards of khaki and 115,000,000 yards of flannel.

The khaki and flannel together measured 110,000 miles, or enough to go four and a half times round the earth at the equator.

In one war order placed recently the United States asked for 5,000,000 blankets, 2,000,000 cots, 45,500,000 yards of cotton cloth, 21,200,000 yards of unbleached drilling, 6,000,000 pairs of shoes and 11,191,000 pairs of light woolen socks.

Such a drain on the world's economic resources makes for a tremendous readjustment all along the line. Not the least interesting phase of this situation is the shift of woman to the job of man.

In Germany close to 5,000,000 women are in industries covered by the sick and death benefit societies. In England more than 3,000,000 women are employed outside of their homes, of whom half a million work in the munition plants. Similar conditions obtain in France.

FIGHTING FOR HAPPINESS

When you get into a frame of mind that makes life seem one tiresome duty after another, with no pleasure in it; when ill-health seems to take all the joy out of life and you worry over things that are really not worth worrying about, then your nervous system is becoming exhausted, and you are on the way to a general breakdown in health. In this condition your health and happiness is worth fighting for and good, rich, red blood is what your system needs. It is a hopeless task to try to restore your health while your blood is deficient either in quantity or quality. And remember that no medicine can be of any use to you that does not build up your weak, watery blood.

To build up the blood and strengthen the nerves there is one remedy that has been a household word for more than a generation—Dr Williams' Pink Pills for Pale People. It is the actual mission of these pills to make new, rich, red blood, which strengthens the nerves and tones the entire system. They give you a new appetite, make sleep refreshing, put color in the lips and cheeks, and drive away that unnatural tired feeling that oppresses so many people. If you want to experience new health and happiness give Dr Williams' Pink Pills a fair trial.

You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

TRIPPING INTO TOWN.

A little lass with golden hair,
A little lass with brown,
A little lass with raven locks,
Went tripping into town.

"I like the golden hair the best!"
"And I prefer the brown!"
"And I the black," three sparrows said—
Three sparrows of the town.

"Tu-wit! Tu-wit!" an old owl cried
From the belfry of the town;
"Glad-hearted lassies need not mind
If locks be gold, black, brown!
Tu-wit! Tu-wit! so fast, so fast
The sands of life run down.
And soon, so soon, three white-haired dames
Will totter through the town;
Gone then for aye the raven locks,
The golden hair, the brown,
And she will fairest be whose face
Has never worn a frown!"

Elephants' Curious Teeth.

Whoever has looked inside an elephant's mouth has seen a strange sight. Elephants have no front teeth, and they never eat flesh or any food that requires tearing apart. Eight teeth are all they have, two above and two below on each side, huge yellow molars as wide as a man's hand. Over these hay and fodder are shifted by the queerest, ugliest tongue in the whole animal kingdom—a tongue that is literally hung at both ends, having no power of movement except in the middle, where it shifts back and forth from the side, arching up against the roof of the big mouth like a wrinkled pink serpent. Elephants, like human beings, have two sets of teeth. The milk teeth, which are smaller than the permanent molars, fall out when the animals are about fourteen years old. These baby teeth—which are, nevertheless, enormous—are occasionally picked up by circus men among the fodder and preserved as curiosities.

The ideal condition for a cornfield is moist below, dry and light on the surface, which should be free from weeds.

Practical Designs

A smart blouse and skirt, which would be welcome in any woman's wardrobe, are shown in the accompanying illustration. The waist is of fine handkerchief linen with an embroidered spray across the front, and collar and cuffs edged with narrow crocheted lace. The skirt is developed in green wool jersey and is made with a panel down the front and with sides and back slightly gathered. The novel feature of this skirt is the pocket section at the sides. McCall Patterns No. 7893, Ladies' Blouse; in 8 sizes, 34 to 42 bust; No. 7861, Ladies' Four-Piece Skirt; 39 or 37-inch length; in 6 sizes, 22 to 32 waist. Price, 20 cents each.

The all-practical and all-stylish plaid gingham is used for developing the dress illustrated, which is trimmed with a smart pointed collar, cuffs and large pockets of pique. A medium-width belt of patent leather is a very important addition to this little dress. McCall Pattern No. 7864, Girl's Dress; in 5 sizes, 6 to 14 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

WITH THE FINGERS!
SAYS CORNS LIFT OUT
WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers. If you will apply on the corn a few drops of freezone, says a Cincinnati authority.

At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

Increasing Bee Stocks.

Roughly speaking, the bees that are in the hives at the commencement of the honey-flow gather the crop, while the brood build up the colony for next year, unless there is to be another important honey flow. This brood is very valuable for forming nuclei, because these, started early with a laying queen, or ripe queen-cell, will build up into strong colonies before winter. Increasing in this way with brood from strong colonies during the honey-flow is the basic principle upon which an apiary can be quickly built up, while at the same time an almost full honey crop is secured.

TIRES REMADE

Scrap tires can be made into guaranteed tread double service tires, puncture proof, blow-out proof, will outwear any new tire; results will astonish you; send for circular; we pay 8 cents a pound for old tires. We buy, sell and exchange new and second-hand tires and tubes. Auto Tire Exchange, 316 King St., Hamilton, and 101 Yonge Street, Toronto.

"TIP-TOP WAD"
STOPS HOLES IN TIRES
Vulcanizes Quickly Without Heat
Repair your Tires, Tubes, Punctures, Hot Water Bottles. 300,000 users already know it. Postage paid all over Canada. Order a 25-cent tin to-day. Guaranteed to satisfy. Refuse all substitutes. H. Schofield, 49 Victoria St., Toronto.

TO MOTHER.

Dear mother mine, why should you weep
That I, your son, should pay the price
Of one who would his conscience keep,
Though keeping it means sacrifice?
You needs should weep if I heard not
The soul's reveille clear and strong,
Above my fears; if I forgot
A folded hand is weaponed wrong;
Helps wrong prevail, since for the right
It does not work; no friend is he
Of liberty who sees sheer might
Thrust out, and sits in apathy.
He is her friend who, when she cries,
Finds all his fires of spirit spring
Towards God's canopy of skies—
He rides upon Nemesis' wing
Through battle's fury, and the strife;
His is the faith expressed in act;
He to his life is true, and Life
Will say he has kept the pact.
—A. H. Taylor,
On active service in the field.

HARVESTERS WANTED!

Canadian Northern Ry. Runs Excursion Trains To The West.

The earliest arrivals in Winnipeg will have the first and best choice of employment in the harvest fields beyond. The Canadian Northern Railway will run the first Excursion Trains to the West in this connection, leaving Ottawa 9.30 a.m. Aug. 16th; and 10.20 p.m. Aug. 16th and 28th; also leaving Toronto 9.00 a.m. Aug. 21st; and 10.00 p.m. Aug. 21st, 23rd and 30th. Through cars will be operated from Montreal and Joliette, affording direct connection at Ottawa from principal Quebec points.

The equipment will consist of electric lighted colonist cars and lunch counter cars with special accommodation for women.

While the best chances are along the Lines of the Canadian Northern in Manitoba, Saskatchewan and Alberta, where the demand for labor is heavy and the wages high, no matter what final destination you may select, the C.N.R. offers the best route to Winnipeg.

For leaflet showing special train service, excursion dates and the number of laborers required at various points, together with all other particulars, apply to nearest C.N.R. Agent or General Passenger Department, Montreal, Que., and Toronto, Ont.

EXHIBITION COSTS $350,000.

Special Attractions At This Year's Fair Above the Ordinary.

It costs upward of $350,000 to stage and prepare the Canadian National Exhibition each year. Much of this is spent on special attractions for which the Exhibition is famous. No expense or effort has been spared in securing for Confederation Year the finest array of acts for the Hippodrome Show that will be given as usual in front of the Grand Stand every afternoon and evening. There will be a galaxy of stars of the show world filling three stages at the one time.

One of the outstanding features will be the Al Golem Troupe, court artists to the Shah of Persia, who present the most picturesque and sensational acrobatic novelty now before the public. The remainder of the programme will be in keeping with this wonderful attraction.

Minard's Liniment Cures Distemper.

Cold Storage Architecture.

To meet an ever-increasing demand for information respecting the construction of ice-houses and small cold storage systems for farmers, country storekeepers, milk producers, hotel-keepers, owners of country homes and others, the Dominion Department of Agriculture has issued Bulletin No. 19, of the Dairy and Cold Storage Branch, entitled "Small Cold Storages and Dairy Buildings," the immediate sponsors for which are Mr. J. A. Ruddick, Dairy and Cold Storage Commissioner, and Mr. Joseph Burgess, Cold Storage Inspector. The bulletin is a complete handbook on cold storage construction of a comparatively simple and inexpensive kind. Besides minute explanatory details of plans and material required for construction of ice houses and refrigerators, a series of drawings prepared by the Architect's Branch of the Department of Public Works is presented, of which blue prints on a scale of one inch to two feet, can be had free on application to the Dairy and Cold Storage Commissioner, while the bulletin itself can be had, also free, by writing to the Publications Branch, Department of Agriculture, Ottawa. If the information herein contained were extensively made use of, not only would much waste be avoided and financial profit accrued, but considerable benefit would be derived in health and the enjoyment of life enhanced. Five different plans are given in the bulletin with complete specifications for each and a statement of quantities of ice that can be stored.

Vice-Admiral Sims is a Canadian by birth and a fighter by occupation.

LEGACIES.

Unto my friends I give my thoughts,
Unto my God my soul—
Unto my foe I leave my love—
These are of life the whole.

Nay, there is something—a trifle—left.
Who shall receive this dower?
See, Earth Mother, a handful of dust,
Turn it into a flower.
Ethelwyn Wetherald.

SUMMER COMPLAINTS KILL LITTLE ONES

At the first sign of illness during the hot weather give the little ones Baby's Own Tablets, or in a few hours he may be beyond cure. These Tablets will prevent summer complaints if given occasionally to the well child and will promptly cure these troubles if they come on suddenly. Baby's Own Tablets should always be kept in every home where there are young children. There is no other medicine as good and the mother has the guarantee of a government analyst that they are absolutely safe. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Garden at the Front.

A Canadian soldier connected with the Sanitary Department of the Canadian army in France, writes home that he has a very flourishing vegetable garden near the battle line, and that the cabbages, beets, onions, etc., are coming along splendidly right within sound of the battle's roar.

Minard's Liniment Cures Colds, Etc.

Where Bill Was.

Bill Smith, a country shopkeeper, went to the city to buy goods. They were sent immediately, and reached home before he did. When the boxes were delivered Mrs. Smith, who was keeping the shop, uttered a scream, seized a hatchet, and began frantically to open the largest one.

"What's the matter, Sarah?" said one of the bystanders who had watched her in amazement.

Pale and faint, Mrs. Smith pointed to an inscription on the box. It read:

"Bill inside."

WOMEN! MOTHERS! DAUGHTERS

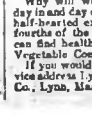
You who are nervous; life palls, hard work and worry annoy or irritate, who are subject to fits of melancholy or the "blues," get your blood examined for iron deficiency.

CHALYBEATED IRON taken three times a day after meals will increase your strength 100 per cent in two weeks in many cases.—Ferdinand P. King, M.D.

ITCHING BURNING PIMPLES ON BABY

Head and Face Covered. Came Off In Scales. Would Cry Most All Night. Cuticura Healed.

"When my baby was two weeks old her head and face became covered with little water pimples. They later broke and dried, and came off in scales. They itched and burned terribly and she could not sleep but would cry most all night. She was so cross and fretful I could not leave her to do my work.



"Then I got Cuticura Soap and Ointment. In three weeks there was not a trace of the trouble left. She was healed." (Signed) Mrs. Alex. Foster, R. R. 2, Preston Sta., Ont., June 9, 1916. Prevent further trouble by using Cuticura Soap for the toilet.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

SICK WOMAN HAD CRYING SPELLS

Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Enhaut, Pa.—"I was all run down and weak inwardly. I had female troubles and nervous feelings and my head bothered me. I would often have crying spells and feel as if I was not safe. If I heard anyone coming I would run and lock the door so they would not see me. I tried several doctors and they did not help me so I said to my mother 'I guess I will have to die as there is no help for me.' She got me one of your little books and my husband said I should try one bottle. I stopped the doctor's medicine and took Lydia E. Pinkham's Vegetable Compound. It soon made a change in me and now I am strong and do all my work."—Mrs. AUGUSTUS BAUGHMAN, Box 86, Enhaut, Pa.

Why will women continue to suffer day in and day out and drag out a sickly, half-hearted existence, missing three-fourths of the joy of living, when they can find health in Lydia E. Pinkham's Vegetable Compound?

If you would like free confidential advice address Lydia E. Pinkham Medicine Co., Lynn, Mass.

The Paisley Advocate

PAISLEY, AUG. 22nd, 1917

—Now that Bob Rogers has resigned from the Dominion Cabinet, there is again a fair prospect that a coalition government may be formed. For some time prior to the unexpected rupture between the Premier and the ex-Minister of Public Works, there appeared to be nothing for it but an election to clear the air. If Premier Borden cannot now reconstruct a cabinet in which considerable Liberal timber is used, then the people must go to the polls and do what they can to produce a House of Commons not at that will be of greater utility than the present one in carrying the country's business through the greatest crisis in our history.

LOCAL AND DISTRICT NEWS

Another Promotion

Corp J Hamilton, of the artillery service in France, has been again promoted, and is now wearing sergeant's stripes. In writing home to his father Jack facetiously remarked that "If the war continues for twenty years I may be a general."

Prize Home Gardens

Following are the names of the winners on the home garden contest in Saugeen, Bruce and Greenock townships: Harold Upshall, Marie Gowanlock, Elsie Muir, Harold Urquhart, Bruce McLean, Effie Reoch, Rachel Cook, Sadie Carelton, Mary Cassidy, Jennie Carr.

Sure It Was

Brer Hunter, of the Kincardine Reporter, seems a little miffed because we called the Kincardine Pipe Band the leading attraction at Centre Bruce garden party, when editors Sayles and Hunter were there. Well, we didn't omit to mention the newspaper boys! While they may have "talked to beat the band," we had not heard that they outrivalled Sally Young's Kitties as an attraction, nor did we understand that either of them led the band in anyway. So we fail to see why we should make any alteration in our report. More than that, it is about a safe bet that if the newspaper fellows were advertised as the leading attraction and the band left out, there wouldn't be a crowd worth talking to.

Was it a Poor Set of Teeth

The following paragraph is from the Owen Sound Sun: We would like to make a suggestion to the Women's Institutes and other contemplating putting on a garden party. It is that they select a committee of their best books to pass upon all pastry before it is placed upon the table for the hungry public to gorge itself upon. If the crust requires an axe to cut it then place an axe beside it on the table. At a garden party in North Bruce a few nights ago some excellent wild raspberry filling was practically wasted because the crusts of the pies were so tough that the little the eatlery could not make an entrance. This is not fair to the large number who make it a point to attend every garden party within 30 miles. We hope the board of planners will be appointed before the next garden party at Wiarton.

DEAR EDITOR—

Last issue I referred to the advantages of thoroughness in dental operations. I will draw the attention of the public to some of the dissimilar ages of operations that are done incorrectly, from a surgical and mechanical point of view.

Most people are aware of the very tender, sensitive and withal a very interesting bit of soft tissue called the "pulp," or by most people called "nerve." If a person takes care of it by seeing that the walls surrounding it are in good condition for protecting it, then it will be a good friend indeed. If, however, it is exposed to irritating influences it will kick harder than any mule unless treated properly. To treat a live nerve properly and to consume the inflammation and consequent destruction of tissue connected with and surrounding this nerve, has been the object of scientific investigation and testing for many years, and it is now clearly proven that not only can abscesses around the ends of roots be cured, but even when pockets are formed in the bone around the ends of the roots of teeth after proper treatment these pockets will fill up again with new bone and the teeth become as useful as ever.

It is clearly demonstrated also that there are still many dentists who, in their anxiety to appear cheap and to get business from the cheap job hunter, will not or cannot give patients the benefit of the surgical skill required in these special operations. These men are not honest because they know they can play on the public, who do not, of course, understand the work. Time and time again cases come under my notice where people have been led to go many miles out of their way and away from their regular place of business where they could get reliable work done, and have had little class of work done. Not only that, but their neighbors are duly apprised of the news "that is such and such a town you can get work done so much cheaper and he does not take so long to do it." Everything is so dear in our own town. Many people are led to accept work that is simply fraud by taking the advice of their would be friends. Many of these victims come to the conclusion that if that man could not save their teeth they better have them out, and so replace solid teeth with movable ones that cannot possibly masticate foods requiring great pressure like beefsteak.

One of these fake operators is working away on the ignorance of the people now not so very far away from Paisley. Much of his work is the cause of many people enduring unnecessary pain and loss of teeth. I do not know any business which gives as good returns for the money as good dentistry. Why not have it?

A H ALLEN

—King George expresses the gratitude of Great Britain to Canada in the steps taken to increase exports of food stuffs to the Mother Land. "I have no doubt that the self-sacrifice displayed on the battlefields of France by my heroic Canadian troops will find its counterpart in the efforts of those who, at home in the Dominion, are devoting themselves to this work."

Meeting at Gillies Hill

Addressed by Hon. Duncan Marshall and Wm. McDonald, M.P.P.

THE ADVOCATE scribe has been present at many public meetings held in the Township Hall at Gillies Hill in the past twenty-five years, but at no previous time has he seen a gathering of the denomination as many conditions which mark the passing of the old and the coming of the new in the circumstances of that as on Wednesday evening of last week. First a great many of the people came to the meeting in motor cars. In the audience there was quite a number of ladies who at the next election will be entitled to go into the polling booth and mark their ballots for a candidate to the Legislature, and it is quite possible they may also enjoy the same privilege at the Dominion election. Of the old time political stalwarts of either party there was hardly one. The great majority of those who a quarter of a century ago took an active interest in all public meetings at the township hall have cast their last votes upon earthly questions and passed to the quietude and peacefulness of that next world where political strife does not arise and party questions are not discussed. Of how those old partisan patriots were judged for their actions in the political arena, no intimation has been received. It might be remarked, however, that had many of the most prominent Grits and Tories been guilty of the atrocious acts with which they were charged by their opponents in the red-hot campaigns of the time, very few, indeed, but would be condemned to a place of torment where they would meet not only old political friends but enemies as well. We would rather believe, however, that those men should be judged upon that sense of conviction and of duty with which they endorsed their party leaders and worked for victory at the polls. They firmly believed the fate of the country depended upon the "party of purity" being entrusted with the reins of power, and what Canadian citizen would be found affiliating himself with a party that was not pure? It was all in how they saw things. The speakers on Wednesday evening were two men who were born and raised in the township. The one has risen to the dignified position of a cabinet minister in a western province where he is aiming to be more useful than dignified, and with an admirable agressiveness is introducing new and more efficacious ways of doing things in the department of government under his charge. The other has more recently taken a place in the legislative halls of our own province, but bids fair, if fortune favors the party of his choice, to fill a larger place than a mere occupant of a seat in the House.

Mr Robt Oswald was elected chairman of the meeting, and briefly introduced the speakers.

Mr Wm McDonald, M P P, said that in the coming elections men are going to vote more on principle, and the old political parties are going to be broken up more than ever before. In the Legislature there is only one representative of the Labor party—Allan Studholme—who gives a conscientious vote every time and is a genuine patriot. Mr McDonald cannot see why cities do not elect more labor men to parliament. Speaking of his own career, Mr McDonald challenged anyone to take exception to any vote he has given in the House. He will continue to try to keep a good record, and will oppose graft whether by Liberal or any other party. The first bill he introduced in the Legislature was to give women the franchise, and the step has since been taken by the Government. He opined that in this province we are going about teaching agriculture altogether wrong. The schools are responsible. Teaching instils in the pupils a love for those subjects that are taught, and if we are going to train the boys to have a love for the farm we must begin it in the schools. He read a series of questions on agriculture which a teacher in Alberta must be able to answer, which shows that agriculture is taught in that province, and teachers must be capable of giving instruction in a very practical course. The speaker also quoted some of the ridiculous questions in the Ontario examination in Art. There are too many subjects in public and high schools to be properly taught, and the curriculum will not be right until some are cut out and the schools get down to teaching those things that are of practical value in life, giving more attention to agriculture than art.

Mr Duncan Marshall, Minister of Agriculture in Alberta Legislature, in opening his address, alluded to some of the effects this war upon agriculture. The war must end some day when Canada must take stock of herself, and then we'll find we are facing some of the greatest of problems. There will be an immense debt and interest to pay. Our debt is piling up now at the rate of $750,000 per day. There will be only one way to pay it and liquidate our national liabilities, through our agricultural production and export of products. We have to have in this country by that time a government with courage to do something. The income tax has got to be increased tremendously. Less than six per cent of the arable land in the Canadian west is at present under cultivation, yet it is impossible to get any on homestead terms. Something radical must be done in connection with this. Land in the hands of speculators should be taken away from them. They should be made to hand it over at a reasonable rate, so that those who want land can obtain it and thus be in a position to assist in meeting our liabilities. When peace comes there will be extensive readjustment and reconstruction in various ways. Efficiency on the land is going to count at the close of this war. Grain prices are bound to recede when the Government is not buying and hoarding to provide against a possible famine. Live stock farming will be the only line that will be worth while. There are not horses enough for war purposes on the German front. No less than 1,000 will be required every month until the end of the war. The history of tractors operated for farm work is not good, and farming is still largely done by horses. There is no question about the horse market recovering very rapidly after the regular business of the world is resumed. In cattle these will be even a greater demand. France, Germany and Belgium will have lost all theirs. In Texas there are right now six million head less than a few years ago. With these conditions prevailing prices are bound to be high for the next ten or twelve years after the close of hostilities. Good live stock can be raised by the farmer as well as the poorer grades. He might as well bring up one that will sell for $150 as one that would bring only $55.

Discussing education and its relation to agriculture, Mr Marshall observed that all the time he attended public school in Elderslie he never had it said to him that it would be a good thing to be a farmer, or to be a better farmer than his father. He had been advised, however, that if he studied well and passed the entrance examination then he could go in and take a high school course and eventually become a professional man of some kind. It is the school system that is at fault in that it does not educate boys to believe that it would be a good thing to live on the farm. If there is any change or improvement made it will be due to public opinion, which is the driving force which brings about any political reform. Why is agriculture, the great industry, and the only one worth while, receiving so little attention in our education system?

In Alberta Mr Marshall found, after becoming Minister of Agriculture, that the boys of the province wanted to learn something about agriculture, and believing that agricultural education should consist of two things—theory and practice—set about giving that education by establishing a number of school at different points where young men and women could receive instruction that would be of practical help to them in farm work. The province now has seven schools of agriculture, which are organized and equipped to give a proper education to 80 boys and girls for every line of endeavor on the land. The late Dr James stated that Alberta has the best system of agricultural education on the North American continent, and hoped to see similar systems in every province of the Dominion. They are beginning to lay the foundation of agricultural teaching on an adequate basis in public and high schools as well as colleges.

The butter-making industry has been greatly improved and assisted by the Agricultural Department, with the result that Alberta has now the highest grade of creamery products, and sent out the best lot of butter that ever crossed the Atlantic. Their creameries captured 54 out of 56 prizes at a large exhibition at Calgary where there was competition from all sections of the Dominion.

Mr Marshall, in the course of his address, laid particular stress upon the importance and desirability of raising the standard of rural life to such a point that the young people will not be inclined to leave the farm. The great thing needed is an institution that will remove the grudge that boys have against the business of farming. On his trip to the Old Country the speaker had found in Aberdeenshire farmers and stockmen who believe that they are engaged in the greatest business in the world. Single animals from their herds are sold at fabulous figures. It has been acknowledged in high places that Wm Duffie the Shorthorn cattle breeder has done more for Britain than any prime minister of the nation.

Mr Marshall advocated a campaign for agricultural reading, also a campaign all over the land for building and equipping schools that will help boys and girls to obtain a training which will fit them for a good and useful life on the farm, and produce conditions that will make them satisfied with life on the land. The kind of agricultural education most needed is that which will lead the people to make their homes comfortable and agreeable in every way, and produce a feeling in the occupants that is the place to get the most solid enjoyment out of life. There is nothing will help the farmer more to do this than the motor car, and none deserve more than the farmer's wife and daughter to enjoy the pleasure controlled by the use of the fast moving and comfortable motor vehicles.

Speaking of men getting enjoyment out of their occupation, he said there isn't anything that will afford as much pleasure as an enthusiastic agriculturist gets out of watching the things about him grow and develop. Compared with that the man who spends his working hours in measuring calico or merely handling any other goods has no life at all.

The farmer's boy must be taught something about farming if he is to receive an inspiration that will keep him on the farm. They've got to know, understand and appreciate their position and must be trained and taught so that they will be getting a reason out of the things they are doing, instead of the work seeming and being all drudgery. Developing intelligence and ability in agricultural pursuits means becoming the most important and useful citizens of this country.

The question of making our educational system meet the requirements of a people whose basic industry is agriculture, is one that should engage the attention of the governments of this country.

In Alberta clubs are being organized in connection with all public schools for the promotion of agricultural education. Competitions are held for the pupils, with prizes offered for the breaking of colts, growing of mangels, turnips and potatoes, and thus they are given an ambition to do things right.

Ontario farmers are well off in working only a moderate area of land instead of having the land greed that prevails in the west. He hopes to see the day when the farms will be small and communities of good homes will be formed.

A Few Minutes at the Front

Vivid Reproduction of Night Scene "Over There" at the Exhibition

Confederation Year fireworks at the Canadian National Exhibition will be on an unusually magnificent scale, in keeping with the elaborate nature of the remainder of the programme. Included in the brilliant display will be a representation of the great flares which are such a menace to the boys "Over There" on their night forays, war bombs, star shells and many other spectacular methods of lighting the battlefield, giving one a vivid idea of what night is along the war-torn front in Europe.

BORN

BRUNTON—In Arran, on Aug 14th, to Mr and Mrs John Brunton, a son.

SCHWASS—At Burgoyne, to Mr and Mrs S Schwass, a daughter.

DUDGEON—In Bruce Tp., on Aug. 9th, to Mr and Mrs Ed Dudgeon, a daughter.

DIED

HALL—In Owen Sound Hospital, on Aug 11th, Samuel Hall, of Tara, aged 75 years.

DENT—In Bruce Tp., on Aug 15th, Elizabeth Wilson, widow of the late Thos Dent, aged 94 years and 4 months.

In Fond Memoriam

of Edward Archie Shipley, only child of Mr and Mrs Alex Shipley, who died Nov 28th, 1916.

'Tis sweet to know that we will meet again,
Where parting is no more,
And our dear Edward we loved so well
Has only gone before.
God knows how much we miss him,
He counts the tears we shed
And whispers, "Hush, he only sleeps,
Your loved one is not dead."
Some time, some day, our eyes shall see
the face we loved so dear;
Some day, some time, his dear hand clasp
to never say farewell.

From his loving Father and Mother

What it Means to You—in Your Pocketbook—in Your Personal Appearance—How it Conforms to Sound Business Judgment in Select from

Our Famous Line of

Men's and Ladies' Suitings

Taking for our text, "He profits most who serves most—he who serves best, serves most"—we put in force a plan of retailing that tends to centre more and more business here—by making it to the advantage of the public to give us their patronage.

We're selling clothes on a margin of profit heretofore regarded as insufficient. But we're winning business on the basis of volume.

Here are 200 patterns for selection. If there's a man who can't be suited we'd like to see him. If there is a man whose tastes can't be met he is a stranger to us.

H. PFAFF & SON

"ANURIC"
THE NEWEST
DISCOVERY IN CHEMISTRY

This is a recent discovery of Doctor Pierce, who is head of the Invalids' Hotel and Surgical Institute at Buffalo, N. Y. Experiments at Doctor Pierce's Hospital for several years proved that there is no other eliminator of uric acid that can be compared to it. For those easily recognized symptoms of inflammation—as backache, scalding urine and frequent urination, as well as sediment in the urine, or if uric acid in the blood has caused rheumatism, it is simply wonderful how surely "Anuric" acts. The best of results are always obtained in cases of acute rheumatism in the joints, in gravel and gout, and invariably the pains and stiffness which so frequently and persistently accompany this disease rapidly disappear.

Go to your nearest drug store and simply ask for a 50-cent package of "Anuric," manufactured by Dr. Pierce, or send 10 cents to Dr. Pierce for a large trial package. If you suspect kidney or bladder trouble, send him a sample of your water and describe symptoms. Doctor Pierce's chemist will examine it, then Dr. Pierce will report to you, without fee or charge.

NOTE!—French scientists affirm that "Anuric" is thirty-seven times more active than lithia in eliminating uric acid, and is a harmless but reliable chemical compound that may be safely given to children, but should be used only by grown-ups who actually wish to restore their kidneys to perfect health, by conscientiously using one box—or more in extreme cases—as "Anuric" (thanks to Doctor Pierce's achievements) is by far the most perfect kidney and bladder corrector obtainable.

Dr. Pierce's Pellets are the original little Liver Pills. One little Pellet for a laxative—three for a cathartic.

BRANT COUNCIL

The Brant Council met as per adjournment on the 13th day of August. Members all present. Minutes of last meeting of Council read and declared correct.

Rowand—Johnston—That this council do now go into a committee of the whole with the Reeve in the chair to strike the rates for Township and County purposes for the current year.—Carried.

Gregg—Findlay—That the Clerk prepare a By-law to provide for the levies agreed upon in committee, viz: For Township purposes, the sum of $8,872.00 at a rate of 3 5-10 mills on the dollar, and for county purposes the sum of $11,933.84 at a rate of 4 7-10 mills on the dollar; in addition to the sums required for the Public and Roman Catholic Separate Schools and other necessary rates.—Carried.

Johnston—Rowand—That By-law No 99 A D 1917. (a By-law providing for the levies agreed upon) be now read the usual number of times, passed, sigued and sealed.—Carried.

Findlay—Gregg—That this council acting as a committee, do now adjourn, and proceed with general business.—Carried.

Johnston—Findlay—That the Clerk prepare a By-law to pass at next meeting of council making it compulsory for all rates levied to this municipality to be paid on or before the 15th day of December, 1917, and in default of payment on or before said date, a penalty of one per cent straight shall be added to the taxes up to and including the 22nd day of December, and 5 per cent straight shall be added after the 22nd Dec. 1917.—Carried.

Rowand—Johnston—That the clerk be instructed to advertise in the Bruce Herald and Times for a collector of rates for current year, tax notices to be delivered to ratepayers according to statute. Arrangements may be made by the collector with the banks to receive payment of taxes, salary $100, to include postage applications to be in the clerk's hands by 10 o'clock noon on the 17th day of September, 1917.—Carried.

Rowand-Johnston—That the Reeve and Clerk issue orders on the Treasurer for all accounts passed at this meeting of council.—Carried.

Gregg—Rowand—That this council do now adjourn to meet on Monday, the 17th day of September, at ten o'clock a m., for the appointment of a collector of rates and for the transaction of general business.—Carried. M A McCALLUM, clerk.

PRESENTATION TO SOLDIER

Wm Currie, son of MT and MRS Robt Currie of Lockerby is another of the Elderslie boys who has heard the call of duty having enlisted with the Foresters Battalion and will train for a short time in London before going overseas. On Monday evening his neighbors on the 7th and 8th called to bid him good bye and present him with a wrist watch. Miss Edna Burns read the following address and Wilfred Grant made the presentation. A pleasant evening was spent in singing and social intercourse interspersed with gramophone music after which the gathering left for their homes wishing the young soldier a speedy return.

To Mr William Currie:

DEAR FRIEND—In the present world's crisis, when our Empire is passing through the most critical period of her history, we believe the most lofty and most noble ambition a young man can possess is a desire to take his stand beside those who are fighting for the freedom of the world. We cannot all be soldiers; we cannot all don the king's uniform and march forth to uphold the honor and tradition of the Union Jack, the grand old British flag, but those of us who remain behind fully realize and appreciate the fact that you and your brave comrades are not only fighting for your king and country, but you are also safeguarding our homes and our families, and protecting them from such a cruel fate as befel hapless Belgium and Servia.

Our earnest prayers will accompany you. May you be shielded from all harm and when our enemies are crushed, as crushed they will be, and the horrible atrocities which they have committed shall have been avenged, we can assure you that a hearty welcome will await your triumphant return.

On behalf of your friends and neighbors we ask you to accept this wrist watch.

Signed on behalf of your neighbors and friends—Wilfred Grant, Wilfred Thompson.

CARD OF THANKS

Mrs J Young and family wish to express their appreciation and gratitude to friends and neighbors for the sympathy and condolence extended to them in their recent bereavement.

CARD OF THANKS

Miss Annie Dent and sisters desire to thank their friends and neighbors for the sympathy and service so kindly tendered by friends and neighbors at the time of their bereavement.

DEATH OF MRS THOMAS DENT

At the ripe old age of 94 years and 4 months Mrs Thos Dent, of 8th Bruce, passed away on Wednesday night of last week. Five years ago the deceased was stricken with paralysis, and her death was due to that trouble. The maiden name of the deceased was Elizabeth Wilson, and she was born in Yorkshire, Eng. She came with her husband to Canada in 1853. They first settled at Blenheim, but three years later came to the 8th Bruce, where they lived the remainder of their days. Mr Dent died a few years ago. Of their family there are three living Anne on the homestead, Mrs Jos Wrightson, sr, and Mrs F Weightson. Mrs Dent took an unusual interest in political and national affairs for a women. She was just four years younger than the late Queen Victoria. In her childhood Mrs Dent sometimes stayed with friends who occupied a position on the estate of the Duke of Kent, and so it came about that the subject of the sketch at times played with the little princess who afterwards became the Queen of the realm. Because of this early acquaintance with the sovereign family Mrs Dent became well acquainted with the history and doings of royalty. She also saw some lively political times in England, and was also well versed in the events of that period. In many of our political campaigns here, notably in that of 1878, Mrs Dent was better able to discuss such questions as the National Policy than many of the men voters, and she would have been proud indeed to have the privilege only now extended to the women to exercise the franchise. The deceased was spoken of by those among whom she lived so long as a very kindly person and a good neighbor. The funeral was held on Friday, interment being made in the U B cemetery, 4th con, and the services were conducted by the pastor of that church.

—Hon. W. J. Hanna, Canadian Food Controller, calculates that food wasted in the garbage pails of Canada each year through carelessness and lack of kitchen economy amounts to $50,000,000 per year, or about $7 per head of population.

PAISLEY FAIR

Tuesday and Wednesday, Sept. 25 and 26

Canadian Bankers' Competition

IN this competition, the Canadian Bankers' Association, acting in co-operation with the Dominion Department of Agriculture, Live Stock Branch, offers cash prizes to boys and girls who exhibit calves or pigs at their local fair, and who comply with all the rules governing the competition.

RULES

1. Only boys and girls who have not attained their 17th birthday before the opening day of the show are eligible to compete in the Canadian Bankers' Competition.
2. No entry fee will be charged.
3. No exhibitor will be allowed to make more than one entry in a class.
4. Not more than one member of a family shall be allowed to compete in a class.
5. An exhibitor who wins a cash prize at one fair shall not be allowed to compete in the same class at another fair.
6. Calves and pigs entered for competition must have been born on or after March 15th, 1917, and must be the property of the exhibitor or the exhibitor's parent or guardian.
7. Grade bull calves and grade boars are not eligible to compete, and prizes for same must not be accepted.
8. Exhibitors must feed and care for the animals they exhibit for at least six weeks.
9. An application form and a certificate form are attached hereto.

(a) The application form must be properly filled out and fyled with the manager of a local branch bank at least three weeks before the date of the fair.

(b) The certificate must be filled out and signed by the parent or guardian of the exhibitor, and fyled with the Secretary of the Fair not later than the day of the competition. If, however, an exhibitor fails to present his certificate on the day of the competition, he shall be allowed to compete, but any prize he may win shall be withheld until a properly filled and signed certificate is produced, and said certificate must be forthcoming within forty-eight hours after the holding of the competition, otherwise his prize money shall be forfeited.

10. A statement, in writing, signed by the Secretary of the Fair, certifying the names of the successful competitors and the prize money won by each, must be procured by the local branch manager at whose branch the general prize money of the fair is paid to competitors, or whose branch, in case the prize money is disbursed in cash by an official of the Fair, is the banker for the official funds of the Fair. The branch manager will, upon receipt of the certified statement, pay the prize money directly to the successful competitors or to the Secretary of the fair for disbursement by him according as the general prize money is paid to competitors directly by the bank or to the Secretary or other official of the Fair, taking in either case a receipt on the certified statement.

The receipted statement must be forwarded forthwith, under registered cover, to the Secretary of the Canadian Bankers' Association, National Trust Building, Montreal.

11. In case the winner of a prize is subsequently disqualified, each exhibitor below him shall be moved up one place.

CLASS I

(Grade bull calves must not be shown.)

CALF, PURE BRED OR GRADE

Prizes—1st, $5.00; 2nd, $4.00; 3rd, $3.00; 4th, $2.00; 5th, $1.00; 6th, Ribbon.

CLASS II

(Grade boar pigs must not be shown)

TWO PIGS, BACON TYPE, PURE BRED OR GRADE

Prizes—1st, $5.00; 2nd, $4.00; 3rd, $3.00; 4th, $2.00; 5th, $1.00; 6th Ribbon.

School Children's Competition

Class 32

1 Club swinging by class composed of not less than 12 in number—prize, school flag, value $5.

2 Physical drill by pupils of any public school, must have at least 30 in number. The number of pupils in class competing will be considered in awarding prize. Prize—A silver cup to be held by the school winning it for the year, and to become the property of the school after being won three times.

3 Best singing of patriotic songs by class or classes of public school pupils. Prize—Picture of Fathers of Confederation in frame, value $5.

Pupils of of all schools competing in these events and in procession admitted free.

The AUTOMOBILE

A Well-Equipped Garage.

"No prospective owner hesitates to ask about the proper way to take care of his car," says an expert. "But he frequently overlooks the matter of providing himself with the facilities to make such care easy. If a man looks after his car himself he should see to it that his home garage is a place of order and tidiness. A clean, well orderad, well-equipped garage means longer life for the car.

"Owners frequently allow their cars to get into bad condition because the garage has been allowed to run down to such an extent that to find any given article a dozen and one other things have to be turned over or upside down, ending very often in a vain search and a ruffled temper.

"There should be a few shelves around the garage on which to place oil and grease tins, boxes for dusters, cotton waste, and the many other accessories which accumulate so quickly. All boxes should have a label outside giving details of their contents.

"Several pieces of wood across the garage near the roof, or across one corner, will do to store away old outer covers and tubes until there are a sufficient number to send away.

"A work bench on which a vise can be fixed is invaluable if there is room for it.

"One of the most useful things in a garage is a tool rack. This is easily made and consists of a fairly thick board large enough to hold all the tools which are kept in the garage for general repairs as apart from those that are carried in the car.

"First of all, however, place the tools on a large piece of paper and arrange them so that they take up as little room as possible, although sufficient room should be left between each for you to be able to pick up any one without disturbing the one next to it. Put them into groups, keeping tools of the same kind together, ranging from the largest to the smallest.

"The best positions having been found, you will now know what size your board will be, but it is advisable to get one larger than you immediately require, so that new tools may be added as they are bought. The board procured, proceed to drive in nails, screws, staples or hooks on which to hang the tools.

"Now, paint an outline of each implement on the board so that when a number of tools are removed at the same time you will be able to see at a glance exactly where they go when you wish to replace them.

"Another useful article is a chest of drawers in which to keep such things as washers, split-pins and nuts. A convenient place for it is on a shelf, not too high up. Any carpenter would make one for a small sum, but during the long evenings it is quite a pleasant occupation to make it yourself, particularly as it does not require many tools or an expert carpenter to carry out the job in a satisfactory manner.

"A handle placed on the top of the chest will enable it to be carried to wherever you may be working, in the same manner as the tool rack. It is very convenient to be able to do this, as it saves much walking about."

EXTRAS FOR TOMMY'S MENU

RATIONS FOR OUR GIGANTIC ARMIES AT THE FRONT.

Native Tastes of Every Unit From Every Part of Greater Britain Considered in Daily Dietary.

Most people have an idea of the general character of rations for the army at the front, but few know anything of the special tit bits which are added to Tommy's menu. In The World's Work for July Mr. Frederick A. Talbot, continuing his history of the industrial mobilization of the Empire for war, deals with the feeding of our great armies.

After the tremendous volume of meat and bread supplied to the armies at the front, we come to a list of extras.

Compressed vegetables require to be supplied upon the same basis as the rate of 875,000 pounds per week. In this instance, however, half a pound of fresh vegetables is issued in lieu of this ration whenever obtainable. So far as the conditions will permit, local supplies of fresh vegetables are pressed into service, both at home and in France, especially in connection with potatoes, of which the forces are devouring 20,000 tons per month and without which the average Britisher does not consider his dinner complete.

As conditions will allow, the soldiers in Flanders are also rewarded with many other dainties. Thus upon the recommendation of the Medical Officer, a soldier may receive a gill of lime-juice, while there is also the rum ration, one half-quarter in volume, which is issued at the discretion of the Officer Commanding on the recommendation of his medical confrere. But, it may be mentioned, the alcoholic stimulant is not issued concurrently with the pea-soup or beef extract authorized to the men in the trenches.

The rum alternatives occur among the "extras," and the ration comprises either two ounces of the soup or two cubes of the beef extract twice a week, or possibly every day if the weather be so severe as to render it advisable for the commanders to agree to its being distributed among the men in the trenches. The latter also receive further consideration at discretion, to the extent of an additional ½ oz. of tea and ¾ oz. of sugar daily, while, if supplies be available, they may receive instead either ¾ oz. of cocoa or chocolate with 1-10 tin of condensed milk, or 1-5 of a tin of cocoa and milk, as a substitute for the soup or beef extract.

The item "extras" at the front also includes, when stocks are to hand, 1 oz. of pickles per man thrice a week to all troops, together with 2 ozs. of butter three times a week. The allowance of fresh or frozen meat or preserved meat and biscuit may also be increased to 1½, 1, and 1 pounds respectively upon the authority of the Quartermaster-General; while last, but not least, comes the "iron ration," comprising 1 lb. of biscuit with a nominal 1 lb. of preserved meat with ¾ oz. of tea and 2 ozs. of sugar.

But it may so happen that the foregoing foodstuffs are not available in sufficient quantities to go round. Consequently there is a scale of "equivalents." Thus 4 ozs. of rice are considered to be equal to 4 ozs. of bread or biscuit; 3 ozs. of honey or 4 ozs. of dried fruits may replace 4 ozs. of jam; while 1 tin of tomatoes is set against 5 vegetable rations, and so on.

When the Indian troops were fighting upon the Western front their peculiar native tastes also demanded exacting study. They were given a daily dietary which was every whit as complete and varied. The contributions in men from every corner of Greater Britain have further contributed to the complexities and intricacies of the commissariat problem. The home authorities become responsible for their sustenance, except in special instances, the moment they disembark from the transports.

Beware of Man With a U-Laugh.

What vowel do you sound when laughing? According to Ha Ha, "if you laugh in A full you are frank, honest and fond of fun and frolic, but you are of a fickle disposition. If you laugh in E (pronounced 'ay'), you are phlegmatic and melancholy; if in I (pronounced 'ee'), you are simple-minded, affectionate, timid and undecided; if in O, you are generous and bold; and if in U—well, you are a person to beware of, for you are entirely lacking in principle—almost as bad as a U-boat."

Think how one tooth can ache, when it is your tooth, and then have lots of sympathy for the poor little fellow that is cutting a whole mouthful of them at once.

ARMY CHAPLAINS AT THE FRONT

HAVE WON MANY HONORS FOR HEROIC DEEDS.

Maintain Morale and Good Spirits of Soldiers and Perform Many Dangerous Duties.

No one can be much at the front without hearing of the good work done by the army chaplains. How good it has been is partially indicated by the fact that since the war began chaplains on this front have won a large number of distinctions, but the list only partially indicates the total value of the services which chaplains have rendered, for they are services which cannot be measured by the same purely military standards as those of other officers.

Achievements such as that by which the Rev. Edward Noel Mellish won the Victoria Cross shed lustre not only on the cloth, but on the whole army. Everybody is proud of it. But apart from such brilliant incidents the war, with its long-sustained strain under virtually stationary conditions and the immense discomforts to which the troops have been subjected, has given the chaplains an opportunity of making good their footing as perhaps no other war has done, and they have seized the opportunity.

Buried Under Fire.

The Higher Command has come thoroughly to recognize their value as an integral part of the war establishment in the maintenance of the morale and the good spirits of the men. The officers have come to know the individual "padre" in the daily friction of life in the field and in times of danger, and they have found him a good fellow and a brave man. The men have learned his value as a comrade who has a power to help them and minister to their comfort as only one who has an officer's rank can, but with whom, at the same time, they can talk much more intimately than with any regular officer. It is this that, for the practical purposes of war, the chaplain's chief value lies.

The burying of the dead, often under fire, and the marking and recording of the position of graves are only a part of the dangerous duties which chaplains at the front have to perform. In the official account of the deed by which Mr. Mellish won the Victoria Cross, it is said that his work of carrying the wounded back and dressing their wounds under fire was "quite voluntary on his part and outside the scope of his ordinary duties." It is far from being the only case wherein chaplains have done similar acts, if not under conditions which gave opportunity for showing courage on so splendid a scale.

Other Dangerous Work.

In the trenches the chaplains are, of course, constantly exposed to the same danger as the men. The opportunities for holding service before action are fewer now than they were in the days of pitched battles. Actions, too, often begin, on the enemy's part, without previous warning, and even where the attack is initiated by us it is not always possible to hold formal service. It remains for the chaplain to do all that he can individually, man to man, in the trenches, and it is in such work at such moments that many chaplains feel that their efforts have been most fruitful.

Many chaplains have been killed in the British army, as many more have been seriously wounded and a very large number slightly wounded.

The work done by the chaplains differs widely. With a hospital or field ambulance it will obviously be different from that with a brigade in the field; and a brigade in the trenches is another thing from a brigade in reserve. Attached to a unit in the trenches a chaplain may have a "parish" with three or four miles of front and a depth of ten miles.

Tommy and the Parson.

Apart from the individual work, already spoken of, in the trenches, the chaplain's best field is in the billets, where it is possible to get to know the men on a friendly and informal footing, when, if the chaplain deserves it, they are very ready to give him their confidence. For all chaplains are not equally adapted to army work. Some find the atmosphere difficult and sterile. To others it is congenial, and they rejoice to feel that they are doing more good than they ever did in their lives. It is a matter of the individual, in whom, perhaps, the quality most needed is that form of tact which enables him to be a good fellow among the men without derogating from the dignity of his calling. It has been abundantly proved that, while the British soldier wants his parson to be a man and a comrade, he insists above all on his being still a parson, and the chaplain who forgets his cloth in the endeavor to become more friendly with the men finds only that he has killed his usefulness.

A certain amount of elimination has been necessary among the chaplains and will go on; but, on the whole, the testimony of all grades, from commanding officers down, is that the chaplains now here are in the mass excellent and are wielding an enormous influence for good. In return, the best of the chaplains freely confess that they in their turn learn much from the men, and it is in the official report of a chaplain who has a large knowledge of men that I find the declaration that "such an upright body of men as our present armies never took the field in the world's history."

"PLAIN MR. WINDSOR."

Descendants of a British Monarch Will be Commoners.

The change goes further than the foundation of a new Windsor dynasty. Not only is the royal house to be styled "the House of Windsor," but the family surname becomes Windsor.

As the title of Prince and Princess is henceforth limited to the children and grandchildren of the sovereign, it follows that a great-great-grandson of a British monarch will be plain "Mr. Windsor." His great-grandsons, too, will be commoners, but will bear the courtesy title of Lord —— Windsor, if we assume that the custom still prevails of creating the sovereign's sons dukes.

Windsor is certainly a good choice of name. Even before the Conquest the kings had a royal hunting lodge at Windsor. The first two Henrys and John lived in the castle, and Edward III. was born there. It was used by the Tudors as one of their favorite palaces, and through the nineteenth century it was regarded more or less as the headquarters of the royal family.

The British royal house has in the past borne various names that might have been revived with advantage — Plantagenet, York, Lancaster, Tudor, Stuart, D'Este (Queen Anne) and Guelph—but for historical and other reasons it was impossible that any of them should be revived for the present dynasty. Windsor as a territorial title, however, may be likened to Lancaster and York, and—the main thing—is entirely English and native in history and associations.

SAVE THE RAGS

Shortage of Wool Increases Demand For This Waste.

A serious shortage in wool exists. Almost all countries engaged in the war have taken over the wool supply to provide for soldiers' equipment, while the United States Council of National Defense recently took up with the clothing manufacturers the matter of the saving of cloth by eliminating from the 1918 styles patch pockets, flaring skirts, cuffs on coats and trousers, etc., and all unnecessary pleats and frills. The Council is also advocating the more general mixing of cotton with wool and the more extended use of shoddy.

For this reason the old fashioned ragbag should come into fashion. The day when rags were not of sufficient value to warrant much attention being paid to them is past. To-day there is a heavy demand for woolen rags. Scarcely of new wool has created an increased market for shoddy materials, of which woollen rags are the basis, and increased prices are being paid for the hitherto neglected material. Save the rags.

The Fork Evaded.

Little Basil was allowed to sit up to the table with his fond mamma on the occasion of a little luncheon party. His manners were generally very pretty, and mamma was horrified when she caught the child stuffing his food into his mouth with his knife.

"Basil!" she cried, reprovingly; "Basil, where's your fork? You ought to use your fork!"

"I know, mamma," said Basil plaintively; "but this one leaks awfully."

L'ECOLE DUBAIL.

Experiences of Pupils in Shell-Swept Rheims in 1915.

In spite of the terrible bombardment that the city of Rheims underwent during many of the early months of 1915, instruction for children still went on in subterranean schools, the most famous of which is the Dubail School, named after a well-known French general. The school occupied nearly a quarter of the basement of a large building devoted to the champagne industry, only a mile from the front line trenches of the enemy. The basement was protected by the three cement floors of the rooms above and by a hill just behind the building. There were also two sub-basements below it, the lower not less than thirty-six feet underground.

The basement was a large rectangular room about one hundred and eighty feet long and sixty feet wide, with the floor nine and one half feet below the surface of the earth, provided with eight small airholes and lighted mainly by three dozen large hanging lamps. Furnishings and other indispensable equipment had been borrowed from deserted schools near by. The four corners of the room were occupied by three elementary classes and one class for mothers. Before the authorities allowed children to attend they required the parents to sign a document freeing the faculty of the school from all responsibility in case of injury. In Le Journal de l'Ecole Dubail the superintendent of the primary schools in Rheims describes some of the experiences of the pupils of this unique school.

One Saturday morning, he says, I lined up all the scholars for sanitary inspection at a quarter of nine as usual, and then we went down from the ground floor of the building into the basement classroom. Ten minutes later there came a terrific explosion, a violent shock made the whole building tremble, and a cloud of thick, black smoke and white dust poured into the cellar. A 210 shell had fallen on the roof about sixty feet away, pierced two of the floors, and even buried shot and fragments as far as the scholars. The older children and the parents who had been waiting for a lull in the bombardment before departing, shrieked, while the smaller ones sobbed and wept. The teachers looked at me frightened but calm. I was nervous, too, but said reassuringly:

"That is all. Two never fall in the same place. Don't be afraid, children. Let us all go down into the cellar; the little ones first. We have time."

Mme. Camous went first with the younger children, aided by Mme. Boudenot, and several of the mothers carrying the tiniest scholars; then followed Mmes. Jonet and Maurey with the older children and parents. All were out in three minutes and without confusion. In the cellar calm soon returned; the women comforted the children, and then told them about the language of the artillery, until at each explosion the little ones raised a warning finger and cried, "Boom!" That kept them amused.

At last the bombardment was over and we had escaped without injury. At ten o'clock we returned to the classroom, which we found strewn with shrapnel bullets and fragments, broken glass, strange contorted pieces of steel and broken iron, all covered with a fine film of plaster dust. The shell had gone completely through the upper floor and exploded on touching the second, so that fortunately the floor above our head had been pierced only by the small pieces and the contents of the shell.

A Conscious Objection.

A recruiting sergeant vouches for the accuracy of the following: The Canvassed—"I could not kill anything." The Sergeant—"But supposing a German was coming towards you with a saw-edged bayonet fixed?" The Canvassed—"I tell you I have not the heart for it. I tried to drown some kittens the other week, and they cried so much I warmed the water for them!"

When you have a cut, bruise or burn, use the inside coating of a raw egg. It will adhere of itself, leave no scar, and heal any wound more rapidly than any salve or plaster.

"I haven't enough suit hangers to hang my clothes." "Roll up a thick section of the newspaper, and tie a string around the middle with a loop. That will do just as well."

GERMANS STARVE WAR PRISONERS

SYSTEMATIC MALTREATMENT OF CAPTIVES OF WAR.

Men Are Permitted to Send Details to Frighten the British People.

As the number of war prisoners increases in all the combatant countries the problem of feeding and caring for them increases more than proportionately because the resources of the different countries are progressively dwindling, writes a correspondent from London. England and France are worried about the constant and numerous reports from Germany that the Berlin Government is adopting a policy of something like deliberate and systematic maltreatment of prisoners. There is no doubt that in the prison and internment camps in Germany cruelties have been perpetrated from the beginning.

The German Plan.

There have been several cases recently in which it seemed the deliberate purpose of the German authorities to permit the English nation to learn how badly English prisoners were being treated. The only possible explanation is that the Germans in desperation are willing to turn the war into a supreme horror, utterly regardless of what may happen to their prisoners in the hands of their enemies.

A recent case of this kind has been reported in which two Australians who had been taken prisoners along with several hundred others of their regiment escaped, returned to the British lines and told their story. It was a gruesome enough narrative, and one of its most significant details was that after these men had been kept for a considerable period almost without food, utterly without sanitary conveniences and in quarters pathetically and needlessly inadequate, they were told by the German prison commandant that they were perfectly free to write all the details home to England. It seemed to be part of the German purpose that England should be flooded with such horror tales.

Wants Prisoners Exchanged.

For a long time the German attitude toward prisoners has suggested that Germany was determined by dint of extreme cruelties to compel England to agree to an exchange of all prisoners en bloc. As matters stand the English hold more German prisoners than the Germans do English, while in the matter of civilians interned in the two countries there are about 400 or 500 Britons in Germany and 35,000 Germans in Great Britain. The Germans made the proposal that they would release all the British civilians in Germany if England would send home all the German civilians in England. This was so hopelessly impossible, in view of the fact that almost all the Germans would have been subject to military duty, that the London Government refused, and an exchange of arrangements which had been negotiated earlier had to be dropped.

Everything possible has been done by the British Government to ameliorate the condition of prisoners in Germany. It has been permitted to send food and other necessaries to them, and vast quantities have been sent, chiefly by way of Switzerland. The best evidence is that a good deal of these supplies never got to the prisoners for whom they were intended.

YOUNG JUDGES AT "BIG FAIR."

Canadian National Revives Competition for Farmers and Farmers' Sons.

Among the new departures at the Canadian National Exhibition this year are the judging competitions for young farmers and farmers' sons under 26 years of age. They will be held under the supervision of the Ontario Government, and a very large entry is expected from among the three thousand students now taking the Government short courses.

Liberal prizes are offered to winners in live stock, poultry, grain, roots, fruits and vegetables. Some years ago judging competitions were held at Toronto, but the present ones are on a much more pretentious scale and under Government auspices should prove a great success.

The Doings of the Duffs.

Brought Him Victory

BEULAH JONES' OVERCOATED CHICKENS PROVE GREAT VOTE GETTERS IN POLITICAL PARADE.

By SELINA ELIZABETH HIGGINS

Miss Beulah Jones was cutting up a cake with a piece of silk thread to prove its lightness, as there came a knock at the door. She glanced through the sitting-room with many a hurried reach for scattered garments and fragments of cloth, in a hopeless effort at tidying up.

"I do hope it isn't the minister, or anybody but some neighbor," fluttered the neat and circumspect little lady.

"It's only me, Beulah," spoke the bluff voice of giantlike John Moore, her distant cousin. "About once a year I get around here. Why don't you ever come and see us, Beulah?"

Miss Jones flushed consciously, then her calm, pleasant eyes took on a serious expression.

"You know I never go anywhere—now," she said, briefly.

"Well," spoke John, plumping down into an easy chair, "I've heard some wonderful things about those pet chickens of yours, and I've come to find out about them. Well! well! well!"

Honest John craned his neck to stare out through the window. His lips expanded. His ruddy face began to pucker comically, and he let out a great guffaw.

"What are you laughing at, John Moore?" demanded Miss Beulah, with severity.

Her cousin could not reply for some time on account of convulsive chuckles. There was ample occasion for his merriment. Waddling around in the chicken yard a full score of Plymouth Rock chickens were parading proudly, attired in close-fitting overcoats. The sewing machine and the rug about it were littered with scraps of cloth representing all the colors of the rainbow.

"It's a great idea," said John, "but it's the funniest thing I ever saw."

"I dont see anything very funny about it," resented Miss Jones. "I suppose the neighbors call me eccentric, and all that, but clothing the chickens is no whim. It's a practical piece of humanity. Some of the poor things froze up last winter. They shan't this."

John Moore grinned the harder as he strode to the window and again

Flushed in a Startled Way.

looked out. Miss Jones was economical in the common utilities of her lonely life. She had not looked to the esthetic in clothing her pets, but to their comfort. Some of the chickens were robed in red flannel, others in part of an old quilt. Some of the overcoats had ruffles at the neck, others had bands, giving a sort of "knickerbocker" effect. Altogether the result was incongruous and comical. John Moore fancied he saw something spectacular in it all.

"I've got an idea, Beulah," he said. "I'm looking for a novelty, and that's what brought me here. I want to buy those chickens."

Miss Beulah regarded her cousin sharply and then suspiciously.

"They're not for sale," she declared at once.

"Then I want to borrow them—rent them, we'll call it. For one day, Beulah, overcoats and all. I'll agree to return them safe and sound. How many are there?"

"Twenty—two."

"Very well; I'll give you fifty cents apiece to help make a show with them for one day. There's your money, and I'll call for them in the morning. If that wise head of yours can think up some comical frills and other additions to those overcoats, as you call them, the better it will be for my purpose."

"See here, John," challenged Miss Beulah, "whatever wild speculation have you got in that busy head of yours now?"

"Just this, Beulah," explained John. "I'm country committeeman. There's an election day after to-morrow, as I suppose you know."

"No, I didn't know," replied the lady very distantly. "I never look at the papers—now."

Her eyes dropped rather sadly as she said this. Her cousin shot a quick glance at her and shook his head and sighed. Miss Beulah had been almost a recluse for nearly two years. The reason for it no one ever ventured to discuss in her presence. It was a taboo subject.

"Well, we are working up a procession," John went on to explain; "torchlights, music and all that. We're going to have a hayrack, showing prosperity—heaps of apples, corn, goddess of liberty and the like. I want to scatter those winter-clothed pets of yours over the load. It will be a great catch."

It proved a greater catch than the ingenious committeeman had expected. It was two days later when Miss Jones saw a wagon draw up to the yard. Her pets, well fed and lively, were being returned safe and sound to their coops, as her cousin had promised.

The weekly paper had just arrived. Miss Jones had flushed in a startled way as she read "the news." It appeared that the overcoated chicks had been the novelty of the procession. The district had a great many chicken farms. The homes display had won over this interest, they had voted for Allen Parsons, and that candidate was elected.

Allen Parsons! How that name awoke painful memories in the heart of the recluse! She had drawn open a drawer in the old-fashioned secretary and had taken thence a sheet of paper, closely written over, and a photograph. The latter was a phototype of the portrait of the successful candidate in the paper. There was a knock at the door. Miss Jones opened it to face—the successful candidate.

"I had to call to thank you for the great support your pets gave me," spoke the stalwart, fine-looking visitor. "Why, Miss Jones—Beulah!"

At sight of the man she had loved, still loved in secret, her estranged fiance, Miss Jones paled, tottered, and Allen had to help her to a chair in the sitting-room. As he started to leave her his glance fell upon the photograph and the letter. His eyes dilated as he tranced a line or two in the latter.

"Beulah," he said, his lips set kindly but determined, "has this letter anything to do with your rejection of my suit two years ago?"

"It has everything to do with it," faltered poor Beulah. "Can you look at it and wonder why? You wrote it!"

"Yes, I wrote it, but as a model for a friend who wished to propose to a young lady in another town. How did it come into your possession?"

"Miss Simeon brought it to me—she said she found it."

"Stole it, more likely," asserted Allen. "My old landlady and a mischief-maker! Oh, Beulah! And has this foolish misunderstanding kept us so cruelly apart all of this time?"

John Moore, coming into the house to see his cousin, halted, stared, stood rooted to the spot, and then retreated softly with a great chuckle of satisfaction.

For Beulah was resting confidingly in the strong, protecting arms of Allen Parsons. All had been explained—and the feathery campaigners had done it!

IF FOOD DISAGREES DRINK HOT WATER

When food lies like lead in the stomach and you have that uncomfortable, distended feeling, it is because of insufficient blood supply to the stomach, combined with acid and food fermentation. In such cases try the plan now followed in many hospitals and advised by many eminent physicians of taking a teaspoonful of pure bisurated magnesia in half a glass of water, as hot as you can comfortably drink it. The hot water draws the blood to the stomach and the bisurated magnesia, as any physician can tell you, instantly neutralizes the acids and stops the food fermentation. Try this simple plan and you will be astonished at the immediate feeling of relief and comfort that always follows the restoration of the normal process of digestion. People who find it inconvenient at times to secure hot water and travelers who are frequently obliged to take hasty meals poorly prepared, should always take two or three five grain tablets of Bisurated Magnesia after meals to prevent fermentation and neutralize the acid in their stomach.

The Dairy Farmer's Ten Commandments.

Mr. Charles Christadoro has issued what he calls "Ten Commandments for the Dairy Farmer" as follows:

Keep healthy cows.
Select good producers.
Use only pure bred bulls.
Feed liberally an approved ration.
Produce the feed.
Keep barn clean and aired.
Keep the cows comfortable.
Be considerate to the cows.
Provide shade and wind protection.
Feed and milk regularly.

TO GARNER CROP WEST NEEDS MEN

THE "IMPERIOUS URGENCY" OF CONSERVING GRAIN YIELD.

Survey Conducted by Canadian Northern Indicates Need of 25,000 Men Along Its Lines

The successful harvesting of the crop in Western Canada this season is what Ex-Premier Asquith of Great Britain would term "a matter of imperious urgency."

Since men began to sow grain west of the Great Lakes, there has never been so much depending upon the yield of grain in Manitoba, Saskatchewan and Alberta as there is this year.

The Canadian Northern Railway, with lines gridironing the productive sections in the west, has already concluded a survey as to labour needs, and the prospects of the wages to be paid, and has announced that 25,000 men will be required to help the farmers garner the crops in the territory it serves. The indications are that the average wages will be around three dollars a day. A further conference between the representatives of the Government, the railways and the farmers is to be held, when further details will be brought out.

The farming situation in Ontario may not permit of sending as much help as in former seasons, but nothing should be left undone on the farms and in the towns to give the western farmers the assistance of which they stand to-day in urgent need.

Morning in the Plowed Fields.

Morning in the plowed fields, while
the dew is wet;
Singing till the sun comes, how can
life forget!
Beauty of the fresh earth, sweetened
as it lies.
Breathing out the fragrance fallen
from the skies!
Mucking birds and redwings,
The killdee and the dove—
Morning in the plowed fields
Planting dreams of love!

Second crop of hay cut, curing hour
by hour;
Half a mile of daisies all in snowy
flower;
Dew in every gold cup fresh as fairy
lips—
Ah, the wine of this world when the
morning sips!
Catbirds after cherries,
Rookery full of crows—
What men want to fight for
Heaven only knows!

Raspberries down the green lane
scenting all the way,
Grasshops in the cornfields, crickets
in the hay;
Wind among the treetops just awake,
and, oh,
The sweetness of the plowed fields
when the breezes blow!
Summer in a dreamland,
The farm hell far away—
Hot cornbread for breakfast,
And then get in that hay!

DOMINION FROM SEA TO SEA.

The Idea of Our Country's Name Came From the 72nd Psalm.

The British North America Act which made Canada a Dominion came into force on July 1, 1867, and that original essay in Dominion self-government has richly justified the faith and foresight of those who undertook it, says the Glasgow Herald.

The Convention sat in a room in the Westminster Palace Hotel, in London, which is now the smoking-room of the National Liberal Club. A tablet fixed in the wall records the fact that in this chamber the delegates conferred. Those who took part in the proceedings are all dead. Sir Charles Tupper was the last survivor, and he died at a ripe old age a very few years ago. The word "Dominion" was suggested by the Bible.

Sir Leonard Tilley had been reading in the 72nd Psalm "He shall have dominion from sea to sea," and thought the passage applicable to Canada.

An English farmer was recently fined seventy-five pounds for refusing to deliver his wool to a dealer named by the British war authorities.

DOMESTIC SCIENCE AT HOME

Sixth Lesson.—Starches and Sugars.

Starches and sugars have many properties in common, and for this reason are grouped together under the name carbohydrates. The preceding lessons have told that carbohydrates furnish heat for the body and energy to do work.

Starch is found principally in cereals, grains and vegetables. It is soluble in cold water and coagulates or thickens when dissolved in cold water and heat is applied. Applying heat causes the cell-like structure to expand and burst, thereby thickening the liquid. Dry starch when heated turns a light brown in color. This is called dextrin, and is soluble in cold water. It is the basis of British gum and is often used in making library paste. When starch is heated beyond the dextrin stage it is transformed into carbon, all the moisture being removed setting the carbon free.

Digestion of Starches.

The process of digestion with starches starts in the mouth. It is most important that all food containing starch be thoroughly masticated. Failure to chew food thoroughly will prevent the saliva from acting upon the starch and prevent the continuation of this important process in the stomach. When starch foods are thoroughly masticated the action of the saliva continues upon the food in the stomach for at least half an hour, until checked by the acidity of the gastric juices. It is for this reason many persons are unable to eat starchy foods with other food containing fruit or vegetable acids.

The stomach ferments do not act upon starch as it passes into the small intestine. The pancreatic juice and ictestinal ferments complete the final changes which occur and are absolutely necessary to convert the starches into soluble sugars.

It is necessary to combine starchy foods with protein foods, as all excess starch is stored in the body in the form of fat.

Cooking Starches.

Starchy foods must be thoroughly cooked, owing to the fact that few, if any, persons thoroughly chew the food which contains starch. Carelessly cooked starchy foods will produce intestinal disturbances. This is particularly true of breakfast foods. Unless they are well coked they should not be given to infants or elderly persons.

The fireless coker is an ideal method of preparing breakfast foods, and, in fact, for cooking all starchy foods.

Sugars.

There are many kinds of sugars. The most familiar of them is the cane sugar. Sugar is also obtained from beet roots, maple trees and certain kinds of palms.

Sugar is also found in vegetables, fruits and milk. The greatest amount comes from sugar cane, which is a plant somewhat resembling corn. It is crushed between rollers, extracting the sweet juice, which is clarified and evaporated until, upon cooling, its crystals appear in a thick liquid. This liquid is molasses. The crystals are brown sugar.

The brown sugar, by a process of refining, is made into many kinds of sugar known to housewives.

Grape and fruit sugars are found in grapes, peaches and other fruits. It is two and one-half times less sweet than cane. Glucose is manufactured on a large scale from corn. Lactose, or milk sugar, is found in milk. The commercial sugar of milk comes from Switzerland, and is made by evaporating the whey of the cow's milk. It is used for sweetening drinks for infants and the sick. It is less liable to produce acid fermentation than cane sugar and is more easily digested.

The Food Value of Sugar.

Sugar is valuable as a nutriment, easy to digest and quickly absorbed by the body. Cane sugar, in the process of digestion, owing to the action of the pancreatic juices, is converted into glucose, and after its absorption it is completely utilized in furnishing heat and energy.

Sugar may be used freely during cold weather without injurious effects, but only a small amount should be used during hot weather.

War-the-War Recipes.

Every time cornmeal is used where wheat products were once used, we help to win the war. Have cornmeal mush for breakfast, with figs, dates or fruit for variety; use cornmeal in quiet breads, yeast breads, desserts. Omit all wheat breakfast cereals. Use rolled oats for muffins, rolls and yeast-raised bread.

Cornmeal Muffins.—One cupful sour milk, one and one-third cupfuls flour, two-thirds cupful cornmeal, one to two tablespoonfuls fat, one to two tablespoonfuls sugar, one egg, one-half teaspoonful soda, two teaspoonfuls baking powder, one-half teaspoonful salt. Mix milk, egg and melted fat and add dry ingredients well mixed.

Indian Pudding.—Three-fourths cupful cornmeal, one quart milk, one and one-half cupfuls molasses, one-half teaspoonful salt, three tablespoonfuls sugar, or one-third cupful molasses. Heat the milk. Sift in the cornmeal as in making mush. Add salt and sugar. Turn into buttered baking dish, put dish in pan of water, and bake very slowly two and one-half to three hours. Serve with hard sauce, cream or crushed fruit.

Oatmeal Muffins.—One-half cupful cooked oatmeal or rolled oats, one egg, two tablespoonfuls fat, one and one-half cupfuls flour, two tablespoonfuls sugar, one-half teaspoonful salt, four teaspoonfuls baking powder. Cook oatmeal, using one part oatmeal to two parts water. A large proportion of water makes too soft a mush and gummy muffins. Mix milk, oatmeal, egg and melted fat. Add dry ingredients after sifting them together. Bake twenty-five to thirty minutes. This makes ten to twelve muffins.

Rye Muffins.—Two and one-half heaping tablespoonfuls each of rye and Indian meal, one tablespoonful sugar and melted butter, one tablespoonful salt, one egg, beaten; one-half teaspoonful of soda, one teaspoonful cream tartar dissolved in enough milk or water to make a drop batter. Beat well, drop by the spoon in hot fat, or bake in muffin tins.

SHELLS LIKE THUNDERCLAP

British Shrapnel Explodes More Quietly than Does German.

Writing from British field headquarters, Edward P. Bell, says:—

Listening to the explosion—continuous as I write—of British and German shrapnel shells, one notes a striking difference in the sounds produced. The British shells make a comparatively soft report, while the German projectiles make a piercing, shattering sound like that of a terrible thunderclap. Moreover, the subsequent sounds are different, those from the German shells being more sibilant in quality and greater in volume than those from the British shells.

Which shell is the more destructive I cannot say. The German has a sharper, louder report, due to the fact that is charged not only with shrapnel bullets, but with high explosive materials. This material bursts the steel shell case so that the whistling noises following are caused by a mixture of bullets and fragments of steel.

The British shell case, on the other hand, does not burst. It remains intact and pours its bullets from the shell mouth as a shotgun pours its shot; thus perhaps the bullets are brought to bear more effectively in a definite direction. Certainly the British must have some good reason for using the type employed.

Brother Fritz's penchant for "frightfulness" shows itself in all he does. There is probably no doubt, as regards his high explosive shrapnel shell, that he reasons that, whether it is really more destructive than the other or not, it is calculated to produce greater fright—a thing which commanders always must fight against among their troops. Happily for the British army, Tommy Atkins is about the hardest man to scare that ever wore a uniform.

Not To Be Cheated.

Little John had been extra specially good that afternoon, and father felt amiably inclined.

"Papa," piped John, "can I have a banana?"

"Yes, certainly, sonnay."

"Papa, if I was twins would you give the other boy a banana too?"

"Yes, of course."

"Well, papa, you aren't going to cheat me out of another banana just because I'm all in one piece, are you?"

Success with poultry means work, and the work must be given when needed.

Redpath SUGAR

If better sugar is ever produced than the present REDPATH Extra Granulated, you may be sure it will be made in the same Refinery that has led for over half a century—and sold under the same name—REDPATH.

"Let Redpath Sweeten it."

Canada Sugar Refining Co., Limited, Montreal.

GLAMIS

Mr John Gunn is taking a holiday. He has gone north to Thessalon to visit his sons.

Mrs Reith and Louise have gone to Toronto on a visit.

Miss Lilly Chittick, who visited her aunt Mrs W J McKeeman, left on Monday for Stoney Creek.

Mr and Mrs Angus Martin of Ripley were calling on friends in this village on Monday.

Miss Anna McKenzie of the north line spent the week end at Neil Currie's.

Mrs Walkenshaw (nee Pearl Rowan) and her two neices little Evelyn and Audrey Rowan, are holidaying at the home of Mr John Deehan.

Mr and Mrs Jason, who were visiting at the Presbyterian Manse, have returned to Toronto.

Mrs Crawford, of Detroit, was calling on friends in the village on Wednesday last.

Miss Flossie McLennan, who was visiting her sister at Rocanville, Sask, returned on Friday.

Mrs Hogarth, of Toronto, is visiting her parents, Mr and Mrs Joe Patterson.

Mr and Mrs Bell, of Willisecroft, spent Sunday afternoon with the latter's brother Mr McCauley at the Misses Howson's.

Miss Emma Kirktown, who is training in Toledo, Ohio, Hospital is home for holidays.

Mrs Young, of the 8th of Bruce, was calling on friends in our village on Thursday of last week.

Mrs Astell, of Saskatoon, is visiting her sister Mrs Neil McLure.

Miss Hughes, of Tiverton, is spending a few days at Jas Thompson's.

Mr Chas McKinnon has returned from an extended trip to the west.

Misses Beere and Burns, of Hamilton, are visiting at Jos Cunningham's and were guests of Miss Laura Cunningham and Miss Reta McKinnon at Inverhuron for a few days.

Mrs Kitchen has bought the property owned by Mrs Jackson and will be moving in shortly.

Mr and Mrs Joe Ferris and son Earl spent Tuesday of last week with friends in Riversdale.

Rev P Reith exchanged pulpits with the Rev Mr Robinson of Tiverton on Sunday last.

Quite a number attended the garden party at William Moffat's on Wednesday and report a good time.

Miss Jennnie McKeeman, and Miss Phyllis Moffat are spending some time in London.

Mr and Mrs Geo MacIntyre and daughter Mary, Miss Tena Wittig, and Mr J L MacIntyre called on friends in the village on Monday on their way to Toronto from a week's holiday at the lake.

Miss Wormske, of the Fergus hospital, who has been nursing the Nesbit family, returned on Friday.

Miss Laura McComb, who has been visiting at Mr Nesbit's, returned to Owen Sound.

Misses Laura Cunningham and Reta McKinnon, who were holidaying at Inverhuron, returned on Monday.

Sunday seemed to be a great day for visitors in our burg. At Mr Kirktown's there were three auto loads—Mr and Mrs Thos Montgomery, Mr and Mrs Wm Montgomery, Fred and Wm Kirktown from Markdale, Mr Adlam and three sisters from Hanover. Mrs T Montgomery and two children will remain for a short visit with her parents.

Two auto loads of Mr Greer's friends spent the day with them.

Mrs (Rev) Sykes, of Detroit, is visiting Mrs McKeeman and renewing old acquaintances. Mrs Sykes was Florence McLean before her marriage and spent a good part of her girlhood days in Glamis.

Mr McCauley knows how to work on the farm as well as preach from the pulpit. He has been helping in the hay field the last two weeks and working hard but it don't interfere with his sermons. He gives his people something good on Sunday. He intends dividing what he makes on the farm between Missions and Red Cross work he is taking a well earned rest this week with his parents in Tara.

ELORA ROAD NORTH

Mr George Storey has been haying at Mr Arch Bryce's

Miss Florence Spong, of Ellengowan spent a few days at Mr John McDougall's.

Mr John Brown delivered a fine bunch of fat cattle to Mr T B Thomson of Dobbington last week.

No 7 and 8 school section held their annual picnic. Those who attended report a good time.

Mrs Webb of Port Elgin spent a few days at J S Campbell's.

The old McArthur Ranch upheld its reputation as a good berry patch this year.

A few motor-loads of our neighbors spent Sunday at the lake shore.

PINKERTON

Rev and Mrs Gale, Misses Hattie and Gladys returned last week from a month's visit at their former home at Alma.

Rev Dr Scott, of Kitchener, occupied the pulpit here on Sunday, and delivered two excellent discourses.

Mr Arthur Collins, of Bervie, met with a painful accident while working on the Caswell farm. He had one of his fingers caught in a pulley and part of the finger was cut off.

Mr Jas Gale, of Alma, spent Sunday at the manse.

Rev Mr Gale, Hattie and Gladys Gale and Jennie Pinkerton spent a few days at Inverhuron.

The Misses Fiddis, of Malcolm, are visiting at the home of their brother, Mr Alf Fiddis.

Miss Isabel Walker, of Parkhead, returned to her home last week.

Word was received by Mr and Mrs Jos Rooney on Saturday evening that their daughter Sadie had died in Cincinnati, near which place she resided. The deceased was very well known here, as she spent the greater part of her life at her home near the village. A few years ago she went to Toronto and there married Mr Alex Camerou. She was in her 26th year, and her early death will be deeply regretted. The sympathy of the whole community goes out to the young husband, to the sorrowing mother and father, sisters and brothers. The remains arrived here on Monday and the funeral took place Tuesday afternoon, conducted by Rev Mr Gale.

WELFTH CON BRUCE

The catchy weather is making the haying a slow job. Help being scarce and a big crop makes slow work.

What about the weed inspector. He must not travel over North St., as the weeds are as high as the fence.

Boys, drive your auto carefully. It is terrible to get upset, and remember when you meet a horse and buggy it isn't a tree or a telephone post. Horses and buggies were here before cars, and the cars can shy into the ditch also.

Mr and Mrs George Scott motored to Port Elgin on Sunday to meet her brother from the west.

Mr Robert Fullerton from Paisley is helping Mr A McLeod at the hay.

Mrs John G McKay and Miss Annie Barrie were calling at Mr Colin McGillivray's one day last week.

An auto-load from Harriston came up on Saturday to visit their mother and sister, viz. Mrs Millan and Mrs John A Howe

Mr Alex McGillivray (ex-reeve) sold a horse to Mr Geo Craig and purchased a new Overland car.

Mr Jno Beaton is poorly at present.

Mrs Dunlop of Greenock was visiting her son Mr H Neilly for a couple of days.

TENTH CON BRUCE

The farmers in this section have finished harvesting a bountiful hay crop. A number of grain fields are also in stook.

Mr Burt Atkinson of Wingham spent Sunday at Mr John Caldwell. Mrs Atkinson and children have been visiting there for some time. They all returned home on Monday.

Mr and Mrs Josh Vennard were also visitors there on Sunday.

Mrs Chas Walmsley is spending a month's vacation with her daughter Mrs Brown in Walkerville.

Mr C McDonald has been under the weather for the past week suffering from neuralgia.

Mrs Henderson and baby accompanied by Miss Emily Mills of Huron were visitors at Messrs John and Robert Caldwell's last week.

Miss Reta McDonald is spending a week's vacation with friends at Port Elgin beach.

We are pleased to see Mrs Thornburn up and around again after her recent illness.

TARA

We are pleased to see Mr H T Tuttle able to be down town again after his recent illness.

Myrtle Irena, the three-year-old daughter of Mr Hugh Graham a well known Derby farmer, residing near Kilsyth, met with a most unfortunate accident on Tuesday afternoon, when she had one leg completely cut off below the knee and the main bone of the other cut through when caught by the binding bar (other was operating in a wheat field. Mr Graham had just made one round of the field, and did not know that the child was in the grain as it was taller than it was, and he did not know of her presence, until she screamed. Tara and Owen Sound doctors dressed the injured limbs.

Mr T W Thompson, weed inspector for Arran Tp, entered action against Mr T Best for allowing noxious weeds to grow on his farm on Concession 9, Arran. The case came before magistrate McDonald here on Monday. Thompson claimed that he had served the defendant with notice on the 21st of July to cut the weeds but the weeds had not been cut. Other witnesses also testified that the property was overgrown with weeds. Best claimed that he did cut the weeds after notice had been served, but stated he could not cut all the weeds without destroying the crop. The magistrate imposed a fine of $5 on and costs. Best may appeal the decision.—Leader.

WALKERTON

Mr Jas J Elder, who is running the farm of his late brother, Charles, at Cargill, brought a sample of wheat into the Herald-Times office on Saturday, grown from seed which he brought down from the West, and which will average from 100 to 125 bushels to the acre. As this is about three times the average yield of other wheat it would prove a great factor in solving the food problem were it not for the fact that it is a poor flour wheat, and on this account is barred from the Western elevators.

P T Barnum said the people liked to be fooled, and many others have proved that the eminent showman knew his public. Tom Longboat, the Canadian Indian runner, is in France with a Toronto battalion, yet a redskin has been masquerading around the United States under the name of the celebrated Canadian He first appeared at Los Angeles last winter but when Ed. Weitlauter, of Kitchener, a former Walkerton boy, came along and exposed him, the bogus Tom took to the tall and lofty, and disappeared from view. Now he has appeared on the Mexican border, and the American public will likely send for Ed. to come down to expose him again.

To fine a man heavily at one court sitting and then acquit him of the charge a few minutes later at a second session, is a sample of lightning change work seldom seen even in this bit of cow country where wonders never cease. The act was staged in Walkerton on Thursday last, when Chief Ferguson arrested two Russian Jews, named Abram and Samuel Davis, who were selling all kinds of silks and other dry goods from a rig in the surrounding country. Hustling them before a local magistrate the Chief had the pair fined $80.00 and costs each, or a total assessment of $177.50, for peddling from a rig without a county license, this being the fine provided by the Bruce County Peddlars' By-Law for such an offence. As the pair didn't have the cash to liquidate the fine, the court seized goods from them amounting to about $200, which the Chief was ordered to put up by auction for the purpose of financing the Court's verdict. Constable Ferguson, who was inwardly congratulating himself on the big game he had landed, and one half of which was to have gone to the coffers of the town and the balance to swell the revenue of the County, was making preparations for the big sale, when the victims of the raid hurried to Mr David Robertson, K C, who immediately got busy working with his spectacles on the by law. His vision finally lit on a part which, he maintained, was a gross flaw in the county work and which, he claimed, entirely invalidated the legality of the fine. Getting hold of the presiding magistrate he so convinced him on the matter, that the local Justice Dispenser immediately held another court, and acquitted the accused, handed back their goods and called off the sale. Walkerton's Chief Constable had then to be content with laying a charge against the pair for refusing to show him their license when asked, and as they didn't have any and couldn't show it, the court fined them each $1.00 and costs, and let them go on their way rejoicing. If the last Bruce County Peddlars' By-Law is such a farce that a man can't be legally prosecuted under it for failure to take out a license, then the sooner the County Council gets busy and frames up something that will hold water the better, as handing magistrates such joke documents to enforce, is neither conducive to the dignity of the court nor likely to instil respect for the law.—Herald and Times.

BRUCE TP COUNCIL

Underwood, Aug 18th, 1917.

Bruce Tp council met in Tp Hall on the above date, pursuant to adjournment, members all present. Minutes of previous meeting read, adopted and signed. A number of communications were then read and disposed of. A delegation from Tiverton Women's Institute addressed council requesting a grant as the institute has devoted their energies since the war started to patriotic purposes.

Dobson—Baker—That this council give a grant of $35 to the Women's Institute of Tiverton, for patriotic purposes.—Carried.

McNeill—McKenzie—That the following rates be struck for 1917, viz: General County rate and Municipal Equivalent, 3.7 mills on dollar; Provincial war tax, 1.1 mills; Township war rate for Red Cross, etc. 2 mills; General School rate, 2.1 mills; General Tp rate 4 mills; and that a by law be prepared levying above rates.—Carried.

McKenzie—Baker—That a bylaw be prepared for the purpose of levying the rates on the different school sections, as called for by the Trustees' requisitions, less the amount provided for by the general rate.—Carried.

Dobson—McKenzie—That a rate of $12 be levied on all Telephone subscribers, and that a by law be prepared levying same.—Carried.

McNeill—Baker—That Clerk be authorized to collect on 1917 taxes, from the parties in the award ditch con 4, amount of cleaning ditch for the year 1913, and the cleaning of ditch this year be collected in 1918 taxes.

Baker—Dobson—That By laws 246, 245, and 246 for buying rates on now read be passed.—Carried.

Dobson—McNeil—That this council empower the different committees to have all bridges let, built as soon as possible.

A number of accounts were then passed and council adjourned to meet on Sept. 22nd, 1917.

J G MACKAY, Clerk.

CASTORIA

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

ARRAN COUNCIL

Council met on August 8th. Members all present. Clerk absent owing to illness. A G Hepden acted as Clerk. Minutes read and adopted.

Councillor George was appointed to have bridge on 5 S R, Con 6, repaired. Robt Henderson asked to have ditch dug on no 8 R. No action. Councillor Scarrow was appointed to examine and see what is needed and report to Reeve. Communications from Capt Danard to the young men who enlisted from Arran $5 each. Laid over. Clerk to write Capt Danard. Council thought it should be made a County affair. Council then took up the estimates of 1917. There will be a large increase in Tp rates. Last year the Tp levy was slightly less than $4000, this year it is $16,687. Council had to borrow money from the new year. The chief items are as follows—borrowed, $4000; Kennedy's bridge, $5500; Red Cross, $1000 and $2500 to finish 1917 and $1500 to have on hand for 1918, printing, stationary, salaries, miscellaneous and B O H. Dt, is also in this sum, and it will require 11 mills in the $ to meet the levy. Last year the rate was 2 and five-tenths, but should have been much higher. By-Law No-11 fixing rates was then finally passed, sealed and signed. Moved by C A Thomas, sec by Fred J Scarrow—that this Council now assembled do extend our sincere sympathy to our highly esteemed friend and Clerk, H T Potts, in his severe illness and hope for his speedy recovery. Orders to the amount of $15 were passed. Council then adjourned until Sept, 17th next.

Letters from the Soldiers

BADLY SHELL SHOCKED

Pte Vic Smeaton, mentioned last week as in the casualty list, had already been in hospital suffering from furunculosis, which is a skin disease contracted in the trenches from drinking bad water, eating canned meats, etc. In a letter to his parents, dated July 8th, Vic tells how he became shell shocked: "I had just spent two days in the line, and—I'm in hospital again, but not for long, I hope. A nerve case this time. When I went back to duty I did not go back to the machine guns. I did not feel capable for that as it is fairly heavy work. I was doing running instead, carrying orders from company to battalion headquarters. Now, I had a very strenuous time, especially when I had to make a quick bolt across country in daylight to dodge Fritz's snipers, whizz-bangs, etc. I had just arrived from guiding a ration party into the line and was starting out with a stretcher case to the dressing station when I was ordered up on an outpost to handle a gun whose crew were nearly all casualties from a raid. An officer spotted me and sent me out in front to cover a party who were blocking a trench to prevent Fritz from surprising us again. About the same time Fritz decided to knock it in with nine-point twos or less, and me in the trench. I felt a noise as if a train were coming my way, then another noise—the same kind father used to make in the morning on the stove pipe at home to get me up. I had a feeling of going up in the air, then a feeling of coming down again, then a snap—something had given way. Next I knew I imagined someone was shaking me, but it was only my knees knocking together."

On July 28th he says: "I am still in hospital, but I have my khaki back again and no doubt will be sent out again, although I am not fit for it yet."

July 29th: "I am still in the same hospital, but expect to go to another soon. I am not very well this evening and am very shaky."

Poppies in Flanders

In Flanders fields the poppies grow
Between the crosses, row on row,
That mark our place, and in the sky
The larks still bravely singing fly,
Scarce heard amid the guns below.

We are the dead, short days ago
We lived, felt dawn, saw sunsets glow,
Loved and were loved, and now we lie
In Flanders fields.

Take up our quarrels with the foe
To you from failing hands we throw
The torch; be yours to hold it high
If ye break faith with us who die
We shall not sleep, though poppies blow
In Flanders fields.

The Walkerton High School

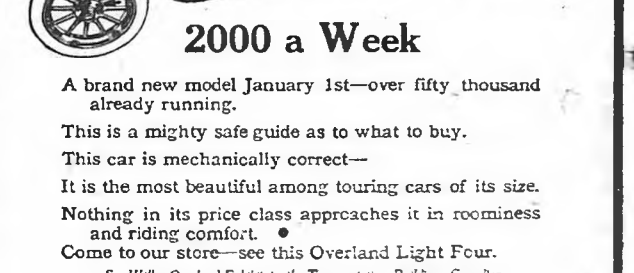
will re-open on

TUESDAY, SEPT. 4th, 1917

Students are prepared for the following examinations:—ENTRANCE TO NORMAL, ENTRANCE TO FACULTIES OF EDUCATION, MATRICULATION—either in pass or honors—into any University in Ontario.

This School has been, for many years, very successful in these examinations. The record this year fully maintains this success. All the teachers are University Graduates or Specialists.

The equipment for teaching Science and Art fully meets the requirements of the Education Department, and there is a good Reference Library.



Full attendance is given to Physical Culture, and an efficient Cadet Corps is maintained.

Board can be obtained at reasonable rates.

For further information address:—

J. MORGAN, M.A., Principal. H. M. LAY, Chairman H. S. B. M. G. DIPPELL, Secretary

Light Four Touring

2000 a Week

A brand new model January 1st—over fifty thousand already running.

This is a mighty safe guide as to what to buy.

This car is mechanically correct—

It is the most beautiful among touring cars of its size.

Nothing in its price class approaches it in roominess and riding comfort.

Come to our store—see this Overland Light Four.

—The Paisley W C T U are preparing a bale of quilts and clothing for the Belgians, especially children's clothing. Any persons wishing to contribute will kindly leave at H B Putnam's office or Spofford's store, on Tuesday or Wednesday, Sept 4th and 5th.

—Rev A H McGillivray, of St John's church, Hamilton, who so acceptably filled the pulpit of Knox Church on Sunday, was the guest of Mrs Jas McGillivray, Queen St north. Mr McGillivray is an old Saugeen and Port Elgin boy and has many relatives and warm personal friends in this district.

—Messrs James Stark, and sons Walter and Nelson, accompanied by Silas Henry and Wm Tooke, motored over to Eugenia Falls and Collingwood on Sunday last. The Hydro Electric Commission are busily engaged in excavating for the installation of a second power wheel. Only one 50 inch wheel has been in use, which developed 4,000 horsepower. It is estimated that the plant can be extended to furnish throughout the year something like 40,000 horse-power when the capacity of the stream is fully developed.

The Staude Mak-a-Tractor Working

Messrs Dan Sparrow and Sterling Fraser, Bruce County agents for this new and most useful farm implement, received one of the tractors this week, and after attaching it to a little old Ford car, gave it a good test by hauling a procession of three automobiles loaded with people along the street in town, and in cutting a large field of oats at Mr Geo Gilchrist's farm, 15th Greenock. On Friday afternoon it can be seen in operation again at Mr S Winch's, Elora Rd north. Every farmer who has a Ford car is specially invited to investigate the worth and practicability of the Staude Mak-a-Tractor in helping to do the heavy farm work quicker, easier and cheaper than by the use of horses. A demonstration in plowing will be given shortly.

One hundred thousand men will soon be called to reinforce the men at the front. Many places to others will be left vacant. Young women and boys under military age will have to fill their places in order to carry on the business in every country. The best time to make preparation is at the Provincial Business College, Owen Sound, and the best time is now. The Fall Term begins Monday, Sept 3rd. Enroll that day, or as soon there after as possible. Full particulars free. C. A. FLEMING, F.C.A., Principal.

Everything for the Bugs

Paris Green, Arsenate of Lead, Bug Finish, Bug Death, Bluestone, Hellebore, Insect Powder, Creolin, Sabidilla, Moth Balls, Instant Louse Killer, Fly Killer, Etc.

P. B. MORE, Druggist

—While cranking his car one day last week Mr J J Jacques had his leg badly injured when the engine back fired, and he has been confined to the house since.

—Mr Adam Scott, owner of the building in which Hogg & Carvill's furniture store is located, delighted the hearts of his tenants by repainting the whole premises. The improvement is certainly noticeable.

Changed Her Mind

ONE WAY LAY FAME AND JOY; THE OTHER DUTY CONSECRATED BY LOVE.

By John A. Phelps.

Lettie's voice rose high and clear above the accompaniment that she played upon the cracked old piano. When Lettie sang she lost herself in the ecstasy of the melody. It was a song from "Rigoletto," but she did not know that; she had found the music among a miscellany left by the last summer boarder.

"Drat that girl!" exclaimed Mrs. French, setting down her pans. She emerged from the kitchen into the parlor where Lettie sat.

"I wish you'd have a little consideration for the boarders, Lettie," she said querulously. "Didn't you know Miss Latham's gone to her room with a sick headache? And you must choose this time to screech like a sick owl in the woods."

Lettie came back to earth with a sigh. "I'm sorry, mother," she said and turned from the piano. Mrs. French went back into her kitchen again.

Just then the parlor door opened and Miss Latham entered. She was dressed in her peignoir; her hair, hanging loosely down her back, gave her a singularly youthful appearance. Nobody would have guessed that this was the famous singer of the opera house, who was proudly displayed upon the billboards nightly during the season.

"Don't stop for me, Lettie," she said. "Won't you sing that again? Who taught you to sing?"

"Oh, it just comes natural, I reckon," said Letty, with an embarrassed laugh.

"But, my dear, that was wonderful. Don't you know that you have a remarkable voice?" Miss Latham asked. "If that were trained you might have a great future before you."

Letty left the piano stool. "You mean that I might get to sing at concerts?" she asked breathlessly. "Do you really think I ever could?"

"O, Letty anybody can sing at concerts. I mean something really big. Wouldn't you like to?"

"Oh, wouldn't I!" exclaimed the girl, clasping her hands. This had been

"I am sorry, Mother."

her vision since her earliest years; as though remembering some previous existence, she saw the lights, the audience, she smelled the perfume from women's dresses and saw the jewels upon their necks and they bent forward to listen. And she was singing to them with all the joy of youth, pouring forth her beautiful soprano voice in sheer exuberance and as naturally as a bird.

"Would you like me to speak to a friend of mine in the city?" Miss Latham asked. "When I go back, I mean. Something might come of it, you know. Of course you would have to mention the matter to your mother."

Lettie sighed. Yes, there would be the trouble. Her mother and—William. What would he say? She felt by instinct that if ever she left the farm she would never return; she would never stand with William before the minister, as they were pledged to do, and supplement the slender ring upon her finger, with its half-hoop of pearls, with a plain gold band.

Two impulses drew her in different ways. One way lay fame and joy and beauty; the other duty, but duty consecrated by love and wifehood.

She looked at William more critically than usual that evening. His hands were coarse and clumsy, his hands were coarse and clumsy, his shoes shapeless; he took no care of his appearance. William did not shine in the external qualities. But he was good. His very goodness irritated her.

"William, how would you like us to go to town?" asked Lettie. "I mean, for a couple of years, maybe, before we get married."

William's brow clouded. He looked sullenly at her. "You mean that you want to put off our marriage?" he asked.

"Don't you want me to have a little happiness before we are married?" asked Lettie.

She spoke sharply, conscious of the intolerable struggle. William answered her thoughts.

"I know if you leave Stapleton you won't never come back," he said. Then, with a burst of passion, "It's that Miss Latham, isn't it, with her notions. Do you know who she is? She's a singer. Just a plain singer—not even a typewriter or office girl. There isn't much good to be said of them, I reckon."

"I reckon you're too mean to live!" cried Lettie angrily, and stood before him with flaming cheeks. "Take your ring back if you want to talk that way."

William rose dully; he was only conscious in his heavy mind that the inevitable had happened. He saw the tragedy, but his untrained mind ran upon mundane things: the home that he was buying, the pigs, the cow, the apple crop that would not bear fruit for the new bride. He took the ring clumsily.

"If you change your mind, Lettie—" he began heavily. But Lettie had left him. She was in Miss Latham's room, upon her knees, sobbing.

"You must take me with you," she wept. "I can't stay here—I can't. I want to live in the town, to see the faces of people, to cultivate myself—"

Miss Latham laid her hand on the girl's head.

"There's another side to the picture, my dear," she said. "Do you realize what you will have to go through—the days of labor, the nights of suffering, the loss of every ideal, the bruising of your heart, the shattered hopes of life and the promise of what might have been, vanishing with the passing years? Lettie," she said, earnestly, "if I could have the past ten years over again they would have been different. But I'll speak to the friend I told you of when I return—if you ask me again to-morrow."

Letty went slowly down the stairs. Her mental poise had come back to her. She thought of her mother's dreary round of days, of her real love for herself, hidden though it was beneath the load of petulance. She looked out into the village. There were the friends whom she had always known; it was peaceful to-night and the moon was rising over the apple orchard. A sudden revulsion of feeling came over her. The tears ran down her cheeks.

A man stepped lightly out of the darkness.

"Lettie," he said, "I want to say—I don't want to stand in your light. I want you to go—I want you to be happy. Perhaps you'll think of me sometimes—"

Lettie stretched out her arms and drew his head down to her own. "I'm going to stay, William," she said.

And Miss Latham, at her window above, heard and was glad.

There are to be no flying schools in British Columbia. It has been decided to abandon the Lulu Island scheme.

Great Britain has enrolled between 5,000,000 and 5,500,000 men as soldiers, or one in eight of the population. Canada has enrolled one in twenty.

Cultivation of the corn is as essential in a damp season as a dry one, in a dry season it conserves moisture and in a damp one it prevents compacting of the soil.

DOMESTIC SCIENCE AT HOME

Seventh Lesson—Fats and Oils.

Fats and oils form the second class of heat and energy giving foods. One of their functions is to lubricate the intestinal tract.

They produce twice as much energy as carbohydrates, and for this reason the people in cold climates consume from two and one-half to three times the amount of fat that persons in warm climates would consume.

Fats are classified or separated into two distinct classes—fixed and volatile oils. All fats used in the preparation and cooking of food are called fixed oils. By this term is meant that little or no evaporation takes place during the process of heating and cooking with the fat. Fixed oils, while they do not evaporate when heated to a high temperature, become dissociated or decomposed; that is, their chemical construction breaks down or separates after the boiling point is reached.

Volatile Oils.

Volatile oils, upon reaching the boiling point, are transformed into a gas or vapor. For instance, if the essential oil of turpentine is heated in a proper vessel by chemists to 300 degrees Fahr., it ceases to be a liquid and becomes a gas, which, upon cooling, returns to the liquid form without loss of volume or weight.

This experiment is dangerous and should be performed only by laboratory experts and chemists. It is given here only as an example for a proper explanation.

Oil of cloves, cinnamon, bitter almonds, lemon, patchouli and bergamot are a few of the best known of the volatile oils.

Composition of Fat.

Fats are called hydrocarbons, composed of carbon united with oxygen and hydrogen. They contain in their composition various fatty acids and glycerine. From decomposed fats the commercial glycerine is obtained.

Milk Fats.

The minute globules of fat that are suspended in milk give it its clean white color. The proportion of fat in milk varies from two and eight-tenths to eight per cent. This variation is due to the age, condition and feeding of the cows from which the milk is obtained.

Milk taken directly from the cow and permitted to stand for a period of time has fat globules on the top. These globules, which are lighter than water, rise to the top and form what is called cream. Cream is wholesome and palatable for the fat it contains.

Butter is made from cream by the process of beating or churning. This action causes the little fat globules to break and then to coagulate into a solid mass.

Animal Fats.

Animal fats heated to the boiling point burn or carbonize, thereby showing numerous particles (black) in the fat. This is unfit to use as a cooking agent for food.

Olive Oil.

Olive oil is the most palatable and easiest of all the oils to digest. The genuine olive oil is almost without flavor. The oil is made in four grades. The first pressing from the olives is called virgin oil. The second grade is good and the third fair; the fourth is sometimes known as refuse oil. Nothing can equal olive oil as a cooking medium.

Cottonseed Oil.

Cottonseed oil to-day is a great improvement upon the oil of a few years ago. The processes are now perfected whereby the oil is produced absolutely colorless and tasteless. It is an ideal medium for frying or shortening, and it is much preferred to the various kinds of animal fat.

Classification of Animal Fats.

Beef fat is known as suet. Sheep fat is called tallow. Pig or hog fat is commonly known as lard. Uncooked fats are called suets. Fat that comes from the cooking of meat, such as roasting or boiling, is called drippings.

Vegetable Fats.

These embody oils produced from vegetables, such as corn oil or peanut oil. Corn or peanut oils are particularly desirable for cooking purposes because they have a delightful flavor and luxture to the cooked food. Other vegetable oils are bayberry, tallow from the bayberry, also penny tallow and oil from different grains.

The Ideal Meal.

Variety in the making of a menu is as necessary as the food itself. One would soon tire of beef and be unable to partake of a sufficient amount for nutriment if it were the only protein furnished for thirty days.

Beef, lamb, veal, pork, poultry, fish, cheese and the legumes give one a wide scope when planning the daily balanced menu. Potatoes, rice, hominy and barley furnish carbohydrates or starches.

Fat from the meat, cream in the milk and butter eaten upon bread also perform their mission in the body and are necessary for its upkeep in supplying energy and lubrication.

Sugar and sugars such as are found in the fresh and dried fruits are classed as carbohydrates. Succulent vegetables and salads supply the necessary mineral salts.

Therefore a portion of meat or a substitute for it, potatoes or their equivalent and one green vegetable, salad, bread and butter and a dessert supply an ideal meal.

Three Good Recipes.

Peach Popovers.—One egg, fill cup with milk, one cupfull of flour, one-fourth teaspoonful of salt. Place in a deep bowl and beat for five minutes with a Dover egg beater. Then pour into hot popover pans. Bake in a moderate oven for thirty-five minutes, and fill with crushed and sweetened peaches or other fruit.

Cucumber Salad.—Peel and cut in thin slices one medium-sized cucumber. Sprinkle with salt and then put in a cool place for one hour. Rinse and cover with chopped ice to make it crisp. Lay on shredded lettuce and serve with the following: One teaspoonful of sugar, one-half teaspoonful of salt, one-half teaspoonful of mustard, one-half teaspoonful of paprika, two tablespoonfuls of vinegar. Blend to a smooth paste and stir in six tablespoonfuls of sour cream. Serve.

Corn Pudding.—One cupful of corn scraped from cob, one cupful of milk, eight tablespoonfuls of flour. Place in a saucepan and blend the corn milk and flour. Bring to a boil and cook for one minute. Cool and add one teaspoonful of salt, one teaspoonful of finely cut parsley, one-quarter teaspoonful of paprika, one-half teaspoonful of grated onion, yolk of one egg. Mix thoroughly and fold in the stiffly beaten white of one egg and one teaspoonful of baking powder. Pour into a thoroughly greased baking dish and set in a pan of warm water. Bake for twenty-five minutes. Serve from the dish with cream sauce.

WESTERN FARMERS CALL FOR LABOR

GRAIN RIPENING RAPIDLY BUT MEN ARE SCARCE.

Cutting Will Commence About August 20—Patriotism Demands Conservation of Crop

The gravity of the situation in regard to the harvesting of Ontario's crops serves but to illustrate more clearly the seriousness of the call of the farmers of the western prairies for some 30,000 men from the eastern provinces to help garner the grain in Manitoba, Saskatchewan and Alberta this season.

The Canadian Northern Railway whose 6,000 miles of line in the three prairie provinces serve the most productive areas, have already announced that the help of 25,000 men would be required to assist the farmers along its lines this year. Since then representatives of the Federal government, the three provincial governments and the leading railways, have conferred at Winnipeg, and announced that 31,000 harvesters from Ontario and the other eastern provinces would be welcomed in the west this year.

As everyone knows, agriculture is at the base of our Canadian prosperity, and if only for this domestic reason, the harvest should be assured. But this year the wheatless millions throughout the world look to the North American continent and especially Canada, for their supply. The North American wheat crop this year belongs to all the world with the exception of the Teutons and their allies, and because of this it is imperative that the grain yield be conserved.

STOMACH MEDICINES ARE DANGEROUS

DOCTORS NOW ADVISE MAGNESIA

Just how dangerous it is to indiscriminately dose the stomach with drugs and medicines is often not realized until too late. It seems so simple for a mouthful or two of some special mixture or take tablets of soda, pepsin, bismuth, etc., after meals, and the folly of this drenching is not apparent until perhaps years afterward, when it is found that gastric ulcers have almost eaten their way through the stomach walls. Regrets are then unavailing. It is in the early stages when indigestion, dyspepsia, heartburn, flatulence etc., indicate excessive acidity of the stomach and fermentation of food contents that precaution should be taken. Drugs and medicines are injurious and often dangerous; they have little or no influence upon the harmful acid, and that is why doctors are discarding them and advising sufferers from indigestion and stomach trouble to get rid of the dangerous acid and keep the food contents sweet (not sour) by taking a little pure bisurated magnesia instead. Bisurated Magnesia is an absolutely pure antiacid which can be readily obtained from any drug store. It is absolutely harmless, is practically tasteless and a teaspoonful taken in a little warm or cold water after meals, will usually be found sufficient to instantly neutralize excessive acidity of the stomach and prevent all possibility of the food fermenting.

NO LONGER OBSOLETE.

Things That Were Thought Out-of-Date Are Being Revived.

In spite of the fact that this is a machine and petrol war, it is remarkable how old things that seemed obsolete keep bobbing up. Who, for instance, would have thought that the seeming outworn weapon, the grenade, after which the British Grenadiers were named, would be one of the successes of the war? Or that the old bayonet would be much use against machine-gun fire?

One must go still further back for armor; yet there has been a distinct movement in favor of a return to it. And it is a fact that the steel caps our men have been provided with have saved tens of thousands of lives.

Then the sword was supposed to be obsolete. Yet we not only read of a naval fight where there was boarding, but it was followed by a cutlass fight, for all the world as in Nelson's Fleet in the brave days of old.

After all, it does not do to scrap things too soon. They may come in very serviceable by-and-by, and even save the situation. And, in spite of machines and general frightfulness, the man himself is the most important instrument, both of war and peace.

Increasing the fertility of the soil is the most important problem before the majority of farmers to-day.

IF THE TONGUES OF YOURSHOES COULD SPEAK, THEY WOULD SAY

USE

"NUGGET" Shoe Polish

It gives the same nourishment to the lenther that the skin gets when on the animal's back.

Black, Tan, Toney Red and Dark Brown. 10c. per tin.

"TAKE CARE OF YOUR SHOES."

ELECTRICAL HOME LIFE.

Idyllic Conditions Which Prevail in the Homes of Sweden.

It is a generally acknowledged fact that we have never made proper use of electricity in this country. In The World's Work, for July, Mr. James Armstrong predicts the early dawn of the British electric age. He cites Sweden as an example of the part which electricity is playing in the destiny of the world.

The city of Stockholm is as cold a city in winter as one could wish to find; but although Sweden produces not an ounce of coal its citizens are as warm and snug as if they lived in the tropics. Electricity supplies the solution of the problem. The Stockholm householder does not burn coal in the grate of his room, and strive to profit from a modicum of heat which is radiated into the room, while most of it escapes up the chimney. Neither does he dive into the depths of the cellar to stoke up the furnace. His last duty on retiring for the night is to move a small handle or switch—button if you like—which sends a current of electricity coursing through the wire coil enclosing a cold water tank. As the water becomes heated up it is sent coursing through the pipes laid throughout the house, and the constant circulation preserves an equable temperature from hall to roof. Upon rising in the morning the householder shuts off the current—the water has been heated sufficiently to last the house during the daytime when the energy is required for a thousand and one other purposes for the benefit of the community.

How is such a system possible? The Swedish engineers have been busy. The torrentinl rivers and mountain streams have been harnessed to turn huge turbines linked up with pondon generators which, in their rapid revolution turn out current as readily and as copiously as water flows from the tap. The energy thus obtained so readily is conveyed from the lonely power-house, maybe for scores of miles, to the city to be distributed among the residents, who are called upon merely to move a small switch in their homes in order to receive the full benefits which the "juice" can extend.

Meals can be quickly and conveniently cooked, the house brilliantly lighted, and as much heat as desired obtained—all by pressing a button. And the cost, owing to the extensive scale upon which current is generated, is but a fraction of the expense which would be entailed were coal or any of the other familiar mediums, gaseous and solid, employed for such purposes.

Proper Methods of Buttermaking.

Few people trouble themselves about the reason that creamery butter is to be preferred to dairy butter, but by way of introduction to Bulletin No. 53 of the Dairy and Cold Storage Branch, Ottawa, Dairy Commissioner Ruddick furnishes an explanation. Incidentally he also points out that a good deal of damage is done to the trade by inferior dairy butter. The bulletin for which Mr. George H. Barr, Chief of the Dairy Division, is responsible, in concise terms describes the whole process of butter making, tells the utensils that should be used and how they should be used, gives the results of experiments with the separator as regards temperature and variations in speed, deals with the care of cream in cooling and preparing for churning and in pasteurizing, gives expert counsel as to salting and working and points to the advisability of attractive packing in parchment paper. He also points out the requirements of the law in branding or marking and supplies practical hints on care of the utensils. Finally, he tells in terse terms how to get the best results in farm dairy work. Both the bulletin and a blue print of the plan for a dairy that is given can be had free by application to the Dairy Commissioner or to the Publications Branch, Department of Agriculture, Ottawa.

ARE you really saving money by neglecting to re-shingle that farm roof? You know that each additional patch lessens the value of your building. You know each widening leak means rotting, loosening shingles and early decay. You know that only by Reflashing your roof can you get enduring freedom from such evils. Pedlar's "Ceeco" Shingles bring you the durability and weathering qualities of steel at a price, when laid, about that of a good wooden shingle roof. A Reflashed roof will last for generations, protecting you at all times from the danger of lightning and fire. The "Right Roof" Book let W— telling you all about steel shingles and how to lay them, is free. Write us to-day.

was a favorite name among the long-forgotten food products of half a century ago, just as it is among the live ones of to-day. Only exceptional quality can explain such permanent popularity.

"Let Redpath Sweeten it."

Made in one grade only—the highest!

Putting Pep and Punch into the daily job during the hot days is a matter of physical and mental fitness—and this comes from foods that supply the greatest amount of real nutriment with the least tax upon the digestive organs. Cut out meat and potatoes and eat **Shredded Wheat Biscuit** with sliced bananas or other fruits and green vegetables. Strengthening and nourishing.

Made in Canada.

WESTERN CROP MUST BE SAVED

Insistent Call for Men From Prairie Wheat Fields.

The crop in Western Canada is rapidly approaching the harvest stage. In some places, indeed, cutting has commenced already. But the insistent call for harvest help will be general throughout Manitoba, Saskatchewan and Alberta within the next few days.

Save the crop! is the urgent appeal from the leaders in all the Allied countries. In Canada, the young men of adventurous tendencies in the towns and villages of Ontario, who have been unable to go to the trenches, will be contributing a very real service to the cause by helping grain growers of the Prairie Provinces gather the wheat upon which so much of the success of war operations depends.

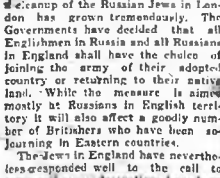
The rates to the west are low, and the wages, because of the high level of the price of wheat, are certain to be good, if not high. Moreover, there is always the possibility that the harvester, "doing his bit," may locate a farm in the west and settle permanently there.

To many young men and those more mature, in every small town in Ontario, including our own, this appears as a great opportunity to serve the country in a practical way. A pleasant, long-distance train journey, and a visit to the invigorating west, are added attractions. But the crop must be saved!

LONDON JEWS FACE RACE WAR.

Russian Element Refuse to Enlist There or Return to Native Land.

There is a race war developing in East London that promises to become bitter, says an English correspondent. The east side of the world's largest city is thickly populated with Russian Jews, who have refused either to join England's army or return to Petrograd for service there. They are in bad repute with the Londoners and the ill feeling has lately taken a menacing turn.



Since the publication of the agreement entered into by the British and Russian Governments the demands for clearance of the Russian Jews in London has grown tremendously. The Governments have decided that all Englishmen in Russia and all Russians in England shall have the choice of joining the army of their adopted country or returning to their native land. While the measure is aimed mostly at Russians in English territory it will also affect a goodly number of Britishers who have been sojourning in Eastern countries.

The Jews in England have nevertheless responded well to the call to arms and many decorations have been won by men of Hebraic origin. Yet the Russian Jews have continued their businesses in East London despite all efforts to put them into khaki. The people are beginning to threaten them. Men who formerly had small shops in that quarter but who have joined the army can hardly be expected to accept without protest the greediness with which the Jews pick up their former trade. Now that the authorities have the power to call up the shirkers they will have to act promptly to avoid demonstrations.

The issue has been put squarely to the Jews, but they are waiting until they are forced to make a decision.

The war has brought them abounding prosperity, but they don't intend to acknowledge their obligations to the community that has been kind to them.

A trip through the East End to-day is enough to convince any one that the English are looking for speedy action. The Russian Jews can expect no further consideration from a Government that has been more than lenient with them, and judging from the sentiment now they know their days in England are numbered. It will either be khaki or a ticket to Petrograd.

A Call to Your Grocer will bring a package of **Grape-Nuts**

A delicious, healthful food and a pleasing lesson in economy.

"There's a Reason"

Made in Canada

THE FIRST LINE OF DEFENSE

Pure blood is the body's first line of defense against disease. Strong, healthy blood neutralizes the poisons of invading germs, or destroys the germs themselves. That is why many people exposed to disease do not contract it. Those whose blood is weak and watery and therefore lacking in defensive power are most liable to infection. Every day may observe that healthy, well-nourished people are less liable to colds and the grippe, than pale, bloodless people. It is the bloodless people who tire easily, who are short of breath at slight exertion, who have poor appetites, and who wake up in the morning as tired as when they went to bed. While women and girls chiefly suffer from bloodlessness the trouble also affects both boys and men. It simply affects girls and women to a greater extent because there is a greater demand upon their blood supply.

To renew and build up the blood there is no remedy can equal Dr Williams' Pink Pills. They tone up the entire system, make the blood rich and red, feed and strengthen starving nerves, increase the appetite, put color in the cheeks, give refreshing sleep and drive away that unnatural tired feeling. Plenty of sunlight and wholesome food will do the rest.

You can get Dr Williams' Pink Pills through any dealer in medicine, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

A Hall of Heroes.

In the great War Museum which the British Government are establishing shortly there is to be a permanent record on tablets of bronze of every man and woman killed in the war or in munition work. It will be a national memorial of Heroes of the Great War. There will also be models of every war worker from the Red Cross nurse to the bus conductress.

Lachute, Que., 25th Sept., 1908.
Minard's Liniment Co., Limited.

Gentlemen,—Ever since coming home from the Boer war I have been bothered with running fever sores on my legs. I tried many salves and liniments; also doctored continuously for the blood, but got no permanent relief, till last winter when my mother got me to try MINARD'S LINIMENT. The effect of which was almost magical. Two bottles completely cured me and I have worked every working day since.

Yours gratefully,
JOHN WALSH.

Games at the Front.

"Somewhere in France" men are playing hard these days.

Behind the lines they are boxing, wrestling, playing ball, competing with each other in all sorts of athletic exercises, squad against squad, company against company, regiment against regiment, brigade against brigade and division against division. It has been found that these games, in which the competitive spirit is aroused among the soldiers and in which their physical energies are taxed to the uttermost, are of great influence in keeping the men sane and balanced behind the lines. The games are started as soon as the soldiers come back from the firing line, when nerves are most in need of steadying and it is necessary to direct the minds of the soldiers into new channels as quickly as possible.

Bethmann-Hollweg's Dress Suit.

After Bethmann-Hollweg was in London some years ago he presented his dress suit to the head waiter of the hotel where he had been staying. When Bethmann-Hollweg was leaving London his valet forgot to pack up his master's dress suit; subsequently the valet wrote to the manager of the hotel in London where the German Chancellor had been staying to say the suit might be given to the head waited. That individual, however, although he was a German, never wore it. He was too old a suit to please him and he sold it to a second-hand clothes shop for four shillings.

Cheese is one of the most concentrated forms of nitrogenous food and admirably supports even the hardest labor in the open air.

Minard's Liniment Cures Garget in Cows

CONVALESCENT.

I'm home again in England!
Across the dappled plains
I see the sweep of Severn,
And hear the elfin strains
Of yellow-breast and golden-crest
That cheer the Cotswold lanes.

I'm home again in England!
Oh, here my languid feet
Take courage from the heather
And here my heart's made sweet
By laughing rills and water-mills
That grind the English wheat.

I'm home again in England!
Home for a little span
From traffic in the desert
With death's rude caravan—
Strong land that made my sires obeyed
Heal now an Englishman.

CHOLERA INFANTUM

Cholera Infantum is one of the fatal ailments of childhood. It is a trouble that comes on suddenly, especially during the summer months and unless prompt action is taken the little one may soon be beyond aid. Baby's Own Tablets are an ideal medicine in warding off this trouble. They regulate the bowels and sweeten the stomach and thus prevent all the dreaded stomach complaints. Concerning them Mrs. Fred Rose, South Bay, Ont., says: "I feel Baby's Own Tablets saved the life of our baby when she had cholera infantum and I would not be without them." The Tablets are sold by medicine dealers or by mail at 25 cents a box from the Dr. Williams Medicine Co., Brockville, Ont.

An Urgent Case.

Violently the loving wife shook her husband's shoulder.

"Wake up, George," she said. "The doctor has just sent your sleeping draught."

MURINE Granulated Eyelids, Sore Eyes, Eyes Inflamed by Exposure to Sun, Wind and Dust relieved by Murine. Try it in Your Eyes—No Smarting, Just Eye Comfort. Murine Eye Remedy At Your Druggist's or by Mail. 50c. per Bottle. Murine Eye Remedy Co., Chicago.

The British Board of Agriculture has placed some six hundred farm tractors at work in the United Kingdom. Over eight hundred plows for use with these tractors have also been purchased.

MONEY ORDERS.

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

Lightning is a great sanitary agent; it produces nitric-acid in the air, which destroys putrid exhalations from the earth.

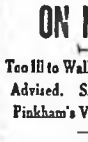
ANY CORN LIFTS OUT. DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers —It's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.



This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

CLIMBED STAIRS ON HER HANDS

Too Ill to Walk Upright. Operation Advised. Saved by Lydia E. Pinkham's Vegetable Compound.

This woman now raises chickens and does manual labor. Read her story:

Richmond, Ind.—"For two years I was so sick and weak with troubles from my age that when going up stairs I had to go very slowly with my hands on the steps, then sit down at the top to rest. The doctor said he thought I should have an operation, and my friends thought I would not live to move into our new house. My daughter asked me to try Lydia E. Pinkham's Vegetable Compound as she had taken it with good results, I did so, my weakness disappeared, I gained in strength, moved into our new home, did all kinds of garden work, shoveled dirt, did building and cement work, and raised hundreds of chickens and ducks. I cannot say enough in praise of Lydia E. Pinkham's Vegetable Compound and if these facts are useful you may publish them for the benefit of other women."—Mrs. M. O. JOHNSTON, Route D, Box 190, Richmond, Ind.

SHAKESPEARE IN GERMANY.

Hun Newspapers Boast Love of Great English Dramatist.

German newspapers announce with considerable pride that, despite all the bitterness of the war, the plays of Shakespeare receive first place in the theatres of Germany. Despite the fact that England has barred Wagner's music and France has torn German paintings from the walls of the Louvre and Italy has desecrated the Goethe Memorial, Germany looks upon art as sacred and in its cities are heard the works of Gounod, Bizet, Moliere, Puccini and Verdi; also George Bernard Shaw and Leo Tolstoi.

Of 294 performances given in the Frankfort theatre, 1916-1917, fifty-five were devoted to the works of Shakespeare, only thirteen to Schiller and twelve to Goethe. In Frankfort, Shakespeare is revered even more than Goethe, and throughout Germany during this war Shakespeare's plays are produced in larger numbers even than in England.

The German newspapers explain that in art no nationality is taken into account. Shakespeare is regarded in Germany not as an Englishman, but as one of the world's greatest poets and dramatists. Germans look upon Shakespeare almost as their own flesh and blood, they declare

GET RID OF Pimples Quickly, Easily and Cheaply by Using Cuticura

The Soap to cleanse and purify, the Ointment to soothe and heal. Nothing better for all skin and scalp troubles, as well as for every-day toilet purposes.

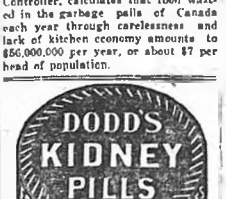
Why Cherries Are Ruddy.

It was the theory of Darwin that nature made cherries beautiful to the eye for a definite purpose. Red, he said, was the most prominent and attractive color. Cherries turned to that hue in order to attract birds. Birds, noting the brilliant globules, tasted them, found them to their liking, told other birds and consumed the crop, swallowing seeds and all. In this way the cherry stones were carried far and wide over the country and dropped where they might grow into other cherry trees.



Minard's Liniment Cures Distemper.

Ireland has a breed of cattle that seldom grows more than three feet high and thrives on the poorest of pasturage, yet the cows yield large quantities of milk daily

Minard's Liniment Cures Diphtheria.

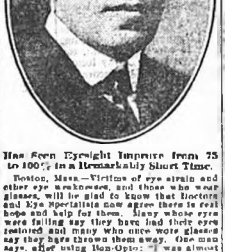
Canada's Waste.

Hon. W. J. Hanna, Canadian Food Controller, calculates that food wasted in the garbage pails of Canada each year through carelessness and lack of kitchen economy amounts to $50,000,000 per year, or about $7 per head of population.

Nuxated Iron Makes Strong, Vigorous, Iron Men and Beautiful Healthy Rosy Cheeked Women

Dr. Howard James, late of the Manhattan State Hospital of New York and formerly Assistant Physician Brooklyn State Hospital, says:

"For a multitude of reasons, to enable your blood to change food into living tissue, it is necessary to supply more organic iron than what our food merely passes through and without doing you any good. You don't get the strength out of it, and as a consequence you become weak, pale and sickly looking. Then you start trying to grow it in a test tube, and in a few days you have a bottle full of blood. I have been in a big variety of lines, but after having been in all manner of Nuxated Iron, they Doctor, that there stuff is like magic."



If you are not strong or well you owe it to yourself to make the following test: See how long you can work or how far you can walk without becoming tired. Next take two 5-grain tablets of Nuxated Iron three times per day after meals for two weeks. Then test your strength again and see how much you have gained. From my own experience with Nuxated Iron, I feel it is such a valuable remedy that it should be kept in every hospital and prescribed by every physician in this country."

Nuxated Iron, recommended above by Dr. James, is for sale by all good druggists and is one of the few organic forms of iron that will not injure the teeth, make them black nor cause constipation. It is also the form of iron used in Nature's Own Remedy (Nuxated Iron Tablets) which is now so popular.

Gee! That there stuff (Nuxated Iron) acts like magic. It certainly puts the ginger of youth into a man

Doctors Tell Why They Prescribe Bon-Opto. Explain How It Strengthens Eyesight Remarkably In a Week's Time In Many Instances.

Has Seen Eyesight Improve from 25 to 100% in a Remarkably Short Time.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Doctors and Eye Specialists now agree there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored and many who once wore glasses say they have thrown them away. One man says, after using Bon-Opto: "It was almost blind. Could not see to read at all. Now I can read everything without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another who used it says: "I was bothered with eyestrain caused by overworked, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriting on the machine before me. I was in both now, and have discarded my long distance glasses altogether. I can count the buttons across on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who must glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Beck, an eye specialist of nearly twenty years practice, says: "Two prominent eye specialists, after a thorough examination of a young lady friend, decided she would have to have the sight of her right eye removed. Her father, who is a prominent citizen, objected to the operation. Within three days a decided improvement was noticeable, within a week the inflammation had almost disappeared, and at the end of six weeks all danger was past and the sight restored. I saw the case again to-day. The eye ball has perfect motion. When we began to use Bon-Opto it was in a fixed position. The conjunctival inflammation has disappeared. Her vision is now 20/20 (20/20 is normal as you know) as against 20/200 when she began the use of Bon-Opto. Another patient came to me suffering from Blepharitis Marginalis with all the usual symptoms such as morning agglutination of the lids, chronic conjunctivitis and ophthalmia. Her eyes had lost dull, inflamed appearance common to such cases. She used Bon-Opto and not only overcame her ailments, treating condition but so strengthened the eyesight that she was able to dispense with her distance glasses and her headache and neuralgia left her. In this instance I should say her eyesight was improved 100 per cent."

Dr. Judkins says: "While house surgeon at a New England Eye and Ear Infirmary and during many years in general dispensary practice, I found doubtless too prone to operate and quite too willing to prescribe glasses, and both inclined to neglect the strengthening and developing of the eyes' muscles. Since the introduction of Bon-Opto as an aid to the strengthening the eyesight will soon make eyeglasses old fashioned. The Director of Medical Inspection of Boston Schools in a report published February 16, 1911, states that only 1 pupil in 20 of 30,128 examined need to wear glasses now, a marked decrease over the previous report. Bon-Opto is hastening the eyeglasses age in be-spectacled Boston."

Dr. Smith, an oculist of wide experience, says: "I have treated in private practice a number of serious ophthalmic diseases with Bon-Opto and am able to report ultimate recovery in both acute and chronic cases, like. If used in my office suffering with an infected eye. The condition was so serious that an operation for enucleation seemed imperative. Before resorting to the operative method I prescribed Bon-Opto and in twenty-four hours the secretion had lessened, inflammatory appearance began to subside, and in seven days the eye was cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) escaped the surgeon's knife by the timely use of Bon-Opto. The tightened external muscles yielded to the soothing and strengthening effects of Bon-Opto by circulating the fids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conger says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. Bon-Opto used according to directions rendered a surprising service. I found my eyes remarkably strengthened, so much so I have put aside my glasses without discomfort. Several of my colleagues have also used it and we are agreed as to its results. After a few days under my observation, the eyes of an astigmatic case were so improved that glasses have been discarded by the patient."

Eye troubles of many descriptions may be wonderfully benefited by the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Then one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With the liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them before it is too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

NOTE—A city physician in whom the above article was submitted said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituent ingredients are well known to ordinary eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or mental stress. I can highly recommend it in cases of weak, watery, reddog, smarting, itching, aching eyes, red lids, inflamed lids or eyes inflamed from exposure to smoke, sun, dust or wind. It is one of the very few proprietaries I feel should be kept on hand for home use in almost every family." Bon-Opto is not a secret medicine or patent remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to increase eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including general druggists, also by T. Eaton & Co., Toronto.

"Bon-Opto Is Hastening the Eyeglasses Age in Bespectacled Boston."

The Paisley Advocate

PAISLEY, AUG. 29th, 1917

—It is claimed that potash has been discovered in Muskoka Lake, Ont. Should this prove to be true, another trade link between Germany and Canada can be severed. The Germans have boasted that the potash supply of the world was located in their country, and that other nations would accordingly be deprived of a supply at their will.

—There may be another panic in the Canadian paper trade. The U S supply of sulphur is said to be equal to the home requirements w that the republic has gone to it and will need a lot more for munitions. Therefore it is proposto put an embargo on the export of sulphur, and Canadian paper mills have been buying a large part of their supplies of that article from our southern neighbors. Without it for the making of paper from wood pulp, there is likely to be a tremendous shortage of news paper before long.

—Munition making in Canada is tapering off, and soon thousands of employees who have been engaged in producing war material will be available for other occupations. When present contracts are completed, there will be only a limited amount of munition work carried on in this country, as British factories are now in a position to attend to nearly the whole business. The industry has brought a lot of money into Canada, and helped to keep the Dominion prosperous. Employment was given to over 200,000 men and women and it is possible that at least 50,000 to 75,000 of these may be released within a short time.

—Whatever effect it is intended to produce ultimately by the Hanna system of food control, right now it looks very much like losing control of the fractious food market. When the Hon W J touched the button and ordered beefless and baconless days the city eating places took it pleasantly, merely substituting lamb and veal on the bill of fare, the waitresses naively assuring the puzzled patrons that these were not meat. When meat is not meat ordinary hungry mortals don't seemingly know, so have to be told. One consequence of this order is a nice little rise in the prices of lamb and veal. To put a real ban on killing either young cattle or sheep would do more to conserve the meat supply than the regulation that has been put in force. And then what about so many of our beef cattle going to the U S instead of being retained for home consumption or for the Allies armies in Europe? We are also bidden to do without canned peas, beans, corn, tomatoes and other vegetables from August to October. Just as if we wouldn't do that anyway with fresh vegetables galore growing in the back yard or obtainable at the nearest store or market.

—Instead of a pension system for their soldiers who are about to take a hand in defeating the Germanic armies, the United States propose to substitute insurance in providing for the inevitable casualties of war. A bill establishing such a system is already under consideration in Congress. The plan is that soldiers are to be insured for their own benefit in case of disability and for the benefit of their dependents in case of death. Every man is to be protected by a government indemnity, fixed in amount according to the extent of the disability he may suffer and the size of the family depending upon him. Soldiers who wish can get additional insurance by paying the small premium of $8 a thousand for the amount desired, the excess cost being carried by the government. It is also planned to provide for the re-education of men so crippled as to be unable to pursue their former callings. And the dependent families of men in service are cared for. Each soldier must assign to his family about half his monthly pay, and the government agrees to add a sum nearly or quite as large. this it will be noted, covers the work done in Canada by the Patriotic Fund which is raised by voluntary contributions. The pension system as it existed in the U S following their wars, has been unfair and wasteful, chiefly because there was too much political influence linked up with it. As in Canada it is agreed that the nation must be generous with citizens who risk life or limb or health in its service, and it is recognized that it will be well to attain that the end by some means that will avoid the extravagances and scandals that have so often attended pension administration.

—Drying fruit and vegetables is an old method being revived this year. The housewife can use this method without trouble and with the simplest facilities. In fact vegetables may be put aside by any time.

LOCAL AND DISTRICT NEWS

Another Special Prize

In addition to those appearing in the prize list of Paisley Fair, there will be premiums offered for general purpose team – 1st, $6 by the Society; 2nd, $4 by Mr D McBeath.

New Continuation Teacher

Miss Mary I. Rodger, of St Marys, is the new assistant teacher in Paisley Continuation School, and comes equipped with the elementary art certificate. Mr Ratchill, the principal, has also secured a physical culture certificate during the summer vacation.

Quarantined For Diphtheria

Letters from boys of the 160th Batt's received last week state that the Battalion has been quarantined for diphtheria. The rainy season is starting again and the Battalion expect to move into new quarters. This would seem to indicate that the battalion will spend another winter in England.

Dominion Alliance Field Day

Next Sunday is the annual field day of the Dominion Alliance in Bruce county when delegates from the organization will be heard in every town and village in the county. Rev Wm Kettlewell is to be in the Baptist church, Paisley, at the morning service, and at a union service in the Methodist church in the evening. In the afternoon the same speaker will be at Williscroft Baptist church.

No Pension In Sight

We understand that one of the Walkerton boys who was invalided home from France lately, has received his discharge from the army with his pay cut off but no pension in sight. As he has not sufficiently recovered from his disability to go to work, his position is not an enviable one. Instances of this kind multiplying on all sides, would seem to indicate that the authorities of making a poor fist of looking after the interests of our returned soldiers. If the government interprets the temper of the public rightly in regard to its handling of such cases it will very soon make a radical change.—Telescope.

County Bowling Trophy

A meeting was held recently at Cargill with the object of putting up a bowling trophy to be competed for by the county of Bruce only. The representatives of the different clubs present were agreeably surprised by the offer of Stevens-Hepner Co of Port Elgin Brush Works, to present the county with a trophy to be contested for somewhat in the same manner as the Bowman trophy, which has got out of bounds for Bruce county bowlers on account of having been won by Toronto and other distant clubs. The offer was accepted, and a hearty vote of thanks tendered Messrs Stevens and Hepner for their splendid gift. The trophy is to be called the Keystone, which is the firm's name for their product.

Minister Hits Out

"Our Canadians at the Front are spoken of throughout the world as lions," said Rev C W Coates of Walkerton Methodist Church in a recent sermon to his congregation, "but our members of Parliament at Ottawa have acted like a parcel of donkeys. When I read of what our boys are doing at the Front, it makes me very proud, but when I look at what we are doing at home, it makes me ashamed to call myself a Canadian." The speaker went on to say that Canada should have had a coalition gov't. and conscription long ago. Conscription was nothing new, he said. They had it in the Napoleonic wars and in the Civil War across the line.

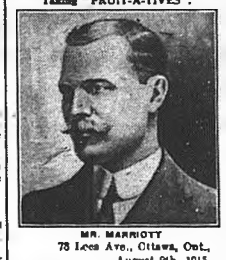
Has Alberta Government Position

Mr Alex C Ross, of Calgary, was here for a couple of days last week on a flying visit to his old home on both Bruce. For three years A. C. has been employed with the Alberta Department of Agriculture in connection with the Farmers' Encouragement plan of loaning funds to farmers who desire to procure breeding stock—termed the Cow Act—under which groups of farmers may be advanced as much as $500 each on the strength of their joint notes. The terms are very favorable to the farmers. The fund is procured from the banks on the guarantee of the Department, and to the latter the risk is very well secured. Mr Ross is sent down to Ontario in charge of the Alberta exhibit at Toronto Fair.

Accused of Burning Barn

Martin Hansen, formerly of Greenock Township, has been committed for trial by Magistrate Talton, of Walkerton, on a charge of arson. Bail has been refused and the accused is confined to jail until his trial. Evidence brought out at the preliminary hearing showed that the accused and his wife had not got along well for some years. About a year ago Hansen assigned all property to his wife and left the district. On the night of August 1 the barn was burned and Hansen is charged with the offence. The prisoner has been living at Hespler for some time, but on the night of the burning he came to Paisley by train. He hired a rig at Purdy's livery and drove out into the country after 11 p m returning some three hours later. It is this nocturnal visit which forms the crown's circumstantial evidence against the accused.

Send the Young Students On



Since your boy or girl has passed the Entrance exams, you are considering where a further course of study is to be taken. Here are some of the reasons why they should be sent to attend Paisley Continuation School: 1. They are near home—not among strangers—and can get home for a week-end, thus saving expense, but more important, you can keep an eye to them. 2. The citizens of Paisley school sections, at no inconsiderable expense, have erected one of the most up-to-date school buildings in the province. It is commodious, well lighted, well-ventilated, clean, sanitary, and altogether the surroundings are healthful and inspiring. They have not done all this for themselves alone, but for the children of the vicinity as well. They need your help, and will welcome your children as students. 3. The Continuation School Classes are not large, hence your child will get more individual instruction than he would elsewhere. The teachers can take a more personal interest in each student. This a great advantage.

Decide now! Make Paisley your Educational Centre.

—"Buy perishable food and eat plenty of it—but don't waste it."

THE BLESSING OF A HEALTHY BODY

Has Not Had An Hour's Sickness Since Taking "FRUIT-A-TIVES".

MR. MARRIOTT

78 Lees Ave., Ottawa, Ont., August 9th, 1915.

"I think it my duty to tell you what "Fruit-a-tives" has done for me. Three years ago, I began to feel run-down and tired, and suffered very much from *Liver and Kidney Trouble*. Having read of "Fruit-a-tives", I thought I would try them. The result was surprising. During the 8½ years past, I have taken them regularly and would not change for anything. *I have not had an hour's sickness* since I commenced using "Fruit-a-tives", and I know now what I haven't known for a good many years—that is, the blessing of a healthy body and clear thinking brain".

WALTER J. MARRIOTT.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Brockie—Johnson

On Thursday morning, August 2nd, the marriage of Mary Winnifred, eldest daughter of Rev and Mrs W R Johnston to George Brockie, youngest son of Mrs Barrie of Brandon, took place in Holy Trinity church. The ceremony was performed by the bride's father in the presence of their immediate relatives and friends. The bride was given away by her uncle Hon Jas Johnson of Boissevain. Mrs Lemoine Fitz Gerald of Winnipeg sang very acceptably Aylward's "Believe it is More." Mr and Mrs Brockie left on east bound train and will make their home in Brandon. The out of town guests were Mrs Barrie of Brandon, the Hon and Mrs Jas Johnston and sons of Boissevain, Mrs Fitz Gerald of Winnipeg and the Misses Mealky of Langdon, N D.

Death of W. G. Ritchie

On Monday, after an illness of about ten days, Mr W G Ritchie passed away at his home, 20th con Greenock. The deceased had not been in robust health for quite a number of years, having been afflicted with chronic bronchitis and asthma, from which he suffered much distress at times. Mr Ritchie was born in Greenock and in his most active years was one of the best known men in the Township. For several years he was the collector of taxes. He was born at Enniskillen, being a son of the late Mr and Mrs John B Ritchie, and lived there until he bought a farm on the 20th some about fourteen years ago. On account of his poor health he was obliged to quit farming for a time when he lived in Paisley for two years and in Owen Sound four years. He was married to Sarah Amelia Dickson, of Allliston, who survives him with their one son Garnet S. and three daughters—Hazel, Annie and Bertie—who are all at home. Six sisters and one brother are living—Mrs Swanson of Walkerton; Mrs Armstrong of Inglewood; Mrs McLennan of Russel, Man; Mrs Wallace and Mrs Glen, of Crystal, N D; Mrs Costick of Beswick, Rainy River, and John in Sask. Mr Ritchie was a man who took a keen interest in public affairs, was well read, of intelligent mind, very pronounced in his views, and could freely discuss the questions of the day. He was a member of the C O F order and the Sons of Scotland. In politics he was a Liberal and in religion a Presbyterian. The funeral takes place this (Wednesday) afternoon. Interment will be made at Enniskillen. The widow and family have the sympathy of all in their bereavement.

DEAR EDITOR:

Before I leave the surgical side of dentistry, which at best I can only touch on in a general sort of way, I would like to touch on some of the truths and misconceptions of the X-ray.

A person may neglect the treating of teeth even though they should cause him considerable pain. In course of time the tooth may appear quiescent or cured, but pain may occur in ear, temple, arm, top of head or opposite jaw. X-ray locates the trouble if not already discovered. Sometimes it is an old neglected root and sometimes it is a slowly dying nerve with tissue slowly changing to dead matter creating an irritation to the live tissue against which it lies or is in contact with. It may be a long growth at the end of a root. In these cases if the dentist finds the trouble won't yield to ordinary treatment and resorts to X-ray might show him the exact difficulty which in many cases would enable him to save the tooth, or in case of a solid root make it useful for a bridge or crown. Otherwise it would have to be extracted. In the treatment of roots we find there are different classes of them. For instance, there is the general class which a good operator can be sure of getting right to the end of the root to be treated with his fine root canal instruments. These he can assure himself of having completely filled by tests which he uses.

Then there are the roots which have such fine canals they have to be opened up all the way by drilling. If these are straight roots one can be reasonably sure of opening up properly. If, however, they are curved at the top or branch off into extra fine canals, one needs the X-ray to pilot in many of these cases. However, if symptoms of soreness will not disappear in the ordinary way, relief and cure can in many of these cases be obtained by making a small opening in the bone at the end of the root, thus relieving pressure and making a way for medication. It is strange how some otherwise good physicians and surgeons do not seem to understand that here the same principles hold good as in the treatment of other wounds, and they will hastily order a good tooth extracted because they cannot get at the trouble with their instruments. If they find a wound or sore on a finger or toe they do not say: "Cut it off; it will give you all sorts of diseases if you don't." They advise treatment and cure without amputation, and only amputate after they find they cannot cure otherwise. How foolish it is to advise extracting such a useful organ as a tooth without first advising treatment by the proper surgeon, the dentist. If an X-ray is taken the result should be taken to the dentist, as it is a well-known fact that doctors often misread these X-ray plates. On account of the very slight knowledge the medical man has of dentistry all sorts of mistakes are made. Teeth are ordered extracted for appendicitis, hardening of the arteries, rheumatism, etc, to find the real trouble later. The dentist is the only authority for the conclusion to extract. It is simple to him. If he can cure them there is no need to extract. If he can't there is nothing left but to extract.

WOMEN OF CANADA.

Fort Coulonge, Quebec.—"I am happy to tell you that your medicine did me wonderful good. I was troubled with weakness and I tried wines and other things but received very little benefit. I was young at the time and knew very little about medicines but a lady friend came to see me with a bottle of Dr. Pierce's Favorite Prescription. I began using and a few afterward I was twins."—Miss J. Ilsley, Fort Coulonge, Quebec.

Thousands of women right here in Canada who are now blessed with robust health cannot understand why thousands of other women continue to worry and suffer when they can obtain for a trifling sum Dr. Pierce's Favorite Prescription, which will surely and quickly banish all pain, distress and misery and restore the womanly health.

Young mothers who preserve the charms of face and figure in spite of an increasing family and the care of growing children are always to be envied. "Favorite Prescription" gives the strength and health upon which happy motherhood depends. It enables the mother to nourish the infant life depending on her, and enjoy the happiness of watching the development of a perfectly healthy child.

A GREAT BOOK THAT EVERY WOMAN SHOULD HAVE.

Over a million copies of the "The People's Common Sense Medical Adviser" are now in the hands of the people. It is a book that everyone should have and read in case of accident or sickness.

Send fifty cents (or stamps) for mailing charges to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., and unless this notice and you will receive by return mail, all charges and customs duty prepaid, the valuable book.

$14,000 for Bridges

The township council of Kincardine will be put to an expense of about $14,000 this year for new bridges and culverts, to replace those washed out. It means an assessment of about $12 extra on every 100 acre farm. The council will put it in this year's taxes.

Food Controller Prohibits Canned Vegetables

From Aug 24 to Oct 15, the sale and consumption of canned vegetables is prohibited in Canada, by the decree of Food Controller Hanna. "The people are selling canned goods at a season when other foods are available and even going to waste for want of labor," says Mr Hanna. "In justice to those growing such vegetables they should be put on the market, and we have decided that it is only in the interest of the cause that the housewife should use the stove more and the can opener less."

A GREAT BARGAIN

The war map issued by The Family Herald and Weekly Star of Montreal is now ready for distribution. It is certainly a great map and a great help in following war news. It is greatly praised by returned officers and men. The price of The Family Herald is now $1.25 a year, a smaller increase than was expected, and with the map given with each subscription it is cheaper than ever. The map alone would cost as much. The paper and map are given to both new and renewal subscriptions at $1.25 a year, but the map cannot be procured otherwise. The Family Herald is the greatest family and farm paper on the Continent and a great credit to Canada.

Died in Jail He Built

It was a strange dispensation of fate that made the Walkerton jail, which Richard Thomas Jones helped to construct here as a young man in 1866, the death-bed of the veteran builder over half a century later, but such was the case when a homeless man, committed for three months as a vagrant, closed his eyes in death on Friday evening last just two days before the expiration of his sentence and just as his release from the cells was in sight. Friendless and penniless, the deceased came to Walkerton about three months ago for the purpose of entering the House of Refuge, but finding that the doors were shut to shy but those who were residents of the county, and he having been, it seems, a confirmed knight of the road for some years, the weather-beaten visitor was arrested as a vagrant and placed in the very bastile that he in younger and better days had assisted to erect. While breaking stone in the jail yards last week the aged prisoner came upon a bush of green blackberries, and after sampling the unripe fruit devoured the entire crop. Bowel trouble resulted and with the end of his prison term in view, the soul of the wanderer took its flight. A coroner's jury was empanelled, in accordance with the law respecting prisoners who die in jail, and after viewing the remains a verdict of death from natural causes was returned. The following day all that was mortal of the old pioneer mason was laid to rest in a potter's plot in the Walkerton cemetery. The deceased was in his 73rd year, and was, it seems, but another victim of the flowing bowl.—Herald and Times.

REDUCED FARES ON ALL LINES OF TRAVEL

The Western Fair, Sept. 7 to 15

The Management of the Western Fair of London, Ontario, are making every possible effort this year to eclipse all their previous Exhibitions, good as they have been. They are giving special attention to the Live Stock and Agricultural departments. Two Thousand Dollars was added to the Prize List (which was a liberal one before) making this year's list the best ever offered, and exceedingly liberal in all departments. It is expected that there will be a large entry in all the Live Stock Classes. Special classes in the Horse Department have been provided for farmers and their sons. Professional breeders and dealers have been barred from these Classes and the farmers will have an opportunity of exhibiting against farmers. There are also plenty of classes for the professionals with liberal prizes offered. Prize Lists, Entry forms and all information promptly given on application to the Secretary, A M Hunt, London, Ontario.

—"If you can't be a fighter, don't be a waster."

—Contractor J S Dewar is erecting a new cement veneer house on Victoria St south. He intends having the roof on this fall, and will finish it early next season.

—Red Cross shipments for August: 98 pairs socks, 11 suits pyjamas, 9 flannel shirts, 80 hock towels, 42 Turkish towels, 23 pillow slips, 3 French caps, 1 parcel old linen, 1 parcel old flannel. Also 60 pairs socks to boys in England and France.

—Nothing since the outbreak of the war has caused such a sensation in the daily papers last week of the proposed Dominion Franchise bill which proposes the disenfranchisement of aliens and their children. This if put into effect would disenfranchise 76 per cent of the votes in the riding including Mr W W Welchel, the sitting member, and Mr W D Euler, the independent liberal candidate.

THE PATHEPHONE

Five of these large cabinet phonographs each with twelve records given as first prizes in the District Contests. Value, $150.00. Size 20 in. x 20 in. x 44 in. high.

Enter the Bread Making Contests

at Rural School Fairs in Ontario

The Campbell Flour Mills Company's great offer of the big One-Hundred-and-Fifty-Dollar Pathe phonographs (Five of them!) and other valuable prizes, for the best loaves of bread baked with Cream of the West flour, is stirring up tremendous interest all over Ontario. Many girls are already busy as bees practising with Cream of the West flour. Last year many girls declared, "Oh, if I had only practised, I'm sure I could have won!" Don't wait another day. Decide right now! Practise, Practise, Practise with

Cream of the West Flour

the hard wheat flour that is guaranteed for Bread

Every time you bake with it you find out new qualities in this flour that makes such splendid big loaves of delicious light bread. Practise!

In five districts, each comprising several counties, we will give away free to the winner of the first district prize a large cabinet phonograph. At each fair there will be given a fine list of local prizes.

Prizes Worth Trying Hard For

1st Local Prize.—"Girls' Own Annual," a great big beautifully bound, illustrated book with 800 pages of stories and articles about people, art, animals, gardens, sewing, crocheting—everything that particularly interests young girls, older girls and their mothers. This is a wonderful prize that you can treasure for years.

2nd Local Prize.—"Stories of Famous Men and Women," beautifully cloth bound with gold titles, many beautiful pictures in colors, containing fine stories of Florence Nightingale, Grace Darling, Flora MacDonald, Jenny Lind, the late Queen Victoria, and others.

3rd Local Prize.—"Britain Overseas," a big handsomely bound book with many colored pictures, interesting stories and descriptions of the countries and the peoples of Britain's world-wide Empire.

4th Local Prize.—"The Queen's Gift Book," a book of stories, pictures and special articles by Britain's best writers, the proceeds from the sale of this book are for the benefit of disabled soldiers in England.

Note—Unless the entries number six or more only first and second prizes will be awarded. Unless an entries number ten or more no fourth prize will be awarded.

The District Prizes.—The winner of the first prize at each local fair automatically becomes a competitor for the following District prizes.

1st District Prize.—The "Pathephone" is the name given to the fine big mahogany phonograph we offer as first prize. It will give you endless pleasure and entertainment for a lifetime. It has special tone control attachment and needles, enabling you to play all kinds of flat disc records of no matter what make. The Pathephone reproduces band music, orchestra music, songs and fancy pieces perfectly; with it goes a dozen of the famous Pathe records. Total value, $150.00.

2nd District Prize.—Set of Dickens' Works, 18 splendidly bound volumes with many illustrations. Among the books in the set are "Oliver Twist" and "Old Curiosity Shop." These are two of the most entrancing stories ever written.

3rd, 4th and 5th Prizes.—"Canuck" Bread mixers. This simple, yet well-made machine, takes the hard work out of bread making. Instead of laborious kneading of the old method, you just put in the ingredients, turn the handle, and the dough is thoroughly and more evenly mixed

Read Carefully Conditions of Contest

Every girl and boy competing at the rural school fair in her district, whether or not she attends it, providing that her 12th birthday occurs before November 1st, 1917, or her 19th birthday does not occur before Nov. 1st, 1917. One loaf of bread must be submitted baked in pan about 3 1/2 x 5 inches and 3 inches deep, and divided into twin loaves, so that they may be separated at the fair. The loaf must be baked with Cream of the West Flour. One-half will be judged at the fair. The other half of the prize loaf will be sent to the Ontario Agricultural College, Guelph, to compete in the District Contests. The judging will be done by Miss M. A. Purdy, of the Department of Breadmaking and Flour Testing. The local contest at the fair will be conducted under the same rules as all the other regular contests at your fair.

The Standard by which bread will be judged will be as follows:

1. Appearance of Loaf	15 marks
(a) Color	5 marks
(b) Texture of crust	5 marks
(c) Shape of loaf	5 marks
2. Texture of Crumb	40 marks
(a) Evenness	15 marks
(b) Grain	20 marks
(c) Color	5 marks
3. Flavor of Bread	45 marks
(a) Taste	25 marks
(b) Odor	20 marks

Important.—Each loaf must be accompanied by the part of the flour bag containing the face of the Old Miller, and an entry form must be signed by the girl and parents or guardian, stating date of birth, P.O. address, and giving name of dealer from whom Cream of the West Flour was purchased. The form will state that the girl actually baked the loaf entered in the competition. The forms will be provided at the time of the fair. The decision of the judges is final. Not more than one entry may be made by each girl and not more than one local prize will be awarded to the same family.

Which District is Yours?—The list shows you which counties you compete against if you become a competitor for the District prizes.

District No. 1.—Counties of Glengarry, Stormont, Dundas, Grenville, Leeds, Frontenac, Lennox and Addington, Carleton, Lanark, Renfrew.

District No. 2.—Counties of Hastings, Prince Edward, Peterboro, Northumberland, Victoria, Durham.

District No. 3.—Counties of York, Ontario, Peel, Halton, Wentworth, Oxford, Brant, Waterloo (with a few fairs in Wellington and Perth).

District No. 4.—Counties of Welland, Haldimand, Norfolk, Elgin, Kent, Essex, Lambton, Middlesex (with a few fairs in Huron and Lincoln).

District No. 5.—Counties of Bruce, Grey, Dufferin, Simcoe, Districts of Muskoka, Parry Sound, Timiskaming, Algoma, Manitoulin.

THE RESULTS of the contests at the fair will be made known in the usual way as in the case of all the other regular contests. The District results will be announced as soon as possible after the conclusion of the Rural School Fairs in the Province.

DO NOT MISS THIS GREAT OPPORTUNITY! Every girl between 12 and 18 years should compete. What a splendid way to stir up increased interest in breadmaking! Get a supply of Cream of the West Flour at your grocers and practise using it as often as possible to increase the chances of winning. If your dealer cannot sell it to you, write to the Campbell Flour Mills Co. Ltd., Toronto, and we will promptly tell you the nearest place to get it.

NO COMPETITIONS IN COUNTIES NAMED BELOW: The competition is open to all parts of the Province where Rural School Fairs are held, except the Districts of Rainy River, Kenora and Thunder Bay. These districts are the only parts of the Province where school fairs are held by the Dept. of Agriculture in which the competition will not be a feature. There are no district representatives of the Department of Agriculture in the Counties of Sudbury, Huron, Perth, Wellington, Haliburton, Nipissing, Nassau or Lincoln, and no rural school fairs are held in those Counties by the Dept. of Agriculture. There are, however, a few fairs held by local societies in Wellington, Perth, Huron and Lincoln, and these are included in the competition.

The Campbell Flour Mills Company, Limited

(West) Toronto Peterboro Pickering

Cream of the West Flour is sold by the following dealers: A. Fisher & Son, Paisley; D. Mallough, Lucknow; E. Witter & Co., Mildmay; Geo. Lambert, Mildmay; A. McGillivray, Port Elgin; Mrs. J. A. Wells, Southampton; Wm. Irwin, Wiarton.

The AUTOMOBILE

You May Not Know—

Best results can be secured from a motor cooling system by keeping the radiator cells free from foreign matter. Particularly on long trips over bad roads the interstices of the radiator are packed with dirt and mud, retaining the heat which should be dissipated in radiation.

A deposit of dust on the reflector or lens often cuts down the light to a marked degree. The owner should make a weekly habit of wiping the dust from these parts. While doing this it is a good plan to inspect the cable connections. Vibration often loosens it and the poor contact results in a loss of light and waste of current.

A very serviceable blowout tire patch that will take you safely home may be made out of tire tape. Clean the fabric around the blowout with gasoline, and apply strips of tape, first lengthwise and then crosswise, until the hole is well covered. Then cover the tape with a thickness of cloth to keep the inner tube from sticking, and the patch is complete.

In adjusting differential gears difficulty is often experienced in seeing whether the gears are meshing properly. —A small pocket mirror, mounted on a soft iron wire handle, may be used in much the same manner as a dentist's mirror. Inspection or repair on many hidden and obscure parts is also facilitated by the use of this mirror.

If the pounding is regular and continuous, it is likely to be from lost motion in bearings. If irregular and occasional, it is more likely to be due from pre-ignition from incandescent carbon, or from imperfect electrical connections. If it is accompanied with an occasional miss, especially if the missing is more frequent when the car is running than when the engine is running idle, it is more apt to be imperfect electrical connections.

Extra spark plugs carried loosely in the tool box are liable to be broken by contacting with tools. A good plan for storing them is to cut a section a trifle greater than length of plug from a discarded garden hose. When the plug is forced into the center of the hose it is fully protected against damage.

That automobile tires deteriorate almost as fast when not in use under ordinary conditions as they do from common wear or use. Carrying the tire where the exhaust gases reach the rubber is one of the overlooked causes of tire depreciation.

Clogging of the muffler is hastened when too much oil is fed to the engine. The unburned oil is forced back into the muffler, where it covers the parts, permitting them to hold carbon and dirt. A thorough cleaning is possible only when the muffler is removed and partly dismantled, but often lumps of oil-soaked dirt may be loosened by tapping the sides of the muffler lightly with a hammer. After cleaning the driver will at once notice a marked difference in the performance of the car.

Too while too lean a mixture is the usual cause of "popping back," it must not be forgotten that any defect in the intake manifold, either original or acquired, may cause only one cylinder to get a too lean mixture, and cause popping back when the average mixture is right.

HARVESTERS, READ THIS!

The best way to the harvest fields of Western Canada is by the Canadian Northern Railway. Special through trains will be operated from Toronto to Winnipeg at 9.00 a.m. on August 21st, and 10.00 p.m. on August 21st, 23rd and 30th. Also from Ottawa 10.30 p.m., August 23th. Through cars connect from Montreal and Jollette. Going dates: August 21st and August 30th, from Canadian Northern stations and agencies, Toronto and north to Sudbury and Milnet, Ont., and east to Chaffey's Locks, Ont., inclusive, including branches; from all stations on Algoma Eastern Railway. August 23rd and August 30th, from Toronto and all Canadian Northern and N., St. C. and T. Railway agencies, west and south of Toronto. August 28th. From all Canadian Northern stations in Quebec except north of St. Raymond and Riviere a Pierre. From all Canadian Northern stations and agencies in Ontario, Hawkeshury to Capreol (Pembroke and North Bay line) and Ottawa to Brockville, Elgin and Westport, inclusive; and from all New York Central R.R. stations in Canada.

The equipment will consist of electric-lighted colonist cars and lunch counter cars, especially designed to cater to the needs of large bodies of men at moderate rates. West of Winnipeg the demand for labor is great along the lines of the Canadian Northern Railway and the wages are correspondingly high. All particulars from nearest C.N.R. agent or General Passenger Dept., Montreal, Que., and Toronto, Ont.

TWO STYLES NOW FOR MEN.

A Great Saving Would be Effected If Women Followed.

In its effort to conserve raw material and labor, the United States Government has appealed to the manufacturer of men's clothing to limit the number of styles in suits to two, and to make these up as simply and as economically as possible. What if the designers of women's outer garments should receive the same request? Will you, ladies, then take to khaki for service wear and blue serge for dress parade?

In England among the men khaki has leveled all social distinctions. The nobleman is garbed like the Tommy. In our training camps here now, says an American writer, the only way to single out the millionaire from the fifteen-dollar clerk is by the quality of his wrist watch. Now, ladies, it looks as if you will have to find a place in the dress line; you and your cook will receive the self-same allotment of garments. Hold on to your dress yard. Two punchings and you are clothed for the year.

Oh, yes, we agree with you that even under the present regime your cook is able to get a nine ninety-eight copy, faithful in detail, of your original one hundred and ninety-five dollars Paquet model. After all, the day is long since past when one could surmise at a woman's position from her dress. Even in England, for the last two years, the munitions worker has been enveloping herself in the sables of the duchess. So much for the privileges of title.

The most remarkable saving which two styles of dress will effect will be on women's disposition. No more anxious poring over fashion-plates, no more envy of her neighbors' wardrobe, no more worry over hubby's reception of her dressmaker's bill.

Half the world is engaged in clothing the other half. Let us mobilize our dressmakers and milliners. Surely, we can turn their inventive ability to account.

August in the Melon Patch.

Oh, the sun shines hot on a big straw hat,
And the dust is hot on little bare toes—
But then, who cares for a thing like that
Where the biggest melon grows?

For the worn top rail is a perfect seat,
When an oak tree stands by the fence for shade,
And the third just right for the little bare feet,
When the prize-won search is made.

And the melon's heart is so crisp and red
And sugary, cracked dead ripe in two!
Oh, who would care, since the hot road led
Where the biggest melon grew?

—Abbie Craig.

EVENTS OF WAR'S THIRD YEAR

YEAR JUST CLOSED HAS BEEN FAVORABLE TO ALLIES.

On Field of Battle the Past Twelve Months Have Brought Many Successes.

Three years ago on July 28th Austria-Hungary declared war on Serbia and set Europe and the world aflame.

On both the western and eastern fronts in Europe the Teutons find themselves on the defensive at the advent of the fourth year of conflict. They fight on lines newly-established, after forced retirement from terrain which they had won in earlier days at a tremendous sacrifice.

Progress toward the achievement of the ultimate aim of the Entente and its allies has been furthered by political disturbance, which will remain memorable in the history of all times. Chief among these are the fall of two crowned heads—Nicholas of Russia, and Constantine of Greece. Political events within the German and Austrian Empires, featured by the fall of Chancellor von Bethmann-Hollweg, have led to open discussions of peace in the German Reichstag.

Portugal and Rumania threw in their fortunes with the Entente shortly after the third year began. The United States entered in April, followed by Cuba and Liberia. Panama pledged the United States aid in her defending the Panama Canal. China, Bolivia, Guatemala and Siam have severed diplomatic relations with Germany.

Three New Nations.

Three new nations were born during the year. Poland was created a kingdom under German and Austrian direction. In Mecca the Arabians overthrew Turkish rule and declared independence. In the Balkans, liberty was restored to Albania, which was established as a republic under Italian political protection.

The first and second American contingent of troops landed in France on June 26th and 27th.

Progress of the War.

At the close of the second year the Germans were still unwilling to concede failure in the operations centering on Verdun. After August 3, 1916, the French gained the ascendancy, culminating in the retaking of Douaumont, Thiaumont and Fort Vaux, with thousands of prisoners and many guns. By November the French had once more come into possession of the complete circle of the Verdun defences.

The second phase dates back to the commencement of the Franco-British offensive—the Great Battle of the Somme—in July of 1916. By November the British and French had penetrated German positions for a depth of six miles.

In the spring the Germans, anticipating a resumption of the Somme operations, began what has become known as the "Hindenburg victorious retreat" to newly established German lines. The British claimed capture of nearly 5,000 prisoners in the three months of this German retirement for a depth of from 3 to 14 miles along a front of about 40 miles. In April the British transferred their offensive northward of Arras, forcing von Hindenburg to redistribute his forces along a fifteen-mile front. Canadians played a historic part in this fighting, and Vimy Ridge was captured after one of the world's bloodiest battles. This success cast of Arras turned Hindenberg's northern flank, and British critics regarded it as the greatest feat in the history of British arms in the present war.

On French Front.

Meanwhile the battles of Champagne and the Aisne had been carried on by the French. Fighting in these regions continues after three months, during which the French have advanced from one to five miles along a fifty-mile front.

In June, 1917, the British began an attack on Messines and Wytschaete in an effort to straighten out the Ypres salient. Gaining every objective, they advanced three miles on an eight-mile front. Portuguese and Belgian troops aided in this offensive. In recent days the fighting there has been confined to raiding operations.

It is estimated that during April, May and June the Germans suffered 850,000 casualties on the western front.

On Russian Front.

The Russians, having in June of 1916 begun an offensive from the Pripet marshes to the Rumanian frontier, speedily captured Czernowitz and the rest of Bukowina, together with Brody in Galicia, and in August they entered Stanislau for the third time in the war. The Halicz bridgehead fell in September, but the subsequent advance on Lemberg was not prosecuted because the plight of Rumania demanded the transfer of Russian troops to aid their Balkan ally.

After the Russian revolution, the Russians made a feint to advance on Pinsk, to cover the actual operations resumed in July against Lemberg. This latter front extended 18½ miles. This operation broadened by mid-July, so that it extended from the Gulf of Riga to the Rumanian front, a distance of 800 miles. Then the extremists interfered and brought about the retreat.

Italy's Campaigns.

Italy, declaring war against Germany on August 28, began a more vigorous prosecution of her earlier offensive against Austria, and stormed and captured Gorizia, hitherto considered impregnable. By Jan. 1 the Italians had captured 1,200 square miles. After a winter of artillery duels, Italy resumed her offensive on the Carso front in the campaign toward Trieste. Within a month the Austrian lines were broken from Costagnavizza to the sea. In the Trentino the Italians took the offensive in June and captured Austrian positions on Monte Ortigara and Agnello pass. These they were forced to relinquish, however, in the face of Austrian counter-attacks.

In the Balkans.

In the Balkans the year's military development saw the occupation of Rumania by the Teutons—a gain of great economic value because of the oil and grain fields. The Rumanian army reformed, is now co-operating with the Russians.

Bulgaria won successes of moderate importance, including the capture of the Grecian port of Kavala. The newly-equipped Serbian army arrived at Saloniki in August and began an offensive which won Ostrovo, on the road to Monastir. This offensive, resumed in the spring with the co-operation of Entente and Venezelist troops, won Monastir and Cernia.

In Greece the military menace of the Entente forces included a blockade of Greece and temporary French occupation of Athens.

In the Far East.

A brilliant British campaign in Mesopotamia accomplished the capture of Kut-el-Amara in February, gold of Bagdad, terminus of the Berlin-to-Bagdad railway, in March. Russians operating in Persia took Hamadan; and further north, in Turkish Armenia, Russians captured Van.

In the Holy Land the British advance has carried them nearly to Gaza. Their objective is Jerusalem.

Except for submarine operations, naval writers have found little to engage their attention during the past year. U-boats destroyed an estimated gross tonnage of more than 4,000,000 during the year.

Cities from Bagdad to London have been subjected to air raids, notable attacks being those by German Zeppelins and airplanes on London. In four attacks on England in May, June and July, 287 persons were killed and 837 injured.

The Prophet Without Honor.

Although Mr. Thomas Hardy, the famous English novelist, has lived for so long in Dorsetshire, among the very scenes that he has depicted so graphically in his books, he is of such a retiring and modest disposition that his literary fame is unknown to a number of the quiet country folk who live in his vicinity.

An enthusiastic admirer once visited Dorsetshire and approached an old lady whom he found sitting outside her cottage door.

"Mr. Hardy lives near here, doesn't he?" he inquired.

"Which Mr. Hardy?" asked the old woman.

"Why, Mr. Thomas Hardy, who writes books," replied the astonished pilgrim.

"Oh, I know naught about him," said the woman, "but there be a Hardy near by that rears grand pigs!"

VENIZELOS, THE GREEK PREMIER

SCENE AT THE END OF THE LAST BALKAN WAR.

Story Which Illustrates the Affection of the People of Greece for the Great Statesman.

The following story, of particular interest at the present time because of the light that it throws on the affection and gratitude of the Greeks for a man whose position is now so prominent, is attributed to the Figaro by Dr. C. Kerofilas, in whose Eleftherios Venizelos, His Life and Work, it appears.

One afternoon in July, at the end of the last Balkan War, two Frenchmen, whom a happy fate had brought from Athens to the Piraeus were witnesses of a scene that was unique. They sat down in the square under the shade of the plane trees, where waiters from the neighboring cafes dispensed raki and fresh water. All of a sudden an unusual flutter woke the town, almost asleep in the torrid heat. The little newspaper boys waved the last edition of their printed sheets and ran as hard as they could in all directions, crying:

"He is coming! He is coming!"

"Who?" asked some passers-by.

And those astonishing little boys of Athens, who are as intelligent, quick and amusing as in the days of Themistocles, kept on running, like Achilles, fleet of foot, repeating in a shrill falsetto chorus, with high, piercing notes, "Venizelos! Venizelos!"

A motor car came in sight on the new road from Athens, which follows the pleasant curves of Phalerum Bay. It was a motor ambulance. On its gray sides appeared the Red Cross. Why did M. Venizelos come to the Piraeus in this conveyance? Rumor soon told us. A destroyer of the royal navy was awaiting him in the military port, where he was to embark for Saloniki, and virtually for the peace conference in Rumania. But on the way from Athens a breakdown compelled his chauffeur to come to a stop in the open country. What was to be done? Time was short. The destroyer had steam up. Already the sun was setting and the rocky slopes of Ægina and Salamis were turning pink, lilac and mauve. . . . An ambulance car approached on the way to Piraeus to fetch the wounded brought by the hospital ship Ionia. M. Venizelos took advantage of the opportunity, but some passers-by had seen him. He was obliged to forfeit his incognito, which suits his modesty and his energy. He could not avoid the ovation that awaited him on the quay of the Piraeus as he embarked.

Gratitude of a Nation.

It was a very touching and sober demonstration; to me it expresses the spontaneous gratitude of a whole nation to one who was laboring hard for national greatness. The people thronged about him to welcome him and thank him. They wished him God-speed. They did not ask for a speech, for they knew that his time was precious. This sort of restraint from a people who love oratorical skill above all things was significant. When the pinnace from the arsenal put off from the quay the crowd, seeing their minister leaving them so simply and proudly beneath the blue-and-white flag, to settle the terms of peace, after having organized with untiring energy two wars of national liberation, shouted with one voice:

"Long live our nation!"

"Long live Venizelos!"

"Long live Greater Greece!"

He was calm and gentle, as usual, very quiet in word and gesture, revealing only by the smile that lighted his grave and thoughtful face all the emotion pent up within his heart. The boatmen of the port rowed after him, and stood up in their boats to call out a few friendly greetings and good wishes, with that touch of cordial familiarity that in a Greek is perfectly respectful:

"Good by!"

"A good passage!"

"Let the peace be worthy of our country!"

While some voices, as if repeating a prayer, in slow and solemn intonation said from time to time:

"May God be with you!"

Fortune in Chewing Gum Every Year.

Loud and long are the complaints of the stringency of the times and the walls concerning the tightness of money; but these laments are not coming from the manufacturers of chewing gum. Neither the war nor any other calamity has affected the output of this great necessity. The annual outputs of chewing gum average about 7,000,000 pounds, although in 1913 the average reached nearly 14,000,000 pounds. Thus it is estimated that $13,000,000 are chewed up annually.

THE MEANING OF CAMOUFLAGE

A WORD WHICH BAFFLES MOST CIVILIANS.

But Which Conveys Volumes to the Military Man and Covers a Multitude of Devices.

If there is one word more baffling than another in the war lingo, that word is "camouflage." Probably the answers to the question, "What does camouflage mean?" would be as varied as the answers. But the word—pronounced "kom-oo-flah-zhe"—conveys volumes to the military man.

Camouflage means primarily making something look like nothing. It means generally the art of fooling the enemy's eyes.

The moving pictures of the British tanks in action shown recently in this country well exemplified the primary meaning of camouflage. The crawling land ships were covered with streaks and patches of varicolored paint, reproducing light and shadow, to disguise them from the German airmen or artillery observers. Newspaper readers, seeing pictures of heavy guns covered by branches, behold an example of camouflage.

Another trick of camouflage is familiar to readers of history by the name of Quaker guns. On all the fronts of the world war all the armies erect dummy guns made of tree trunks, as in the American Civil War in 1861, to draw the enemy's fire. But now the camouflage experts have added the modern frill of simulating a flash and cloud of smoke for the dummy gun by touching off a charge of loose powder.

Most Ancient Example.

The digging of false trenches that the hostile airmen may spot them and signal his battery to waste time and shells on an empty ditch is camouflage.

When snipers crawl into No Man's Land with grass in their caps and when raiding parties go out at night with faces and hands blackened to make them as nearly invisible as may be their officers call it camouflage.

The British khaki, the color of earth and dust, is an example of the same electric term; so are the German field gray and the French horizon blue.

But the greatest and perhaps the least known use of camouflage is to hide troops advancing in an attack in daylight. This is done by expelling great clouds of smoke or vapor from the trenches before the infantry go over the top. Generally the men wait until the cloud has settled over the enemy's trenches, confusing them and preventing their firing accurately at the attackers. Sometimes the attacking troops leave the trenches with the cloud and advance in its protection.

The varieties of camouflage are infinite. Probably the most ancient example is the wooden horse of Troy. Any little trick that makes the enemy see what does not exist, anything that makes him do something he ought not to do is camouflage. Its best Canadian synonym is "bluff."

TORONTO COLLEGE OF MUSIC

The Toronto College of Music reopens Tuesday, September 4th. The excellent work done by this College under the direction of the distinguished master musician, Dr Torrington, makes it an important factor in the musical education of Canada. A copy of the Calendar being mailed to any address sent in, gives full information of the College courses of instruction and Examinations.

Not So Rich After All.

"Mamma," said small Henry, "I don't believe Solomon was half so rich as they say he was." "Why not?" queried his mother. "Because," replied the youthful student, "it says here 'and he slept with his fathers'. If he had been very rich I guess he would have had a bed of his own."

The route to victory is in the farmer's row.

Change your food habits casually as you would change your shoes. Look around you and see the variety of foods that you never heard of or saw before. They are all good to eat, and eatholicity of taste is the foe of speculators who corner staples.

The Doings of the Duffs.

Farm Crop Queries

Conducted by Professor Henry G. Bell.

Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—Subscriber:—What is the value of orchard grass for hay? When and how should it be sown? Does it do better on sandy soil than oats? When and how should it be sown?

Answer:—Orchard grass is a very valuable hay grass if cut at the right time. If it is allowed to come into blossom fully, it tends to become hard and woody, and of course, loses in feeding value. Orchard grass can be sown either for hay or for pasture. In either case from 28 to 30 lbs. of good seed per acre gives good results. Prepare the ground fairly in the spring and seed the grass seed with a nurse crop such as wheat or barley at the rate indicated sowing not more than 1 bushel of wheat or barley per acre. Orchard grass thrives on a variety of soils, but it will not do well on undrained soil. It is very resistant to drouth and does better than other grasses in shady places, such as in orchards. In order to assist in getting a good stand, you would do well to give the ground a thoroughly dressing of manure or add 200 or 250 lbs. of fertilizer to the acre at the time the seed is sown.

Question—H.F.:—I wish to know if I could put my second cutting of clover into my silo. Would it make a better grade of feed than it would to cut it for hay? If it is a good plan to put it into the silo, please give me some instructions as to how I should handle it.

Answer:—Some farmers claim to have successfully ensiled clover of second cutting. My personal experience in handling the second crop of clover in this way has not been very favorable. The ensilage which resulted did not seem to be readily eaten by the stock. In my opinion, a better grade of feed from this material can be obtained by making it into hay.

Question—L.C.S.:—We have a piece of land which is pretty wet, but cannot afford to tile it. Would you think it would do it any good to sub-soil it? Would it drain any better? It is surface-drained but has not got a good outlet. Would like your opinion on it anyway.

Answer:—I would advise you to open the surface drains rather than to attempt to sub-soil this piece of land. Sub-soiling may lower the stand of water to some extent, but the advantage would be only temporary. For permanent improvement of the soil, I strongly advise the addition of tile drain as soon as you can afford it. I rather look upon the use of tile drain as a profitable investment which will lead to greater returns from your field than as an immediate expense.

Question—Reader:—I have five acres of very heavy wheat, which is lodged and in a bad condition to cut. I wish to put this ground into alfalfa this fall. I was advised to sow the alfalfa in the wheat this spring, but for reasons unnamed we did not do so. Can I plow this ground after wheat is removed and get the alfalfa in so as to have it get a start for fall? I will very much appreciate any advice as to the proper handling of this problem.

Answer:—In order to get a good stand of alfalfa, I would advise you to cut your wheat, as you have planned. Fall plow the field fairly deeply and top-dress with about a ton of ground limestone per acre. If the soil will not wash or puddle, let it stand till spring. As soon as the soil can be worked add four or five loads of manure per acre, and thoroughly disk the field until it is smooth and mellow. When a good seedbed has been obtained, sow from 20 to 25 lbs. of alfalfa seed per acre at the same time that you drill in about a bushel of barley or wheat per acre. In order to insure a good stand, I would advise you at this time to drill also 200 to 300 lbs. of fertilizer analyzing 2 to 3% ammonia, and 10 to 12% available phosphoric acid. This available plantfood will give your young alfalfa plants a quick and vigorous start, and will in nearly all cases, insure a good stand. Cut the barley as soon as it is ripe and give the young alfalfa crop a chance to make a strong growth during the rest of the summer.

Summer Cultivation of Old Meadows.

Two years, on the average farm, is quite long enough to leave meadows down, for best results and greatest profits. They should then be broken up and cultivated for other crops.

Deep ploughing is not necessary nor need the furrows be set up with a narrow plough. Rapid work at this time of year is essential. A two-furrow plough, with three horses, will turn over a large piece of land in a day. At the close of each day the area ploughed that day should be rolled. This breaks the lumps, presses down the furrows, re-establishes connection between the surface soil and the subsoil, bringing up the moisture from the latter to aid in rotting the sod.

After rolling, discing and harrowing should not be delayed. With such cultivation one retains a surface mulch, opens, aerates and fines the soil and destroys many seed types of noxious weeds and with the co-operation of the summer sun this work is most effective. With the present scarcity of labor, this is the cheapest and most practicable method of weed destruction and soil preparation for grain or even for hoed crops.

After the sod is destroyed, a rigid or spring-tooth cultivator with wide points should be kept going at intervals until autumn. Then the land should be thoroughly ploughed, as deep as the humus or plant food in the soil will allow. On the Dominion Illustration Stations, some results have been obtained in comparing the summer cultivation of sod land with fall ploughing the same, which indicate very clearly the benefit derived from summer cultivation as outlined above. In addition to the greater yield obtained, it should be remembered that the land is thereby put into much cleaner condition for subsequent crops.

Two fields of 4 acres each were taken; the first field was ploughed after harvest, was cultivated occasionally during the summer and autumn and ploughed in the autumn; the other field of 4 acres was left in sod and also ploughed in the autumn. The crops from the summer-cultivated field gave a yield of 15 bushels more per acre than the field ploughed in the autumn. This difference of 60 bushels on the four-acre field at 50 cents a bushel shows a total gain of $30.00. Counting the cost of summer cultivating at $1.00 per acre, a total cost of $16.00 for the 4 acres, an increase in net profit of $14.00 or $3.50 per acre was obtained. The soil on the cultivated field being in a much finer condition and almost free from weeds, the difference in the profits from the two fields, if worked alike, should be almost as great the following season.

Roots.—28 rows of sugar beets grown on summer-cultivated land produced 10¾ tons, while 36 rows of the same length grown on land simply spring ploughed only produced 9 tons, a difference of 3,733 pounds. The price paid at the factory being $5.63 per ton, a gain of $16.03 per acre was shown in favor of the after-harvest cultivation.—Experimental Farms Note.

Give every boy a box of shoe-blacking and a brush for his own.

If producing extracted honey, raise the brood chamber up and place a full extracting body below to give more room for the queen. Clip one of the wings of all queens, to prevent the swarms from leaving. If they issue, combine the two characters in the offspring, is like trying to produce milk custard by grafting milkweed on egg-plant.

The profitable gains on a bunch of feeders are those which increase the value of the animals per pound. Such gains are due more to intelligent buying than to feeding and handling.

Shavings are cheaper than straw for bedding, and just as convenient to use. This does not justify burning straw and buying shavings.

A thermometer for the dairy is just as essential as a toothbrush for the toilet. Success in handling dairy products is due largely to maintaining definite temperatures, and such is not possible by guess.

Almost any pure-bred bull with good milking ancestry will improve a herd of grade or scrub cows. That does not infer that the best bull is not desirable.

FACTORS IN SHEEP RAISING

By I. J. Mathews.

It has been quite a long time since farmers have taken any great interest in sheep, and for this reason the oncoming generation knows very little about the particular points of care that are necessary to make the sheep business a paying one.

Desirable as Scavengers.

As scavengers, sheep are certainly good and for this reason alone a dozen or fifteen head of sheep might well be carried on a farm of ordinary size—say one that contains a hundred and twenty acres. Cattle in the pasture refuse to eat the weeds along the fences and here is a place where sheep come in handy, since they seem to relish the weeds almost as much as the grass. Many farmers have found to their everlasting pleasure that a few sheep turned into a corn field that is weedy will soon rid the field of the weeds without doing any particular damage to the corn. Of course, if the corn is about ripe, after the sheep have eaten up the ragweeds and other foreign plants in the corn field, they may tackle some of the ears of corn, but they will not do this until after they have exhausted the supply of weeds.

In cleaning up old brush rows or pastures that are intended for breaking, sheep do excellent work since they sprout the stumps ad completely that the sprouts are killed out during the first season of pasturage. The following spring this land can be broken very well.

Rotate the Pastures.

Where sheep are kept as one of the major businesses of the farm, particular attention must be paid to the pasture upon which they graze, since there seem to be a number of internal and external parasites that prey upon the woolly creatures. After sheep have pastured upon one piece of land two seasons it is high time that they were moved to the next pasture.

Another point that often comes up regarding sheep in that of shelter during the winter. When it is taken into consideration that when winter draws on the sheep have all the way from two to five inches of wool covering their backs and when we remember how warm woolen clothing is, we are in a position to know at once that the sheep do not require a very warm shelter. The most successful sheep men with whom I have acquaintance do not give the sheep close shelter at any time of the year, except the ewes, for a few days just at lambing time.

The Dog Menace.

Dogs, no doubt, contribute something to the loss of sheep and whether or not there happens to be a law to that effect I should feel perfectly free to shoot any dog that was nosing about the sheep yards. Until secure protection from dogs can be legislated through, sheep men should take precautions by building high dog-proof fences about the place where the sheep stay nights. Under present conditions, however, there can be no doubt but that it will pay to take on a few sheep, but as with all other ventures, he who makes the venture should know the limitations of his enterprise.

The Sunday School

INTERNATIONAL LESSON SEPTEMBER 2.

Lesson X. The Shepherd of Captive Israel—Ezek. 34. Golden Text.—Psa. 23, 1.

Verses 11-16. Jehovah himself will undertake the care of the neglected sheep. Search . . deliver . . bring . . . feed. Successive stages in Jehovah's work for his people: (1) he will seek them out; not one will be overlooked (verse 11); (2) having found them, he will deliver them from the countries to which they were scattered (verse 12); (3) then he will bring them back to their old home (verse 13), where (4) he will feed them with rich pasture (verses 14, 15). Lost.—Jehovah, as the good shepherd, will give first care to the most needy. Each will receive what he needs most. Fat . . destroy.—The sheep who have grown fat through taking advantage of their fellow sheep he will destroy. Justice.—Better, judgment. Instead of feeding them on rich pasture, he will feed them on destructive judgments.

17-22. Jehovah will do even more: the strong sheep will no longer be permitted to injure the weak.

23, 24. Jehovah will appoint a vice-regent to administer the government in his name. One shepherd. The promise that Jehovah will set a shepherd over their flock does not contradict the statement in verse 13 that Jehovah himself will shepherd the sheep. As verse 24 indicates, Jehovah will continue to be supreme; but he will govern through a representative. The numeral "one" is used to suggest the reunion of north and south under one ruler (compare 37, 21; Hos. 1, 11; etc.). Servant.—Any individual, or group of individuals commissioned to carry out the divine purpose may be called Jehovah's servant. In this sense the title is applied to the nation, to the prophets and, as here, to the ideal king of the future.

25-27. There will be abundant peace and prosperity. Covenant of peace.—A convenant that will guarantee permanent peace. Evil beasts.—The last source of trouble will be removed. The evil shepherds are displaced, the sheep are restrained from hurting one another; when the beasts of prey are gone the sheep will be safe even in the jungle. Though the figure of the flocks is maintained, "beasts" is here used figuratively of foes of every kind. In Hos. 2, 18 the thought is slightly different. While Ezekiel expects the destruction of the wild beasts Hosea looks for a convenant decreed by Jehovah that will prevent the beasts from troubling the people. Isa. 11, 6 holds that the same thing will be accomplished through a transformation of the nature of the beasts. Make a blessing.—That is, make altogether blessed, or, bless in abundance; in the manner suggested in the context especially, by giving abundant prosperity.

Sheep Notes

Sheep are excellent weed destroyers, as they keep the weeds nibbled so closely that no seeds are formed and the roots are exhausted. A small flock of sheep is an excellent scavenger on almost any farm, and they make profitable use of waste land, provided that dogs and internal parasites can be controlled.

The lambs should have a bit more grain now if they are to be marketed this fall.

Rape is an excellent feed for sheep, and it is greatly relished by them. Experiments have shown that they make rapid gains on it. It is a crop which is easily grown, and where sheep and feeding cattle are kept it will be found advantageous to have a few acres of this succulent feed. As a rule it is pastured off, but it is also a valuable soiling crop for sheep.

When the pastures become a little dry, rape may be cut and drawn to the sheep. A little of it will go a long way in preventing the animals from running down in condition. However, as a rule it is pastured off and proves valuable in keeping the lambs in condition after being weaned, and in toning up the breeding stock.

There are a few precautions, however, which must be observed in order to avoid loss. It is a feed which readily causes scouring and bloating if care is not exercised at the first. Turn the flock on in the middle of the afternoon the first time or two when the rape is perfectly dry. After a few days sheep may be left on it continually, but there should be grass pasture near the rape field to which the sheep have free access.

The Dairy

From England, as well as from this continent, come reports of dairy herds being reduced. When other men are going out of a staple line is usually a good time for wise men to stay in it.

Insure fancy prices for butter by having a clean, attractive package of good quality. A neat wrapper more than pays for itself.

Cutting dock, mullein, thistles and poisonous weeds in the castle pasture is a chore that fits in nicely after a rain, when the ground is wet. The task may not seem necessary until a cow is lost through poisoning, when it will be too late for prevention.

Crossing a heavy milk producer of one breed and a high butterfat producer of another in an attempt to

Your Problems

Conducted by Mrs Helen Law.

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and the answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Mrs. J.L.T.:—1. The cause of your five-months-old baby crying so much at nights may be:—1. He is not awakened every three hours for food throughout the day. 2. The room is too warm. 3. He is too warmly clad, or the clothes may be wrinkled. 4. He sleeps in a lighted room. 5. He has been accustomed to being picked up every time he cries. 6. He may be constipated. 7. His ear may ache or his throat may be sore. 8. He may have had too much excitement just before going to bed. 2. It is never safe to use old rubbers saved from the year before on a new lot of preserves. To test rubbers for preserve jars, pull them out to see whether they are of sufficient elasticity to return to shape and not break. All parts should be subjected to the strain. Expense should not be spared in buying rubbers. 3. To cure a child of sucking his thumb, wash the tip and of the thumb with tincture of aloes or with a saturated solution of quinine. 4. Lemon is a splendid thing to keep on your sink to rub on your hands after you are through with the dishes. It takes away the stains, freshens your hands and makes them sweet and clean. 5. Hematitching can be very neatly done on the sewing machine in this way: Draw the number of threads desired and baste the edge of the hem in the center of the drawn threads. Lengthen the stitch on the machine and stitch on the very edge of the hem. Pull the bastings out and pull the edge of the hem to the bottom of the drawn threads. Hemstitching done this way can scarcely be distinguished from that done by hand. 6. A little baking soda sprinkled over fruit when stewing will prevent the juice boiling over. It will also reduce the quantity of sugar required. 7. Apply salts of lemon to the ink spots on the pink cotton dress. 8. To get rid of beetles, sprinkle equal parts of red lead, sugar and flour, mixed, near the holes.

Lulu:—1. To make a fountain that will delight the convalescent child you should get a small glass bottle and nearly fill it with water. Then bore a hole through the cork and place a straw through the hole. The straw should be long enough to reach almost to the bottom of the bottle, and if the straw does not fit the cork tightly you should put sealing-wax round it to keep out all air. You should now take a glass jam jar and heat it over a lamp or candle. Stand the bottle of water on two or three sheets of damp blotting paper laid on a plate or dish, place the jar over the bottle, and press hard to prevent air getting underneath. Now, as soon as the air in the jar begins to cool, the water in the bottle will rise through the straw and form a pretty little fountain. The great thing to remember is to press the jar down over so tightly. If air can get away from under the jar you will not have your fountain. 2. The coats of tailored suits will probably be longer during the coming winter than they have for some time. 3. Grass stains can be removed with ether. Most medicine stains can be dissolved by alcohol. 4. Keep only a tea or coffee service with a pair of candlesticks on the sideboard. Lacking the service or a handsome tray, have a good-looking receptacle for fruit. Keep all small silver necessary to everyday use out of sight. The aim is to keep all dignified and free from a cluttered-up mixture. For the dining-room table use a runner or square of crash hem-stitched with a bit of cross stitch or a round centerpiece of oyster-white linen with a heavy filet insertion and edge.

E.F.:—A canning outfit may be made in five minutes. All you need: A wash boiler, a false bottom for it made of laths or sticks, or of corrugated tin with holes punched in it; a square of cheesecloth to hold fruits or vegetables when dipping into hot water; a kettle. Principles of home canning fruits and vegetables: Wash and cleanse the food; blanch by placing it in boiling water; plunge immediately and momentarily into cold water; pack food in hot jars, add boiling syrup or boiling water; place tops and tops in position half air-tight; submerge jars in boiling water in the wash boiler and cook; tighten the tops.

Value of Bees on Farms.

To give an idea of the value of bees in agriculture, it is stated by a German writer that an ordinary colony during Summer contains an average of 20,000 foragers. Of these 80 fly from the hive to the pasturage every minute; therefore, taking the working hours as from 7 o'clock in the morning to 5 in the afternoon, 48,000 flights would be made. During each flight every bee visits at least 80 blossoms. This amounts in round numbers to 2,000,000 for the hive in one day. It is reckoned that there are on an average 100 fine days when bees are able to fly, consequently 200,000,000 blossoms may be fertilized by the bees of one colony. When only one-tenth of these blossoms are properly fertilized by bees, it leaves the enormous number of 20,000,000 fertilizations to each colony.

Never leave the soap in the dish-pan to waste and stick to the dishes.

A duck may lay a bigger egg than the helpful hen can lay, but when she's through the cackles not, but simply walks away. And so we scorn the silent duck—but the helpful hen we prize. This is only another way to say that it pays to advertise.

Bedtime Stories

The Fairy of the Fountain.

The Fairy of the Fountain and the Little Boy of the Fountain are not the same. The Little Boy of the Fountain is a small image who sits by the waters, day in and day out, with uplifted finger, beckoning the birds to drink or bathe in the basin that he holds in his lap.

And how many, many birds come at his mute call! Freda could tell you, for she is always watching for such things. But how the fairy got there, or where she really came from, Freda never knew.

According to the little girl herself, it all happened in this way: As she was sitting one morning by the fountain, feeding the goldfish, she fell to wondering what it was that made the water bubble up in the basin in such a queer way. Of course grandmother could explain it all; but then that would stop the wondering, which in itself was such fun! Suddenly a small canary flew toward her, and perched on the finger of the Little Boy of the Fountain; but the strangest thing was that, instead of singing Freda a song, it began to speak to her!

"Little girl," it said, "shut your eyes for just a moment."

Freda did so, and when she opened them again, behold, standing right on the edge of the basin, was the tiniest and loveliest little figure that you can imagine!

"I am the Fairy of the Fountain," the little creature said at once. "You were wondering what made the water bubble up in such a funny way. It is I who make it do that, with my little golden churn. If you don't believe me, just notice how still the water is now, while I am talking to you!" And, sure enough, the rippling sound had quite ceased.

At first Freda felt very shy in the presence of so strange a visitor, but at last she found her voice and asked the fairy a question.

"Will you let me play some day with your little golden churn?"

"I wish I could," said the fairy good-naturedly, "but you would never be able to get down through such a tiny little hole. Still, you may try it if you wish."

But Freda could only succeed in getting the end of one finger down the water pipe.

"Can't you bring your churn up here?" she asked, as she shook the water from her finger.

The fairy shook her head. "I should be afraid of losing it, and then all my fun would be spoiled forever and ever and ever."

"I'm sure that if you did lose it my grandmother would let me get you another one," argued Freda.

But the fairy remained firm. "There isn't another one like it to be found outside of fairyland," she said, "and they are scarce enough there."

"How big is it?" asked Freda. "And is it all bright and shining?"

"It's bigger than a thimble," said the fairy, "and brighter than any star."

"Oh, how I wish I could see it!" exclaimed Freda, clasping her hands.

"Well," said the fairy, relenting, "I'll bring it just for a moment to the top of the basin if as soon as you have seen it, you will shut your eyes again while you count ten."

Freda promised, and before she could have believed it possible, the fairy drew to the top of the water pipe the most wonderful little churn—just a little bigger than a thimble and brighter than any star. "Now close your eyes," she said to Freda.

Freda did as she had promised; and when she opened her eyes once more there was no fairy anywhere to be seen—only a wee yellow bird perched on the finger of the Little Boy of the Fountain. The bird trilled forth a sweet note or two and then disappeared. And almost immediately the water began to ripple again in the basin where the goldfish were at play.

So Freda will tell you that now she knows just how it happens that the water comes bubbling up: that it is a little fairy churning away at a golden churn. If anyone tells Freda that she must have been asleep and dreaming, she answers that if she had been asleep she would surely have fallen into the fountain and got most dreadfully wet.

TWELFTH CON BRUCE

We are sorry to hear that Mrs Geo McGillivray is on the sick list.

The Misses Gowanlock, of Walkerton are visiting on the 12th.

The past week has been rather backward for hauling in. Daily showers are the order of the day.

Messrs Russel and Elgin Cummings were out to Elderslie a couple of days last week helping to finish haying, also Master Rodger was out for a holiday.

Mr Eli Barnes Sundayed at his home here.

Mrs Hughes and daughter Hazel from Shallow Lake are visiting her sister Mrs Alex McRae.

Mr and Mrs Thos Howe Sundayed at Mr J W Howe's.

Little Ann and Alice Latterel, spent a few days with their aunt Mrs Jno Cumming.

NARVA

Miss Rebena Little has returned home after visiting her cousin Irene Moffatt.

Misses Sutherland are visiting at the home of Mrs Robt Keyes.

Miss Irene Moffat is visiting at Chatsworth.

Roy Alexander left last week on the harvesters' excursion for Success, Sask.

Mr H B Storey the new Methodist minister was making calls in the burg last week.

Mrs Wm Mutrie and children are visiting Mrs Mutrie's father, Mr Alex Cameron.

Mrs Alexander and Norman spent Thursday in Walkerton.

Miss Dolly and Mr John Bell spent Sunday with Mr and Mrs Geo Young at Silver Lake.

Clegence Reid has returned home after working for some time with Mr John Keyes.

Mr John Shaw spent Sunday at his home in Paisley.

Mr Percy Mooney spent Sunday in the burg.

Mr and Mrs Kerry of Eden Grove visited at Mr A Gorman's.

Mrs F McCracken, Misses Amanda, Ena, Carrie and Mr Will McCracken motored up from Brussels and spent Sunday at Mr Wm Alexander's.

(Intended for last week)

Quite a large crowd attended the lawn social, held at Mr W H Moffatt's by the Narva Women's Institute last Wednesday evening. A delightful programme of speeches, readings, solos and instrumental music was rendered by the local talent. A main feature of the evening was the sale by auction of a silk autograph cushion and quilt, the cushion going to Mr Geo Percy for $4.75 and the quilt to Miss Dolly Bell for $21.75. Proceeds for Red Cross work. The ladies wish to thank all those who so kindly assisted and also Mr and Mrs Moffatt for the use of their lawn.

CANTIRE

Haying is finished and harvest is now chasing the farmers. Women and children have done their bit to gather in the hay and the harvest will likely be garnered with the same help.

Mr and Mrs Neil Reid attended the wedding of the latter's sister at Glenannan last week.

Mr Rob Muir, who was assisting his uncles, Neil and Donald Reid, with the haying, returned to his home in Turnberry last week.

A number from here drove to Paisley on Sunday last to hear Rev A H McGillivray in Knox church. As the rev gentleman preached his first sermon at Gillies Hill and during his stay was very popular, his friends here are glad to be numbered among the well-wishers of one who has risen to a prominent place in the Presbyterian church.

Miss Tena Dowsald, a former teacher here, is visiting at Mr D A McIntyre's.

We are glad to report that Miss May Muir, who has been laid up with an attack of appendicitis, is recovering.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

PINKERTON

Mr and Mrs E Pearce, of Sault Ste Marie, are visiting the latter's aunt, Mrs Adam Reid.

Rev Dr Scott and daughter returned to their home in Kitchener last week.

Lieut Harold Pinkerton, of London, spent Sunday at his home here.

Among those who went west last Thursday were Harvey Pinkerton, Neil Murray, Elmer Reid, Roy Alexander, John Cruickshank. Joe Anstead intends leaving this week.

GLAMIS

The marriage of Mrs Draper, daughter of the late Thos McIntosh, to Mr Murray took place at the manse on Saturday by Rev Mr Reith. Both parties come from Stratford.

Miss Winnie McLennan, of Detroit, is home for a visit.

Miss Reta McKinnon has gone to Hamilton for a few days.

Misses Mary and Clara Everett, of Port Elgin, spent last week at Mr Alex McEwen's.

Miss Susie McLennan, of Detroit, is visiting her uncles, Messrs Amos and Geo Wade.

Miss Flossie McLennan leaves this week for the Soo where she intends to teach next year.

The Narva school has secured for their teacher Miss Akitt, of Clarence.

Misses Jessie McKeeman and Phyllis Moffatt have returned from London.

Little Evelyn Rowand, of Toronto, is stopping a while with her aunt, Miss J K McLennan.

Mr Allan McKinnon leaves this week on the harvest excursion for the west.

Mrs Ruddell, of Ashgrove, is visiting her sisters, the Misses Howson.

Mr and Mrs Peacock and two children, of Meaford, are visiting the latter's parents, Mr and Mrs Neil McFarlane.

Miss Wood and daughter Margaret, of Superior, Mich., who spent six weeks with her mother, Mrs K McLennan, left for their home on Friday.

St Paul's church was highly favored on Sunday in having with them Mrs Sykes, of Detroit, who sang two solos at both services which were well rendered. Mrs Sykes has a beautiful, full rich voice and puts a great deal of expression into her singing. After the evening service she went to the Baptist church and sang two solos for the B Y P U, which were very much appreciated. She sings a great deal in public and excels in Scotch music. She leaves this week for Toronto and other places before returning to her home.

Rev Mr Daniels spoke in the Baptist church on Sunday night on western missions. He has been for a number of years secretary of western missions and his address was very interesting as he told of the work done among the Russians, Hungarians and other foreigners out in that land, and the great need of sending the gospel to them in their own language.

SECOND CON. ELDERSLIE

Master Walter Patterson spent last week visiting Paisley friends.

Miss Beaton, of Winnipeg, is the guest of her sister, Mrs Will Young.

Mr and Mrs T Patterson spent Sunday week at Owen Sound.

Mr C Smellie was seriously ill last week with an attack of asthma.

The threshing operations have commenced in this section. J McCulloch, who always likes to head the list, was the first here to thresh barley.

Mr and Mrs Geo Hope, Mr and Mrs A Dawson autoed to Southampton one day recently and spent a pleasant time at the beach.

Miss Mabel Lillico has gone to visit friends at Niagara before taking up teaching duties at the Soo.

Miss Mabel Dawson was one of an auto party who spent a pleasant day up in Bruce Peninsula last week.

M D Campbell made a business trip to Tiverton last week.

Richard Jeffkins, who was confined to the house last week, is able to be out again.

Mrs W J Allen, James, Catherine, Elizabeth and Edna, spent Sunday at Meaford.

Mr A McCulloch, of Queen Hill, visited friends here on Sunday.

Mr and Mrs Ilse, of Paisley, spent Sunday at Sam Patterson's.

GREENOCK COUNCIL

McNab's Hotel, Chepstow
Aug 20, 1917

Council met as per adjournment, all the members present, the reeve in the chair. The minutes of last meeting were read and adopted.

The following accounts were presented for payment: Jos Streader, grading and work on Durham road, $19 25; H Thompson, plowing and grading Kinloss boundary, $57 50; H Thompson, 25 yds gravel, $2 50; Rodger Clancy, 60 yds gravel div 33, $6; Jos Bechberger, 80 yds div 27, $8; M Dieboldt, 151 yds div 32, 33, $15 10; P Meyer, 118 yds div 19, 31, $11 80; L Caskenette, 156 yds divs 12, 13, 14, 16, $15 60; A Caskenette, 4 yds put on road at 35c, $1 40; W Kelts, 113 yds div 34, $11 20; H Wilhelm, 123 yds divs 27, 28, $12 30; J Schuster, 38 yds div 13, $3 10; T Quinlan, 68 yds div 30, $6 80; W Sadle, 80 yds div 20, $8; A Watson, 65 yds div 68, 74, $6 50; G Anstett, 129½ yds div 50, 51, 53, $12 95; W Petteplace, 171 yds div 21, 22, $17 10; Jos Lippert, 16 yds div 44, $1 60; G Webb, 24 yds div 44, $2 50; D Perdonent, 80 yds divs 76, 77, $8; Bed Brownscombe, 141 yds divs 69, 72, $14 10; J Zettler, 102 yds div 37, $10 20; F Graf, 85 yds div 46, $8 50; G Smith, 120 yds div 63, $12; H Purdy, 120 yds divs 61, 62, T road, $8—$14; J Desmond, 100 yds divs 59, 60, $10; Mrs T Dobson, 48 yds div 58, $4 80; A Pritz, 230 yds divs 39, 40, $23; J Thompson, 18 yds div 4, $1 80; D McLean, 6 yds div 4, 60c; J Kenney, 75 yds div 87 50 and road work paid in taxes $3 75—$11 25; W Megraw, services as fence viewer, $2; R C Teeple, services as fence viewer, $2; W J Ross, services as fence viewer, $2; D Pinkerton, road work paid in taxes in 1916, $6 10; J Hall, engine on grader 40 hours at 80c per hour, $32; R J Kirkstown, road work paid in taxes in 1916, $5; C McTeer, road work paid in taxes in 1916, $2 50; Geo Bauserman, road work paid in taxes in 1916, $5 75; W Hedley, one new culvert and repairing one, $7 90; Alex Waechter, hauling tile from Dunkeld, $1 50; Municipal World, blank forms, $1 06; S Pollock, repairing roadway, $2 50; J W Wilson, road work paid in taxes in 1916 and 10 yds gravel, $6; G T R, freight on tile, $3 96; Neil McLean, filling washout Bruce boundary, $33; Hospital for Sick Children, maintenance of W McArthur, $300; Jas Clancy, grubbing stump on T 1 Bruce, $1; A Forsythe, rep railing on Durham road, $1; F Caskenette, rep steel bridge at Riversdale, $1; Wm Rankin, filling washout on North St, $3 50; Jacob Koller, grading on Durham road, $51 95; J Cunningham, conveying Ada Cunningham to hospital at Woodstock, $13 50; H Baxter, rep at 1 20, $6; Joe Anstett, 18 bars iron for Plett bridge, con 14, $31 50; H C McLean, adv for tenders for Kaake drain, $12 80; A Dietrich, rep culvert, 50c; Robertson & McNab, drafting by-law, copies and instructions to clerk re Kaake drain, $21 27, attending judges' court at Riversdale, letters, etc, to clerk, $14 72—$36 00; M McNab, room for council meeting, $1.

Sawyer—Gilchrist—That the foregoing accounts being found correct be paid, and that the reeve sign checks for same.—Carried.

A check was issued in favor of J J Williams, M D, for maintenance of Ada Cunningham in Hospital for Epileptics at Woodstock for 7½ weeks from Aug 8th, $26 25.

Symon—Gilchrist—That this council go into committee of the whole to consider tenders for construction of Kaake drain.—Carried.

Council formed into committee of whole.

Council resumed and received report of committee as follows: The following tenders were received: D B Campbell, Strathroy, for $7300; McAusland & Anderson, North Bay—clearing willows, $40 per acre, clearing slash, $30 per acre, grubbing, $125 per acre, logs cut and rolled out 30c each, earth excavation, 50c per cub yd, loose rock, $1 50 per cub yd, rock, $3 per yd; C Crowley & Son, Gadshill—clearing willows, $40, slash, $60, timber, $180, excavation per cub yd, 26c. Your committee would recommend the acceptance of the tender of Crowley & Son. All of which is submitted. Phelan, chairman.

Sawyer—Campbell—That this council accept the tender of C Crowley & Son for the construction of the Kaake drain.—Carried.

Sawyer—Symon—That this council grant the sum of $25 to be expended on con 4 west of a l 15.—Carried.

Gilchrist—Symon—That councillors Campbell and Sawyer be a committee to examine locality of a drain on con 12, requested by Jas Ernst, and consider what is to be done.—Carried.

Campbell—Sawyer—That this council grant the sum of $30 to Greenock Agricultural Society.—Carried.

Symon—Gilchrist—That the clerk be instructed to draft a by-law for the purpose of levying rates for the year 1917.—Carried.

The Walkerton High School

will re-open on

TUESDAY, SEPT. 4th, 1917

Students are prepared for the following examinations:—ENTRANCE TO NORMAL, ENTRANCE TO FACULTIES OF EDUCATION, MATRICULATION—either in pass or honors—into any University in Ontario.

This School has been, for many years, very successful in these examinations. The record this year fully maintains this success.

All the teachers are University Graduates or Specialists.

The equipment for teaching Science and Art fully meets the requirements of the Education Department, and there is a good Reference Library.

Full attendance is given to Physical Culture, and an efficient Cadet Corps is maintained.

Board can be obtained at reasonable rates.

Overland

Light Four Touring

A Leader

No other car so low in price will appeal to you once you have driven an Overland Light Four.

No other car in its price class offers such complete satisfaction.

Its easy riding qualities, due to its studied balance throughout, long resilient cantilever rear springs, generous wheelbase and big, oversize tires are exceptional in a car of its size and weight.

Drop in for a demonstration. Ask to drive this car yourself. The test will convince you that what we have said is true.

Government Judges

Government Judges are to be secured for the Horses, Cattle, Sheep and Pigs, also for Poultry and for Ladies' Work. The directors decided that it would be more satisfactory to the exhibitors to have the government judges and thus prevent any probability of local favoritism in awarding the prizes.

POULTRY ENTRIES

Poultry exhibits are not required to be brought in the first day this year, but must be in place by 10 o'clock on Wednesday.

Special Prizes

HORSES

By McGregor & Smart—Class 1, Sec. 2, Agricultural foal, 2nd prize one neckyoke, value $1.50.

Colt Roasted to Death by Heat From New-Mown Hay

Richard Coghlin lost a fine colt on the farm of Wm Schotts, near Atwood, where it was pasturing, through a most startling cause. It was found dead in an old barn after it had been missing for a couple of days. The barn was used for the horses and cattle to go into for shade. This year it was necessary to use it for putting in hay. It is not known whether the animal was in the barn at the time the hay was put in, or whether it went in afterwards, as the doors were left open. However, it was discovered deep down in the hay on its back. It was nearly roasted from the heat of the new hay.

ADVERTISING RATES

Subscription Price—$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

Advertising Rates—Legal and other casual advertisements 8c per nonpariel line for first insertion, 3c per line for each subsequent insertion.

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $1 for first three weeks and 25c for each subsequent insertion.

Advertisements without specific directions will be inserted till forbidden and charged accordingly. Transient display advs. charged by the inch. Rates on application.

Advertisements in the local columns are charged 10c per line for first insertion, and 5c per line for each subsequent insertion. This includes announcements for church or school entertainments, garden parties &c. No notice less than 15c. Regular advertisers 5c per line. No adv. less than 15. Set in black-faced type, price and one-half.

—Marriage licenses issued and money to loan. T. H. GEORGE.

—Summer goods clearing at half price. L C Spofford.

—Two good dwellings to rent. Apply to H B Putnam.

—A carload of British Columbia shingles just in. J S Dewar.

—Spick & Span Cleanser, regular 10c, special 3 for 25. L C Spofford.

—Have you seen our new fall mantles? Ballachey, Laidlaw & Co.

—FOR SALE—Six octave organ, piano cased. Apply to Miss Cameron.

—Full lines of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—Large size fancy comforters $4.50, special $3.39. L C Spofford.

—FOR SALE—A number of little pigs. Apply to J W Brown, R R No 3, Paisley.

—Highest prices paid for hides and sheepskins. H. F. McGregor, Butcher, Steele Block.

—Shoe Polish—Two-in-one in black and white, special 4 for 25c. L C Spofford.

—All last year's accounts are long past due, and must be settled. Ballachey, Laidlaw & Co.

—Mrs McIntyre's two stores, also town lots, will be sold at a bargain. Apply to H B Putnam, Paisley.

—Parties requiring repairs for the Mellotte cream separator may obtain them at Fisher's flour Mill.

—Best Orange Pekoe Black Ceylon Tea, 80c lb other places, special 50c, or 10 lbs for $4.50. L C Spofford.

—WANTED—Three housemaids by Sept. 10th for Ontario Agricultural College, Guelph. Apply to Matron.

—Highest price for beehides, horse hides, calfskins, sheepskins, tallow, &c. P. OLTSHER, Paisley Meat Market.

—FOR SALE—Horse, harness, cutter, buggy. A quantity of window sash and 500 fire brick. J N Collins, Paisley.

—All requirements for preserving and pickling are on our shelves. Ballachey, Laidlaw & Co.

—FOR SALE—Large brick residence of the late Mrs Cameron, on Queen St north. Apply on the premises, or to D Forrester.

—WANTED—1000 Spring Chickens, 2 lbs or over. Feed is high, so is the price. Better sell them. Call us. L C Spofford.

—All makes of pianos, organs and sewing machines, also small musical instruments. P McKinnon, agent, Paisley.

—Special prices on flannelette blankets for the week. 8lbs—10-4, $1.39; 11-4, $1.69; 12-4, $1.98. Worth double. L C Spofford.

—FOR SALE—Mrs J Roberts wishes to dispose of her property on Nolan St, Fair buildings, about 10 acres in all, Paisley P O.

—A full line of repairs for Massey-Harris, McCormick, Frost and wood, and Peter Hamilton machines and implements also hay cars. J A Elwes.

—Harvesters' Excursion to Western Canada, Sept 10th and 12th. For tickets and all information apply to the old reliable C P R Agency, Paisley.

—LOST—On Aug 26th, between Paisley and Burroyne, a crochet white wool jacket. Finder please leave at the Advocate Office or with Mr Geo Webster near Dunblane. Reward.

—"It is wonderful how it made the hair grow." This is what is said of Wilkinson's Hair Tonic. See the testimonial and try this remedy for baldness. Geo Willscroft, Paisley.

—Homeseekers' Excursions to all parts of Canadian Northwest every Tuesday—May 8th to end of October. For maps, tickets, and all information, call at the old reliable C P R agency, Paisley.

—AUCTION SALE of about fifty head of cattle mostly 2 years old, and a few colts, on lot 5, con 4, Arran, on Thursday, Sept 13th, at 2 30 p.m. Terms—cash or notes bearing bank interest. A Gammie, prop, R C Pearce, auct.

—FLOUR, FEED, SEEDS, GRAIN—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

—Port Elgin Fair, Wednesday and Thursday, Sept 19 and 20.

—Miss Tena Thomson is home from Normanville for holidays.

—Miss Agnes Pearce has gone to Owen Sound to attend business college.

—Miss Gertrude Ross, of Vinemount, is the guest of Miss Jean McKerracher.

—Miss Rhea McLelland, of Ethel, is visiting at Mr. Alex McRae's, North St

—Mrs Chauncy Parker, of Greenock, was visiting friends in Mildmay for a few days.

—Mr J A McGillivray is home from Detroit on a visit to his mother, Mrs A McGillivray.

—Miss Mary Warren, of Reuben, N Y, is visiting her aunt, Mrs R W Burns, at Lockerby.

—Mr and Mrs G B Irwin went to Ripley on Saturday to attend the funeral of the former's sister.

—Mrs Mitchell, of Toronto, was visiting her sisters, Mrs Thos Johnston and Mrs Montgomery.

—Mrs. Thornburn and two daughters, of Port Elgin, were visitors at Mr. J. J. Jacques' last week.

—Mrs Mac Sinclair, of Toronto, is visiting at the home of her mother, Mrs Buchanan, Inkerman St.

—Mrs F McNeill was visiting at the home of of her brother, Mr John Coulter, in Port Elgin for a few days.

—Mr and Mrs Chas Brigham and family went last week on a motor trip to Toronto, Trenton, Belleville and other eastern points.

—Mrs D McKenzie, has gone to visit in Cornwall for a couple of weeks and attend the wedding of her neice, Miss Norma Atkinson.

—Mr and Mrs Fred Brown and little daughter, of Owen Sound, visited at the home of her father, Mr Jas Maxwell, over the holiday.

—The W C T U will meet in Putnam's hall on Friday at 3 p m. to pack the quilts and clothing for the Belgians. Any ladies interested are very welcome.

—Mr and Mrs John Pfohl, Miss Rhoda, Master John and Mrs Dahms motored from Carrick and spent Sunday at the home of their cousin, Mr and Mrs John McBeath, 4th Elderslie.

—An automobile special prize appears in the Paisley Fair adv. on another page, given by Mr. Dan Sperrow for lady driver with motor car—first $3, and $2. This will make an interesting item in the driving events.

—Councillor Charlie Thomas, of Arran, has his arm in a sling these days. While helping to build a garage at Mr Jas. Replen's a scaffold he was working on gave way, and in the fall a bone was cracked in his left shoulder.

—Rev Wm Kettlewell was unable to keep his appointment to deliver addresses in Paisley at Willscroft on Sunday in the interests of the Dominion Alliance, owing to illness. His place was very ably taken by Mr Frank Veigh.

—Hanover band, engaged for Paisley Fair, is one of the crack musical organizations in this part of Ontario and has the reputation of being in the small list of first-class bands. Their music alone will be worth the price of admission.

—Two rinks of Paisley bowlers, shipped by Messrs I Shoemaker and Thos Muir were down to the Walkerton tournament which opened on Monday, but did not become encumbered with any of the trophy goods. There were 61 rinks entered. Batchelier of Owen Sound and Geo Allen of Mount Forest shipped the winners in the trophy event.

—E Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationary and school supplies. Agent for daily papers and magazines. Give us a call.

—Arrangements are being made for a big day in Port Elgin on Thursday, Sept. 20th. A revised and enlarged prize list, special attractions in the afternoon, and the celebrated Jas Fax to furnish fun for the concert in the evening are some of the reasons why everybody is going.

Chesley Fair, Sept. 18th and 19th

"The best ever" is the motto for Chesley's big show on Sept 18th and 19th. The prizes have been greatly increased and Chesley show will see keen competition in every department. Write for a prize list to W G Warmington, Sec.

Farm Crop Queries

Henry G. Bell.

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—A.F.:—I have a five-acre field with good natural drainage, which I want to get into alfalfa next year. It was well manured two years ago, and sowed to wheat; not seeded last year. Plowed last fall, and beans planted this spring without fertilizer. Shows a good stand of beans. The soil needs lime. Will you kindly tell me the best way to start the alfalfa, also when and how to lime the soil?

Answer:—When the beans are harvested have the ground plowed deeply. As soon as the soil is dry enough to work next spring, apply a dressing of ground limestone at the rate of at least a ton per acre. Work this into the soil by disking and harrowing. About two weeks later sow a bushel to a bushel and a half of barley as a nurse crop at the same time seeding with 20 to 25 pounds of good alfalfa seed per acre. In order to insure a good catch of alfalfa, I would advise the addition of 200 to 300 pounds of fertilizer per acre. This can be drilled in at the same time the seed is sown, if the seed drill has a fertilizer distributing attachment. If not, the fertilizer can be broadcasted the same as was the lime and worked into the soil by a light harrowing just previous to the time the grain and alfalfa seed is sown. This fertilizer should carry from 2 to 4% ammonia and from 8 to 12% available phosphoric acid. It would be well also to have 1 or 2% potash, if it is obtainable.

Question—H.H.:—I have an eight-acre field which I want to now to oats in the spring. This piece of land is sandy loam and in a fair state of fertility, having been covered with manure in the last two years. It produced a good crop of corn this year. I want to get this field seeded to clover, no clover having been grown on it for the last six years. How would you advise sowing the clover to insure a catch? Would you inoculate the seed? I have clover chaff from about 25 loads of clover seed. Could this be used to inoculate by spreading on the field after it is plowed and worked in the soil with a harrow?

Answer:—After the corn has been harvested, deeply fall plow the soil and in the spring apply a ton to a ton and a half of ground limestone per acre. Work this in with a careful disking and harrowing. In sowing a mixture of clover and timothy, you can profitably use 10 lbs. of clover and 4 lbs. of alsike to the acre, as well as 5 or 6 lbs. of timothy seed. Make sure that you get good vital seed. That is, have your seed purchased by early spring. Count out a couple of hundred seed as an average sample. Place these between two damp blotters. Keep the blotters medium damp but not soaked. Place them on a plate and keep the seed near some source of warmth. In a week or ten days the seed should have sprouted sufficiently to ascertain the percent of good strong seed. If only 75% of the seed germinates strong, increase your seeding about 25%.

I would advise inoculating the seed but not by mixing it with clover chaff. Write to Prof. D. H. Jones of the Bacteriological Department of Ontario Agricultural College, Guelph, and obtain a culture for clover seed from him. This bottle of material contains the pure line of bacterial life that lives on the roots of the clover seed. Apply this as directed and you will get better results than you would otherwise.

In order to still further insure a catch, I would advise drilling in 200 to 300 lbs. of fertilizer per acre, as advised in answer to A. F.

Question—R.K.:—I have a field that is seeded to clover on the north half, and the south part is in corn this year. I wish to use the whole field for cow pasture next year. What can I sow on the south part that will make good pasture?

Answer:—After the corn has been harvested, I would advise you to fall-plow this part of the field and as soon as the soil will work in the spring, sow the following mixture:—one bushel each of wheat, rye and barley. For pasture purposes it will not make any difference whether you use fall wheat or spring wheat for spring seeding. With good weather this pasture should come along so that you can use it in six weeks. Avoid pasturing too heavily, and on the other hand, avoid allowing any of the grain to come to head. This mixture has given good results on many farms in Ontario and it tests at Ontario Agricultural College.

Question—W.F.:—I have three acres of land which I plowed up last spring being old sod with some June grass, and put it into barley. Could I work it good now and sow part of it to sweet clover this fall for pasture next summer? Is it first class clay loam like and level and dry. Would you advise me what would be my best course to take to have good pasture for next summer?

Answer:—I would not advise the growth of sweet clover for pasturage next spring. I have examined this crop as it grows in the Eastern half of this continent and have not been impressed with its usefulness as a pasture or hay crop.

On sandy soils where there is a desire to increase the organic matter rapidly, sweet clover can be grown and plowed under to good effect.

If you wish next summer's pasture for temporary purposes only,—that is, for the one summer,—I would advise you to work the ground as you indicate and to sow a mixture of rye and winter wheat this fall. As soon as the crop has made a fair spring growth, it will be ready for pasturing and will continue to give good pasturage as long as you prevent the grain from coming into head.

As soon as the snow begins to go off in the spring, I would advise you to sow 10 lbs. per acre of common red clover seed on the rye and wheat ground. The alternating thaws and frosts will work this seed into the ground and the young clover will come along so as to fill up the bare spaces and so make a substantial backing to the grain pasture.

If you wish to seed your ground to a mixture that you want to stand for two or three years, I would advise you to work it as you recommend this fall, and seed it to a light sowing of winter wheat or rye, say one bushel per acre; also sow timothy seed at the rate of 6 or 8 lbs. to the acre. As soon as the winter snows begin to go off, sow a mixture of 6 lbs. of common red clover and 4 lbs. of alsike per acre as recommended above. Cut the wheat as soon as it is ripe so as to give the grass and clover mixture an opportunity to make a good substantial growth.

THE CONSERVATION OF FOOD

An Article Dealing With Two Subjects of Vast Importance in the Present Crisis, Namely, the Saving of Wheat Flour and the Problem of Milk Supply.

By Abby L. Marlatt, Specialist in Scientific Home Management.

The enthusiasm with which the bread-makers (and-bread-winners) of the country are attacking the problem of conserving wheat flour is shown by the appearance of new recipes for different types of bread designed to save wheat.

All these recipes fall into general classes determined by what has been substituted for wheat, or by what grain or cereal or vegetable has been mixed with the wheat in order that less wheat need be used.

Wheat, as it comes to the housekeeper's kitchen flour bin, is in three forms: white flour, whole wheat flour, and graham flour. The white is wheat ground and refined into a multitude of grades. The whole wheat includes all constituents except the bran. The graham keeps everything, even the bran. In all, of course, there is variation dependent upon the manufacture. Wheat flours show a very starch content, low mineral ingredients, and a medium amount of protein or tissue-building material. Add to wheat flours other starchy cereals or vegetables, such as rice or potato, and you increase the starch proportion of the whole. In like fashion any of the three elements of the flour may be varied by the character of whatever other grains, cooked or uncooked, are added.

Bear in mind this principle of substituting some other ingredient for part of your wheat flour, for upon it is based the sort of "war bread" which, in various forms, is a favorite with the recipe makers. This is "brown crumb bread."

The Use of Bread Crumbs

When the first cook stove was in its infancy the use of bread crumbs in cookery was antique. Undoubtedly the ancient Romans used them; certainly every housewife to-day knows that bread crumbs have their usefulness in deep frying, in scalloped dishes, for puddings, for meat stuffings, and for decorating vegetables and meats. And at the present time many a wideawake housekeeper is realizing that bread crumbs may be used in bread making.

Prepare the crumbs from stale bread left over from the table, from trimmings of toasts, or from dry rolls. Brown in the oven and pulverize. Of course no bread should be used for this after it has begun to mould. After pulverizing, seal the crumbs in jars into which moisture and spores of mould cannot penetrate. The method of utilizing the crumbs is practically uniform. The bread sponge is made in orthodox fashion, with milk or water, with salt, sugar, and shortening, yeast and flour. Then the pulverized crumbs are added to form the sponge into a dough. Some declare that 50 per cent. of the flour ordinarily used is saved. But if the wheat flour employed is low in gluten (that tough, elastic property of wheat flours) then something less than 50 per cent. of crumbs must be used. Any woman with a taste for experimentation will be willing to try out different proportions until she learns just how much of other products she can use in her wheat bread and still attain the spongy, elastic loaf which the family relishes.

Many who have tried this declare that the result is nearly identical with regular whole wheat bread, differing only in its darker color and its sweet and nutty flavor due to the browning of the crumbs.

Hotel-men have seemingly utilized this type of "crumb" bread extensively, and declare that their patrons have been most enthusiastic. And the conscientious housekeeper seeking economy should not scorn such a source of experimentation. For, whereas many a woman at home has always cooked in a stereotyped, rule-of-thumb way, practicing economy only when it happened to suit her, the hotelkeeper always has to make both ends meet. He knows.

Milk is a Most Valuable Food

One never speaks of milk without thinking of the child, and in any discussion of voluntary saving of foods during the present crisis, the rights of the child stand first. In last analysis, the future of any nation is determined by the care which it to-day gives to the child.

Nature has stated, in no uncertain terms, that milk is the essential food of infants and the young child. All experiments to-day prove that we have made no advance over nature in any attempt to substitute other foods for this essential in the diet of the child. Not that milk is an ideal food. It is, however, the nearest approach to an ideal food for the child that we have.

Given alone it is not satisfactory beyond the first few months and must be supplemented by other foods which will supply the necessary mineral matter in the form of iron to aid in building the red blood corpuscles. Even the modification of milk will improve the diet for the child. This may be accomplished through the addition of water in which cereals have soaked.

Milk and cereals are very satisfactory combinations for the young, as the milk supplements the mineral deficiencies of the grains and furnishes the absolutely essential stimulant for growth.

As a stimulant to growth, milk, along with the yolk of egg, stands at the head of the list. Both of these contain fat soluble substance. If these are omitted from the diet, the child is retarded in growth, and such a serious case of malnutrition may result that the child may die.

It is for these reasons that to-day the greatest need is to encourage the dairy industry. On the size of the dairy herds and the measure of their milk production will depend the ability to safeguard the health and nutrition of the people. Not that adequate nutrition may not be secured without the use of milk, but with the high prices of food to-day, there is no advice that can be given to the mother of a family that is of more importance than to continue to supply milk for the young child of the family.

Variety of Milk Dishes

The fact that the growth stimulants may be increased through the use of the green leaves of such plants as spinach, beet and turnip tops, dandelion, chard, water cress, lettuce, endive and cabbage is not so well known as it should be. Older people can get this essential food product from these sources. This growth stimulant is supplemented by the use of butter and skim milk in the preparation of food used at the table.

Every housekeeper knows the infinite variety of foods that may be prepared with milk; creamed vegetables of every kind; creamed gravies, using all kinds of meat, poultry, fish and game. Creamed sauces used as a basis of vegetable soups and cheese dishes. Croquettes and souffles will give the peculiar value of the milk, along with the other great value of the vegetables or meats, the mineral matter, flavor and energy, and in most of the cases enough of the protein, or tissue building, for adequate growth.

Do not throw away any sour milk. The use of it should be encouraged as an essential part in the preparation of the quick bread, cakes and some sauces. Where the amount left over is sufficient, it may be used to make cottage cheese. But also save the whey from the cottage cheese for it should be used in bread making and some types of soups, in order that the valuable mineral matter of the milk may not be wasted.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 248 Woodbine Ave., Toronto.

Mrs. T.:—1. To remove spots from your suit, mix a little cornstarch into a paste with gasoline, rub this on the spots and let it remain until dry, then brush out with a whiskbroom and you will find that unless the stains are very stubborn they have disappeared. Keep away from any fire while doing this. 2. A good freckle and sunburn lotion is 1 ounce of hydrogen peroxide, 1 ounce rosewater, and 2 ounces witch-hazel. Apply several times a day. 3. A dry, well-ventilated place, such as an attic, furnishes a good storage place for onions in winter, as slight freezing does not injure them, provided they are not handled while frozen. To keep well, onions must be matured and thoroughly dry. 4. It is said that eucalyptus oil will remove grease stains from any kind of material without injuring it. Apply the oil with a clean piece of flannel and rub the material gently until the stains disappear.

M.C.S.:—A common cause of tired and swollen feet is weak instep. Examine for symptoms of flatfoot. Rheumatism is another very common cause. Take an alternative hot and cold foot bath at bedtime. Apply a moist pack to the feet over night—a moist towel covered with mackintosh and flannel. Massage with cold cream is also useful. If varicose veins are present bathe in cold water twice daily and apply an elastic bandage or a cotton flannel bandage, cut on the bias about two and one-half inches in width.

Lucie:—1. There are two "Dominions" in the British Empire, Canada and New Zealand. 2. The British Court is known as the Court of St. James's because the official residence of the King of England was at St. James's Palace from the reign of William III. to the year 1837, in the reign of Victoria. In that year the Queen and all the rest of the royal family moved to Buckingham Palace, so far as concerns board and lodging, mere physical facts. In theory the court still resides at the squat and ugly edifice of St. James's, and levees and drawing rooms continue to be held there in support of the legal fiction. The name of St. James appears in connection with the present edifice because a hospital for lepers was occupied on the site before 1100 under dedication to St. James the Less. In 1532 Henry VIII. took over the property from its monastic possessors, destroyed the buildings and erected the palace, of which Hans Holbein is said to have been the designer. While little of the old Tudor palace survived the fire in 1809 the chimney piece in the presence chamber displays the initials H. A. as a reminder that at the time it was constructed Anne Boleyn was Queen. 3. To correct stooped shoulders try to get out of the habit of allowing them to droop, and sleep with a very small pillow or none at all. Several times a day bring the forearms at a right angle with the arms, and place a broom-stick or other suitable stick in the angles thus formed in such a way that the stick will come behind the back, and keep it there for a few minutes, walking if desired. Inflate the lungs often and in other ways develop your chest muscles. "Shoulder braces" are not recommended.

B.B.:—A good plain abundant dinner, promptly served, is more popular with the threshers than a fancy one. The day before they are to come, bake pies and brown bread, then heat the former and steam the latter a few minutes while preparing dinner, which freshens both. In the morning stew a big kettle of apple, with sugar enough to make a jelly-like juice of them, and there are very popular along with the ham or salt pork, which the men usually prefer to a chicken dinner. The pork fried brown and crisp and with plenty of rich milk gravy is liked along with mashed potatoes, sliced onions and tomatoes. Green corn, in season, is always liked, while cole-slaw or boiled cabbage goes well with the pork.

How to Open a Book.

Hold the book with its back on a smooth or covered table; let the front board down, then the other, holding the leaves in one hand while you open a few leaves at the back, then a few at the front, and so on, alternately opening back and front, gently pressing open the sections till you reach the center of the volume. Do this two or three times and you will obtain the best results. Open the volume violently or carelessly in any one place and you will likely break the back and cause a start in the leaves. Never force the back of the book.

Young pigs should not run in heavy pastures when the dew is on the grass.

In wintertime we talk about scratch sheds to make hens work for a living, but how about the summertime? We make our hens dig in the scratch shed litter every day in the year.

Poultry

Improper feeding impairing digestion, or too much dry feed will cause hen to become crop bound, which is indicated by loss of appetite and distended crop followed by difficult breathing.

Give teaspoonful castor oil, knead the crop. If this fails to give relief an operation could be performed as a last resort.

Poultry are naturally of a hardy nature. It is mainly on account of some neglect that they become diseased. A smooth plumage is noticeable in fowls possessing good health, and the comb and wattles are bright red in color. The droppings, too, are more or less hard, of a dark-brown color and capped with white. Other indications of good health are a bright eye, a good appetite and an active gait.

As a summary, birds that are bright, active, with keen appetites, clear eyes, red comb, smooth plumage, clean legs—the male that crows, "talks," fights and digs; the female that scratches, "sings" and lays—are birds that enjoy good health; from such can be expected healthy chicks.

There is not much hope for the man who is all the time shifting from one breed to another. Get a good one and stick to it like a dog to a root. You will win.

Hogs

Too many breeders are so anxious to get returns that they breed young sows before they are developed. The result is that the sow never turns out to be what she would have had she attained her growth before farrowing.

The best cross to produce pigs for bacon is one between pure-bred boars and sows of the same breed. To speak plainly, crossing of breeds is rather risky except in the hands of one who thoroughly understands breeding, and such men do not practise it to any extent.

Many newly-born pigs die immediately after delivery just for lack of a helping hand. If a sow farrows nine pigs and loses three, a loss of one-third is experienced; but few look at the matter in that light. They generally consider themselves fortunate that the other two-thirds of the litter pulled through.

About three weeks before farrowing, pregnant sows may be given a ration consisting of nine parts of rolled barley and one part of tankage, or three pounds of skim-milk to one pound of the barley. This method of feeding will insure strong, lusty, active newborn pigs.

Although your choicest young animals fail to win ribbons at the fairs, the efforts for better stock have not been wasted.

The Sunday School

INTERNATIONAL LESSON SEPTEMBER 9.

Lesson XI. The Benefits of Total Abstinence (Temperance Lesson)—Daniel 1. Golden Text—Dan. 1, 8.

Verses 1-7 furnish the historical background of the incidents subsequently related. Among the exiles carried from Judah to Babylon were four young men who were appointed to receive their education at the royal court. Provision was made that they should have the same kind of food and drink as was served on the royal table.

Verses 8-10. Loyalty of the four young men to their religious convictions. Defile—The defilement might be due to several causes: (1) the meat might come from unclean animals; (2) the animals might not have been killed in the proper manner; (3) the food and drink might have been consecrated to a Babylonian deity. These are all ceremonial considerations; but it must be remembered that by the later Jews ceremonial uncleanness was placed on the same level as normal uncleanness. Eunuch—Eunuchs are still common at the courts of Oriental rulers. Find kindness—Jehovah showed his appreciation of the fidelity of the young men by making their lot easier; he made the official in charge of them kindly disposed. Worse looking—Through lack of sufficient or proper food.

11-16. A successful experiment. Though the chief of the eunuchs did not grant Daniel's request, the latter felt that it was safe to push the case. He, therefore, persuaded their overseer to try them for a short time on a vegetable diet. He agreed, and when the experiment proved a success the "unclean" food was withdrawn permanently. Steward—A subordinate official, who was in personal charge of Daniel and his companions. Pulse—the reference is to vegetable food in general. Fairer . . fatter—The thought is that in recognition of their fidelity, Jehovah gave exceptional food value to the vegetable products they ate.

17-20. God rewarded their faithfulness further by bestowing extraordinary intellectual gifts. Learning—letter. Literature. Wisdom—Better, science. The young men surpassed all others in their knowledge and appreciation of literature and science. Daniel excelled also in unique prophetic powers. Stood before—They were appointed personal attendants of the king. Magicians . . . enchanters—The two terms may be used here with a very general meaning—men of learning. The divinely bestowed wisdom of the young Jews was far superior to the learning of the wise men of Babylonia. Thus fidelity and obstinence received their reward.

The dial of a new bathroom scale faces upward so that a person standing on it can read his own weight.

Bedtime Stories

The Seven Ducky-Daddles.

There were six eggs under Amanda Ducky-Daddle. When they hatched out she counted them: "One, two, three, four, five, six, seven! I can't believe it!" she cried.

But there they were, seven downy balls!

Amanda and her seven little Ducky-Daddles lived near the pond. Every day she took them out and showed them how to hunt under the grass for worms.

But before they left the house she cautioned them: "Keep close to me. If you stay away a big black Towser-Cat will hurt you; and perhaps he will eat you up. When I say, 'Quack! Quack!' you must all come quickly."

One day, when the seven little Ducky-Daddles were hunting for worms, Amanda saw something furry behind the gooseberry bush.

"Quack! Quack!" she called loudly, and all of the Ducky-Daddles hurried under her wing.

"Keep close to me. I see Towser-Cat behind the bush!" Mother Amanda continued sharply.

And of course they all stayed close to their mother until Towser-Cat had gone away.

Another day Amanda Ducky-Daddle had to go to town to buy rubbers for the seven little Ducky-Daddles. She called her children about her and wrapped them in their red knitted mufflers. One by one she kissed them good-bye and said: "Stay near the house, and if you see Towser-Cat run in quick and bolt the door."

Then she took her umbrella, in case it should rain, and went out.

Half an hour later the seven little Ducky-Daddles were hunting for worms, when Sammy, the oldest, saw something black behind a gooseberry bush.

"Run, run; it's Towser-Cat!" he cried.

They all rushed for the house, but Ezra Ducky-Daddle tripped over his red knitted muffler. He felt a dreadful scratch down his back, and he was sure that he had lost a lot of feathers; but he scrambled up and hurried into the house, where he helped his brothers bolt the door.

When Amanda came home she found seven very frightened little Ducky-Daddles.

"If you eat a great deal, you will soon be so big that Towser-Cat will not dare to chase you," she said to her seven frightened children.

And at supper they ate all of their bread and milk, and even asked for more.

A few days later Amanda Ducky-Daddle had to go to market to buy a new broom. As it was raining, all of the little Ducky-Daddles helped her into her rubbers and then put on their own.

One by one she kissed them good-bye and said, "Stay near the house, and if you see Towser-Cat run in quick and bolt the door."

Then she took her umbrella and started for town.

The little Ducky-Daddles were hunting for worms, when Sammy saw something black behind the gooseberry bush.

"Run, run!" he cried. "It's the Towser-Cat!"

They all started for the house, but their rubbers were so heavy that they could hardly run and Towser-Cat soon caught up with them. Before the seven young Ducky-Daddles could shut the door, his big black paw was inside.

They all pushed the door as hard as they could, but it would not shut.

"Hold the door tight and I will pull the gooseberry net over him!" cried Sammy, jumping out of the window.

"Look out for his claws!" Ezra called excitedly, as Sammy pulled the net over Towser-Cat; when he was all tangled up the seven set up a shout; "Let's push him into the pond! Let's push him into the pond!"

Towser-Cat looked like a bundle of strings, as the seven excited Ducky-Daddles pushed him over and over. They rolled him down the hill, over the banking, and splash! into the pond.

"Push him way out to the middle, where it's wettest," said Ezra.

In the excitement all of the seven little Ducky-Daddles fell into the pond, and all of them lost their rubbers as they tumbled over one another.

"I've lost my rubbers!" called Sammy.

"So have I!" cried Ezra.

And "So have I!" cried all of the others, and they swam out into the pond after their rubbers.

When they returned there was no Towser-Cat. He had scurried up the bank and run away.

Now you know why Towser-Cat does not like the water.

"One Meatless Meal a Day" is a good food slogan for war time, or any time—better make it two meatless meals a day—it would mean health and strength for the nation. But be sure and get the right substitute for meat in a digestible form. **Shredded Wheat Biscuit** is the ideal substitute for meat. It is 100 per cent. whole wheat prepared in a digestible form. Two or three of these little loaves of baked whole wheat make a nourishing, satisfying meal at a cost of only a few cents. Delicious with milk or cream or fruits of any kind.

Made in Canada.

FATE OF AUSTRIA-HUNGARY

PRESENT PLIGHT OF THE DUAL MONARCHY.

Dependence on Germany is Entire and to Desert Would Mean Economic Suicide.

Political events are moving so rapidly in the Central Empires that an article on the fate of Austria-Hungary in The World's Work is particularly topical.

Will Austria-Hungary leave Germany before the end of the fight?

To this the answer seems plain: It would be certain political and economic suicide for her to do so. Hence she cannot, unless her people feel the depression of hunger so desperately that they become reckless of their future.

Will Austria be subservient to Germany after the war? And to what extent is she so now?

Briefly, Austria-Hungary cannot help herself in the matter. Her dependence is not voluntary. So far as sentiment is concerned, indeed, there is very little love lost between the two countries. For Prussia and the Prussians a distinct dislike is even felt.

The wounds of 1866 are still smarting. Her fall from power, the loss of her supremacy in the Germany of that time, are keenly realized. Prussia is regarded as an upstart with the unmistakable qualities of an upstart. The departed glory of the Austria of old is deeply regretted. The Slavs of Austria bear their powerful western neighbor undisguised hatred.

But needs must. Austria is firmly convinced that without Germany's strong arm to support her she is doomed as a political entity. We all grasp the hand that is held out to us to save us from drowning, no matter whose it be.

Austria's Plight.

Consider the facts. Look at Austria-Hungary's present plight. Austria-Hungary is economically undeveloped, or, at least not sufficiently developed. Her turbulent history, plus another more recent element, i.e., the race strife within her borders, accounts for that. Of that one becomes aware as soon as one crosses her frontiers.

How far behind she is in intellectual development is best seen, for instance, by studying her latest statistics. From them it is seen that there are whole large provinces where illiteracy predominates.

Hungary especially, though a country abounding in natural resources, urgently requires capital. Formerly Paris was the money market to which Hungary supplied by preference. But, owing in part to the heavy drain on French liquid resources made by Russia, as well as to the fact that Hungary formed part of the Dreibund, that market was closed to her.

That became very evident during the five years preceding the war, when Hungary vainly attempted to place various loans for internal improvements in Paris. There was a financial boycott declared against Hungary by France. Thus Hungary, too, was forced to turn to Germany as a financial backer.

The whole banking system of Austria, her financial status, rests and leans on Germany. The connection is very intimate and strong. Most of the Austrian and Hungarian industrial papers, shares, and values are quoted and dealt in outside of Vienna—only in Berlin.

Unless there is a tremendous slump in condition between now and harvest the supply of beans will be, proportionately, greater than the supply of potatoes. The bean crop of the United States was estimated on July 1 at 22,000,000 bushels, against 8,816,000 a year ago.

GEN. BRUSILOFF RUSSIAN PATRIOT

KEPT HIS OWN COMMAND IN CONTROL DURING REVOLUTION.

Man of Statesmanlike Wisdom With the Swift and Courageous Action of a Soldier.

All honor is due to the heroic young War Minister, Alexander Kerensky, who has played such a splendid part in firing the fighting blood of the Russian soldiers, chilled by the work of German agents in the first days of the revolution.

Less dramatic for the moment, but immensely effective, has been the work of General Brusiloff, the Russian Commander-in-Chief.

The drive began on Brusiloff territory, between Zlochoff (Zloczow) and Brzezany, along the Sziipa River; it was begun with the armies which Brusiloff had held firmly in his own hands while he was commander of the south-western front before his appointment as Commander-in-Chief. It is pertinent to ask why the Brusiloff group of armies was chosen to begin the new drive; why this group of armies was supremely ready and effective. The answer, I believe, is this: During the three perilous months immediately following the abdication of Nicholas II., when the work of German agents in Russia was, at times, seemingly triumphant, Brusiloff had given orders that not one of these "Socialist" propagandists should be tolerated within speaking distance of any of his troops—and had seen that his orders were carried out. Therefore, it happened that, while the German agents were drugging the Kronstadt sailors and sowing discord at Petrograd, the morale of the Brusiloff armies on the south-west front was almost wholly unimpaired, their fine discipline was almost wholly unshaken.

Brusiloff intervened in another way, which has been indicated in the press cables, but which has not, in all likelihood, been clearly understood. It will be remembered that German agents, just about the time when Nicholas descended from the throne scattered broadcast through Petrograd the famous "Order No. 1," apparently signed by the Executive

General Alexander Brusiloff.

Committee of Workmen's and Soldiers' Delegates, and actually supported by a few of the extremists in that ill-balanced body; its effect was practically to smash the mainspring of discipline in the Russian army. Kerensky hastened at once to the Executive Committee and procured the publication of a modifying "Order No. 2," in an effort to neutralize the damage done. But Gutchkoff, then War Minister in the Provisional Government, seemingly daunted by the extremists, gave the official sanction of the War Ministry to some of the subversive provisions of the German proclamation.

Soldier and Statesman.

Immediately afterward two events were chronicled by the cables, each in a space of three or four lines. The first of these was a hurried visit of certain famous generals to Petrograd and the Provisional Government. Brusiloff was one of them. The second event was the resignation of Gutchkoff, whose place was taken by Kerensky. These two comparatively unnoted events are not unconnected, we may surmise; they were not without their bearing on the swift convalescence of the Russian army.

We can see already, through the early and magnificent result, what statesmanlike wisdom inspired that swift, courageous and decisive action.

But without question, Brusiloff's gift of statesmanship is best demonstrated by the fact that, while it was he who led the Czar's armies in the great Galician drive which began on June 4, 1916, it is still Brusiloff who leads the armies of Free Russia.

The Department of Agriculture and Technical Instruction for Ireland, in exercise of the powers conferred on them by the defence of the realm regulations, have made an order, which came into operation on Saturday, July 21, prohibiting the exportation of horses from Ireland, save under special license.

AN AGE OF WEAK NERVES

"No heart for anything" is the cry of thousands of men and women who might be made well by the new, red blood Dr. Williams' Pink Pills actually make.

Misery day and night is the lot of hosts of men and women who are today the victims of weak nerves. Their pale, drawn faces and dejected attitude tell a sad tale, for nervous weakness means being tortured by morbid thoughts and unaccountable fits of depression. These sufferers are painfully sensitive and easily agitated by some chance remark. Sleeplessness robs them of energy and strength; their eyes are sunken, their limbs tremble, appetite is poor and memory often fails. This nervous exhaustion is one of the most serious evils affecting men and women of to-day. The only way to bring back sound, vigorous health is to feed the starved nerves which are clamoring for new, rich, red blood. This new, good blood can be had through the use of Dr. Williams' Pink Pills, which fact accounts for the thousands of cures of nervous diseases brought about by this powerful blood builder and nerve restorer. Through the fair use of this medicine thousands of despondent people have been made bright, active and strong.

Dr. Williams' Pink Pills are sold by all dealers in medicine, or may be had by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

TO MY SOLDIER.

Dear Love, I wanted you to know
That ever in my heart I go
And stand beside you, there
Amid the noise, the flying shells
Amid the smoke; amid the Hell;
I stand beside you there!

My quivering soul knows but one prayer—
Oh, keep my soldier in Thy care—
God, stand beside him there!"

— Maude Gordon Ruby.

MILITARY CROSS HERO

Capt. William Stewart MacTier, who was reported recently to have been awarded the Military Cross for gallantry in the field, is a son of Mr. A. D. MacTier, general manager of eastern lines of the Canadian Pacific Railway. Capt. MacTier went to the front with the first Canadian Contingent and has been twice wounded, the first time at Ypres, and lately at Vimy Ridge. At the outbreak of the war, Capt. MacTier was on the ocean returning from Europe, and immediately on landing joined the Thirteenth Battalion, under Lieut.-Col. (now Brigadier-General) Loomis, D.S.O. He went to the front with that unit and fought with it when it covered itself with glory at Ypres and Festubert. He was then wounded by shrapnel and returned to Montreal to convalesce. On returning to the front he was attached to Brigadier General Loomis' staff, he having taken over the command of a brigade in the meantime. After serving in this capacity for a short time one of his feet gave out and an operation was necessary. On his return to the front on this occasion he was transferred to a Montreal Highland Battalion and promoted to his captaincy.

Most Wonderful Invention.

A Player-Piano that transposes in thirteen tones, manufactured exclusively by the National Piano Co., Limited, will be on exhibit at the Toronto Industrial Exposition at their booth. A cordial invitation is extended to each and everyone interested to examine and hear this wonderful Player. National Piano Co., Limited, City Warerooms, 266-268 Yonge St.

Fish For Central Canada.

Fish is to become more plentiful in the Canadian market. Hon. W. J. Hanna, Food Controller, has inaugurated a special refrigerator express car service direct from the Nova Scotia coast to Toronto. This is the first step in a plan to put on a fish car express service from both Pacific and Atlantic points to supply Central Canada with sea food cheaply.

Women Can Help in Harvest.

Women should help harvest the bush and small tree fruit crops this year. A mobilization of available women for this work would be of great assistance. The women of Europe are now working regularly in the fields. They have planted and harvested crops ever since the war started. Are the women of Canada willing to do as much? If we wait until the fields are yellow we will be too late. The various women's organizations could do much if they would organize immediately.

Maidenhair fern should not be watered over the foliage. Keep the pots standing on damp ashes and apply the water to the pot. In the garden apply the water at the base of the plants.

Tulips, narcissus and hyacinths, potted now, and the pots buried, may be had in bloom for Christmas.

Minard's Liniment Cures Dandruff.

SHORTAGE OF WOOL.

By Saving Rags Canadians Can Help to Avert Serious Shortage.

In all the warring countries the demand for rags, to supply the world's shortage of wool, is insistent. Canada is no exception, and appeals are being made throughout the country for the savings of rags and old clothes that they may be again used in the manufacture of shoddy, to relieve the strain upon the wool supply. In Great Britain, the Local Government Board has called attention to the varied means by which this material may be saved, as follows:

"On account of the large stocks of clothing needed for the British and allied armies, efforts are being made to save the maximum quantity of rags for use in shoddy mills. The aid of women's societies has been invoked in conjunction with urban and rural officials. The collection is largely dependent upon the patriotic spirit of the people, but large supplies of old clothes and rags will be called for. Central depots are provided for storage, and when enough rags are on hand for shipment they are forwarded to the district centre, where they are sorted and sold to mill owners, the profits going to the Red Cross or other war charities. An especial appeal is made to the tailors and dressmakers to keep their cuttings for this purpose. Discarded clothing is separated into three classes—all wool, all cotton, and cotton and wool."

This method can be undertaken in Canada by many organizations. Hitherto, owing to our wasteful habits, the saving and collecting of rags has not appealed to us, but the war has brought about many changes, and, it is incumbent upon all Canadians to do their bit toward averting the serious shortages that otherwise are sure to result.

POSITIVE PROOF. AMAZING RESULTS
$5,000 Guarantee If We Fail.
There has been a standing offer of $5,000 Reward for any case Ham-Lax and Ham-Ray fail to relieve if directions are followed for three years, and more than 50,000 people have tried it successfully without a single failure. That is why the offer still holds good.
Mr. Manuel Vazquez, of 142 Hastings Street, Toronto, was going to have an operation for Kidney Stones two weeks ago. He tried Ham-Lax and Ham-Ray the day before the operation was to be performed and received such benefits that he purchased a Ham-Ray Machine and one bottle Ham-Lax, with the results that to-day he is cured.
Mr Thomas Jones, of 113 Sheridan Ave., Toronto, suffered with Rheumatism in his heart and other parts of his body for 9 years. After trying everything he failed to get results until he took one treatment of the Ham-Ray Machine and used one bottle of Ham-Lax. Unsolicited he has given his testimonial.
We unconditionally guarantee Ham-Lax and Ham-Ray to give relief from Rheumatism, Paralysis, Stomach, Kidney and Liver Disorders. Write us at once. Explain what you think about yourself, and whether you have Electric Current available or not and leave the rest to us. Address the Ham-Lax Co., 16 King West.
Will You Visit the Exposition?
Remember you are cordially invited to call and have your case treated free of charge, and a full explanation of what Ham-Lax and Ham-Ray will and will not do. It is well worth the visit to find out the true facts of your case.

In hot, dry weather do not allow the flower beds to dry out, or the vegetable beds, for that matter. Beds of lily of the valley and other plants that have flowered for the season are likely to be forgotten. To obtain best results for the next season the plants must be cared for the remainder of this season. Turn on the hose, at least during dry weather.

St. Isidore, P. Q., Aug. 13, 1894
Minard's Liniment Co., Limited
Gentlemen,—I have frequently used MINARD'S LINIMENT and also prescribe it for my patients, always with the most gratifying results, and I consider it the best all-round Liniment extant.
Yours truly,
DR. JOS. AUG. SIROIS.

Apple Pie.

Patrick had called on his Betsy, and she gave him a handsome helping of her special make of apple-pie. Patrick was loud in its praise.

"I tried a new way," said Betsy beaming. "I put a few gooseberries in to flavor it!"

"Begorra!" cried Patrick. "If a few gooseberries give so good a flavor to an apple-pie, what a darlint of an apple-pie it would be made o' gooseberries entoirely!"

FELICIA'S TAKINGS.

First Felicia took to knitting,
Everywhere she went.
On a wristlet, sock or sweater
Constantly intent.
Next she took to Red Cross nursing,
Making countless slings,
Bandages and shirts and towels,
Lint and other things.

Then Felicia took to canning,
Every afternoon
Cooking messes in the kitchen,
Brandishing a spoon.
When of beans, tomatoes, peaches,
Corn and carrots aha
Wearies, I, behold! am hoping
She will take to me.

—Minna Irving.

BABY'S GREAT DANGER DURING HOT WEATHER

More little ones die during the summer than at any other time of the year. Diarrhoea, dysentery, cholera infantum and stomach disorders come without warning and when a medicine is not at hand to give promptly the short delay too frequently means that the child has passed beyond aid. Baby's Own Tablets should always be kept in the home where there are young children. An occasional dose of the Tablets will prevent stomach and bowel troubles, or if the trouble comes suddenly the prompt use of the Tablets will cure the baby. Mrs. Chas. Anderson, Minda, Alta., says: "Baby's Own Tablets are the best medicine for little ones who are suffering from a weak stomach. They cured my baby when suffering from stomach complaint and have made her a fine healthy child." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Where Water Spreads Fire.

The use of water in attempting to extinguish grease fires is extremely dangerous. The Lumber Underwriter report a case where a fire started in the oil box of an engine. An employe dashed a pail of water on it, scattering the burning grease which was taken up by a revolving flywheel, throwing it in all directions, causing the plant to burst into flames in many places simultaneously.

Minard's Liniment Relieves Neuralgia.

Cheap Fish.

In 1915 and 1916, Manitoba lakes produced 48,000,000 pounds of fish, 75 per cent. of which was exported to the United States. For 9,000,000 pounds of whitefish, the fishermen received on the average 5 cents a pound. In some Canadian cities Manitoba whitefish sells at 15 cents a pound or more. The Food Controller for Canada is arranging to reduce the wide margin between fishermen and consumers.

Minard's Liniment Cures Burns, Etc.

Old pastures should be ploughed early if they are to be seeded to winter wheat or rye. After beans or potatoes the grain may follow with only one disking.

YES! MAGICALLY!
CORNS LIFT OUT
WITH FINGERS

You say to the drug store man, "Give me a small bottle of freezone." This will cost very little but will positively remove every hard or soft corn or callus from one's feet.
A few drops of this new ether compound applied directly upon a tender, aching corn relieves the soreness instantly, and soon the entire corn or callus, root and all, dries up and can be lifted off with the fingers.
This new way to rid one's feet of corns was introduced by a Cincinnati man, who says that freezone dries in a moment, and simply shrivels up the corn or callus without irritating the surrounding skin.
Don't let father die of infection or lockjaw from whittling at his corns, but clip this out and make him try it.
If your druggist hasn't any freezone tell him to order a small bottle from his wholesale drug house for you.

MAGIC BAKING POWDER
READ THE LABEL
NO ALUM

Something New in Frightfulness.

A curious war invention is a projectile which, on leaving the gun-muzzle, releases an enormous pair of shears that are guaranteed, with good aim, to cut a whole company of enemy troops in two.

MONEY ORDERS

It is safe to send a Dominion Express Money Order. Five dollars costs three cents.

In spraying potatoes the job may as well not be done at all unless the under side of the foliage and also stems are covered.

Minard's Liniment for sale everywhere.

Cinerarias must be kept moist and cool with plenty of air.

MOTHERHOOD WOMAN'S JOY

Suggestions to Childless Women.

Among the virtues of Lydia E. Pinkham's Vegetable Compound is the ability to correct sterility in the cases of many women. This fact is well established as evidenced by the following letter and hundreds of others we have published in these columns.

Poplar Bluff, Mo.—"I want other women to know what a blessing Lydia E. Pinkham's Vegetable Compound has been to me. We had always wanted a baby in our home but I was in poor health and not able to do my work. My mother and husband both urged me to try Lydia E. Pinkham's Vegetable Compound. I did so, my health improved and I am now the mother of a fine baby girl and do all my own house work."—Mrs. ALLIA D. TIMMONS, 216 Almond St., Poplar Bluff, Mo.
In many other homes, once childless, there are now children because of the fact that Lydia E. Pinkham's Vegetable Compound makes women normal, healthy and strong.
Write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for advice—it will be confidential and helpful.

MIXED

The Power behind the Strong Vigorous Men of Today

IRON

Dr. Ferdinand King, a New York City Physician and Medical Author says: "There can be no strong, vigorous, iron man nor beautiful, healthy, rosy-cheeked women without iron—Nuxated Iron taken three times per day after meals will increase the strength and endurance of weak, nervous, run-down folks 100 per cent. in two weeks' time in many instances. Avoid the old forms of metallic iron which may injure the teeth, corrode the stomach, and thereby do more harm than good. Take only organic iron—Nuxated Iron." It is dispensed by all good druggists.

The Paisley Advocate

PAISLEY. SEPT. 6th, 1917

THE CASUALTY LIST

The soldier boys from Paisley and vicinity, the majority of whom are sons of the district, have so far been rather fortunate in escaping mention in the casualty list, the number killed or wounded being comparatively light considering the strength of the force of recruits that has gone forth from the homes of our residents. This week brings the longest list of natives of the village and surrounding country that we have yet been called upon to publish as casualties in one issue.

JOHN McAFEE

Enlisted in a British Columbia battalion, and went over as a bandsman, a son of Mrs Hugh McAfee, 14th Greenock, killed in action.

ERNEST CUNNINGHAM

Son of Mr and Mrs Jos Cunningham, of Clamis, killed in action. Enlisted in the west.

REUBEN WITTMAN

Also went over with a western unit. Son of the late Mr and Mrs And Wittman, of Paisley. Learned the printing in The Advocate office and was for several years employed as foreman in the office of a Moose jaw daily.

REG F GIVEN

Lieut in the Royal Flying Corps, is a son of Mr and Mrs W S Given, of Millbrook, formerly of Paisley, and a nephew of Mrs G L Carter. Sustained double fracture of right hand, received in crash.

WILLIAM THOS. RAE

Serving with a western battalion, is in the casualty list for the second time. Has wound in hand, result of being buried by a shell explosion. Son of Mr and Mrs Wm Rae, of Paisley.

LOCAL AND DISTRICT NEWS

—The first of the local shows will be at Port Elgin on Thursday, Sept 20th. The Fair is being held a day earlier in the week than usual so as not to conflict with any other show in the district. The members of this Fair voted all their surplus the last two years to Red Cross and Patriotic funds and are endeavoring this year to put be a show that will be well worth attending.

The Worst Country Road

County Road Commissioner Hunter was in town on Thursday last. He is quoted as pronouncing the Elora Road to be the worst piece of highway in the county system.

Large Continuation Classes

When school re-opened on Tuesday morning there was an attendance of 61 pupils in the Continuation School, distributed among the classes as follows: Form III 13, Form II 16, and Form I 32. This is a very encouraging beginning for the term.

160th Officer Changed

Col Sutherland, a few months ago made commanding officer of the Bruce Battalion at Witley Camp, has been sent to France, and Maj Moffat is now Colonel in command, with Major McNally as senior major and Capt Logie Foster of Port Elgin as junior major.

School Competitions Trophy

The handsome silver cup offered for physical drill by public school pupils at Paisley Fair is on exhibition in Shoemaker's jewellery window. This trophy is to be held by the school winning it for a year, to become the property of a school after winning it three times.

Pinkerton Station Burned

For the third time in the past ten years Pinkerton station building at Eden Grove was destroyed by fire on Sunday morning. The cause is supposed to be lightning. Hardly a trace of the building is left except the charred sills on the side next to the track and the contents were all consumed.

Sentenced for House Breaking

Clarence Ernest, of Walkerton, was last week sentenced by Judge Craig to two years in the reformatory for house breaking. Ira Hippel on the same charge, was let go on suspended sentence. Ernest was let off on a previous charge, and it was thought by the judge that he was too confirmed a case to let off. They were going through a house in Brant in the absence of the owners.

Golden Wedding

A quiet but happy event took place at the home of Mr and Mrs H Crowe, Port Elgin, on Wednesday, Aug 15th, the occasion being the fiftieth anniversary of their wedding. Congratulations and gifts were received during the day by the happy couple including checks from Mr A M Ledingham and Mr H D Crowe of the west, who were unable to be present. Those present were Mr and Mrs McNeil and son of Southampton; Mr and Mrs Strachan and family of Glencoe, Mr and Mrs Hosson, Mr and Mrs Dorland and daughter of Guelph.

Cash Donations Instead of Preserves

The Women's Patriotic League ask the ladies of Paisley and vicinity to leave with the Secretary, Mrs D McArthur, donations of cash with which to buy properly prepared preserved fruit to send to the soldiers. By experience gained in the past two years it has been found that it is more economical and satisfactory to have the fruit put up specially at headquarters than to accept preserved fruit from everyone willing to give. For every $15 contributed the League can send 100 quart jars of jams, jellies or canned fruits, each jar having a label with the name of the donor. Contributions of 25c and up will gladly received.

Red Cross Benefit

Miss Evelyn McNiven, daughter of D. and Mrs McNiven, of New York, who were here for a few days visiting her mother and sisters on Albert St, gave a public musical recital in the town hall on Monday evening, which was highly appreciated by those who were present. Miss McNiven is a highly gifted and well trained vocalist, also an accomplished violinist. Miss Netta Johnston assisted in the programme, and Miss Nettie Tiel ford played the accompaniments. Paisley's orchestra also rendered selections. Although the recital was given on only a day's notice, the sum of $23 was realized for the Red Cross Fund.

Appreciates Parcel

Pte H J Clarke, of the 3rd Canadian Cons Depl at Seaford, Sussex, England, writes to the Paisley Patriotic League: "I received your kind remembrance in form of a parcel of good eats to day (Aug 8th) in perfect order—as the boys said, almost like a Christmas sock, only lacking the tin whistle. I saw by The Advocate some time ago that you were making up parcels, and am sure I did not expect to be one of the elect. I notice some thoughtful person evidently has been reading about our sugar shortage, and I must be very careful lest I be prosecuted for hoarding, which is a crime under The Defence of the Realm Act. All contents most acceptable, from socks to salted peanuts. Have not had the privilege of meeting many of the boys of the 160th Bruce Battalion, as they are in another county, though I hope for the pleasure of a chat in the near future. Thanking you all, I am, as ever, an old Paisleyite."

Complaints of Soldiers and Soldiers' Relatives

In spite of every care and diligence on the part of those in authority, complaints that must be recognised as inevitable and inseparable from military operations on a large scale, are heard from discharged soldiers and friends or relatives of soldiers concerning reports of casualties, pay of soldiers, separation allowance and assigned pay payable to soldiers' wives and families, and kindred subjects. Many of these complaints may have some foundation and are proper subjects for investigation. The District Officer and his staff will deal with such complaints promptly if they are referred to them. Before communicate with the District Headquarters before giving publicity to such matters. No special form of address is necessary, but any letters addressed to the "Assistant Adjutant General, District Headquarters, London, Ont.," will invariably find their way into the proper hands. The geographical area of Military District No 1 with its headquarters at London, Ont, comprises the counties of Essex, Kent, Lambton, Middlesex, Oxford, Waterloo, Wellington, Perth, Huron and Bruce, therefore all military questions of whatever character arising within this part of the Province should be referred to this District Headquarters.

An Old Resident Gone

Mr Wm Aikens, who was in his 83th year, passed away on Thursday morning last, following a stroke of paralysis which rendered him helpless and speechless two days previous. On Monday he was walking around town, greeting and chatting with those he met in his usual hearty and cheery way, feeling in excellent health and spirits for one of his advanced years, but on Tuesday morning he was stricken down. Mr Aikens was a resident of Paisley for thirty years, engaged as a wagon maker and woodworker until only a couple of years ago, when he was obliged to give up his trade on account of old age. He was generally respected in the community, as a good tradesman, a kindly, friendly and christian man. Born in County Moulton, Ireland, he came to Canada with his parents in 1843, the voyage across the Atlantic in a sailing vessel occupying about ten weeks. The family settled in Brantford, where the subject of this sketch learned his trade in a carriage building establishment. Subsequently he worked at Burford, Aylmer, New Durham and Worcester before coming to Paisley. He was married in 1854 at St Thomas to Emily Jane Bowen, who died in 1899. In 1901 he married again, his second wife being Elizabeth Porter, whose death occurred three years later. Since then his daughter, Mrs McInnes lived with him. The surviving family by his first wife are: Rev James E, of Wyndham, Maine; George M, of Earl Grey, Sask; Wm A, of Vancouver; Mrs John Smith, of Niagara Falls, Ont; Mrs Vander, of Ayr; Mrs John Hay, of Vancouver; Mrs P Purdy and Mrs Maloney, of Paisley. One brother is living, Mr Edward Aikens, of Norwich. The deceased was a Presbyterian in religion, and Liberal in politics. The funeral on Saturday afternoon was largely attended, service being conducted by Rev G C Little. Interment was made in Stark Vale cemetery.

—The drop in the price of hogs last week was due to a despatch in the daily papers stating that the Canadian packing houses having been notified by the British Food Controller that no more bacon hogs will be bought by the British Government for import. The order will have little effect on the country's trade, but it is a serious blow to the packing industry. Last year the William Davies Co alone shipped 97,761,000 pounds of bacon to England, and with other companies' exports, the total was nearly 200,000,000 pounds.

—Canada and the United States must cut down their normal wheat consumption by 160,000,000 bushels to meet the needs of Great Britain and the Allies. Hon. W. J. Hanna, Canadian Food Controller, estimates that to feed Great Britain, France and the other Allies, and the men at the front, will require 1,125,000,000 bushels of wheat. This means at least 460,000,000 will have to be imported from Canada and the United States. There will be no surplus for normal consumption in those two countries only 300,000,000 bushels surplus for export, and so by special efforts of food conservation the people of United States and Canada will have to make up a shortage of 160,000,000 bushels.

Children Cry
FOR FLETCHER'S
CASTORIA

—A farmer claims to have found a sure cure for potato beetles by ten years experience in Colorado. He plan is simply to plant one or two flax seeds in each hill of potatoes. He says the bug will, without exception, fight shy of the flax. This might be worth trying next year.

THE TONIC THAT BRINGS HEALTH

"Fruit-a-tives" Builds Up The Whole System

Those who take "Fruit-a-tives" for the first time, are often astonished at the way *it builds them up and makes them feel better all over.* They may be taking "Fruit-a-tives" for some specific disease, as Constipation, Indigestion, Chronic Headaches or Neuralgia, Kidney or Bladder Trouble, Rheumatism or Pain in the Back. And they find when "Fruit-a-tives" has cured the disease, that they feel better and stronger in every way. This is due to the *wonderful tonic properties* of these famous tablets, made from fruit juices.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

GREAT RESOURCES OF COMMERCIAL RUSSIA

Greatest Part of Russian Population Engaged in Agriculture—Rich in Dairy Produce and Minerals

Mr. J. D. Allan, Ex-President of Toronto Board of Trade, has given an interesting address on "Commercial Russia." He condensed into his address a large number of interesting facts and figures relating to that country of wonderful resources. Over eighty per cent. of the population of Russia is engaged in agriculture, he said, the most of them peasants of a very high order of intelligence, although 47,000,000 of them were serfs or slaves in 1861. The climate is various, according to latitude, but the summer climate of southern Siberia is similar to that of Canada.

Advanced Farming Methods

Russia's methods in agriculture, colidotarge, the slaughter of animals, etc., are very advanced, and in many respects far ahead of those of Canada, said Mr. Allan. The exports of dead poultry and eggs now are $60,000,000 yearly. The finest creamery butter sold in London is made on the plains of Siberia. The total agricultural exports from Russia in 1911 amounted to over $700,000. In 1913 there were 3,706 agricultural partnerships for co-operative sale of produce. In 1910 there were 32,000 students in agricultural courses and 296,000 at tending lectures. The total crop of raw cotton amounts to 150,000 tons; and 65 per cent. of the cotton manufactured and used in Russia is grown there. In 1910 the factories used wool valued at $100,000,000, every fibre of which was grown in Russia. In silk that country ranks sixth in the world; in linen yarn it is second in the world.

Splendid Forest Policy

The forestry policy of Russia puts Canada to shame, said Mr. Allan. They have 1,706,000,000 acres of forest all under one jurisdiction, and when timber is removed from the ground the lumberman must plant again, tree for tree, everything he has cut down. This is barbarous Russia; are we as civilized in Canada?

The German language is now absolutely prohibited in Russia; but on account of the prejudice there due to the Crimean War, British exports to Russia increased only by eight per cent. from 1893 to 1909, while exports from Germany increased 370 per cent. In ten years 11,000,000 ounces of fine gold were taken from Russian mines; and the iron mines would not be exhausted if 10,000,000 tons of pig iron were taken every year for 100 years. Russia is rich in all minerals, and progressive in methods commercially.

OUR FAR-FLUNG EMPIRE

Covers More Than a Fifth of Earth's Land Surface

A London paper writes: It is hard to realize the huge size of the Dominion of Canada. Its 3,400 miles wide—bigger than the U.S.A. unless Alaska is reckoned—and as big as Europe if Germany be left out! It could easily maintain a population of two hundred millions. Australia is the small est continent. If it be reckoned such, and the largest island in the world. New Zealand is our next antipodes. It is generally regarded as one of the smaller colonies, yet it is only a little less than the area of the British Isles. South Africa runs to about a million square miles of territory, without including the newly conquered territory in South West Africa. British East Africa is another million-square-mile piece, whilst Nigeria is about half as much, and Greater Egypt about the same. Add to this the smaller colonies, and Britain's stake in the Dark Continent—without reckoning Germany's contributions—works out to the size of the whole of Europe.

Nor does this take into account hundreds of islands in the Far East Indies, in the Pacific, in the Indian Ocean, and those corners of the world's ocean highways, like "Gib." and Aden, and Singapore, and Hong Kong, which all go to swell the total present mileage of the Empire to eleven and a half million, or rather more than a fifth of the whole land surface of the globe.

Sure Cure for Insomniacs

If more of these insomniacs, wild fanciers of the night, whose daily life is between an unventilated "home" and a dead air office, would get out under the blue skies and look a bud in the face, or drop a fly or a worm in a stream they would become useful to humanity.

Teach the boy the "why" of things and he'll soon be interested in the "how."

What is the next step for the grain farmer of to be to maintain the productivity of his land?

December is the wheat harvest month in New South Wales.

BALLACHEY, LAIDLAW & CO.

The Store with the Stock

The World's Best
Gathered for your Selection

Whatever your requirements you will find here to supply them goods from the four corners of the earth:

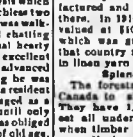
Spices From the fabled East Indies, the land of perpetual sunshine.

Rubbers Manufactured from the products of Equatorial Africa.

Woolens Made from Botany Yarns, as well as from our own home product.

Cottons From Egypt and the Southern States.

Lustrous Silks Spun by the silk worms of China, and woven and dyed in France.



Dainty Embroideries From the looms of Switzerland.

The world is now ransacked to fill your wants, and it is our place to know where to procure these commodities at their best and present them to you with the maximum of convenience to yourselves.

For Sale

NEW two-storied stucco house. Bath, furnace, good cellar, well in good condition. Will be sold at cost. Apply to THEODORE

Most Eminent Medical Authorities Endorse It.

Dr. Eberle and Dr. Brathwaite as well as Dr. Dunsan—all distinguished authors—agree that whatever may be the disease, the urine seldom fails in furnishing us with a clue to the principle upon which it is to be treated, and accurate knowledge concerning the nature of disease can thus be obtained. If backache, scalding urine or frequent urination bother or distress you, or if uric acid in the blood has caused rheumatism, gout or sciatica or you suspect kidney or bladder trouble just write Dr. Pierce at the Surgical Institute, Buffalo, N. Y., send a sample of urine and describe symptoms. You will receive free medical advice after Dr. Pierce's chemist has examined the urine—this will be carefully done without charge, and you will be under no obligation. Dr. Pierce during many years of experimentation has discovered a new remedy which he finds by thirty-two times more powerful than Buhls in removing uric acid from the system. If you are suffering from backache or the pains of rheumatism, go to your best druggist and ask for a 50-cent box of "Anuric" put up by Dr. Pierce. Dr. Pierce's Favorite Prescription for weak women and Dr. Pierce's Golden Medical Discovery for the blood have been favorably known for the past forty years and more. They are standard remedies to-day—as well as Doctor Pierce's Pleasant Pellets for the liver and bowels. You can get a large trial package for 10c. of any one of these remedies by writing Dr. Pierce.

Doctor Pierce's Pellets are unequaled as a Liver Pill. *One tiny, Sugar-coated Pellet a Dose.* Cure Sick Headache, Bilious Headache, Dizziness, Constipation, Indigestion, Bilious Attacks, and all derangements of the Liver, Stomach and Bowels.

HE GOT HIS REWARD

The question is often asked "Why does an editor not always tell the truth, the whole truth and nothing but the truth?" The answer is plain "He is taking his life in his hands in doing so." For instance a few weeks ago an editor grew tired of being called a liar, and announced that he would tell the truth. The next issue of his paper said:

John Black, the laziest merchant in town, made a business trip to Belleville yesterday.

William Sykes, our groceryman, is doing a poor business. His store is dirty and dusty. People won't buy in a dirty store.

Rev Braun preached last Sunday on charity. The sermon was punk. Half the congregation and four of the choir slept through it all.

David Dawson died at his home this a.m. The doctors say it was heart failure but we all know how David would booze.

Harry Brown is moving his family to Naperville. His neighbors presented Hank with a razor and his wife with a carving set. It is hoped they will start quarrelling and use their presents to the best advantage—of the community.

Miss Susie Hatt, of Piperville, sang to the village choir Sunday night. Her voice is not unlike the whistle of the basket factory. The fellow who told Susie she could sing ought to be vaccinated, and then burned at the stake.

Married: Miss Spirea Rhodes to Joe Conlen, on Saturday in the Baptist church. The bride is a very ordinary town girl, who does not know more about cooking than a jack rabbit. She never helped her mother three days in her life. She is not a beauty and has a gait like a duck. The groom is an up to date loafer and has lived off the old folks all his life. The match is one that will amount only to costing the taxpayers to care for another batch of feeble minded.

The morning after the paper was printed the editor was hanging to a telephone pole.

Sad Tragedy at Normnby

Last Friday evening the fine brick house on the 10th concession of Normanby belonging to Mr Cornelius Damm, was destroyed by fire which originated in a defective chimney. The building was completely consumed, together with a considerable portion of the contents On Saturday afternoon Mr Damm started to clear up the debris, and discovered that the platform of the well which was located in the woodshed, had been burned, allowing a good deal of burned embers to fall in. Mr Damm, assisted by his cousin, Robt Damm, and a couple of neighbors, decided to clean out the well, and he was let down into the well by means of a rope. The well is 35 feet deep and there is about three feet of water. While Mr Damm was cleaning out the well he remarked to those above, "I believe there is gas down here." A moment later he gave the order to pull up. The order was immediately obeyed, but Mr Damm was apparently overcome for he was unable to hang on for more than a few feet, and fell back into the water. His cousin, Mr Robt Damm, then volunteered to go down to the rescue, but he was overcome as soon as he reached the bottom of the well, and he was quickly brought to the surface again, and lay in an unconscious condition for an hour before he revived. By this time the neighbors began to arrive, and finally a big healthy man named Hollinger was prevailed upon to descend the well. He succeeded in fastening a rope around Mr Damm's body, but when they finally got him out of the well life was extinct. Mr Damm was 48 years of age.—Millbrae Gazette.

GLUE FROM FISH WASTE

Some attempt has been made in Canada to produce glue from fish waste, but hitherto it has usually been found that production involves too much technical knowledge and too many highly paid officers. That fish glue, however, can be manufactured in Canada at a profit is clear from the success of the Russia glue works at Gloucester. These glue works were started by two very humble men, some years ago; they bought fish skins and fish heads and have manufactured glue and fertilizer and each a success has their venture been that the company which they have organized, has become very prosperous. The works are now about ten times the extent they were a few years ago and they cannot adequately supply the demand for their product—a demand created by the excellence of the glue. There is quite an opening in regard to fish glue products. Canadian fishermen waste an enormous amount of material, which would produce fish glue, on the banks and in the Gulf of St. Lawrence fisheries, and the amount per annum would startle anybody. The fish waste is now simply dumped into the sea.

FEEDING MILCH COWS

Judgment in Feeding Will Result in Profit

The law of diminishing returns applies nowhere more truly than in the feeding of dairy cattle. The more food eaten and digested the greater the flow of milk, is an infallible rule in dairying. But there is a point where the increase of milk will not be sufficient to defray the cost of the extra food. This point depends entirely upon the relative cost of the feed as compared with the market value of the milk, cream, butter, or cheese.

Thus it follows that if a farmer feeds all his hard alike, irrespective of their capacities for producing, he is bound to suffer considerable loss. The cow's capacity for producing milk is limited. It is doubtful if a maximum yield of milk is ever profitable from all the individuals of an average herd.

The liberal use of concentrated foods will increase the flow of milk, but it will not convert a bad milker into a good one. But it generally pays to give a good milker a reasonable amount of cake and meal. Unless such an animal is well fed she will "milk herself away." The quantity of such feed should be determined and regulated by the yield of milk, the heavy milkers getting an extra supply.

Thus in the feeding of milch cows for profit the law of diminishing returns should always be kept in mind. If an accurate record is kept of the milk of each cow, and its butter fat content known, little trouble will be experienced in gauging the feed so that a maximum of profit may be gained from the herd.

ARMENIAN'S RARE FIND

An Armenian manufacturer of artesian wells in Egypt had purchased a piece of land close to his home. He was interested in the cultivation of fruit and trees. The work had not long been in hand when the men engaged in digging struck a hard substance with the pickaxe. Further excavation revealed to their astonished gaze a huge stone measuring three metres in length by one metre wide. Underneath the great stone the excavators discovered an extensive room, bearing on its walls writing in the form of birds and serpents. The Superintendant of the Egyptian Museum sent two expert representatives who gave orders for digging to continue. This resulted in the further discovery of a large sarcophagus, containing the mummy of a powerful king of ancient Egypt. The richness of the gold and magnificent hangings should bring in a very handsome return both to the owner of the land and the discoverers of the treasure. The owner of the land offered to hand over his share of the profit to local charities at Cairo.

WHICH SCHOOL?

All Business Colleges are not alike. Choose Carefully

ELLIOTT Business College

Yonge and Charles Sts., Toronto

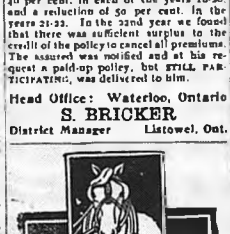
Has a national reputation for high grade work and the demand for our graduates is far greater than our supply. You risk nothing by attending this school. It is time tried and truly tested. Write for our large catalogue. Enter any time. Toronto is the best place in Ontario for positions.

W. J. ELLIOTT, Prin.

The Actual Results

OF THE

DOMINION LIFE



are unexcelled.

A Typical Case

The holder of Policy No. 21 was assured on the Ordinary Life, reduction of premium plan. His premium was reduced by 13 per cent. in each of the years 6-10, by 28 per cent. in each of the years 11-15, by 40 per cent. in each of the years 16-20 and a reduction of 50 per cent. in the years 21-22. In the 22nd year we found that there was sufficient surplus to the credit of the policy to cancel all premiums. The assured was notified and at his request a paid-up policy, but STILL PARTICIPATING, was delivered to him.

STEELE'S For Horse Collars and Sweat Pads, Rubber Lap Rugs, Whips, Auto Plush Rugs, Bickmore's Gall Cure, Star Harness Soap, &c

Our Harness includes quality, durability, appearance and high class workmanship found in no other makes of Harness.

Baggage Trunks, Suit Cases, Club Bags, Grips. Good assortment and close prices.

Harness parts and Repairing our Specialty

J. H. STEELE

Speaking of advertising here is what some of the publishers charge for space: Ladies' Home Journal, $8 a line or $104 per inch and $6,000 for a full page issue; the back cover sells for $10,000. A full page advertisement in the Saturday Evening Post sells for $7,000; the back cover sells for $7,000. The centre page in colors is $12,000. As this advertising space is always filled it is evident that advertising pays even at these prices.

—When you eat a spoonful of honey you have very little idea as to the amount of work and travel necessary to produce it. To make a pound of clover honey, bees must take the nectar from sixty-two thousand clover blossoms, and to do this requires two million seven hundred and fifty thousand blossoms or more that must be visited by the bees. In other words, in order to collect enough nectar to make one pound of honey a bee must go from hive to flower and back again two million seven hundred and fifty thousand times. Then, when you think how far these bees sometimes fly to search of these clover fields, often one or two miles distant from the hive, you will begin to get a small idea of the number of miles one of the industrious little creatures must travel in order that you may have a pound of honey

CARD OF THANKS

The family of the late Wm Aikens desire to thank their friends and fellow-townspeople for the kindness and sympathy extended to them in their recent bereavement.

Preserving and Pickling

We have a full line of Pure Spices, White, Cider and Malt Vinegars, Sugars, Jars, Rubbers, Parafine—everything you will require for your Canning and Pickling.

Leave your order with us for Tomatoes, Cucumbers, Onions, Plums, Pears, Peaches, Grapes.

Care and Repair of Tires.

A very satisfactory tire paint for finishing the inside of a tire after repairing may be made by mixing thoroughly one gallon of gasoline, one half pint of C-35 cement, one and one-half pounds of soapstone and one-half pound of whiting. Many successful repair men are using this formula with the best of results.

It is so comparatively easy to preserve the tread design in vulcanizing repairs made on tires with non-skid treads that the wonder is that any repair man should fail to do so. A tread pattern is inexpensive and easily made. First cut a ply of U. F. 52 fabric 18 inches long and the same width as the tread. Over this lay a ply of gum of 1-16 gauge half an inch wider than the fabric and cover the whole well with soapstone. Then place this pad fabric side down in a sectional mold and stand the tire the tread design of which you wish to preserve on this. Tighten the clamps and cure for twenty minutes.

In using this pattern in the vulcanization of the tire repair twenty minutes should be added to the regular cure in order that the heat may penetrate the pad.

In building up a sectional tire repair cleanliness is a prime requisite. The stock should be well stitched and all air blisters either rolled or picked out. Each operation should be followed by a cloth saturated with gasoline to take off the bloom. The gasoline should be allowed to evaporate thoroughly before proceeding with the next step. All fabric must be applied skim coat down.

Trouble Rules For Balky Autos.

Above all, remove nothing from the engine except as directed in test rules.

1. Gasoline—Is tank full? Are pipes clean? Is carburetor clean? If carburetor needs adjusting do it, otherwise leave it alone. Does manifold leak?

2. Compression—To test: Open all petcocks except the one on cylinder to be tested; crank engine, noticing how strong the compression is in each cylinder.

3. Ignition—A. Test for a spark by taking wire off of any plug; hold wire about one-eighth of an inch from plug; crank engine with switch on. Spark should jump to plug.

B. Are the batteries run down? Does the vibrator (if any) buzz? Is the timer clean? Do timer points make good contact?

C. Are any wires loose, burned, wet, broken or short-circuited? Are spark plugs clean and are points 1-50 of an inch apart?

D. Does magneto armature revolve? Is safety spark gap clean? Are interrupter points clean and adjusted right? Do all brushes make good contact? Is distributer clean? Is distributer rotor loose, broken or making poor contact?

E. Check magneto wires as per "C."

Note—Loose wires and terminals and neglected batteries, also dirty gasoline, cause much trouble.

Note—To keep a gas engine running, cooling and lubrication are needed.

WHERE CANADA'S HEROES LIE

TRIBUTE OF REGARD PAID TO BRAVE SONS.

Quiet and Picturesque Resting-Place For Dominion Soldiers Killed at the Front.

Though with the exception of a short journey to France, I have never passed beyond the as which encircle the British Isles, ften an Englishman, I visited the other day a sad but beautiful little scrap of Canada. It is the burial ground of the Canadian soldiers who die in England, and it is situated in the huge cemetery of Brookwood, in Surrey, about thirty miles southwest of London. One of the Canadian officers with whom I talked said it was very like parts of his own country. The ground is undulating and still wild, and among the heather and pinewoods grassy paths lead hither and thither, and at intervals—sometimes very long ones—there are groups of graves. It may be of interest to describe briefly a Canadian military funeral in England. It will show your readers that their kinsmen who die there receive the honors which they richly deserve, and it will afford another instance of the admirable way in which the Canadian contingent is organized and managed.

Arrangements Were Perfect.

It was a young cousin of mine who had died. He had given up a good position to fight as a private. He was wounded at Vimy Ridge, spent a month in a French hospital and was then sent back to a London hospital. We had hopes of his recovery, though he would always have been a cripple, but pneumonia supervened and the end came swiftly. A few days previously his sister, a member of the Canadian Nursing Staff, arrived in England, and she was with him when he died. We and another Canadian lady, a friend, were present at the funeral. The Canadian military authorities took over all the arrangements. The special train for Brookwood started from a London station, and in it was the coffin in which we laid the flowers we had brought with us. The firing party and the bearer party occupied most of the carriages, and there was a saloon labelled "Canada," half of it reserved for us, the other half containing the officers, the major in charge, the Canadian military chaplain, and others.

The train ran right into the cemetery, and there, while the preparations were being made, we sat in a special waiting room with the label "Canada" on the door. The major came to say that all was ready and the procession started, the firing party with reversed arms leading the way, then the bearer party with a light hand-cart carrying the coffin covered with the Union Jack and our flowers, and finally ourselves, my cousin, a pathetic little figure in her bright blue uniform with gold buttons. It seemed a long walk before we reached the Canadian burial ground. In the distance an Australian funeral was taking place, and above the purple heather the birds were singing in the warm sunshine. While the chaplain read the service the firing party stood leaning on their reversed arms. When he had finished, he was followed by the Wesleyan chaplain, for another soldier was to be buried alongside. The latter had evidently no friends in England, for there were no flowers on his coffin. It seemed so sad—so painfully lonely—that I wished to take some of our flowers and lay them at his feet as a humble tribute to his memory, but I shrank from asking my cousin at this moment, though I know she would have liked it.

The Last Post.

Then three volleys were fired over the open graves, the Last Post was sounded, and we walked sorrowfully back to the train, leaving our hero at rest with his comrades amongst the heather and pine woods. The major in charge asked if we were satisfied with the arrangements, and there could be only one answer—that they were perfect. It must please Canadians at home to learn that their soldiers who die in England, even though they be only simple privates, are buried with all the honors that are possible.

Over every grave the Canadian military authorities erect a white wooden cross, with the name and other particulars. Each is numbered, and in any communication about the grave the number should be given in order to avoid trouble and delay. Friends who intend to visit the spot should also make themselves acquainted with the number, as they can then be guided without difficulty to the grave they seek.

Spiked frames to be strapped to the shoes have been invented, to enable a man to walk upon an inclined roof.

Pull up the early flowering annuals as they go out of bloom.

THE ORIGIN OF THE RED CROSS

STARTED BY A SWISS GENTLEMAN, M. DUNANT.

Nicknamed "The Good Samaritan of Solferino" by the Grateful Soldiers of 1859.

It was during the terrible suffering of the soldiers in the Crimean war that the world awoke to the realization that something must be done for the wounded on the battlefield.

We hear stories of the brave nurse, Florence Nightingale, who gave up her own home life in England and went into the hospital work at Scutari, and with a group of nurses cared for the wounded soldiers by day and by night. As she carried her little night lamp in her hand and ministered to her suffering soldier boys they called her the "Lady of the Lamp" and the "Angel of Mercy."

But although Florence Nightingale did much to help the soldiers and saved many lives, she was not the one who started the Red Cross work.

Who, then, first thought of this plan of universal service? It was a man, not a woman. He was not an army officer nor was he a doctor, but he loved his fellow man and had the sympathy of a good physician toward all suffering humanity. This man was M. Henri Dunant, a gentleman of means who lived in Switzerland. In the summer of 1859 he was touring in Italy and was at Solferino when that dreadful battle was fought on that warm mid-summer day, June 24.

Suffering at Solferino

There the Austrian army was defeated by the combined forces of France and Sardinia. At the end of the horrible struggle more than 3,500 men lay dead or disabled upon the battlefield. For hours and days they lay where they had fallen without care.

Henri Dunant went out himself on to the battlefield and helped the soldiers and organized the poor peasant women who lived near by into a band of volunteer nurses. They were so frightened by the terrible sights they could do very little at first, but under the leadership of this brave man they were able to do something to help the distress of the wounded.

As soon as Dunant could do so he had some of the soldiers removed to the neighboring town of Castiglione. Here the churches and other public buildings were converted into emergency hospitals, and Dunant at his own expense bought the necessary supplies. He not only procurred the bandages, linen and sponges which were needed, but he bought special treats for his boys—tobacco, oranges and citron. He would go about among them administering to their needs, writing letters for them, cheering them and encouraging them. He were spotless white clothes and was so immaculate in his appearance that they nicknamed him "The Good Samaritan."

After he returned to Switzerland he wrote a book in French called "Souvenir de Solferino." He spoke with deep feeling of the need for the protection and care of the wounded and for those who were trying to attend them during the time of battle. He felt that the wounded should be removed at once from the field and that a permanent ambulance corps of trained and efficient people should be a part of every army. To do this with safety these trained workers and their wounded soldiers must have protection from attack and should not be fired upon by either side.

Red Cross on White Field

His book was so practical in every way and was so full of vivid scenes of the suffering soldiers at Solferino that it made an immediate appeal and was translated into many languages. The universality of the appeal, not in the name of any particular nation, but for the good of suffering humanity, brought it home at once to the hearts of all people, and every one had this feeling of the brotherhood of mankind and that something should be done to help this work.

Henri Dunant not only wrote this vivid story of Solferino but he went to the different courts of Europe and personally told his experiences on the battlefield, and then advanced his plan for a world society of protection and service.

In his home country of Switzerland he at once enlisted the sympathy of the Society of Public Utility of Geneva, and the president, M. Gustave, Moynier, took up the crusade. A commission was appointed and the first international conference was held in Geneva in October, 1863.

The meeting lasted for four days, and the subject was well discussed and resolutions were adopted which contained the fundamental principles upon which the Red Cross work was founded. The next year, at the famous Geneva convention, on Aug. 22, 1864, the society was formed. As the flag of Switzerland is a white cross on a red field, out of compliment to this country, where the organization originated, and also because Switzerland is a neutral nation, they decided to reverse the Swiss flag for the sign of this new order, and a red cross on a white field was chosen as the emblem of this humanitarian society.

GASOLINE VERSUS OATS.

If Machinery Took Place of Horse, More Land Could be Sown in Wheat.

Great Britain has recently forbidden everyone to feed horses on grain suitable for human food. The action causes the economists to call attention to the possibilities of greatly enlarging the food supplies of the world, by using the vast areas now devoted to producing grain for horses, for which the world is fast substituting power-driven vehicles and cultivators.

The number of horses on farms in 1917 is no greater than in 1910. Meanwhile, the shift of production from oats, chiefly used as food for horses, to that of wheat as food for man, made rapid progress. The number of acres devoted to the production of oats in 1916 showed an increase of less than eleven per cent. over that of 1910, whereas the acreage devoted to wheat in 1916 made an increase of twenty-seven per cent. over that of 1910, and corn also showed an increase, although not so great as that of wheat. During the 1916-1917 period, in which the horses in the country showed a slight decrease in numbers, and the acreage devoted to the production of their food showed a less gain than that of the acreage devoted to the food of man, the production of petroleum, which is the fuel of road and farm machinery, showed an enormous increase.

The quantity of petroleum produced in the United States was 8,801,000,000 gallons in 1909, and 12,564,000,000 gallons in 1916. Figures of world production of the various cereals indicate the substituting petroleum-fed power machines for the grain-fed horse would materially increase in other countries the area available for producing food for man. In the United States, where, as in Canada, oats and wheat grow side by side on lands capable of producing grain, the area devoted to oats was, in 1915—the banner-crop year—41,000,000 acres, and to wheat, 60,000,000 acres. In the world as a whole, the area devoted to producing oats is about one half as great as that devoted to wheat.

Wilhelm!

Oh, Me!
Oh, my!
And Likewise I ! ! ! !
Sit still, my curls, while I orate.
Me, I, Myself, the throne, the State;
I am the Earth, the Moon, the Sun—
All rolled in one!

Both hemispheres am I!
Oh, my!
If there were three, the three
I'd be!
I am the Dipper, Night and Day
North and South Poles, the Milky Way!
I am they that walk, or fly on wing,
Or swim, or creep. I'm EVERY-THING!

It took six days to make the land and sea,
But centuries were passed in making ME!
The universe? An easy task. But I—
Oh, my!

There will probably be a good deal of grain left shelled on the ground from this year's harvest. Turn it into pork.

Perennial phlox requires plenty of water, and suffers during periods of drought if it is not supplied plentifully.

"Economy puddings" and "economy meat pies" are the latest forms in which food is served in certain fashionable households. Plain foods are growing into favor again the world over since the war.

TO WIN SUCCESS.

Fulfil Your Duties Promptly is an Excellent Rule of Life.

One of the most successful of men said recently that he attributed his success to his early formed habit of doing at once what he saw ought to be done.

Whenever a task, big or little, presented itself he gave it his immediate attention, despatching it with all possible promptness, and his splendid achievements are proof of the success of this early formed habit.

Much of the mental worry and physical ill-being comes from putting off until to-morrow what should be done to-day.

A task promptly accomplished seldom brings worry or fatigue.

It is the delay in getting at it that worries and tires us.

Quite apart from the mental and moral discomfort of dreading a task, it does our work actual harm.

It is a common failing among women, this failure to attack our obligations instead of worrying over them.

Just why this should be so is a puzzle unless it is because most of us have not had much, if any, executive training.

How often do women exclaim:

"Oh, I should have written that letter long ago!" or "I have owed that call so long I'm ashamed of myself;" or "I've put off going to the dentist so long my teeth are in a bad condition;" or "My rubbers have a hole in them and here it is pouring pitchforks; I've had it on my mind for the last week to get a new pair," etc. Now a cry of despair over some really big obligation, neglected until too late; now a wail over some small one.

Some one has said that the hardest part of work is getting at it. This is so true. Work's irksomeness is almost invariably in our fretting over the fact that it lies ahead of us.

The executive person that we all admire has perfected the art of "getting at" doing what has to be done.

The minute we treat this "getting at" the performing of tasks promptly as of primary importance and starting right off at our work we have accomplished the worst part of it.

Care and worry come through our putting off till to-morrow what we should do to-day.

Life is much brighter when we are abreast with our duties. Surely it is worth while to make every effort to keep abreast.

Why think a week about buying a pair of needed rubbers? Save your mind and nerves and get the rubbers.

SOUNDS THAT NONE CAN HEAR.

Human Ears Adapted to Only Limited Range of Air Vibrations.

What is sound?

There isn't any such thing—not, at all events, as people ordinarily think of it.

Without an ear to hear it, there would be no sound. But for the presence of the atmosphere about us, there could be no noise. On the moon you would have no voice. If a 42-centimeter gun were fired ten feet away you would hear nothing.

What we call sound is merely an effect of air vibrations impinging upon the auditory nerve. But, oddly enough, when the number of these vibrations per second falls below a certain point, we hear nothing, and the same is true when it rises above a certain point.

Thus, there are sounds that we cannot hear. There is no question of the fact that the noises made by many insects are wholly inaudible to us, by reason of their high pitch. But they are audible to other insects undoubtedly.

A curious instrument for testing a person's range of hearing is a little whistle, with a rubber bulb to force air through it. It can be adjusted for any pitch. Some persons can hear it at a higher pitch than others, but beyond a certain point it becomes inaudible. Yet it is surely producing sound. A katydid could doubtless hear it.

Potatoes in Greenland never grow larger than a marble.

God rest you merry gentlemen,
Let nothing you dismay.
—Old English Song.

Mucilage which can be used in both stick and book form, and of which only the quantity desired at any particular time can be utilized, has been invented, the purpose being to guard against the loss consequent upon the drying of liquid mucilage.

WHEN THE WAR WAS PLOTTED

ON JULY 5, 1914, MATTERS WERE DEFINITELY ARRANGED.

At the Council at Potsdam the Decision Was Made Which Plunged the World Into War.

On the eve of the fourth anniversary of the outbreak of the war there was published in the London Times a statement of the first importance as to the origin of hostilities. From this it appears that the war was deliberately arranged on July 5, 1914, at a Council at Potsdam, at which the Kaiser was present.

In a report of a recent speech in the Reichstag by Herr Haase, an Independent Socialist, printed in the Leipsiger Volkszeitung of July 20, appears a reference to "the meeting of July 5, 1914," as one of the matters which would have to be explained before the origin of the war is fully understood. "This," says the Times correspondent, "is the first public reference to a date which will probably become the most famous of the fateful month of July, 19 1."

The Conspirators.

At the meeting in question there were present:—The Kaiser, Herr von Bethmann-Hollweg (Chancellor), Admiral von Tirpitz (Minister of Marine), General von Falkenhayn (Minister of War), Herr von Stumm (head of the political department of the German Foreign Office), the Archduke Frederick (cousin of the late Emperor Francis Joseph, who took command of the Austrian forces at the outbreak of war), Count Berchtold (Austro-Hungarian Foreign Secretary), Count Tisza (Hungarian Premier), and General Conrad von Hoetzendorf (Chief of the Austro-Hungarian General Staff).

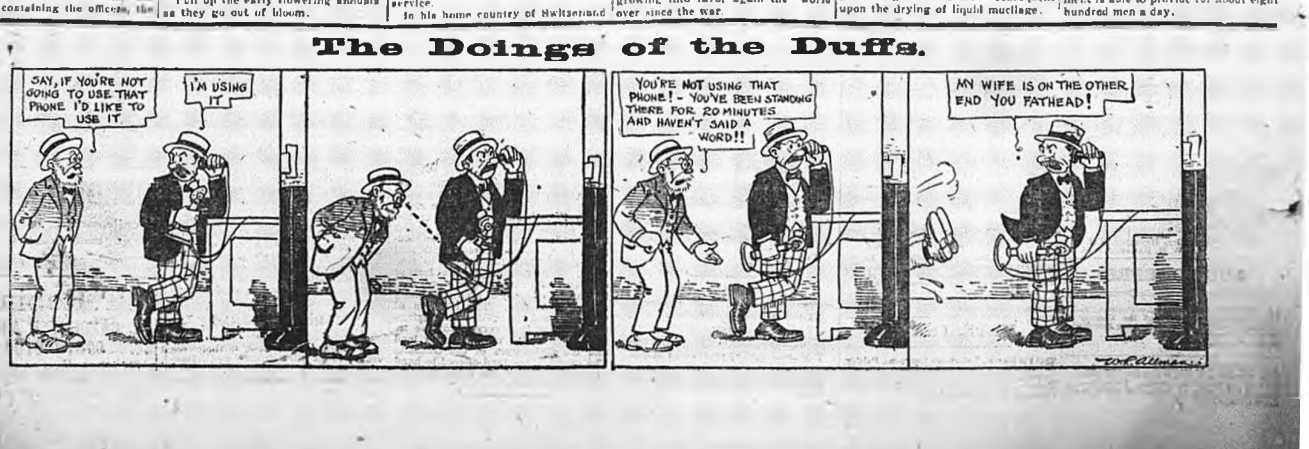
It appears that Herr von Jagow and Count Moltke were not present.

The correspondent goes on:

"The meeting discussed and decided upon all the principal points in the Austrian ultimatum which was to be dispatched to Serbia eighteen days later. It was recognized that Russia would probably refuse to submit to such a direct humiliation, and that war would result. That consequence the meeting definitely decided to accept. It is probable, but not certain, that the date of mobilization was fixed at the same time.

"The Kaiser, as is well known, then left for Norway, with the object of throwing dust in the eyes of the French and Russian Governments. Three weeks later, when it became known that England would not remain neutral, Herr von Bethmann-Hollweg wished to withdraw, but it was too late. The decision of July 5 was irrevocable."

Shutting the Gates of Mercy.



It will be recalled that the Archduke Ferdinand and his wife were murdered at Serajevo on June 28, 1914. The Austrian ultimatum to Serbia was presented at Belgrade on July 23.

"In accordance with a long-formed plan of aggression and conquest they 'shut the gates of mercy on mankind.' Millions on millions throughout the world were doomed to slaughter, laceration, ruin, privation, sorrow, by one arbitrary camarilla of half a dozen men. More crimson is their guilt than that of all the private homicides that ever lived, and this war cannot end until it is made certain that universal war can never again be brought on the world by similar men and similar means."

Portable Army Baths.

The French War Department has just completed the first of a series of fifty portable bathing establishments which are about to be used in the French army. Each comprises three compartments, separated by double partitions. The soldier leaves his uniform and underwear in the first compartment, has a warm shower bath in the second, and in the third is given new underwear and receives his uniform, which, in the meantime, has been disinfected by steam heat. The whole apparatus is carried on two automobile trucks. Each establishment is able to provide for about eight hundred men a day.

DOMESTIC SCIENCE AT HOME

Eighth Lesson—Proteins.

Proteins are necessary for body building and repairing waste tissue. They are a very important constituent of our food, differing from all other compounds in their composition, owing to the presence of nitrogen. The human body is composed of eighteen per cent. protein.

Eggs, meat, milk, cereals, peas, beans, lentils are all protein foods. Protein coagulates upon the application of heat, acid or ferment. Some proteins are entirely soluble in cold water. The compounds of protein are divided into three distinct classes, namely: Albumens, gelatinoids, extractives.

The white of an egg is the purest for of albumen. It is found in the form of a thick, white, viscuous liquid. Albumen is also found in meat, as casein in milk. It is in the form of gluten in wheat and cereals and as legumin in peas, beans and lentils. It dissolves readily in cold water and coagulates upon the application of heat.

Gelatinoids.

The second class of protein compounds are the gelatinoids. Gelatin is found in the connective tissues, which are their leading constituent. It is also found in meat; tendons, cartilage and bone; also existing in all bodily tissues. They are a very important element in the body. The entire wall cells contain large proportions of gelatin. It is very important that the manner of cooking food be of such a nature that every particle of this valuable substance be retained in the food.

Extractives.

The third class of proteins is extractives. This extract is the flavoring which is found in foods. Great care must be taken while cooking foods that nothing impairs this flavor or destroys its value as an important element of nourishment. Extracts are soluble in cold water.

Protein in soluble in cold water and coagulates upon the application of heat, so that care and judgment should be used when cooking various protein foods.

Meats.

Two methods are employed to cook meat for food.

First, where it is the object to extract all the nutriment of the meat into the liquid or broth, as in soups, meat teas and broths. The meat is cut into small pieces or chopped fine, added to the cold water and brought slowly to boiling point. Then it is placed in a position where it will simmer or cook at a temperature of 165 degrees Fahr. This method extracts all the nutriment from the meat.

Second, searing or coagulating the surface of the meat. The meat is put to cook in boiling water or steam from five to ten minutes and then processed at a simmering temperature, or the surface of the meat is brought in contact with intense heat for the same purpose, coagulation, or searing the entire surface. It is then processed as directed in the preceding recipe.

The second method preserves all the nutritious elements in the meat.

Canning Peaches.

Freestone peaches give the best results. Albertas and Crawfords are the first choice.

Make a syrup of two pounds of sugar and five pints of water. Boil this for five minutes, then cool. Split the peaches in half and remove the stones. Peel the peaches and drop them into the syrup.

This method prevents the delicate pulp of the peach from becoming bruised while removing the stones. Dropping the peeled peach into the prepared syrup prevents discolornation. When a sufficient number of peaches are prepared fill into sterilized jars, packing them closely together as possible. Fill the jar to overflowing with boiling hot syrup, made by placing in a saucepan and boiling for ten minutes, six cups of sugar, six pints of water. Now place the sterilized rubber and lid in position and partially tighten. Put into a hot-water bath and process for thirty minutes after the water starts boiling. At the end of this time remove the jars from the bath, fasten the lids as securely as possible, test for leaks and then store in a cool, dry place.

Spiced Peaches.—Prepare and peel the peaches just the same as for canning. Let them stand in the stock syrup while preparing the spiced syrup.

Spiced Syrup.—Six cups of sugar, five cups of water, juice of one lemon. Place in a saucepan and stir well until dissolved. Now add the following spices, tied in a piece of cheesecloth: one tablespoonful of whole cloves, one tablespoonful of allspice, two sticks of cinnamon, one tablespoonful of blade mace, two roots of ginger. Add to the syrup and then boil for ten minutes. Now pack the peaches into the jars. Pour the spiced syrup to overflowing in the jars. Place the sterilized rubber and lid in position and then partially tighten. Process the jars for thirty minutes in a hot water bath, after the water starts boiling. Remove from the bath, tighten the lids as securely as possible and then test for leaks. Store in a cool, dry place.

To use the stock syrup left after the peaches are all in jars: Place the peach peelings in a large preserving kettle and add the stock syrup (the syrup used to lay peaches in while peeling them). Place this on the fire to cook until the pomace is very soft. Stir frequently to prevent scorching. Strain and bottle the same as for fruit juice. Or, to four quarts of this juice add quarter peck of apples, washed and cut into small pieces. Do not peel or core the apples. Cook until the mixture is soft and then drain as for jelly. Measure the juice and then return it to the kettle. Bring it to a boil and then cook fo five minutes. Add an equal measure of sugar. Stir until well dissolved, then boil for eight minutes. Pour into glasses and store as for jellies.

Note.—A safe and reliable method of cooking jellies is to use a thermometer. Cook to 222 degrees Fahrenheit.

If Stomach Hurts Drink Hot Water

"If dyspeptics, sufferers from gas, wind or flatulence, stomach acidity or sourness, gastric catarrh, heartburn, etc., would take a teaspoonful of pure bisurated magnesia in half a glass of hot water immediately after eating, they would soon forget they were ever afflicted with stomach trouble, and doctors would have to look elsewhere for patients." In explanation of these words a well known New York physician stated that most forms of stomach trouble are due to stomach acidity and fermentation of the food contents of the stomach combined with an insufficient blood supply to the stomach. Hot water increases the blood supply and bisurated magnesia instantly neutralizes the excessive stomach acid and stops food fermentation, the combination of the two, therefore, being inordinately successful and decidedly preferable to the use of artificial digestants, stimulants or medicines for indigestion.

The man who starts the plow as soon as he has a field cleared will be in the best position for the necessary big crop in 1918.

Paid Them In Full

SAVINGS OF MANUFACTURER'S STENOGRAPHER SAVED EMPLOYER FROM RUIN AND DISGRACE.

By George Elmer Cobb.

After five years of hard work Wilfred Ashton walked down the steps of the neat little factory he had dominated, a ruined man. The morning was bright and beautiful, the air like new wine, all nature seemed disporting in the brilliant sunlight. But his heart was like lead. The plant was in the hands of a receiver, and he was a bankrupt.

Wardells had done this—Wardells, the upstarts, the business pirates. The elder of that firm had been taken in off the street penniless by Ashton, had been given work, had learned the secrets of the business, and had gone out to exploit them on his own account. The rival house manufactured a counting machine. In some way Wardell had secured the sole right to manufacture a machine the sale of which was Ashton's chief source of revenue. Trade fell off. Wardells spread and flourished like a green banyou tree. Ashton & Co. went down hill, fast.

And now—ruin! Reckoning up anxiously, Wilfred had found that the plant and his other resources would pay off about seventy-five per cent. of the debts. This it was that crushed him. Son of a business man of clean, straight record, proud of his honorable business reputation, what had been swept away was as nothing to him if he could but have paid one hundred cents on the dollar. He reached the office of his lawyer, dejected and hopeless.

"We have an offer for the assets in bulk," explained the attorney. "It will square the secured indebtedness entirely. It will also take care of all the other liabilities, except about two thousand."

"If I could only reach that!" exclaimed Wilfred. "It is those creditors, small, struggling firms, that need their money. Is there no way I can reach this deficit?"

"A way has been opened," announced the lawyer, "a remarkable one. There is the list of the unsecured creditors," and he pushed over a written page, "and here is two thousand, handed to me by a brother attorney, representing a mysterious client who does not wish to be known."

"You amaze me," cried Wilfred, his face shining, his eyes filling with grateful tears, "who could have done me this kind act?"

He thought of two brothers of his dead mother. Family differences had estranged them, but surely this gracious help in the time of need had come from them. Wilfred signed the I.O.U. extended to him by the lawyer. His heart seemed singing within him.

"A mere matter of form," remarked the attorney—"the money will never be asked for."

"But it will be given," insisted Wilfred. "Bless the giver! All the obstacles before me are as trifles now—one hundred cents on the dollar! My name without the shadow of a stain, and life all before me!"

He was treading air as he left the lawyer's office. He would yet build a grand edifice on the ruins of the old! He took from his pocket a card filled with memoranda.

There was an office boy recently in his employ to recommend, some trifling personal bills to adjust, and—Miss Bonney.

His face lightened when he was home again with thoughts of the true, loyal person who has been not only his employee, but his friends, Miss Bonney! His heart gladdened as he recalled the occasion, three years before, when he had given this poor, friendless girl, a position in his office. Her gratitude, urging the most devoted service, had made him respect and value her. She had been "his right hand man." More than once, gazing at her sweet quiet face, he had thought of a home with such a precious being as its mistress, but waited, waited, "until his ship had come in for certain."

Four days previous, when it was known that the business was on the

"We Have an Offer for the Assets in Bulk."

rocks, Amy Bonney had gone home. Ill. Wilfred remembered now that she had not sent for her salary. He consulted his little store of money.

Wilfred found her in a neat, modest cottage, her aged mother its housekeeper. She blushed and paled, and looked wistful and then trembled, as he handled her the money. Her eyes glowed sympathetically with his own when he told of his unknown benefactor.

"I shall not forget the most helpful assistant I ever had, when I get on my feet again," said Wilfred brightly. "I am very sorry to see you out of employment."

"Oh, I shall soon find a new position," declared Amy. "A relative left us a small amount of money a short while ago, and I could almost wait till you need a stenographer again, Mr. Ashton, which I know will be soon. It is all you—you!" she cried, in a burst of fervent emotion, "who gave me work and encouragement when we were down at the lowest ebb. I shall never forget it."

"It seems to me that I am receiving nothing but blessings in my own darkest hour," replied Wilfred movingly.

"There is another thing," said Amy. "You remember Mr. Judson, the old inventor who was hurt at your plant? You pensioned him off, you know. Ever since then he has been trying to invent a new counting machine. I—that is, I have encouraged him. He was here yesterday, and he is sure, oh, so very sure, that he is near to perfecting his invention.

Two evenings later a messenger brought Wilfred a note, asking him to call at the home of Miss Bonney. When he arrived he found old Abel Judson there.

"I've made it!" cried the inventor enthusiastically. "The double ratchet did it. The dream of years! And all for you, who were so kind to me, and this dear girl, who financed me! My invention is perfected—a counting machine that will drive Wardells out of the field."

It was true. One hour later, after an inspection of the invention, Wilfred knew that Judson had at last won fame and a fortune.

Only one thing would the inventor agree to—that Wilfred was to become his partner. In three months capital was found, in six the old plant was running again. At the end of the year Wilfred and Amy were man and wife.

"I am making money so fast," he said to his happy helpmate one evening, "that I will be able to pay up the two thousand dollars so generously given me when I failed."

Amy reached within her pocket. She drew out a scrap of paper. In amazement Wilfred regarded the I. O. U.

"Don't you understand?" she cried in delight, and tore the document to scraps—"paid!"

"You—you furnished that money!" exclaimed the dumfounded Wilfred.

"Yes, my all for you, the bravest, truest friend I ever knew," replied Amy rapt1y, "and now the dearest, best husband in all the world!"

Thumb Tacks.

A writer in a fashion paper draws attention to the thumb tack and its toilet uses. Wherever she travels she says she takes large corks filled with these tacks, two of which will hold her skirts against the wall of the room or closet and the necessity for carrying about a regiment of hangers is thus obviated. She also sticks thumb tacks through her veils and hair nets, affixing "these pesky belongings," as she terms them, to the bottom of the drawer. Another use for the tack is to stick it, or several of it, into the bottom of skirts to hold them stretched and firm against the wall.

At the sale of Holsteins in England seventy-four animals averaged £80 16s. Two animals sold for 200 asguines each and one for 240.

September is a good time to look for a special egg market. It is the time when consumers are coming back to the city and are looking for new-laid eggs. It is also the time when new-laid eggs are the scarcest. If you are sagituated thnt you can ship direct to consumers, see about this trade.

A tenant who is about to quit a house may not legally remove any trees or shrubs he has planted in the garden, without the permission of the landlord.

Lightning clouds may touch the earth with one of their edges, or be four or five miles up. They rarely discharge when more than 700 yards above the earth.

10, 20, 50 and 100 lb. Bags.

Made in one grade only—the highest!

GLAMIS

The Free Methodists have secured another pastor, Rev J A McClung from Michigan. Rev De Mille, late pastor here, is settled in Hamilton.

Rev Mr Reith is spending a few days in Toronto. He is expected home this week accompanied by Mrs Reith and Louise.

Miss Gilmore of Kincardine was the guest of Mrs Percy last week.

Mr Fiddis Sundayed at Mr Geo Webb's.

Mrs Geo Harrison and daughter Lillian called at J C MacIntyre's on Monday, on their way to Cheseley.

Mr McCormick spent a few days with his sister Mrs McFarlane of Lorne.

The Misses McKenzie of Kincardine motored up on Friday and spent the day at Mr Neil Currie's.

Visitors who left for their homes last week were Mrs Ruddel to Ashgrove, Mr and Mrs Peacock and family to Meaford, Mrs Walkingshaw and the Misses Evelyn and Audery Rowan to Toronto, Chas McKinnon to Wallaceburg, Mrs Quitete and Mary and Murchie Beaton to Toronto, Miss Emma Kirktown, to Toledo, Ohio.

Miss Pearl Kirktown leaves on Tuesday to attend the Paisley High school.

Mr Clifford Sprig, of Belleville, who spent a few days at Mr Kirktown's left on Monday for Toronto.

Miss Mabel Kirktown was unable to resume her duties as teacher this week, owing to an accident which might have been fatal. While motoring last Friday afternoon something happened the steering gear of the car, and Miss Kirktown was thrown out and sustained some bad bruises which will keep her confined to the house for a few days.

Although in poor health for some time, death came very suddenly to Mr Jas Hendry at his son's residence on the boundary. He was in his 87th year. The funeral took place on Sunday afternoon to Purdy's cemetery. Mr Hendry will be very much missed in our village, as he was a resident for a good many years. Rev Mr Robinson, of Tiverton, officiated, his own pastor, Rev Mr Reith, being away from home. There are three daughters and one son left: Mrs W J McKeeman, of Glamis; Mrs Chittick, of Stoney Creek; Miss Annie Hendry, of Weston, and William, on the boundary.

Those who attended the funeral of the late James Hendry from a distance were Mr and Mrs Chittick of Stoney Creek, Mr Reid and daughter Marjory of Beamsville, Miss Annie Hendry of Weston

Dr McGregor and wife of Chicago, his father and two sisters of Ashfield motored up on Tuesday last and spent the day at their friends, Mrs H Campbell and Mrs K McLennan.

The Misses Condy, of Greenock were visitors at Kirktown's on Saturday and Sunday.

Mr and Mrs Andrew Tenant of Netherhill, Sask., spent an afternoon with Mrs H Campbell and daughter Lizzie last week

The saying that trouble never comes singly proved only too true when three cables came to our village last week. On Monday word came to Mr Dan McLean on the 2nd that his brother Peter was wounded. On Wednesday another message came to Mrs McAfee informing her that her son Jack had been killed in action. The deceased had been living in the west for some years. He enlisted with a western battalion and was in the trenches over two years. On Thursday morning another sad message came to Mr and Mrs Jos Cunningham telling them that their youngest son, Ernie, had been killed on the 15th of August. It brought the war very near to us when one from our midst was taken. Ernie had been living in the west for some time and enlisted there. He was a bright promising boy and a general favorite with everybody.

Our sympathy goes out to the sorrowing parents, sisters and brothers. Memorial services will be held on Sunday morning in the Baptist church.

Mr Cameron, of Lucknow, spoke on Sunday morning in the Presbyterian church and in the Baptist at night, in the interests of the Dominion Alliance.

A number of our old settlers will remember Mr John McFarlane who lived on the 10th of Greenock for about fifteen years. Last Friday his son Neil had a wire telling him of the death of his father on Thursday last at his home in Mather, Man. The deceased had been living in the west about 35 years He was born in Perth, moved with his family to Stanley, was married there to Christy McCowan, who predeceased him fifteen years ago He was for many years deacon in the Baptist church here, which office he filled in the church in Mather also. There are three sons and two daughters left to mourn the loss of a godly father: Neil, of Glamis; Rev John, of Newark, N J; Archie, Mary and Margaret, at home.

PINKERTON

Mr R L Garland, of Palmerston, came up on the special train on Sunday, returning Monday morning.

Mr and Mrs J Gale are visiting at the home of the former's brother, Rev R M Gale.

The casualty list of last week contained the name of Pte Jerry Desmond. Jerry enlisted in the west some time ago, and the telegram stated that he was wounded in the leg, the arm and the head. All hope that the wounds may not prove serious.

Miss Mary Desmond returned to Toronto on Monday to resume her duties at St Michael's Hospital. She was accompanied to Toronto by Miss Sylvia Reid.

Miss Zeta Clark leaves this week for Detroit where she will train for a nurse. We wish her every success.

Joe Anstead and Horace Clarke left last Thursday for the west.

Mr and Mrs A Gregg have returned from Inverburon where they spent the summer.

Another of our boys has fallen on the battlefield of Flanders, in the person of Pte John McAfee, eldest son of Mrs H McAfee. Pte McAfee has not been home for 14 years and was a fine type of manhood. The sympathy of the whole community goes out to the sorrowing mother, sisters and only brother who is with the 160th Batt. in England. A memorial service will be held in the Presbyterian church on Sunday afternoon at 2 o'clock.

On Monday evening of this week a number of ladies, representing the Pinkerton Red Cross Society, called at the home of Mrs H McAfee and presented her daughter, Miss Bertha, who has enlisted as a Red Cross nurse, with a purse of gold. Mrs Gale read the following address and Mrs Bain made the presentation:

DEAR MISS MCAFEE—We have come here this evening in behalf of the Pinkerton Red Cross Society to express our appreciation of the sacrifice you are making and to wish you well in your career as a Red Cross nurse. Your country has called and you have answered the call nobly. Your path of life will not be smooth; there will be grave trials to be borne, but through it all you may know that you are doing the utmost a woman can do for her country. How many homes have been darkened, even as yours has been. We sympathize sincerely with you in your bereavement, but think from how many homes you may ward off the dark cloud by your services to the wounded.

We owe a debt that can never be repaid to Florence Nightingale. In founding the Red Cross she began a work that cannot be too highly valued. How could we expect our soldiers to recover from the serious wounds they receive, were it not for the excellent medical treatment they receive?

We cannot wish you a pleasant experience for that would not be a nurse's life, but we do wish you the happiness which results from the knowledge of a duty faithfully fulfilled and we ask you to accept this purse as an expression of the well wishes of the Pinkerton Red Cross Society. Signed in behalf of the Society—Mrs Gale, Mrs W Alexander, Mrs A Reid, Mrs J Mattie, Mrs A Bain.

Children Cry
FOR FLETCHER'S
CASTORIA

TWELFTH CON BRUCE

Miss Essie Barrie, the nurse, from Toronto was visiting at Messrs Colin McGillivrey's and Jno Cumming's for a few days last week.

Don't forget the Red Cross packing on Friday at S S No 15.

The farmers will use lots of twine this year as the grain is very heavy.

Mr Robert Stoddart spent the week end at Messrs Jno Cumming's and Jno Dunlop's.

Mrs Alex McGillivray and two daughters have moved back to Port for the school opening.

Mrs Alex McLeod Sundayed with her mother Mrs Pollock in Saugeen.

WALKERTON

The Bruce County Hospital, which has had rather hard sledding in financing its affairs owing to so many of its old sources of revenue having been diverted to patriotic or war purposes, was awarded a $100 grant by the town council on Monday night instead of the time honored $100 award which the hospital had been receiving. It seems that many outside townships, which send liberal quotas of charity patients to be treated free here, contribute practically nothing towards the up keep of the institution with the exception of their trifling share of the county grant. For instance, one township that has a charity patient in for days of the year, and has had her there for over six years, makes an annual donation of about $10 to the hospital, when according to law the municipality could be assessed $1 00 per day or $365 per year for her maintenance. This is but an instance of how certain municipalities are using the charity end of the hospital for their destitute cases and then falling down in their share of the up-keep of the works.

County Treasurer, Mr Norman Robertson, and wife received a cable message on Tuesday morning stating that their youngest son, Capt Eric Robertson, who had previously been reported as "missing," was now reported "killed." As a Flight Commander of the Royal Flying Corps, Capt Robertson was leading an air squadron over the enemy's lines on the evening of July 12th when his machine was put out of action by anti-aircraft guns and sent crashing down from a height of over thirteen thousand feet. As the machine landed in enemy territory, nothing definite was known of the fate of the gallant aviator, who was simply recorded as "missing" in the official army reports. His young wife, who was in England, took the matter up, and we understand an effort was made through Swiss channels in Germany to discover the fate of Capt Robertson, with the result that her worst fears were confirmed by the sad news reaching her that he had been killed. Leading a flying squadron against his country's foes, the daring young aviator thus met a hero's death and made the supreme sacrifice for the flag. Born in Walkerton about 28 years ago, Capt Eric Robertson threw up a good position as secretary-treasurer and assistant manager of a big factory in Milton, to do "his bit" in the Great War, and in his death Walkerton has lost a gallant son and the Empire a brilliant airman.—Herald and Times.

—Controller Hanna is considering the suggestion of limiting the serving of beef and bacon in hotels and restaurants to Tuesdays and Fridays and to serving of bacon on other days to breakfast time only.

Canada's Most Popular "Country Club"!

This is Country Club week in Canada—a week that has been set aside for the special purpose of displaying this most popular of all sport models—the Overland Country Club.

We want you to see this car—to examine it at close range—to note the strikingly stylish beauty of its interior as well as exterior lines.

Every detail reflects the height of good taste.

We want you to ride in it—to drive it if you please and to satisfy yourself as to the power plus economy of its motor.

We are at your service at all times but we are particularly anxious to have you drop in this week to see our special Country Club exhibit.

PAISLEY FAIR

Tuesday and Wednesday, Sept. 25 and 26

Government Judges

Government Judges are to be secured for the Horses, Cattle, Sheep and Pigs, also for Poultry and for Ladies' Work. The directors decided that it would be more satisfactory to the exhibitors to have the government judges and thus prevent any probability of local favoritism in awarding the prizes.

POULTRY ENTRIES

Poultry exhibits are not required to be brought in the first day this year, but must be in place by 10 o'clock on Wednesday.

Special Prizes

HORSES

By Brown Bros, Nurserymen, Welland, Ont.—Class 40, Sec. 37, for best bushel of apples exhibited, apples to be sent to the donors at Welland, prize, $5 worth of nursery stock, competitor's selection.

—A new cow pest that threatens to diminish the milk supply seriously is reported by dairymen as appearing among the herds of London district. For lack of better techni al knowledge the bug is called the "North west fly," and is said to sting with the power of a charge of rocksalt. One dairyman states that when this fly attacked one of his cows the poor animal became almost demented and ran about the field, tail in the air until it dropped from exhaustion. Wherever the pest has appeared the herds have fallen off in their output, and the dairymen are consulting experts to ascertain the best means of exterminating the pest. So far they have been able to secure little satisfaction, as no one has been able to secure a sample of the fly.

—Port Elgin tax rate is 33 mills for this year, and even that will not provide the council with sufficient to meet all demands, says The Times.

—Mrs McIntyre's two stores, also town lots, will be sold at a bargain. Apply to H B Putnam, Paisley.

—Parties requiring repairs for the Melloite cream separator may obtain them at Fisher's flour Mill.

—FOR SALE—One large coal heater and wood cooking stove, also kitchen furniture. Apply to Mrs A Rose.

—Highest price for horsehides, horse hides, calfskins, sheepskins, tallow, &c. F. OLTSHER, Paisley Meat Market.

—FOR SALE—Rowe, harness, cutter, buggy. A quantity of yellow sand and 300 firs brick. J N Collins, Paisley.

—Millinery opening on Friday and Saturday this week. We extend you a cordial invitation. Ballachey, Laidlaw & Co

—FOR SALE—Large brick residence of the late Mrs Cameron, on Queen St north. Apply on the premises, or S D Forrester.

—All makes of pianos, organs and sewing machines, also small musical instruments. F McKinlay, agent, Paisley.

—How about your winter Underwear? We are prepared for that cold weather with hundreds of dollars' worth. Ballachey, Laidlaw & Co.

—A full line of repairs for Massey-Harris, McCormick, Frost And wood, and Peter Hamilton machines and implements also hay cars. I A Hides.

—NOTICE—As I am giving up business in Paisley and leaving town, all patrons are requested to call for their laundry before Wednesday, Sept 19th. Pov Lee.

—"It is wonderful how it made the hair grow." This is what is said of Willicroft's Hair Tonic. See the testimonial and try this remedy for baldness. Geo Willicroft, Paisley.

—E Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—Homeseekers' Excursions to all parts of Canadian Northwest every Tuesday—May 8th to end of October. For maps, tickets, and all information, call at the old reliable C P R agency, Paisley.

—FLOUR, FEED, SEEDS, GRAIN—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

Chesley Fair, Sept. 18th and 19th

"The best ever" is the motto for Chesley's big show on Sept 18th and 19th. The prizes have been greatly increased and Chesley show will see keen competition in every department. Write for a prize list to W G Warmington, Sec.

—Arrangements are being made for a big day in Port Elgin on Thursday, Sept 20th. A revised and enlarged prize list, special attractions in the afternoon and the celebrated Fox Jazz to furnish fun for the concert in the evening are some of the reasons why everybody is going.

—All goods charged, especially the last year, would be worth at least one-third more if in the shelves now. We have had to pay cash for most of goods required for some time to come, and take delivery when we can get them. We require all accounts paid before Sept. 22. Please help us to give you good value. Paisley Mercantile Co.

—FOR SALE—One 60 barrel flour mill: one saw mill, capacity seven thousand per day, with water privilege and a two story brick dwelling house, all situated in the centre of the village of Paisley. The above will be sold by public auction on Wednesday, Sept 19, at 2 o'clock; this property must be sold in order to wind up an estate. J P Fisher, executor.

Paisley Fair, Sept. 25, 26.

—Mr and Mrs Alex Bird are visiting in Wingham.

—Mr Jas Maxwell is visiting his daughter in Owen Sound.

—Fred Shoemaker spent three weeks of the holidays in Toronto.

—Neil McDonald, jr., 10th Bruce, is spending a week in Wingham.

—*Boys and girls, get into the Bankers' Competitions at Paisley Fair.*

—Mrs O Rourke, of Walkerton, was a visitor at Mr Neil McDonald's, 10th Bruce

—Miss Nettie Scott has returned from an enjoyable visit at Cromarty, her former home.

—Miss Belle Hopper of Toronto is visiting her mother and brothers, Elora Road South.

—Miss Louisa McDonald, of Glenelg, is the guest of her aunt, Mrs McInnes, Goldie Street.

—Mrs R J McIntyre, of Toronto, is in town for a few days, the guest of her sister Mrs H B Putnam.

—Miss Ritchie, of Toronto, is here on an extended visit at the home of her uncle Mr I. Stanley.

—Miss Myrtle Hay, of Dauphin, Man., is visiting her aunt Mrs W J Tocke and other relatives here.

—Mr Geo. Watson, of Vancouver, B. C. is here on a visit at the home of his parents, Mr and Mrs S Watson, Victoria St.

—Mr and Mrs A B J Simons, Miss R. Gibson, and Miss S McCallum motored to Toronto and spent a week in the city.

—Mrs Wm. Brown, of Lockerby, has returned home after spending a month visiting her son, Dr. Jas. Brown in Toronto.

—Mrs David Thomson, accompanied by her daughter, Mrs Robt Valentine Southampton, left on Monday to visit relatives in Watertown, N Y.

—*School Children are preparing for the competitions at Paisley Fair.*

—Piling machines from Camp Borden are beginning to cut lines through the air of this region. We hear that a fleet of six planes passed over Brant Tp. a few days ago. A couple came to earth down near Bervie on Saturday, one of them being wrecked by striking an apple tree.

—The executive committee of the Women's Patriotic League have decided to serve refreshments on Fair Day, and would ask for a liberal supply of sandwiches, bread and butter, cake, pie and cream from our town and country friends to be left at the Town Hall or the Red Cross tent on the grounds on second day of the Fair.

—The first of the local shows will be at Port Elgin on Thursday, Sept 20th. The Fair is being held a day earlier in the week than usual so as not to conflict with any other show in the district. The members of this Fair voted all their surplus the last two years to Red Cross and Patriotic funds and are endeavoring this year to put on a show that will be well worth attending.

At Toronto Fair

Messrs J C Gibson, D Forrester, F McKinnon, J S Dewar, R J Skinner, Mrs Montgomery, Mr and Mrs W E Barnfather, Mr H McKerracher, Mr and Mrs J H Glover, Miss Connie Carter.

Military Exemption Tribunals

The men who are to serve on the tribunals that deal with the petitions for exemptions from duty under the Military Service Act are being selected. In South Bruce there will be boards located at Walkerton, Paisley, Tara and Lucknow, while those for North Bruce will be at Port Elgin, Kincardine, Wiarton and Lion's Head. One member of each local board will be chosen by a committee of the House of Commons and Senate, and the other member chosen by the County Court Judge.

A Pastor Surprised

An incident that is typical of the kindly relations that exist between the members of the Fisherton Presbyterian congregation and their much beloved pastor occurred on the arrival of Rev. and Mrs Gale back from their vacation. Members of the congregation assembled at the Manse, and after heartily welcoming Mr and Mrs Gale back to their midst, took occasion to present their pastor with a purse of $75 in gold as a special token of their appreciation of his faithful and valuable services as pastor.

Paisley Fair, Sept. 25 and 26

Largest Prize List in the County, also most commodious buildings and grounds. Many specials, including $20 by Bankers' Association to boys and girls who exhibit calves or pigs. Public school competition in club swinging, physical drill and patriotic singing. Hanover band—the best musical organization in this part of Ontario—engaged for Sept. 26th. Grand concert at night—Howard Russell, Harry Bennett and Mrs Conlin-Bain, vocalists. Write or phone W R Barnett, Sec'y, for a Prize List.

Everything for the Bugs

Paris Green, Arsenate of Lead, Bug Finish, Bug Death, Bluestone, Hellebore, Insect Powder, Creolin, Sabidilla, Moth Balls, Instant Louse Killer, Fly Killer, Etc.

Watch for This Space Next Week

—The Red Cross Workers of No 15, Bruce, packed the following, on Friday last—41 pairs socks, 16 suits pyjamas, 10 flannel shirts. Amount earned by members since last meeting for Red Cross purposes $40. Of this $18 was earned by the school children.

Grandmother's Desk

OLD LOVE LETTER THE NEWLY WEDS FOUND IN A SECRET DRAWER.

By FRANK FILSON.

Grandmother Penderby was one of those sweet-faced, silvery haired old ladies who seems to have stepped straight out of the pages of some seventeenth century novel. She ruled by love, but unquestionably, in the old house of Lynbrook.

Nobody would ever have dreamed of disobeying or thwarting Grandmother Penderby. Even "Squire" Penderby, hot-headed and impetuous as he was, had never done that. One glance from grandmother, one wave of the uplifted finger, and the Squire was reduced to a condition of trembling obedience.

That was why the quarrel between Mildred, the old lady's granddaughter, and her fiance, Will Hurlbut, was made up so quickly. They had been engaged two years and they were to be married at Christmas. But Will had been attentive to another girl—at least, so Mildred fancied—and harsh words and bitterness in their wake; and the end of it was that Mildred threw her ring at Will and Will clapped on his hat and stammed the door.

"Quarreled? Did you say you and Will had quarreled, Mildred?" exclaimed her grandmother that evening, when she had succeeded in forcing an explanation of her grandchild's tear-stained face and dejected spirits. "How can a girl quarrel with the man she is engaged to marry?"

"Because I have found out that he is false," sobbed Mildred unhappily. "He—he didn't love me; he has never cared for me at all."

"He cared for you enough to offer you his hand and name, Mildred," replied her grandmother. "And I presume that you had some knowledge of his nature and disposition before you accepted him?"

"I was deceived," said Mildred. "All girls may be deceived. We claim the right to act for ourselves nowadays. It isn't like it was when you were young and women had no power of initiative. Didn't you ever break an engagement, grandmamma?"

The old lady's cheeks had suddenly grown scarlet. "From the day when I accepted Mr. Penderby," she said, "my will was his will and his wishes were mine, and I placed the most implicit trust in him."

So the quarrel ended, because that evening, when Will came back in a penitent mood, Grandmamma Penderby led him straight into Mildred's boudoir, and made Mildred put her hand in Will's, and then wisely went out and left them together. And ten

'Didn't You Ever Break an Engagement, Grandmamma?"

minutes later, when they appeared before her, as she sat in her chair, knitting, the faces of both were radiant.

The Penderby homestead was one of those quaint, old-fashioned houses that are still to be found, here and there, upon the very borders of our modern cities. It was full of little nooks and closets, and its attics were stacked with the accumulated debris of generations: old trunks, old furniture, old papers. A week before their marriage Grandmother Penderby, who had been rummaging in what she called her private store room, appeared before Mildred and Will, flushed and triumphant. In her arms she bore a heavy, old-fashioned writing desk.

"This is to be one of my wedding presents to you children," she said. "And don't turn up your noses at it, either of you, because my mother thought enough of it to give it to me when I was engaged."

Mildred had often seen the little desk, but instinctively she had refrained from tampering with it. She knew that grandmother valued it highly—so highly that she had never allowed it to be used, but had kept it on the high shelf among her most cherished treasures. She had always suspected that some of grandmother's treasured relics were kept hidden in it. But when she opened it it was empty, and only the faint odor of dead rose leaves betrayed the fact that it had contained anything but dust.

"We'll keep—what shall we keep in it, Will?" Mildred asked.

"Our love letters," responded Will, promptly. "That is, if it is big enough. But isn't it strange, Millie, that a desk of this size should have such a very small interior? It almost looks as though it might contain a secret drawer."

"There does seem to be a lot of space underneath the drawer," said Mildred, fingering the edges of the desk. "Why, Will, it rings quite hollow. Just tap it and listen."

It certainly did ring hollow. And it did seem as though there were some second drawer under the first. But the cunningly arranged veneering gave no evidence of any opening. Will tapped and tapped in vain.

"I guess there isn't any secret drawer, Millie," said Will, and set the desk down upon the table with a bang. And then a curious thing happened. The jar apparently set some long devised spring to working, for the whole front of the desk flew open, revealing a little, flat compartment immediately beneath the drawer.

A single sheet of yellow paper, covered with faded writing, lay there. Will looked at it and then snatched it up and began reading.

"Will!" exclaimed Mildred reprovingly.

"But I must read it," he exclaimed. "Look at this signature—it is that of my grandfather, Ebenezer Hurlbut. It may be some long-lost will.

But it was no will. It was a letter addressed to Grandmother Penderby, and it ran as follows:

"My Dearest Own Elizabeth:

"Your cruel words to me to-day, though they have sorely wounded me, cannot quench the passion for you that burns in my bosom. So, since you have said that this unhappy misunderstanding of ours must end our engagement, since you have forbid me to approach the grounds and alter of my devotion, I shall place this within your mother's writing desk, hoping that some impulse will draw you hither, to open the little drawer you once showed me, and to find this outpouring of my soul. Elizabeth, you cannot mean that we must part for ever, that you will bestow your priceless self upon that dullard, Nat Enderby, for when your marriage bells ring out my life will become unbearable to me and I shall end this wretched existence. Without you life will become impossible.

"Till time shall end, thine,
"Ebenezer Hurlbut.

"Jan. 24, 1851."

Will Hurlbut folded up the paper and looked at Mildred. Her eyes were moist and her lips were quivering.

"It must have lain there unnoticed these fifty years and more," she said. "We must not let her know, now."

"No," answered Will, and, tearing the paper into strips, he let them flutter slowly out of the open window.

"Will," said Mildred, presently, "do you remember the date of your grandfather's marriage?"

"It was in the spring of 1858, I think—it must have been, because my father was born that Christmas."

"And grandmother was married in the summer of 1857. It didn't last long, this desperate passion. Will? But, dearest, do you know what grandmother told me once—it was just after our stupid quarrel? That when she was young no girl ever dreamed of quarreling with the man she was engaged to marry."

Will laughed as he kissed her. "Oh, well, I guess that human nature was pretty much the same in those times as it is nowadays," he said. "But, Mildred, dearest—"

"Will?"

"Think how lucky it is for us she didn't marry your grandfather. Because that would have made us cousins—and marriage between cousins is impossible in this state."

HAIL BRITANNIA!

What if old England
Were to die to-night?
The wolves would gather round her bier,
To-morrow they would slaver here.
The Bulgar, Turk send forth a cheer,
If England died to-night.

The Kaiser's sword would hack its way
From Kiel to Colon and Bombay.
And darkness enshroud the dawning day,
If England died to-night.

Democracy, where would it be?
Tossed on a wild, unguarded sea,
The sport of evil destiny,
If England died to-night.

Brave France and Allies, what their fate?
And we, alas, prepared so late?
Where could you find a saviour State
If England died to-night.

What of the little peoples then?
What of their liberties and when?
Where would we find the conquering men,
If England died to-night.

What of the aims of German peace?
When would the horrors of war cease?
When from the victors come release,
If England died to-night.

Think of the panic and the fears,
The brutal deaths, the endless tears,
The world fall back a thousand years,
If England died to-night.

Why, if our England
Were to die to-night,
Her children true would meet the test
And, gathering from the east and west
For freedom, they would give their best,
If England died to-night.

—J. Levering Jones, in Philadelphia Ledger.

If you can't be a fighter, don't be a waster.

It is to be hoped that no apples will be allowed to rot under the trees this year. Call in the neighbors and pare and dry them and share with the workers or make the apples into cider and feed the poorest to the hogs in limited quantities.

RAILWAY POLICY IS CRITICISED

Acquisition of Canadian Northern Imposes Burden of Unknown Magnitude.

The following criticism of the policy of the Government in respect of the Canadian Northern Railway is made:

The Government bill to authorize the purchase by it of the capital stock of the Canadian Northern Railway is half-way through the House of Commons and will shortly be in the Senate. If it becomes law, it will impose on Canada, at a time when the country is under an unprecedented strain, a burden of unknown magnitude. One certainly greater than any ever before imposed upon this country, with the exception of the war debt.

The purchase of a defined piece of railway property is one thing. The buying of stock in a company with unascertained assets and unknown liabilities is another. Once the Government becomes the principal owner of the common stock, it must provide out of loans or taxes for all the debts of the railway due or to become due and for all future losses in operating. The estimates of expenditure still necessary to be made run into enormous figures. No one knows what the real extent of its obligations are. The railway has bonds outstanding and debts unpaid; so have its subsidiaries. There are guarantees given by it to other companies, unpaid balances on contracts and upon accounts, but to what extent is unknown. What its assets are is equally unknown. It operates and is interested in railway companies, land companies, telegraph companies, tunnel companies, lumber companies and hotel companies, but no one knows how far it owns them, what their assets or liabilities are, nor to what extent the railway company is responsible for their liabilities.

No other railway company nor any other group of business men would consider such an acquisition except after elaborate examination and reports from accountants and appraisers on the assets and liabilities, and then only subject to a solvent guarantee that all supposed assets would be delivered and that no undisclosed debts or obligations would appear. To find out these things, where such examination and guarantee cannot be had, the usual course in the United States has been to place the road in the hands of a receiver, whose staff can ascertain them and place them before those interested in an accurate and clear statement. Systems quite as large, notably the Union Pacific, the Atchison Topeka and Santa Fe and the Rock Island, have in the United States been through this process and have emerged from it with capital written down to correspond to the actual values, in a solvent condition and able to perform their duties as public servants.

The only examination so far had into the affairs of the Canadian Northern has resulted in the opinion of two out of three railway experts that the stock proposed to be purchased was worth nothing. This means that whatever its nominal value may be, the unsecured debts are more than enough to prevent its being sold to any reasonably prudent purchaser. In view of the fact that no money was paid to the company for the stock and that the company has never been able to earn anything upon it, there was and is no reason to expect any other result from examination.

No agreement or obligation to purchase is produced. In fact, nothing has transpired except verbally and then between members of the Government not named and persons whose names are not disclosed. In fact what is to be paid, who is to get paid for it, what the cost and the attendant obligations are, no one knows. The smallest transaction in common life could not be concluded in such a way, and any attempt to do it by trustees responsible to a court would unquestionably be a breach of trust, and this is the largest and most onerous undertaking ever contemplated by any Canadian Government, and the most risky. It is safe to say that no road capitalized above its earning power can ever be a useful public servant, nor can any road bought by a Government for more than its worth ever be anything but a continuous drain on the tax payer.

The Canadian Northern Railway was built as a private speculation. Its bonds were sold to financiers at a discount. No money was received into its treasury for its stock. Nothing has been made public which would justify the taxing of other citizens of this country for the purpose of giving fictitious value to these bonds and stocks. The interest and other charges on Canada due to the war increase every day and even now are so great that it is difficult to say from what source they can be paid without an economic strain never hitherto undergone and a cutting down of expenses not yet even begun.

The credit of the country abroad is less than it has ever been. The last loan of $100,000,000 at 6 per cent. for two years netted only $95,111,111. In other words, the country is borrowing money at a charge of more than 8 per cent. per annum. Note.—According to the Monetary Times of August 17th, Sir Thomas White stated the net proceeds to be $96,250,000, not $96,111,111, and that the commissions and charges were 1¾ per cent. He was speaking of a two-year 5 per cent. loan. The cost would be 8 per cent. if the 1¾ per cent. comes out of the $96,250,000, but not otherwise. Its future credit may depend entirely on the belief of foreign bankers that good money will not be sent after bad, and that speculative enterprises will be allowed to find the financial level called for by their intrinsic merits.

The undersigned, all of whom as investors have a stake in the prosperity of this country, desire to call the attention of their fellow-countrymen to the grave risk they all are running of having their own earnings diverted for the purpose of securing profits to bondholders and stockholders of a concern, the equity in whose enterprise has been declared by the only people at all in a position to form an opinion to be of no value. It is also urged that the strongest possible protests be made before it is too late to all senators and members of Parliament.

Montreal, August 20, 1917.

P. W. Molson, James Law, H. R. Drummond, Geo. E. Drummond, Armand Chaput, Ferd. Prudhomme, Zeph. Hebert, A. J. Brown, C. S. Gzowland, H. A. Ekers, Chas. Chaput, A. Guy Beaf, Joseph Ainey, C. Meredith, C. S. Campbell, W. R. Miller, George Caverhill, Wm. McMaster, H. W. Blackwell, Andrew J. Dawes, Robert Hampson, George B. Hooper, George W. Sadler, W. W. Hutchison, Wm. C. Finley, F. H. Wilson, G. F. Benson, A. Craddock Simpson, James Morgan.

The Gazette, Montreal, of August 23rd, comments on the above as follows:

THE RAILWAY POLICY.

We print in another column a protest against the purchase of the Canadian Northern Railway signed by many of the leading capitalists of Montreal, and this protest is not lightly to be disregarded. The point at issue is this, is the country to take over a burden that other shoulders should bear? Will the ownership of the Canadian Northern impose upon the people a financial obligation avoidable without danger to national interests? If the Government was divorced from the enterprise, the answer is easy. Like any other business undertaking the property should stew in its own juice, and undergo the course of liquidation through receivership, emerging therefrom in stronger condition in respect of liabilities both of current and of capital account. That appears to be the view of the financiers whose statement we print, and there is force in the view.

The Canadian Northern must be carried on as an operating road. It serves a great territory and a large community of people whose welfare is dependent upon the operation of this railway, but having exhausted its financial resources the alternative of Government ownership by acquisition of the common stock, or through the medium of a receivership, is the only one presented.

To Government ownership we are opposed. A reorganization of the capital liabilities, through the medium of receivership, is the other recourse. The liability of Canada in either event remains, the Government and the provinces having guaranteed the great sum of $211,000,000 of bonds of the company. It is, however, necessary to learn the extent of the liability taken over by Canada in the bill now before Parliament. What assets are acquired? What obligations incurred? If there be a margin on the debit side of the account, if Canada is assuming a debt over and above existing guarantees, the public may not unreasonably ask why. The railway is a fine property with excellent prospects, but after all is said, it is a business venture which should be allowed to face the consequences of all business ventures. One thing is certain; the country should not be saddled with any avoidable liability. The debt created by the war is already large, and constantly increasing. New sources of taxation have to be tapped. The outlook is by no means bright in respect of the Dominion finances and before the additional obligation of taking over the Canadian Northern Railway is incurred, it is necessary at the very least that we should know precisely what is being purchased in the way of asset, and what is being incurred in the way of liability.

JAPAN AS A FIGHTER.

Surrender and the White Flag Have No Place in Army and Navy.

The Japanese soldier never surrenders. "Die with the castle for your pillow" is a literal translation of the precept kept constantly before the Mikado's little fighting men. While the belligerent nations of Europe today have about four million prisoners of war distributed among them, the Japanese prides himself on the fact that in the war with China in 1894 not a single Jap was taken prisoner. In the war with Russia about 1000 Japs were taken prisoners by the Muscovites, but they were mostly civilians. The Jap soldier or sailor who surrenders and later returns from captivity has no further place in the society of Nippon. He is an outcast, forever condemned to shame and isolation in his own country. In a siege the Jap garrison hangs on until every last man is killed or wounded. The spirit that dominates the Jap army and navy is that of contempt for death. "United we stand; together we die," is their motto.

Japan at the present moment has more than 2,500,000 trained soldiers—all of this caliber—ready on the trigger for action. They have 800 transports ready to hurry forward their army wherever duty calls. Her normal peace strength is an army of a million and a half soldiers, and she has an unorganized available force of more than eight million men. Every man in the Land of the Mikado is a potential soldier, drilled and schooled in athletics and military maneuvers from youth, lithe and wiry little chaps of the jujutsu brand seen in our vaudeville theatres.

Her navy is one of the strongest in the world. Japan ranks among the first four nations in this respect, standing up with Great Britain, the United States and Germany. And while the English and German fleets have been suffering losses during the three years of the world war, Japan has been vying with the United States in rushing to completion a vast naval shipbuilding program. As with the Jap army man, so the navy man never runs up the white flag, but fights until his ship is sunk or victorious.

About the House

DOMESTIC SCIENCE AT HOME

Eighth Lesson (Continued).—Proteins.

Methods of cooking milk, fish, cereals, peas, beans and lentils are given this week. The protein of milk is in the form of casein, which precipitates when acid is added to the milk, as in the combination of tomatoes and milk.

When milk becomes sour the sugar content of the milk changes to acid. This acid will also cause the milk to precipitate. Casein is also clotted by ferments or digestive juices which are present in the stomach.

Milk may be heated to the scalding point, using a double boiler. Slow cooking at a temperature just below the boiling point will give better results when cooking foods that contain milk. When combining milk with acid fruits or vegetables, if a quarter teaspoonful of baking soda is added to the fruit or vegetable to neutralize the acid, the milk will not separate. This amount is for one pint of milk, or you may blend one tablespoonful butter, one tablespoonful flour, two cupfuls milk. Cook until boiling is reached. Now slowly add the fruit or vegetable. Bring to the scalding point and use. When cooking puddings and custards always stand the dish or pan containing the mixture in a larger pan containing hot water, then bake in a moderate oven.

Fish

The protein of fish is similar in character to that of meat. It differs in structure and composition. Fish may be cooked by boiling, broiling, baking, sauteing or frying. A steady, even heat is required and an allowance of twenty minutes to the pound after cooking starts may be considered a fair time allowance. Owing to the delicate texture of fish, always wrap the fish in a piece of cheese cloth to broil.

Use a double-fold wire broiler when broiling; also lay the fish on a fine wire rack when baking. This permits easy removal from the pot, fire or pan and makes the appearance of the fish much better when served.

Cereal

The length of time required for cooking cereals depends entirely upon the amount of cellulose the cereals contain. Steel-cut oatmeal will require much longer time than the flaked oats, which are first crushed and then steamed.

Hominy will require longer to cook than cornmeal. Long, slow and continuous cooking is the proper method for cooking all cereals.

Legumes

Fresh peas and beans are cooked in boiling water, boiling gently, so that the vegetable will not break or become mushy. Use barely enough water to cover.

Dried peas, beans and lentils should be soaked first in plenty of cold water for twelve hours. They should then be steamed until tender. They may also be boiled gently.

Lentils are very nutritious, easy to digest and are considered a valuable article of diet in Europe.

Rice a Valuable Food.

Food experts are urging a wider use of cereals, and suggest that they may appear in some form at every meal. With a high food value and no waste, the housewife should learn how to cook them properly and serve them so that their use does not become monotonous.

Rice should be more appreciated than it is, for it can be served in so many ways. Polished rice is of less value as a food than that which is unpolished, because in the polishing the vitamines, which are an essential life principle, are ground off. The latter also has the advantage of being less expensive. Rice cooked thus should look like a mound of snow.

Wash the rice well through one or two cold waters, then sprinkle it into a kettle of slightly salted boiling water which should not stop boiling at all for twenty minutes. No two grains should adhere together, and each ought to be swollen to twice its natural size. When it is soft turn out into a colander, shake it up lightly and set in the oven a moment to dry. Stewed tomatoes added to the water in which the rice was boiled will, if properly seasoned, make a delicious soup. Cold boiled rice added to scrambled eggs will piece out that dish so that two eggs will serve several people. The housewife will find that rice may be added to many dishes, increasing their bulk and reducing their cost.

Trench Cake.

One-half cupful of shortening, one cupful of sugar, one cupful of water, one-half cupful of raisins, chopped fine. Place in a saucepan and bring to a boil. Cook for two minutes and then add: Three-quarters teaspoonful of baking soda, one-half teaspoonful of cinnamon, one-quarter teaspoonful of cloves, one-quarter teaspoonful of mace, two tablespoonfuls of cocoa, two cupfuls of flour. Beat well until cool and then add two teaspoonfuls of baking powder. Pour into a greased and floured pan. Smooth the top of the cake with a knife dipped in water. Cover the top of the cake with the following mixture: Four tablespoonfuls of sugar, eight tablespoonfuls of flour, four tablespoonfuls of shortening, one teaspoonful of cinnamon. Work the mixture between the hands until it is fine and crumbly. Spread smoothly over the cake and then bake for forty minutes in a moderate oven. This delicious cake is just the thing to send to the men in the trenches as it keeps indefinitely.

Freesias.

Plant freesias in August and September in pots for winter flowering. The bulbs are inexpensive and the flowers are delightfully fragrant. Put three bulbs in a five inch pot. The soil should be leaf mould and loam with a little sharp sand. Such soil as florists use from a compost heap is the best. Set the pots in a sheltered place in the garden and cover the tops with spaghnum moss until the foliage appears. Plant every two week for a succession of bloom.

Roses will be benefited by a good showering with the hose after a hot day.

CANADIAN ORDER of CHOSEN FRIENDS

A fraternal and insurance society that protects its members in accordance with the Insurance Government Standard. Sick and funeral benefits payable.

Authorized to obtain members and charter lodges in every Province in Canada.

Only Canadian night, named and controlled.

If there is no local lodge of Chosen Friends in your district, apply direct to any of the following officers:

Dr. J. W. Edwards, M.P. W. F. Manhinnon, Grand Councillor. Grand Recorder.

W. F. Campbell, Grand Organizer. J. H. Bell, M.D., Grand Medical Ex.

HAMILTON - ONTARIO

Ontario Veterinary College

110 University Avenue, Toronto, Canada

Under the control of the Department of Agriculture of Ontario. Affiliated with the University of Toronto.

College Reopens Monday, Oct. 1, 1917. Calendar Sent on Application.

H. A. A. GRANGE, V.S., M.Sc., Principal

PRACTICAL FARMING

WHY NOT GROW YOUR OWN CLOVER SEED?

In average seasons red clover that has not been pastured after the first hay crop has been removed, will produce a crop of well-matured seed. Instead of cutting the second crop for hay, pasturing it or, as it frequently happens, ploughing it under, why not allow this crop to mature and save the seed from it?

By raising your own clover seed you are obtaining seed from plants which, by their very existence, have demonstrated their adaptation to the conditions prevailing on your farm, and in your immediate locality. Such seed, it is quite reasonable to suppose, will produce plants which are equally well adapted to local conditions. For this reason home grown clover seed is really more valuable than most of the seed obtainable through ordinary channels of commerce.

Quite often very poor-looking fields of second growth red clover will produce a profitable crop of seed. In many cases fields where the clover is quite thin and say only eight or ten inches high, will yield over one hundred pounds of clean, well-matured seed per acre. Usually, however, an average second growth will produce anywhere from 150 to 250 pounds of seed per acre.

The red clover seed crop should be cut when the heads are dark brown in color, and contain hard, well-developed seed. In harvesting all unnecessary handling should be avoided. Rough handling, frequent turning, etc. will thresh or break off the most mature heads, thus wasting a portion of the most valuable seed.

Where the crop is less than one foot high it may be cut with an ordinary mowing machine. It is usually advisable to have two men follow the machine with hand rakes and move each swath out from the standing crop a few feet so that, on the next round, the cut clover will be out of the way of the horses and machine. By following this practice with short clover, a great deal of seed will be saved that would have otherwise be threshed by the horses' feet, and therefore left in the field.

Where clover is one foot or more in height the most satisfactory implement to use for cutting is the binder. The cord should be removed, and the spring on the knotter slackened so that it will trip continuously. Usually there are two boards that hold the sheaf; these should also be slackened so that the clover will have a free course to the ground. In dropping to the ground, the seed will not shell and the crop will be left in loose windrows where it will dry quickly, and can be easily gathered with a barley fork.

The length of time that the clover should remain in the field would depend upon the weather. Generally speaking the crop should be placed in the mow or stack when dry enough to keep well. It can then be threshed when convenient.

PEACHES

THE most valuable of all fruits for preserving. Home preserved peaches give at small cost, autumn's most luscious fruit for our winter enjoyment.

LanticSugar

"Pure and Uncolored"

is best for peaches and all other preserving. The clear sparkling syrup develops all the exquisite flavor of the fruit. Pure cane, "FINE" granulation. Experienced housekeepers order it by name all through the preserving season.

2 and 5-lb. cartons; 10, 20 and 100-lb. sacks.

PRESERVING LABELS FREE—Send us a red ball trade-mark cut from a bag or carton and we will send you a book of 54 ready gummed printed labels.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and fun answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Subscriber:—Perhaps the following will give you an idea for your bazaar. At a church fair held recently, one booth was noticeable for its business-like appearance and for the large sign on its arch, which read:

Economy Booth
Pay Ten Cents And Learn How To Save Ten Dollars

The curious crowd that soon gathered found the notice as good as its word, for the committee in charge had taken a census of favorite economies far and near, and were prepared to make practical demonstrations of the ideas.

Each of the four sides was devoted to a special class of demonstrations. The cooking economies, of course, occupied the front. A good cook demonstrated in a miniature kitchen some of the acceptable dishes that can be made from left-over portions of food without spending more for new ingredients than the left-overs are worth. No dishes were prepared except those that were actually based on material that otherwise would have been wasted. The lesson in economy was later emphasized by selling the food at five cents a plate—the best way of clinching the point. An assistant in the kitchen showed how to peel fruit and vegetables with the least possible waste, and another assistant sold economy cookbooks.

The next counter was devoted to economical ideas in sewing and mending. There the onlookers learned, among other things, that old stockings can be cleverly fitted with new feet and the tops of new stockings reinforced against the wear and tear of suspender garters, that a second lining will save the back breadth of a silk underskirt, and that attractive collar-and-cuff sets can be made from worn linen skirts. Another counter was given over to miscellaneous ideas in economy illustrated by ingenious little makeshifts of all kinds.

A sign over the fourth counter read, "How To Save Your Luxuries." The demonstrations threw surprising light on the way people sometimes waste the supplies that cost most. A striking illustration of the lesson was furnished by two tallow candles of the same size that were set burning side by side at the same time. One had been kept in the ice box, the other on an open shelf, and it was interesting to note how much longer the cold candle held out. Half of the same counter was used for an exhibit of things that may be profitably saved or sold. The samples included a collection of magazines, a stack of newspapers, some empty bottles and a quantity of tin foil. A ball of string composed of many stray lengths was marked, "Save this—it costs three times as much as it used to cost."

The economy booth is sure to be well patronized and so it performs a double service—collecting money and promoting economy. A wide-awake committee will be able to think of numerous other useful suggestions in saving.

Hostess:—A game that provides instruction as well as fun makes a double appeal and is sure to prove popular. Well-known faces in a good example of this kind of game. It is played with a hundred or more cards made of pictures of famous persons cut from magazines or newspapers and pasted on cardboard mounts of uniform size. It is permissible to have several different likenesses of the same individual. Beneath each picture is inscribed the name of the person, the place and date of his birth and the reason why he is famous.

Any number of players can take part. Deal seven cards to each player, and lay the remainder in a common pile in the middle of the table. The object of the game is to see which player can first get rid of all his cards. The first player draws a card from the pile, compares it with his hand, and proceeds to discard as many celebrities as may be grouped with it, if the other players approve the classification that he makes.

For example, persons born the same year may be discarded together, or those of the same calling, or those associated in the public mind with the same cause. The most desirable classification, naturally, is that which will use up the greatest number of cards.

The other players draw and discard as their turns come. Each of them has the additional privilege of adding an appropriate card to any group on the table, provided that group does not already contain four cards, which constitute a complete book. The first player who succeeds in ridding himself of all his cards is entitled to one point for each of the cards still held by his companions, and is the winner of that round. The more well-informed and quick-witted a player is, the sooner of course he will play out his cards. The game may be played either for a certain number of rounds or until some particular score has been reached. Progressing from table to table will add to the fun.

Bedtime Stories

The Farm Where Father Was a Boy.

When father lived here on the farm—
Oh, it was long ago!—
Could he have had the fun I have,
And known the things I know?

Why, I have seen a fox to-day,
Out on the pasture hill,
And caught three minnows in the brook
That flows below the mill.

And I know where wild cherries grow,
And where the wood grapes are,
And where the fern root is more sweet
Than sugar is, by far.

And then I caught a firefly once,
And found what makes the light;
And once I heard an owl "Whoo! Whoo!"
Beside the road at night.

I almost caught a turtle, too,
Down by the lily pond;
And, anyway, I saw a hawk
Fly from the woods beyond.

When father lived here on the farm,
So very long ago,
I wonder if he had such fun
And knew the things I know.

In haying time I helped a lot!
I helped to rake the hay,
And high among the rafters climbed
To tread the load away.

Then once we thought a cow was lost;
But Scotty found her track.
And how he ran! but it was dark
Before he brought her back.

And once—it frightened me a bit—
I found a cave one day.
I'm sure that pirates lived in it,
Or redskins hid away!

Oh, every day brings something new
For Scotty and for me—
A thousand wondrous things to do,
A thousand things to see!

Still, father only smiles and says
That very long ago
He had the selfsame fun I have
And knew the things I know.

Poultry

Market Calendar

During September make the second culling of old hens. All old hens intended for market should be sold before they moult.

Market now old hens, broilers, small roasters, green ducks, green geese.

Young stock, if they have been kept in a good growing condition, should now make a very promising appearance, showing signs of proper development for profit.

Chicks hatched this month, with proper care, can be turned into excellent frying chickens in January. It is a trick worth trying.

February-hatched pullets, or those brought out in early March, are near their laying age. The former, however, are apt to go into moult about now, which will give them a temporary setback in their laying.

Hens are now entering into their moult, which cuts down the supply of eggs considerably. They are able to lay a few eggs in the early stage of moulting, but when the task of growing the new coat comes, it will require all the food and energy possible to do the work properly, and no material will be left to manufacture eggs.

While moulting, hens should have food of a nitrogenous, rather than carbonaceous nature. Oats and sunflower-seed should be fed, and about five pounds of linseed-meal should be added to every 100 pounds of mash food. In feeding sunflower-seed give about one-sixth the quantity of other grains used.

Ducks should be turned into a new run, and the old one sown to rye. This will act as a disinfectant to the soil and the rye will serve as a green crop for their winter feeding.

Young turkeys that have survived until now should be in good condition; they have passed the critical age common to turkeys. As a rule very few turkeys die from disease in the fall of the year.

There is no better time than now for a general cleaning up of houses and runs.

The Dairy

No matter how much can be accomplished by kindness, it is a wise thing to keep a firm hand and a stout staff on bulls of the smaller dairy breeds, —and some others. Good treatment works wonders, but it never pays to take chances.

Profits and losses in cattle feeding can not be determined merely by a comparison of buying and selling prices, because in a six months' feeding period a thousand-pound steer produces three to four tons of manure. This is a source of revenue too seldom taken into consideration.

The most important factor in the production of high-grade butter is the proper cooling of the cream. To make the best grades of butter, the cream should be separated from the milk with a clean separator, kept separate from the cold cream and cooled immediately to about 50 degrees.

The use of hard floors in the dairy barn suggests the use of a cistern for saving the liquid manure. It's a good suggestion, too. Such a cistern can be built of concrete and connected with the gutters by means of tile cemented at the joints.

Butter should not come in less than a half hour. When it comes too soon, there is loss of fat in the buttermilk. When the weather is warm it is best to lower the churning temperature several degrees. The temperature can be raised more easily than lowered after the churning has been started.

Sheep Notes

There are two reasons why more farms should maintain sheep. In the first place, this country has for a number of years been producing only a fraction of the wool it uses. Now, with the foreign supply cut off, there is a serious shortage. Moreover, the demand for meat has been such that a good price for mutton has prevailed for a long time. Logically, the thing to do is remove the difficulties that are a menace to sheep raising and then begin establishing farm flocks.

In planning the sheep barn, allow ten or fifteen square feet of floor space for each animal. Make the doors upper and lower. Have four square feet of glass to 100 square feet of floor space. Arrange the windows so the sunlight will strike the floor.

Too many feeders entertain the idea that a caresss needs only to be fat when they prepare their sheep for market. It has been shown that the lamb with several inches of fat fails to top the market, while half an inch of fat makes a fine carcass. Young lambs are not so likely to be overfat, but older stuff must have a shorter feeding period or less concentrates.

Drive the stake down well when fastening the ram these days. Once a sheep gets the idea that he can pull out and drag away the bar or stake which fastens him, there is little more peace.

HOT LUNCHES IN THE RURAL SCHOOLS

Testimony of Two Teachers As to the Practicability of Serving Warm Meals at Noon.

A country school teacher says: I have found nothing that brings about co-operation between parents, pupils and teachers, like the hot lunches served at noon. Since we began adding a hot dish to our former cold lunches, the parents have awakened to the fact that the teacher is really working for the comfort and welfare of the children. They appreciate it and have shown their appreciation by donating food materials.

Our first attempt was vegetable soup. We purchased a twenty-five cent soup bone, which we cooked until tender. The next morning before school, the older girls prepared the vegetables which had been brought by the pupils. These were added to the stock and allowed to simmer all forenoon. As our school room contains only an ordinary heating stove, our variety has been rather limited as yet. We have had cream of tomato soup, bean soup and hot chocolate. Our next attempt is to be creamed potatoes, and then macaroni and tomatoes.

In addition to enjoying the palatable lunches, it affords an excellent opportunity for teaching the pupils how to prepare the foods properly, set the table, serve the meals, how to observe table etiquette and wash dishes. The boys do their part by keeping in a supply of wood and water, emptying scraps, and have even done their share of the dishwashing, and are more than willing to do something to "get even" with me for making the hot lunch possible. And just to see the children enjoy their dinner more than repays me for my trouble.

Here is the testimony of another teacher: We began serving warm lunches this year for the first, and although I had thought of it for some time and we had raised money to buy a three-burner oil stove, it was a new idea to many of the people of the community, and I thought it best to begin rather slowly. We began by serving a warm lunch only once in a while as a special treat to the children. I was not very sure at first just how it would work out, as we have over sixty children in school, and I was afraid I might be undertaking something that would not prove to be practical. However, I found out that if I had sixty children to cook for, I also had sixty children who were ready to help furnish the food materials and help do the work.

As soon as I was sure that warm lunches could be served without taking much from school time, we decided to have one regularly on Tuesdays. It worked so well and the children begged so hard that it was not long before Friday also became a "hot lunch day." We have quite roomy cloak rooms, and the girls willingly gave half of theirs to be used as a kitchen. Here we placed our stove and cooking utensils. Our cooking outfit is very simple, consisting of a teakettle, a large stew kettle, a frying pan and a large pail. Besides these, we have a large cooking spoon, a soup dipper and some other small dishes and pails. Each child has his own cup and spoon.

The work is all done by committees and the children consider it a great honor to be "appointed" on a committee. A committee consists of two, three or four, according to the amount of work to be done. As a rule, I think the smaller committees do better work, as each one is held more responsible for the tasks.

We begin to prepare our lunch usually at the morning recess, and find that a great amount of work can be accomplished in that fifteen minutes if necessary. We never attempt to have more than one dish on the same day, and as yet, they have been very simple. We have had cocoa, coffee, potato soup, bean soup, tomato soup and vegetable soup. The vegetable soup was the most elaborate of anything we have undertaken, as it contained meat, potatoes, cabbage, carrots, onions, etc., all of which had to be put through a food chopper. However, it proved quite a success and the committee were very proud to have made it.

The parents have been very good about furnishing. I know they have the welfare of their children at heart and it is worth any trouble on my part that I may be forced to take in order to make these warm lunches possible to see the happy faces of the children as they form in line and march up after their portion of the food, whatever it may be, that helps to make their cold, oftentimes frozen, lunches appetizing and nourishing.

Horse Sense

Hay will not take the place of grain for horses doing hard work. A pound of hay each day for every hundred pounds of their weight is enough for horses. Mules will do with less.

Harness can not be neglected without lessening its life and annoying the horse. A soft, pliable harness is a big help in getting the most work from a horse, with the least fatigue. Washing the leather in warm water with a neutral soap and a stiff brush, and applying oil before the leather has completely dried, will preserve the harness and please the horse.

To harden the horses' shoulders for the fall plowing, bathe with cold salt water several times a day. Keep the harness clean and see that the hames fit the collars. If the shoulders become chafed, dust with talcum powder or finely sifted slaked lime.

The Sunday School

INTERNATIONAL LESSON SEPTEMBER 16.

Lesson XII. The Fiery Furnace—Daniel 3. Golden Text —Isa. 43. 2.

Verses 16-18. A confession of faith. Answer—Nothing can be gained from a discussion. Their mind is made up; they will be loyal to their God. Furnace—That is, a smelting furnace. There is not the slightest doubt in the minds of the young Jews that if they prove faithful and continue to trust in their God, he will do the "impossible" for them. If not—They know their God has the power to deliver them; but even if for any reason he should fail to use his power, they will not prove faithless. Golden image—There is no statement that it was the image of a deity; it may have been a representation of Nebuchadnezzar himself. In either case, worship of the statue would imply disloyalty to Jehovah.

19-27. Deliverance from the fiery furnace. Fury—The refusal of the three men enraged the king and he immediately gave orders that the threatened punishment should be meted out. Seven times—The hotter the furnace, the more wonderful the deliverance. Breeches—The articles of clothing named are probably the mantle, the tunic, and the cap. In their haste the executioners went too near and were killed; while the Jews suffered no harm. Astonished—Better, alarmed. What he saw alarmed him; so he rose hastily from the seat from which he had watched the proceedings. Loose — Or, unbound. While the fire had burned away the ropes with which they had been bound, no harm had come to their persons. Son of the gods—A heavenly being, an angel. The thought is that the king saw an angelic figure by the side of the three youths. Following verse 23 the Greek translations of Daniel have a long insertion. It begins with a description of how the three youths walked in the midst of the fire, praising God. It then narrates the confession and prayer of Azariah, and represents the three as uttering a doxology, which leads on into a hymn known as the Benedicite. The whole is known as the Song of the Three Holy Children. Its object is to teach that piety and faith have their reward. This is also the object of the canonical book, and certainly of the story in chapter 8.

Following the deliverance Nebuchadnezzar makes public acknowledgment that the God of Israel is supreme; while the three Jews receive greater honors than had been theirs before. During the Maccabean crisis when many scholars hold the book of Daniel was written, a narrative like this would be of the greatest inspirational value, for it would furnish a powerful incentive to maintain faith in God.

Hogs

Hog oilers too expensive? Then try making some at home. Take old roomy sacks or pieces of burlap and tack or tie them on posts in the hog lots where hogs are accustomed to rub. Saturate the cloths with crude oil or stock dip, and see that the oil is renewed every few days. Go slow about putting the rags on trees, else the pigs may have to do without shade next summer.

One time is about as good as another to disinfect for hog cholera. Right now, is always the best time. Use quicklime in the lots and sheds, and sprinkle or spray phenol preparations about in the cracks of the houses. Supplement these precautions with a general clean up, and make them sufficient to keep the disease away by maintaining a strict quarantine against dogs and animals from infected lots. Go as far as to keep your neighbor out of the lot if his hogs are sick. That won't be unneighborly.

In one of the western states last fall a bunch of September pigs was fed on a ration consisting of peas, shorts and tankage. They were sold on a fifteen-cent market in March at a profit of $5.71 a head. Another lot fed on barley, shorts and tankage netted only $4.87 a head. Peas and barley were valued at the same price per ton.

Breed for winter pigs now if you have the buildings for them. There is no reason why a sow can not raise a litter while she is raising the mortgage. The returns from the sale of the litter will be welcome about corn-plowing time next summer.

Potato Flour

Potato flour is made by dehydrating or drying the potatoes and then grinding them. The potatoes are sliced or cut into cubes and dried. When thoroughly dried the pieces or slices are quite hard; these are run through a mill and ground into flour. Potato flour is used for bread making and for general baking purposes. Mixed with wheat flour it makes bread that is considered better than bread made from wheat flour alone.

LOCAL AND DISTRICT NEWS

—Best of Music at Paisley Fair, by Hanover Brass Band.

Back to the Trenches Again

Pte Archie McNeill, an old Paisley boy, grandson of Mrs Wm McIlraith, Paisley, writes home saying that he has again been passed as fit, and expects to go to France soon. Pte. McNeill has been in uniform over three years, having signed up four days after war was declared. He has been wounded twice, receiving the last on June 3rd, 1916. Pte. McNeill is another of those soldiers who, on account of the scarcity of men, are compelled to go back as long as they are fit to hold a gun. He states in his letter that he did not enlist to hang around England, but to fight, and that we all are needed to do our full part yet before this struggle is ended.

Soldiers Wounded

Mrs Geo. Hepburn received official notice on Friday that her son, Pte. Ian Hepburn had on Aug. 25th received a gunshot wound in the face, and has been removed to hospital at Canterbury. On Monday Mrs Mac. McArthur was advised that her brother, Pte. Albert E. Muir, had been wounded, but was again on duty. Word has also been officially received that Pte Ross Woods, son of Mr D H Woods of Lovat, was wounded on Aug 15th. Pte Eric Hargreaves, son of Mr and Mrs J M Hargreaves, now of Winnipeg, suffered gunshot wounds in his back and is now in Kitchener's War Hospital at Brighton. Eric was pay sergeant in his battalion, but reverted to ranks to go to France.

The Late James Hendry, of Glamis

The county of Bruce has lost one of its early pioneers and valued citizens in the person of James Hendry, of Glamis, whose death occurred on Aug 31st. Mr Hendry was born at Stonehaven, Kincardineshire, Scotland, in 1830, and came to this country from Aberdeen in the year 1850. He arrived in Hamilton, and later married Miss Margaret Dick, who passed away thirty years ago. Mr Hendry took up mercantile life and became one of the early dry goods travellers, representing a Hamilton firm, which moved to London, taking him with it. He later moved to Porter's Hill, near Goderich, where he conducted a general store. In 1878 he purchased a farm at Glamis and there he resided until his death. Mr Hendry was a devout Presbyterian and a staunch Liberal. He lived a life beyond reproach, and never stooped to anything beneath the dignity of a strong manhood. The surviving members of the family are three daughters, Miss Hendry, Weston; Mrs W J McKeeman, Glamis; Mrs J T Chittick, Stoney Creek; and one son, William Hendry, Tiverton.

The Bacon Trade

Under date of Sept 4th a bulletin was issued from Ottawa stating that there is no foundation whatever for the report that exports of Canadian bacon to Great Britain are to be suspended. What has happened is merely that the British Food Controller, Lord Rhondda, will permit no importations without specially granted licenses. The British Food Ministry established on Sept. 3rd a single Government buying agency in the United States for the purchase of Canadian and American bacon, butter, ham and lard. From that date no purchases will be made except through this official channel. Shipments of bacon, therefore, will continue but it will now be possible for the British authorities to keep promptly and continuously informed as to quantities received, quantities in transit, and quantities consumed. Great Britain and our Allies still require at least 25 per cent of our output

DEAR EDITOR

Before leaving the realm of surgery I would like to refer to some of the errors that people fall into for lack of realization of the aim of dental surgery. Some of the results of leaving old roots or abscessed roots of teeth are very misleading. Besides the injury to the general tone of the system there may be pains in the ear, temples, top of head, also in shoulders or arms often mistaken for rheumatism or neuralgia. There may be swelling of glands under the tongue, in the neck and in the cheek. There may be running sores on cheek, neck or chest. There may be disease on abscess in the maxillary sinus that is the hollow in the cheek bone, the treatment of which has been greatly changed and the time of treatment greatly shortened by the dental method of treatment. The convenience of the dental equipment are a great aid for this work. When one discovers any of the above troubles the wisest course is to first consult the dentist to see if the teeth have any relation to the trouble. I could relate many histories of long standing sores being cured in this manner in a short time. I cannot emphasize too strongly the wisdom of having the children's teeth cared for properly. So many cases came under my notice of neglect along this line causing all kinds of trouble that it is surprising parents are not more awake to the fact.

A H ALLEN

A FREE WAR MAP

Every home in Canada should have a map of the great war area in Europe to see where our Canadian boys are fighting. The colored map offered free with the Family Herald and Weekly Star of Montreal is complete in every detail. It is the best map yet published. The subscription price of the Family Herald is now $1.25 a year but to make up the difference to their subscribers this great map which could not be produced under two dollars a copy except in large quantities is given free to all subscribers new and renewal who pay a year's subscription, $1.25. It is a great big bargain indeed.

THE CHIEF CHARM OF LOVELY WOMAN

Soft, Clear, Smooth Skin Comes With The Use Of "FRUIT-A-TIVES".

NORAH WATSON
86 Drayton Ave., Toronto.
Nov. 10th, 1915.

A beautiful complexion is a handsome woman's chief glory and the envy of her less fortunate rivals. Yet a soft, clear skin—glowing with health—is only *the natural result of pure Blood.*

"I was troubled for a considerable time with a very *unpleasant, disfiguring Rash*, which covered my face and for which I used applications and remedies without relief. After using "Fruit-a-tives" for one week, the rash is completely gone. I am deeply thankful for the relief and in the future, I will not be without "Fruit-a-tives".

NORAH WATSON.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent post paid on receipt of price by Fruit-a-tives Limited, Ottawa.

A Quartette of Beauties

These shoes are designed for particular women. Note the perfect lines, then with the knowledge that your feet will be entirely comfortable. This is assured with every pair of "Empress". We are agents for this high-grade shoe which is made in Canada by Canadian artizans.

H. PFAFF & SON

Will They All Be Fined?

Last week a detective motored through this part of the country seeking whom he might find violating any of the various new regulations which have recently been placed on the statutes of this province, but which many appear to have considered not worth paying any particular attention to—such as the pure food and seed regulations, the revenue stamp and war stamp regulations, and that latest one prohibiting the sale of canned goods. Figuratively speaking, this scout got a tuft of hair out of nearly every merchant's wool, and in many cases carried away the whole scalp. Grocers willingly and innocently sold him health salts, for instance, without putting a war tax stamp on, and a druggist handed out something else minus the stamp. Others were found with adulterated spices, &c, or had sold tins of peas, corn or tomatoes, while dealers in tobacco had thoughtlessly taken squares of plugs out of the caddies instead of leaving them in until sold, or had a different brand of cigars in a box than the name called for. Passing a farm within a few miles of town the keen eye of the sleuth noted a field where beanstalks were growing at such a distance apart that it would be impossible for them to have even a nodding acquaintance with each other on a windy day. The farmer is interviewed: "Where did you get the beans?" and soon. A sample is asked for from the seller in town, and the quality of the beans for seed purposes will be tested by an expert. This gentleman overlooked no one who should be called upon, and the fellows on whom he found the goods are wondering how much it's going to cost them after his report is made to headquarters. In Paisley there are a few whose names are not entered in his book, but in some of the neighboring towns every man Jack had been treating one or other of the regulations as a joke, and now they are in torture. We are told that there are one hundred of these detectives out through the province, and if each one of the centurians finds as many offenders as he who did duty in this territory, and each offender is fined according to law, the provincial treasury will be filled to overflowing. Next thing we may expect to find calling upon us is a fellow who will examine our teeth on mentious days for traces of pork or beef!

—Write or phone P W Elliott, Sec'y Port Elgin Fair, and get one of the revised prize lists.

Light Four Touring

Canada's Choice

Few of the highways and byways in the Dominion are strangers to the Overland Light Four touring car.

The popular demand for this model has made it a familiar sight from Nova Scotia to British Columbia.

And its popularity is growing greater every day.

For it has the style and beauty usually found only in cars selling for a much higher figure.

Moreover, it is dependable—a real family car, one that will carry five people in comfort and safety.

The motor is powerful, quiet and of sturdy construction.

Soft cushions, long resilient cantilever rear springs and large four inch tires absorb practically all jolts and jars of the road.

Drop in and see this car. Let us show you real four cylinder performance. A demonstration will convince you as it has thousands of others.

The eyes at forty require assistance

When you are that age, reading or near work becomes an exertion, and glasses of just enough strength to relieve all strain should be obtained. We are experts in this line. We examine eyes free of charge and guarantee satisfaction.

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

The Ladies' and Gents' Tailor

Bell 'Phone

An enthusiastic rally of the Baptist Young People's Unions of the Owen Sound Association was held in the Chesley Baptist church on Labor Day. Representatives of young people's work were present from Wiarton, Mar, Paisley, Dorham, Hanover, Owen Sound, Southampton, Elmwood and other points. The morning session was devoted to reports. In the afternoon addresses upon interesting topics were given. Miss V Knechtel, of Southampton, presented "Methods of Creating Interest in Young People's Work;" Miss Walker, of Durham, gave to the convention a helpful talk on the relation of the B Y P U to the church; Mrs I M McKinnon, of Chesley, told of "Doubling the Attendance of a Union;" "The Value of a Missionary Spirit in a B Y P U" was discussed by Miss Slade, of Hanover. The afternoon session was closed by an interesting missionary address by Rev M Neilson, of Paisley. In the evening, after a rousing song service and addresses from representatives of local young people's societies, Rev Mr McKwen, of Wiarton, delivered an address upon the subject, "The Web of Life."—Enterprise.

A fine of one dollar and costs amounting in all to about six dollars was imposed upon Mr Harry Roberts on Monday by Magistrate McDonald. It appears that on Saturday some boys were bathing in the mill race and were throwing each other into the water. Mr Roberts' boy was one of the number and the former complained of the treatment accorded his boy, with the result that some words were exchanged, and finally Roberts slapped one of the youngsters. The magistrate held that Roberts should not have struck the boy, and imposed the fine as stated above.—Tara Leader.

PERSONALS.

Well-known Woman.

Chatham, Ont.—"I was sick for about four years. Got very weak, could not eat to amount to anything. I got very thin and had no strength at all. I was very much discouraged at times—thought I was never going to get better. I could not walk a block without feeling all tired-out. I took different medicines but did not get the help I needed. A friend of mine advised me to try Dr. Pierce's Favorite Prescription. I began to take it with the 'Pleasant Pellets' and by the time I had taken two bottles I was well on the road to recovery, and in six months I was entirely well. My appetite came back and I gained in flesh. Now I am as strong and healthy as any one could wish to be. I owe it all to Dr. Pierce's medicine and I am glad of the opportunity to give testimony in their favor; they have done wonders for me."—Miss Thelma Parker, 161 E. King St.

Chatham, Ont.—"I have taken Dr. Pierce's medicine with good results. I was weak and run down, lost my appetite and got very thin. I took 'Favorite Prescription' and 'Pleasant Pellets' and these two medicines built me up in a very short space of time so that I felt as well as ever. I found them to be all that is recommended of them; *they are good.*"—Miss. Wm. Weekes, Cor. Taylor & Grand Ave., E., Chatham, Ont.

Every woman who has backache, headache, low spirits, sleepless nights, owes it to herself to speedily overcome the trouble before a breakdown comes prostration.

Dr. Pierce's Favorite Prescription is a non-alcoholic remedy that any ailing woman can safely take because it is prepared from roots and herbs with pure glycerine, containing tonic properties.

WHICH SCHOOL?

All Business Colleges are not alike. Choose Carefully

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Has a national reputation for high grade work, and the demand for our graduates is far greater than our supply. You risk nothing by attending this school. It is thoroughly tested and truly tested. Write for our large catalogue. Enter any time. Toronto is the best place in Ontario for students.

W. J. ELLIOTT, Prin.

For Sale

NEW two-storied stucco house. Bath, furnace, good cellar, well in good condition. Will be sold at cost. Apply to T H GIBSON

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Women help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places—They need training.

NORTHERN Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circulars free on application.

C. A. FLEMING, F.C.A., Prin.

Calf Lost

STRAYED from lot 6, con 9, Greenock, about June 15th, one steer calf, red color with a sprinkle of roan. Any information regarding the animal will be gratefully received. H RUDOLPH, Paisley, R R No 2.

VILLAGE COUNCIL

Council met on Sept 6th, all the members present except Dr Houston. Minutes of last regular and subsequent special meeting were read and adopted.

The resignation of H C Wilkins as night constable was read.

By-law No 669 providing for a levy of taxes for the current year on an assessment of $321,930 was read read a first time. The levy is as follows:

FOR	RATE	AMOUNT
County rate	3 5-10	$1127 33
Village rate	10 5-10	3380 19
Local imp. frontage		207 86
" deben	2 4-10	772 57
Gen reben, c'pt Petty and Ross at bridge	3 5-10	1130 69
Sanitation		281 50
Street materials		40 93
Dogs		49 00
School rates	6 9-10	2221 83
School deb, share	3	966 12
		$10,168 91

By-law No 670, providing for the appointment of H F Boyle as collector of taxes for the current year, was read a first time.

Pearce—Sparrow—That the resignation of H C Wilkins be accepted to take effect on 15th Sept.

Logie—Pearce—That by-law No 669 be now read a second and third time, passed and executed.—Carried.

Sparrow—Pearce—That by-law No 670 be now read a second and third time, passed and executed.—Carried.

Sparrow — Pearce — That the Paisley Electric Light Co be asked for the estimate of the cost to install a modern system of lighting for the town hall.—Carried.

Logie — Sparrow — That payments be made as follows: Murdoch Leitch, $48; H C Wilkins, $42 45; Weighmaster, $12 25; John H Maurer, $15; Paisley Elect Light Co, $47 55; Wm Sparrow, $10; D F Thomson, $4; D Sutherland, $3; John Stoddart, $1; D Eason, $3 50.

Pte. Edgar Garland

Second son of Mrs Samuel Garland, of Pinkerton, who died of wounds received on June 9th, shortly after being removed from the field to No 6 Clearing Station, France. Deceased was in his 21st year, and enlisted with the 209th Batt at Swift Current, Sask, in Feb, 1916.

CONSCRIPTION NOW IN FORCE

All Men Engaged in Agricultural Production Will Be Exempt

The Military Service Act has become law, and it is announced from Ottawa that a proclamation will shortly be issued for calling out the first class of recruits under the Act. This comprises all single men and widowers between the ages of 20 and 33. The military service council is in daily session, the work now in hand being the preparation of forms of exemption and forms of military report. The latter are for men to sign who do not apply for exemption.

When the proclamation is issued all men in the class called out will be required, within specified date, either to report for military service or to apply for exemption. The forms will be available at all postoffices throughout the Dominion. A man in the class affected who does not wish to claim exemption may report either at military headquarters in person or by means of the military report forms. By this means the military authorities will be kept in touch with his whereabouts. When he has reported the man stands in the same position as an enlisted soldier on leave of absence.

Up to the point of joining up, the law will, generally speaking, be enforced by the civil authorities. If a man fails to report for service without making claim for exemption, civil proceedings will be taken; and, it is pointed out, the Military Service Act provides severe penalties for such cases.

A large number of applications for exemption is expected. Fear of interference with agriculture, it is shown, are groundless.

Under the provisions of the Act all those who are making themselves useful in any way in the increase of agricultural production will be exempted. Certain classes of skilled workers will also secure exemption. Further, any man with any reasonable sort of ground to give to the tribunal, either as to the benefit to the community which is going to cease from his remaining in civil life, or serious embarrassment caused to him personally, having regard to his particular circumstances, would stand every chance of getting exemption.

ELDERSLIE COUNCIL

Gillies Hill, Sept 5th, 1917

Council met on above date, members all present except Mr Fraser. Minutes of last meeting read and adopted.

Lewis—Thomson—That the sum of $50 be equally divided between the Paisley and Chesley Agricultural Societies.—Carried.

Allen—Thomson—That the following accounts be paid and that orders be issued for same.—Carried.

Thos Sparrow, 65 yds gravel per J C Sparrow, $6 30; Thos Dinsmore, 75 yds per Jas Hammond, $7 50; Jos Palmer, 60 yds per J D Poole, $6; Thos Thompson, 55 yds per W T Thompson, $5 50; Richard McCurdy, 34 yds per Thos Ferris, $3 40; D McGregor, 49 yds per Wm Pender, $4 90; John Ickler, 96 yds per S Patchell, $9 60; J Lemkie, 39 yds per Jas Spencer, $3 90; A L McKinnon, 57 yds per H Rudolph, $5 70; H Wilson, 10 yds per A Clement, $1; Mrs T Pepper, 46 yds per J McCullough, $4 60; Wm Pender, performing arrears of statute labor, $3; S Patchell, performing arrears of statute labor, $9; W T Cruickshank, performing R R and Tel statute labor, $10 50; A L Sinnaike, building two culverts 10x 20 and 12, con 12, $25; Rich McCurdy, 24 yds gravel per R H Foster, $2 40; Thos Ferris, performing arrears statute labor, $5 25; Andrew Knapp, repairing bridge 30 sidereod south, lot 33, con 3, and repairing Stone bridge, $5 50; I Shoemaker, ring for soldier, $5 50; Hugh Watt, work on culvert Eld and Sull townline, $25; C J Henry, 12 yds gravel per Wm Thomson, $1 20; A McCurdy, drawing material and building culvert, Eld and Brant townline, $5.

Lewis—Allen—That this board do now adjourn to meet again on Monday, Oct 1st, at 1 o'clock p m, for the business of Court of Revision.—Carried.

The Late Pte Ernest H. Cunningham

The sad news received by Mr and Mrs Jos. Cunningham, of Glamis, of the death of their son, Pte. Ernest H Cunningham, which occurred somewhere in France on August 13th, came as a shock to the parents and other members of the family. Only a few days before they had received a letter from him in which he was well and wrote optimistically. Pte Cunningham was born in Glamis on December 12th, 1893. He went west and when war broke out he was residing at Sanford Dene, Sask. On Feb 26th, 1916, he enlisted with the 209th Batt of Swift Current. He trained at Camp Hughes, Man., and went overseas on Nov. 1st, 1916. He was transferred from the 209th Batt. to the 9th reserve, and went to France in May, 1917. Here he was attached to the Canadian 10th Batt, in which he saw action until he answered the great call, which was his life, for liberty in this momentous struggle. Ernest H Cunningham went west in 1911 and took up a homestead near Sanford Dene. He was a young man of fine christian character, and when duty called did not shirk. He put his business affairs in order and went out to play his part as a true man. He was a member of the Baptist denomination. He leaves to mourn his loss, besides his parents, the following brothers and sisters: A R A Cunningham, Melville, Sask; J. Charles Cunningham, Regina, Sask.; Miss Nina, Minnedosa, Manitoba; Mrs R W Burgess, Cabri, Sask.; and Misses Lila and Laura, at home. To these the entire community will extend sincere sympathy, and the name of another Bruce County boy will be added to the list of those who played their part as true men should in this great struggle. At home where he spent his boyhood days he was well liked and esteemed.

Enter the Bread Making Contests

at Rural School Fairs in Ontario

The Campbell Flour Mills Company's great offer of the big One-Hundred-and-Fifty-Dollar Pathe phonographs (Five of them!) and other valuable prizes, for the best loaves of bread baked with Cream of the West flour, is stirring up tremendous interest all over Ontario. Many girls are already busy as bees practising with Cream of the West flour. Last year many girls declared, "Oh, if I had only practised, I'm sure I could have won!" Don't wait another day. Decide right now! Practise. Practise. Practise with

Cream of the West Flour

the hard wheat flour that is guaranteed for bread

Every time you bake with it you find out new qualities in this flour that makes such splendid big loaves of delicious light bread. Practise!

In five districts, each comprising several counties, we will give away free to the winner of the first district prize a large cabinet phonograph. At each fair there will be given a fine list of local prizes.

THE PATHEPHONE

Five of these large cabinet phonographs, each with twelve records, given as first prizes in District Contests. Value, $150.00. Size 50in. x 20½ in. x 49½in. high.

Prizes Worth Trying Hard For

1st Local Prize.—"Girls' Own Annual," a great big beautifully bound, illustrated book with 800 pages of stories and articles about people, art, animals, gardens, sewing, crocheting—everything that particularly interests young girls, older girls and their mothers. This is a wonderful prize that you can treasure for years.

2nd Local Prize.—"Stories of Famous Men and Women," heavily cloth bound with gold titles, many beautiful pictures in colors, extracting the stories of Florence Nightingale, Grace Darling, Flora MacDonald, Jenny Lind, the fair Queen Victoria, and others.

3rd Local Prize.—"Britain Overseas," a big handsomely bound book with many colored pictures, interesting stories and descriptions of the countries and the peoples of Britain's world-wide Empire.

4th Local Prize.—"The Queen's Gift Book," a book of stories, pictures and sports written by Britain's best writers; the proceeds from the sale of this book are for the benefit of disabled soldiers in England.

Note.—Should the entries number six or more only first and second prizes will be awarded. Unless the entries number ten or more no fourth prize will be awarded.

The District Prizes.—The winner of the first prize at each local fair automatically becomes a competitor for the following District prizes.

1st District Prize.—The "Pathephone" is the name given to the fine big mahogany phonograph we offer as first prize. It will give you endless pleasure and entertainment for a lifetime. It has special reproducer attachments and needles, enabling you to play all kinds of flat disc records of no matter what make. The Pathephone reproduces band music, orchestra music, songs and fancy pieces perfectly; with it goes a dozen of the famous Pathe records. Total value, $150.00.

2nd District Prize.—Set of Dickens' Works, 18 splendidly bound volumes with many illustrations. Among the books in the set are "Oliver Twist" and "Old Curiosity Shop." These are two of the most entrancing stories ever written.

3rd, 4th, and 5th Prizes.—"Canuck" Bread mixers. This simple, yet well-made machine, takes the hard work out of bread making. Instead of the usual kneading of the old method, you just put in the ingredients, turn the handle, and the dough is thoroughly and more evenly mixed

Read Carefully Conditions of Contest

Every girl may compete at the rural school fair in her district, whether or not she attends school, providing that her 12th birthday occurs before November 1st, 1917, or her 13th birthday does not occur before Nov. 1, 1917. One loaf of bread must be submitted baked in pan about 7 x 5 inches and 3 inches deep, and divided into twin loaves, so that they may be separated at the fair. The loaf must be baked with Cream of the West Flour. One half will be judged at the fair. The other half at the prize loaf will be sent to the Agricultural College, Guelph, to compete in the District Contests. The judging will be done by Miss M. A. Purdy, of the Department of Homemaking and Fruit, assisted by Britain's best judges. The district contests at the fair will be conducted under the same rules as all the other regular contests at your fairs.

The Standard by which bread will be judged will be as follows:

1. Appearance of Loaf ..... 15 marks
   (a) Color ..... 5 marks
   (b) Texture of crust ..... 5 marks
   (c) Shape of loaf ..... 5 marks
2. Texture of Crumb ..... 40 marks
   (a) Evenness ..... 15 marks
   (b) Fineness ..... 10 marks
   (c) Color ..... 5 marks
3. Flavor of Bread ..... 45 marks
   (a) Taste ..... 25 marks
   (b) Odor ..... 20 marks

Important.—Each loaf must be accompanied by the part of the flour bag containing the face of the Old Miller, and an entry form must be signed by the girl and parents or guardian stating full name, P.O. address, and giving name of dealer from whom Cream of the West Flour was purchased. The form will state that the girl actually baked the loaf entered in the competition. The forms will be provided at the time of the fair. The decision of the judges is final. Not more than one entry may be made by each girl and not more than one local prize will be awarded in the same family.

Which District is Yours?—This list shows you which counties you compete against if you become a competitor for the District prizes:

District No. 1.—Counties of Glengarry, Stormont, Dundas, Grenville, Leeds, Frontenac, Lennox and Addington, Carleton, Lanark, Renfrew.

District No. 2.—Counties of Hastings, Prince Edward, Peterboro, Northumberland, Victoria, Durham.

District No. 3.—Counties of York, Ontario, Peel, Halton, Wentworth, Oxford, Brant, Waterloo (with a few fairs in Wellington and Perth).

District No. 4.—Counties of Welland, Haldimand, Norfolk, Elgin, Kent, Essex, Lambton, Middlesex (with a few fairs in Huron and Lincoln).

District No. 5.—Counties of Bruce, Grey, Dufferin, Simcoe, Districts of Muskoka, Parry Sound, Timiskaming, Algoma, Manitoulin.

THE RESULTS of the contests at the fair will be made known in the usual way as in the case of all the other regular contests. The District results will be announced as soon as possible after the conclusion of the Rural School Fairs in the Province.

DO NOT MISS THIS GREAT OPPORTUNITY: Every girl between 12 and 18 years should compete. What a splendid way to stir up increased interest in breadmaking! Get a supply of Cream of the West Flour at once, dealers and practise using it as often as possible to increase the chances of winning. If your dealer cannot sell it to you, write to the Campbell Flour Mills Company, Limited, and we will promptly tell you the nearest place to get it.

NO COMPETITIONS IN COUNTIES NAMED BELOW: The competition is open to all parts of the Province where Rural School Fairs are held, except the Districts of Kaslo River, Kenora and Thunder Bay. These districts are the only parts of the Province where school fairs are held by the Dept. of Agriculture in which this competition will not be a feature. There are a district representatives of the Department of Agriculture in the Counties of Sudbury, Haven, Perth, Wellington, Haliburton, Prescott, Russell or Nipissing, and no rural school fairs are held in these Counties by the Dept. of Agriculture. There are, however, a few fairs held by local schools in Wellington, Perth, Huron and Lincoln, and these are included in the competition.

The Campbell Flour Mills Company, Limited

(West) Toronto Peterboro Pickering

Cream of the West Flour is sold by the following dealers: A. Fisher & Son, Paisley; D. Mallough, Lucknow; E. Witter & Co., Mildmay; Geo. Lambert, Mildmay; A. McGillivray, Port Elgin; Mrs. J. A. Wells, Southampton; Wm. Irwin, Wiarton.

The AUTOMOBILE

Handy Things for the Motorist

Occasionally a bucket for carrying water is a much-needed convenience, as the man who searches the territory around his car for a tin can or other receptacle has found. One that is readily carried is made of heavy waterproof canvas, with metal frame members rust-proofed. Its capacity is over a gallon.

In shape its top is rectangular, with one of the narrow sides bent out to facilitate pouring. This shape is said to make it easy to handle and easy to fill from a shallow stream.

Folded the bucket is one-half inch thick, four inches wide and ten inches long and can be kept under the seat or in the door pocket, where it is quickly available. Folding or opening the bucket consists merely of a simple motion.

Another thing that comes in very handy and is often needed on long trips is a towline. There is one strong enough to pull a two-ton car up a 20 per cent. grade, yet which can be rolled up under the seat out of the way until it is needed.

The outfit weighs complete but four and one-half pounds. It is twenty-five feet long, made of steel wire twisted into a strand a half inch in diameter. At each end is a patented snaffle hook, which fastens into a manila sling after the latter has been secured around the axle of the car.

Another useful feature claimed for the device is that a car may be made to pull itself out of a mud hole. One end of the line is attached to a tree or stake directly in front of the car, and taking a turn of the rope around the hub of the mired wheel the other is fastened around the wheel by means of the manila sling.

Apply power the motion of the wheel makes a winch of the hub that gradually pulls the car toward the fixed end of the rope.

A compressed-air starter to be mounted on the front of the Ford in place of the starting crank is operated by a lever placed on the steering wheel. Air pressure is carried in a tank under the rear of the car and the pressure is automatically maintained in this tank by the stater, which also acts as a pump. This air may be used for inflating the tires.

To save automobilists eye strain there has been invented a disk of colored glass that can be attached to windshields with a vacuum cup.

Among the new automobile locks is one which, when fastened on a steering column, fastens the steering mechanism, gas and spark controls.

A portable vulcanizer for automobile tires gets its heat from a burner filled with asbestos, which is saturater with gasoline or alcohol.

To save weight a new English automobile has mud guards like a bicycle and single steps instead of running boards.

So that automobile tourists can carry additional baggage an Englishman has invented a trailer to be attached to the rear centers of a car and be supported by a single wheel.

HEROISM OF A CANADIAN RUNNER

WITH ARM BLOWN OFF, CARRIED MESSAGE TO DESTINATION

Russian Private in Same Battalion Captured Six Germans and Their Machine Gun

One of the most heroic deeds put on record in the Canadian corps since the war began is that of a runner of Colonel Ormonder's Alberta battalion. The company to which he was attached was hotly engaged near the chalkpits, and he was given a message to take back to the battalion headquarters, over ground on which shells were falling continuously. He had not gone far when he was seen to fall, and another runner was at once sent out with a duplicate of the message. The second messenger was killed midway on his journey, but two hours afterwards the first one arrived at the battalion headquarters with his left arm blown off near the shoulder. His terrible wound had been roughly dressed in the field, and the messenger, far spent from loss of blood, had then staggered on to do his duty. He was removed in a dying condition, but he carried his message to its destination.

Resourcefulness of a Russian

A fine example of bravery and resourcefulness was given by a Russian private in the same battalion. As the platoon to which he belonged approached the chalk pits they came under machine gun fire. The Russian, going forward, found the muzzles of two machine guns sticking out of the entrance to a dugout. One of them was in action, sweeping the line of advance. To get in front of it, the only way of tackling the crew, meant instant death. A piece of planking lay nearby. To the Russian it was a heaven-sent weapon. With it he struck the protruding gun barrels so hard a blow that they and their crews went clattering down to the bottom of the dugout, whence came cries of "Kamerad, kamerad." At that moment a rifle bullet struck the elbow of the Russian and deprived him of the use of one arm. Holding his rifle with its fixed bayonet, at the charge, in one hand, he ordered the Germans to come up. They came, an officer and five men, who were duly turned in with their machine guns.

Veal has been barred from the tables of hotels in the United States.

"BACK TO THE LAND."

A Movement in Britain of Far-Reaching Consequences.

The great "back to the land" movement grew out of the national service awakening. The merciless sinking of food ships brought England bang up against the alternative that she must cultivate more ground or face intermittent crises so long as the U-boats ravaged the seas.

One of the first things that the new Food Director did was to issue the following dramatic appeal:

"To all plowmen and workers on the land:

"In the trenches, German shells come over on Sunday as on weekdays!

"German submarines are just as active on Sundays as on any other day!

"The enemy takes NO HOLIDAYS. He uses every hour to destroy your country and kill your brothers.

"Will you not work every hour from daybreak to dark, week-day and Sunday, for the next few weeks? Your work now may make just the difference between winning the war and losing it.

"Put in your best work. Inferior work means poor crops."

So deeply was the country stirred over the farm situation that clergymen not only preached the gospel of Sunday plowing from the pulpit, but went out in the fields on Sunday afternoon and worked with their hands themselves.

In order to speed up things hundreds of tractors were introduced on the farms. The British farmer for the first time in his life is using the latest scientific aids to farming.

Not the least interesting phase was the commandeering of a host of women farm workers. They wear overalls and have become very efficient.

More ground is under cultivation in Great Britain to-day than at any other time in its history. Although the country can never raise enough wheat and corn to sustain itself, she has at least taken out definite insurance against future shortage in the grain import.

Have you ever tried growing cover crops among your vegetables? The supply of humus can be increased at a minimum cost by sowing winter vetch or crimson clover with sweet corn, tomatoes, cucumbers, melons, eggplant, peppers, and the like.

"To wash in one of God's rivers in the open air seems to me a sort of cheerful solemnity, or semipagan act of worship. To dabble among dishes in one's bedroom may, perhaps, cleanse the body, but the imagination takes no share in such cleansing."—R. L. Stevenson.

PUSSY AND THE BIRDS.

What Shall We Do in Defence of Our Feathered Friends?

It is asserted on good authority that the average cat kills fifty birds per annum. The cat has indeed become a very serious economic menace by reason of its activities as a wholesale destroyer of the birds that eat the insect enemies of the crops. In this indirect way cats operate to diminish our production of foodstuffs by hundreds of millions of dollars' worth annually.

Pet pussies are chronic and incurable bird hunters. They kill for mere sport. Fledglings in the nest are their helpless and accustomed prey. But in the rural districts there are hundreds of thousands of cats that, having reverted to the wild state, hunt for a living. Trappers in the New England States catch them in large numbers for the fur market, their pelts fetching from fifty cents to $2 apiece.

These wild pussies prey upon all kinds of small game, such as squirrels and rabbits. They carry off the farmer's chickens.

The cat is presumably of African origin. It was first domesticated in Egypt, where the city of Bubastis (between the arms of the Nile) was dedicated to cats and cat worship. When a cat died all the members of the family that owned it shaved their eyebrows, and the sacred animal was embalmed and buried with ceremony. In the Temple of Bubastis, the "fairest in all Egypt," the sacred cats were clad in costly robes, and their necks and ears were hung with jewels and golden ornaments. Great cat cemeteries in that neighborhood have been dug up within recent years.

There is nothing so cruel as religious superstition, and it is hardly surprising to learn that in those days cats were publicly burned in Lent. In England they were roasted alive in brick ovens, as a form of pious celebration. In Metz they were sacrificed by hundreds in bonfires, and in Flanders they were hurled from high towers—a custom that survived in Ypres as late as 1868.

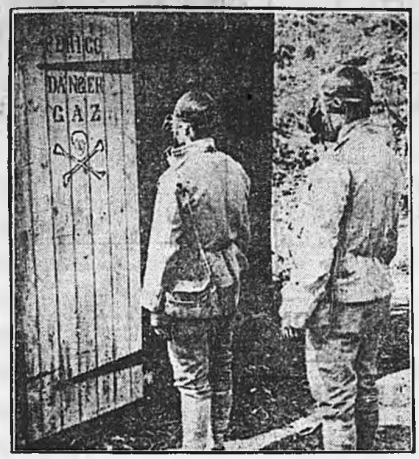
Now the cat is coming into its own again. It is no longer worshipped, but it rivals the dog in the affection bestowed upon it—though it is incapable of entertaining real affection for any human being. We have cat clubs, cat magazines, cat homes and cat shows. Not long ago, in Berlin, a newspaper printed the following "ad."

"Wanted, by a lady of rank, for adequate remuneration, a few well-behaved and respectably dressed children, to amuse a cat in delicate health, two or three hours every day."

APPLAUD HEROIC TEACHER.

Who Conducted School in Bombarded Rheims Cellar.

Mlle. Fourcaux, the heroic school mistress of Rheims, who continued to teach her young charges in a cellar during the bombardment of the city, which still suffers more or less intensely from German shells, was warmly applauded recently by her fellow teachers at a congress in Paris of friendly societies connected with the scholastic profession. A moving reference was made to the large number of schoolmasters who "have fallen gloriously on the field of honor in defence of the country."



Women workers have readily found employment in France during the war in many departments formerly reserved to men. Their activity now extends to the Hotel de Ville and other municipal offices controlled by M. Delanney, Prefect of the Seine, who has given clerical posts to 2,600 wives or daughters of soldiers.

Many of these, who have now become widows or orphans, would have been unable to subsist on their meagre pensions. In the city service their earnings average six francs daily, and to this is added a further one franc 50 centimes daily to meet the increased cost of living. The women have given such complete satisfaction that their positions will be permanent even after the war, and thus their independence is assured.

To disinfect a sink, pour down a gallon of boiling water mixed with two tablespoonfuls of soda and a teaspoonful of ammonia. This will dissolve all greasy matter in both sink and pipe.

Avoid wetting the leaves in watering cucumbers.

In order to keep a paint brush clean when it is not in use, a wire clip has been invented which holds the brush out of the paint in a can.

Gas School, Where Soldiers Wearing Masks Are Tested.

PORTUGUESE soldiers waiting their turn at the gas school behind the British lines in France. The troops go into the gas house or school wearing their masks to see if they can endure the poisonous gas. If, because of some physical disability, the soldier cannot stand the "attack," other work than fighting is found for him. The masks they are shown wearing in the photo are of a new type only recently invented. The signs on the gas school indicate the danger of going in without the mask.

DEEDS OF THE BRITISH AIRMEN

RIVAL FEATS OF CRUSADERS OF THE OLDEN DAYS

Perform Miracles of Daring Over German Lines, Fighting Single-Handed

"One of our men went out to attack an enemy airdrome," writes a war correspondent. "He found the machine just about to rise, so he dived and his fire wrecked it. He then circled round and continued to shatter the wreckage. He made a tour of the airdrome, firing into the sheds from the level roof. He went away and found a German battery in action. He stopped and fired along the line of guns, silencing the lot. Then he sat on the battery five minutes, lest they should recommence firing. He used the remainder of his ammunition on the enemy trenches.

"Another airman took the first enemy airdrome, then a battery, then a train and finally the infantry trenches at Polygon Wood. Another had the luck to find a large body of troops ready. He went along above them, firing into hidden ditches and a wood road which was dotted with dead.

Silenced Batteries

Another spent some time in altitudes of from fifty to 100 feet and found three enemy machines getting ready to start from their airdrome, so he wrecked them all. Then he found a wagon and horses on the road. He shot both horses. He next visited the railway station, shot the guard on duty and finished up by attacking and stampeding a column of horse transport.

"Another airman flew up and down the main street of Zonnebeke at a height of 500 feet, firing on the troops which covered the street till they had all taken to cover. Then he visited the train and railway siding. Then finding a battery firing he silenced that and dived on, and raided trenches on the way home. Another started by visiting an airdrome, where he bombed a group of machines in the ground. He fired into the sheds, went off and found a railway siding full of troops waiting for a train. He scattered them and returned to the airdrome. One machine was just rising, so he attacked it and crashed it to the ground. A second rose, but he attacked that also. When only twenty feet up it sideslipped likewise and crashed down. As he left a machine gun opened fire on him, so he went for that and silenced it."

"But I have so many things to do," is the usual excuse for procrastination.

MY LAD.

Take his brain and brawn, my Country,
For thy need.
Let him fight; and if he must,
Let him bleed.

Take his valiant spirit, God;
It was given
As a free and gracious gift
For life heaven.

Take his broken body, Earth,
It is thine.
Sinew, strength and fair young flesh
Firm and fine.

But, O Justice, loose your bandage!
Doff it now!
Bind it close about his eyes,
Round his brow!

Lest brutality should scorch him
Soon to die;
Hot brutality that sickens
A young eye.

Ay, be merciful, and blind him
In the fight,
Lest red hatred scar and warp him,
Sear his sight!

Let him keep his friendly, human,
Kindly soul!
Let him die with genial heart
Warm and whole!

—Helen Coale Crew.

HIS FACE.

At the Supper in Simon's House an Unknown Disciple Sees a Vision.

"It was in the house of Simon that I first saw Jesus," says "An Unknown Disciple," who relates an ancient tale in the Nation.

"It was not its beauty that chained my eyes, though it was a face beautiful to look upon. Nor was it the light in the eyes, though that rejoiced the heart. It was the tranquility of the face that held me; a tranquility, not of sloth or emptiness, but of surety; the tranquility of one who rested in a certainty greater than other men know.

"That man has the secret of life,' I thought, and as if I had spoken the words aloud the man's eyes turned, and his gaze met mine.

"There was something in the look that stirred my soul. The tranquility did not leave his face, but there came a questioning into his eyes, and then a wistfulness that melted me to pity.

"'He is lonely,' I thought. 'He seeks friends. He asks somewhat of me.' And my heart leapt within me. The eyes held mine for a moment, and then some man spoke and he turned to answer.

"I do not remember the next thing. I was like a man who sees a vision in a crowd and straightway forgets all but his vision."

In the base of a new shaving mug is a lamp to heat the water.

The trade in dried shark meat and fins at Aden, Arabia, has increased since the beginning of the war.

STORIES FROM THE FIRING LINE

STIRRING TALES OF HEROISM AND SACRIFICE.

Modest and Retiring Are Our Brave Men and Not Prone to Speak of Their Adventures.

Modest is the hero of the aid raid, trench attack or of the ambulance, and details of their adventures must be almost literally squeezed out of them. Stories get out, sometimes told to their superior officers, sometimes lived over again perhaps in a reminiscent way months after. One of the most pathetic and admirable comradeships of the British "Tommy" was recounted by a Canadian officer in medical service in a letter written home.

"I had been ordered forward" he writes, "and high explosives were breaking all around, but this did not prevent us from forcing our way past what had been the first line German trenches. We knew there were wounded about, and as the shell fire increased, I was hit. When I came to my face was badly torn by flying fragments and I felt as if I had had a bad shave. I crawled into a shell hole and found two wounded men. They had been there four days with nothing to eat but their emergency rations.

"One of the men was so badly wounded that he could not move, while the other was not seriously hurt. We got them back all right. I asked the man why he didn't try to save himself and he said, pointing to his comrade, 'I couldn't leave 'im, sir.' He will probably get a medal for that."

How They Got Even.

The Canadians hate snipers. Secluded perhaps half a mile from the trenches, where they could not be seen, the snipers would pick off the men. The only way the score could be evened up was by retaliation. This they accomplished in rather a novel way. The trenches then were only thirty-five yards apart, and a Canadian officer installed a phonograph on the parapet and set it going. Soon German heads bobbed up along the line, only to be met with a sharp fire from the Canadians.

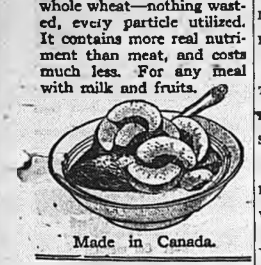
During the activity at Ypres in the early part of the war that city received such punctual bombardment from German artillery that classes of new officers were taken through the ruins daily or weekly to observe the city under fire. They were nicknamed "Cook's Tourists." The Germans were so systematic that it could be determined when and where the next shell would strike. The first shell would be sent at a spot on the rim of Ypres, the next two hundred yards deeper, until all structures in such a line would be demolished. The guns would then be shifted and the adjoining buildings torn to pieces, and so on until the whole city was thoroughly raked.

"Greater Love Hath No Man."

In the early morning, just before the daily British bombardment would begin, Canadian soldiers would write in charcoal on a slab of wood "Business To-day as Usual" and fix it on the parapet so the Germans would have something to expect.

The British trenches in France are so arranged that dressing or first aid stations are situated at regular intervals a short distance in the rear. An officer in the medical service and in charge of one of these stations tells the story of the death of his servant, who insisted on following him from Canada to the front.

"We had worked together," said the officer, "from the beginning of the war and had learned to fall flat on our face when we heard a shell coming. He was always by my side. On this particular day we had been ordered forward, and the high explosives were coming like hail. One large shell came screaming in our direction and we were impelled to drop. It exploded with tremendous force, and for an instant I thought it was all over. I got up, and there at my feet he lay, a torn mass of humanity. The whole impact of the flying shell struck him squarely. He had saved my life."



Wooden forks for picnickers that are sealed in sanitary paper envelopes are a novelty.

A tree has been discovered in Australia the leaves of which yield an oil from which camphor can be made.

The Doings of the Duffs.

Don't Waste, Don't Starve—there is plenty of food for all if you will only do your bit in preventing waste. Demand the whole wheat grain in breakfast foods and bread. **Shredded Wheat Biscuit** is 100 per cent. whole wheat—nothing wasted, every particle utilized. It contains more real nutriment than meat, and costs much less. For any meal with milk and fruits.

Made in Canada.

For Autumn School Days

Very up to date is this little suit with its belt, panel front and buttons on either side of the panel. It is suitable for heavy cotton material and for wool materials such as serge, whipcord and garbardine. McCall Pattern No. 7904, Boy's Suit; knee trousers. In 3 sizes; 2 to 6 years. Price, 15 cents.

A novelty in frocks is this little model with a jumper-like waist which ties under each arm. The dress illustrated is developed in gay plaid gingham with a collar of organdie ending in a tie in front. This is a charming dress for fall school wear. McCall Pattern No. 7928, Girl's Dress; straight pleated skirt attached to underbody. In 5 sizes; 6 to 14 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

BACK TO LONDON

A Poem of Leave

"I have not wept when I have seen
My stricken comrades die;
I have not wept when we have made
The place where they should lie;
My heart seemed drowned in tears, but still
No tear came to my eye.

There is a time to weep, saith One,
A season to refrain;
How should it ope, this fount of tears,
While I sate in the train,
So that all blurred the landscape moved
Outwith the window pane?

But one short day since I had left
A land upheaved and rent,
Where Spring brings back no bourgeoning,
As Nature's force were spent;
Yet now I travelled in a train
Thro' the kindly land of Kent!

* * * * * * *

These are the scenes, these the dear souls,
'Mid which our lot was cast,
To this loved land, if Fate be kind,
We shall return at last,
For this our stern steel line we hold—
Lord, may we hold it fast!"
—Sergeant Joseph Lee, the Black Watch.

EVERY WOMAN'S RIGHT

To every woman belongs the right to enjoy a healthy, active, happy life. Yet nine out of every ten suffer years of agony, usually from some form of bloodlessness. That is why one sees on every side pale thin cheeks, dull eyes and drooping figures—sure signs of headaches, weak backs, aching limbs and uncertain health. All weak, suffering women should win the right to be well by refreshing their weary bodies with the new, rich, red blood that promptly transforms them into healthy attractive women. This new rich, red blood is supplied in abundance by Dr. Williams' Pink Pills which reaches every organ and every nerve in the body.

Through the use of these pills thousands of women have found a prompt cure when suffering from anaemia, indigestion, heart palpitation, rheumatism, general weakness, and those ailments from which women alone suffer. There is no part of this broad Dominion in which you will not find some former sufferer who has regained health and strength through the use of Dr Williams' Pink Pills, and this is the reason why these pills have been a favorite household remedy for more than a generation. If you are ailing and will give the pills a fair trial you will find renewed health and happiness in their use.

You can get Dr. Williams' Pink Pills through any medicine dealer, or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

THE CROWN PRINCE

When He Came to the Throne There Would be War, "For the Fun of It!"

The offices of Crown Prince and court fool used to be distinct, under the Hohenzollern dynasty they have been united. In 1914, before the war began, as Mr. Gerard, late United States Ambassador to Germany, reports the conversation, Friedrich Wilhelm hoped to "find a beautiful American woman" that there would be war during his father's reign. If it didn't come off within this period, he would see that the omission was rectified as soon as he ascended the throne.

"He said, whether war was profitable or not, that when he came to the throne there would be war—if not before—just for the fun of it. On a previous occasion he had said that the plan was to attack and conquer France, then England, and, after that the United States. Russia was also to be conquered, and Germany would be master of the world."

"Just for the fun of it!" That remark of the royal collector of Napoleonana is the faint echo of Frederick the Great, also quoted by Mr. Gerard when he declared, "Nothing can confer honor and fame upon a prince except the sword"; or when he asserted that "in order to be talked about" he started the Seven Years' war, having a full treasury and a strong army spoiling for trouble in his hands. "Drunk with sight of power" is the way Kipling would diagnose Friedrich Wilhelm's ailment. One can almost hear him saying to this megalomaniac parent, "Father, we have all these things—it would be a shame not to use them." "Just for the fun of it" he is willing that the world should be drenched with blood, that millions should be homeless, that women should suffer diabolic torment, that the flower of myriads of families should fall before the cannon. The Crown Prince himself is a leading reason why the dynasty to which he belongs must be put out of business.

Four working parties that are building a railroad across Australia keep in touch with one another by wireless telegraphy.

A thunderstorm rarely succeeds wet weather; the electric fluid being carried by the rain gradually to the earth.

Minard's Liniment Cures Diphtheria.

SAVE THE CHILDREN

Mothers who keep a box of Baby's Own Tablets in the house may feel that the lives of their little ones are reasonably safe during the hot weather. Stomach troubles, cholera infantum and diarrhoea carry off thousands of little ones every summer in most cases because the mother does not have a safe medicine at hand to give promptly. Baby's Own Tablets cure these troubles, or if given occasionally to the well child will prevent their coming on. The Tablets are guaranteed by a government analyst to be absolutely harmless even to the newborn babe. They are especially good in summer because they regulate the bowels and keep the stomach sweet and pure. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

HOW DO YOU TACKLE YOUR WORK?

How do you tackle your work each day?
Are you scared of the job you find?
Do you grapple the task that comes your way
With a confident, easy mind?
Do you stand right up to the work ahead
Or fearfully pause to view it?
Do you start to toil with a sense of dread,
Or feel that you're going to do it?

You can do as much as you think you can,
But you'll never accomplish more;
If you're afraid of yourself, young man,
There's little for you in store.
For failure comes from the inside first,
It's there if we only knew it,
And you can win, though you face the worst,
If you feel that you're going to do it.

Success! It's found in the soul of you,
And not in the realm of luck!
The world will furnish the work to do,
But you must provide the pluck.
You can do whatever you think you can,
It's all in the way you view it;
It's all in the start that you make, young man;
You must feel that you're going to do it.

How do you tackle your work each day?
With confidence clear, or dread?
What to yourself do you stop and say
When a new task lies ahead?
What is the thought that is in your mind?
Is fear ever running through it?
If so, just tackle the next you find
By thinking you're going to do it.
—(From "A Heap o' Livin'," by Edgar A. Guest.

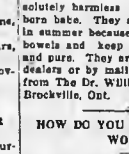
A satisfactory watering pan for the poultry yard can be made of an old cake pan. Secure the pan to the ground by driving a stake through the funnel hole and into the earth. It is easily changed to any desirable spot, cannot be tipped over and will serve a dozen or more chicks at one time.

Minard's Liniment for sale everywhere.

Black-Cat Luck.

A certain resident in a country suburb makes a point of keeping open the doors and windows of his house. As he sat in one of his breezy rooms the other evening, waiting for dinner, his wife came in from the kitchen.

"We've just had a visit from a black cat," she said.



"Ah," he reported, "that's good. Black cats are lucky, you know."

"Yes," answered his wife, who dislikes cats, "this one was certainly lucky. It has run off with the cod steak I was just going to cook for you."

THOSE AWFUL CRAMPS

Suggestions that may save Much Suffering

Marysville, Pa.—"For twelve years I suffered with terrible cramps. I would have to stay in bed several days every month. I tried all kinds of remedies and was treated by doctors, but my trouble continued until one day I read about Lydia E. Pinkham's Vegetable Compound and what it had done for others. I tried it and now I am never troubled with cramps and feel like a different woman. I cannot praise Lydia E. Pinkham's Vegetable Compound too highly and I am recommending it to my friends who suffer as I did."—Mrs. GEORGE R. NAYLOR, Box 72, Marysville, Pa.

Young women who are troubled with painful or irregular periods, backache, headache, dragging-down sensations, fainting spells or indigestion should take Lydia E. Pinkham's Vegetable Compound. Thousands have been restored to health by this root and herb remedy.

Write for free and helpful advice to Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass. Only women open and read such letters.

Would Have Felt the Same.

"Hark!" observed the romantic young woman spending her holidays on the farm. "Just hear how those old trees in the orchard moan and groan in the storm, like the crying of a lost soul!"

"Well," replied her practical and unromantic companion, "I guess you'd moan and groan, too, if you were as full of green apples as those trees are."

MURINE Granulated Eyelids, Sore Eyes, Eyes Inflamed by Exposure to Sun, Wind and Dust, relieved by Murine. Try it for one week in your Baby's Eyes. If boiled potatoes have to stand while before being served, cover with thick cloth and stand the pan where they will keep warm, but not scorch. The cloth absorbs the moisture and helps to make the potatoes floury.

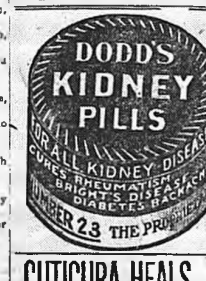
Minard's Liniment Co., Limited.



Dear Sirs,—I had a Bleeding Tumor on my face for a long time and tried a number of remedies without any good results. I was advised to try MINARD'S LINIMENT, and after using several bottles it made a complete cure, and it healed all up and disappeared altogether.

DAVID HENDERSON.

Belleisle Station, Kings Co., N. B., Sept. 17, 1904.

Ontario should produce 26 million bushels of potatoes this year. It may not produce 12 millions if the blight is not vigorously attacked.

The stem end of a potato is the end that was attached to the vine; the opposite and is the seed end. The seed end might be called the top of the potato and the stem end the bottom. The buds at the seed end will swell and grow first.

CUTICURA HEALS ITCHY PIMPLES

On Face. Badly Disfigured. Used 2 Boxes Ointment and 3 Cakes Soap.

"I had a bad itchy lot of pimples on my face which made it badly disfigured. They were inflamed and sore on the head, and I could tear my skin at soon as a little heat came near them. I could hardly sleep.

"When I saw Cuticura Soap and Ointment advertised I sent for a free sample which did so much good that I bought more, and I used two boxes of Cuticura Ointment and three cakes of Cuticura Soap when I was healed." (Signed) Miss Bertha Nilsson, Stockholm, Sask.

If you have a good complexion keep it so by using Cuticura Soap daily and Cuticura Ointment occasionally.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

KINDLY DELIVER THAT BIBLE.

During the German Occupation The Sacred Volume Was Kept Secure

"At Noyon, when the Germans marched in, the Kommandantur went straight to the cathedral, and said to the sacristan's wife: "Kindly deliver up the tenth-century Bible of Noyon Cathedral," says Laurence Jerrold in the Contemporary Review.

"They knew all about it. But the sacristan's wife 'had never heard' of that Bible. For two years and a-half the Kommandantur looked for that Bible, and never found it. The sacristan's wife showed it me. It is a rare illuminated Gospel with some unique decorations.

"She had every night hid it in a different corner of her house. She would have been shot if it had been found. It is back now in the vestry of Noyon Cathedral. The plain, little woman tells you her story baldly."

MONEY ORDERS

Send a Dominion Express Money Order. Five dollars costs three cents.

Though Fortune waits,
'Tis very wrong
To think that she
Will wait for long.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is freezone's claim and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

ROYAL YEAST CAKES

The best yeast in the world. Makes perfect bread.

MADE IN CANADA

E.W.GILLETT COMPANY LIMITED
TORONTO, ONT.
WINNIPEG MONTREAL

Vacant lot, back yard and school gardens have produced $360,000,000 worth of vegetables this summer in the United States. In Canada, by the same proportion, the increased production of vegetables in cities and towns amounts to about $28,000,000.

Minard's Liniment Cures Burns, Etc.

Iron Is Greatest of All Strength Builders, Says Doctor

A Secret of the Great Endurance and Powers of Athletes.

Ordinary Nuzated Iron Will Make Delicate, Nervous, Rundown People 100 Per Cent. Stronger in Two Weeks' Time in Many Cases

NEW YORK, N. Y.—Most people foolishly seem to think they are going to get renewed health and strength from some stimulating medicine, secret nostrum or narcotic drug, and Dr. F. Sauer, a Boston Physician who has studied widely both in this country and in three European Medical institutions, says, as a matter of fact, real and true strength can only come from the food you eat. But people often fail to get strength out of their food because they haven't enough iron in their blood to enable it to change food into living matter. From their overworked, nervous condition they know something is wrong but they can't tell what, so they generally commence doctoring for stomach, liver or kidney trouble or symptoms of some other ailment caused by lack of iron in the blood. This thing may go on for years, while the patient suffers untold agony. If you are not strong or well you owe it to yourself to make the following test: See how long you can work or how far you can walk without becoming tired. Next take two five-grain tablets of ordinary nuzated iron three times per day after meals for two weeks. Then test your strength again and see for yourself how much you have gained. I have seen dozens of nervous run-down people who were taking it for two weeks double their strength and endurance and entirely get rid of all symptoms of dyspepsia, liver and other troubles in from ten to fourteen days' time simply by taking iron in the proper form. And this after they had in some cases been doctoring for months without obtaining any benefit. But don't take the old forms of reduced iron, iron acetate or tincture of iron simply, as only a few cents' worth of this kind will be absorbed and assimilated. Nuzated iron if you want it to do you any good, otherwise it may prove worse than useless. Many an athlete or prize-fighter has won the day simply because they knew the secret of great strength and endurance and filled his blood with iron before he went into the affray, while many another has gone down to the glorious defeat simply for the lack of iron.

NOTE: Nuzated iron, recommended above by Dr. F. Sauer, is one of the newer organic iron compounds. Unlike the older inorganic iron products, it is easily assimilated, does not injure the teeth, make them black, nor upset the stomach, on the contrary, it is a most potent remedy in nearly all forms of indigestion, as well as for nervous, run-down conditions. Numerous instances have been reported of patients who have gained great confidence in Nuzated iron that they offer to furnish $100.00 to any charitable institution, if they cannot take any man or woman under 60, who has a reasonable case, over three weeks' time, increase their strength 100 per cent. or over in four weeks' time, provided they have no serious organic trouble. They also offer to refund your money if it does not at least double your strength and endurance in ten days' time. It is dispensed by all good druggists.

Doctors and Eye Specialists Agree That Bon-Opto Strengthens Eyesight 50% In a Week's Time In Many Instances

A Free Prescription You Can Have Filled and Use at Home.

Boston, Mass.—Victims of eye strain and other eye weaknesses, and those who wear glasses, will be glad to know that Bon-Opto, a remarkable new discovery there is real hope and help for them. Many whose eyes were failing say they have laid their glasses aside and many who once wore glasses say they have thrown them away. One man says, after using it: "I was almost blind. Could not see to read at all. Now I can read every line without my glasses, and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can read even fine print without glasses." Another man who used it says: "I was bothered with eye strain caused by nearsighted, tired eyes which induced fierce headaches. I have worn glasses for several years, both for distance and work, and without them I could not read my own name on an envelope or the typewriter or sew at the machine before me. I can do both now, and have discarded my long distance glasses altogether. I can count the fluttering leaves on the trees across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

It is believed that thousands who wear glasses can now discard them in a reasonable time, and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses.

Dr. Dack, an eye specialist of nearly twenty years practice, says: "A patient came to me who was suffering from Blepharitis Marginalis with all the concomitant symptoms, as morning agglutination of the lids, phrasis conjunctivitis and sublpharea. Her eyes often were crusted and the dull, suffused expression common to such cases. Having run out of her medicine I prescribed Bon-Opto. She used this treatment and not only overcame the disease with which she was afflicted and amazing as it may seem, as strengthened her eyesight that she was able to discard with the distance glasses and her headache and neuralgia left her entirely. One [illegible] improved 100% and have since verified the efficacy of this case. Bon-Opto is remarkable and I have seen the eyesight improve from 50 to 75 per cent in a remarkably short time. I can say it works more quickly than any other remedy I have prescribed for this trouble."

Dr. Smith, an oculist of wide experience, says: "I have used Bon-Opto in practice a number of serious eye troubles with Bon-Opto and am able to report that in 24 hours the secretion had lessened, inflammatory symptoms began to subside, and in seven days the eyes were cured and retained its normal vision. Another case of extreme convergent strabismus (cross eyes) escaped the surgeon's knife by the timely use of Bon-Opto. The frightened external muscles yielded to the soothing and anodyne effects of Bon-Opto and always install Bon-Opto after removal of foreign bodies and apply locally to all burns, ulcers and spots on the eyeball or the lids for its therapeutic effect. By cleansing the lids of secretions and acting as a tonic for the eyeball itself the vision is rendered more acute, hence the number of cases of discarded glasses."

Dr. Conner says: "My eyes were in bad condition owing to the severe strain arising from protracted microscopical research work. I used Bon-Opto according to directions rendered a surprising service. I found my eyes rewonderfully strengthened, so much so I have put aside my glasses without discomfort. Several of my colleagues have also used it and we are agreed as to its results. In a few days, under my observation, the eyes of a pathognomic case were so improved that glasses have been discarded."

Eye troubles of many descriptions may be wonderfully benefited by the use of Bon-Opto and if you want to strengthen your eyes, go to any drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and let it dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start, and inflammation and redness will quickly disappear. If your eyes bother you even a little it is your duty to take steps to save them now while it is not too late. Many hopelessly blind might have saved their sight if they had cared for their eyes in time.

Note: A city physician to whom the above article was submitted said: "Yes, Bon-Opto is a remarkable eye remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or small glasses. I can highly recommend it in cases of weak, watery, aching, smarting, itching, burning eyes, red lids, blurred vision or for eyes inflamed from exposure to smoke, sun, dust or wind. It is one of the very few proprietions I feel should be kept on hand for regular use in almost every family." Bon-Opto is not a patent medicine or secret remedy. It is an ethical preparation, the formula being printed on the package. The manufacturers guarantee it to strengthen eyesight 50 per cent in one week's time in many instances, or refund the money. It is dispensed by all good druggists, including special druggist agency by T. Eaton & Co., Toronto.

GLAMIS

W J McKeeman left on Monday morning for Peamsville, to join a motoring party on a tour through New York state and city.

Mr and Mrs Madden, of Detroit, are visiting at Mr Grower's.

Miss Winnie McLennan, who spent two weeks at her home, has returned to Detroit.

Miss Fairservice, of Walkerton, was calling on friends in this village last week.

Miss Mabel Kirktown left this week for her school.

Messrs Albert Pickard of Wiarton and John Fisher of Paisley spent Saturday night and part of Sunday at the home of the former's sister, Mrs J K McLennan.

Miss Edith Howson, who was holidaying in Muskoka, has returned and will spend some time with her sisters, the Misses Howson.

Miss Akitt, of Nerve school, spent Saturday at J C McIntyre's.

Mrs Alexander, of Bervie, her son Gordon, daughter Maud and neice Myrtle Clark spent Saturday afternoon at Mr Jos Cunninghams's.

Rev J C McClung took the services in the Free Methodist church on Sunday night for the first time. He and Mrs McClung and five children are stopping at Mr Jos Purdy's until their household effects arrive.

Memorial service was held in the Baptist church on Sunday morning in honor of the late Pte Ernest Cunningham, who so nobly answered the call and gave his life for his country on Aug 15th. The church was taxed to its utmost capacity, many coming from far and near to show their respect for the one gone and also to the family. The Presbyterians and Methodists withdrew their services, Rev Mr Keith assisting. The pastor, Mr McCauley, preached from the text, "No man that warreth entangleth himself with the affairs of this life, that he may please him who hath chosen him to be a soldier."—II Tim., 2 : 4.

Paisley Fair, Sept. 25, 26.

ELORA ROAD NORTH

Mr and Mrs Wm Beech spent a few days in Toronto.

Mr S Winch has purchased a small seperator for his own use.

The Patriotic League held their monthly meeting at the home of Mr Geo Dunkels last Thursday.

Alma and Harold Fraser are attending continuation school in Paisley.

By the amount of fruit preserved by some of the fair maidens of the Elora Road one would be led to believe that they contemplated using it in establishments of their own. Nothing like preparedness, girls.

Miss Edna Ewing returned to New York last week accompanied by her sister Daisy who goes to take a course as nurse-in-training. Before the latter's departure she was presented with a sewing set with pearls and an address which read as as follows:"

To Miss Daisy Ewing :

Dear Daisy — Having learned, with sorrow, that you are very shortly to take your departure from our midst, we felt we could not let you depart, without showing, in some way, our kindly feeling towsed you. We shall miss your cheery presence from all our social circles also from our Sabbath school, where you have been a faithful member, and we assure you a hearty welcome any time you may return to us. In the sphere you have chosen as your life work, may you be happy and successful and may God bless you wherever your lot may cast. Please except this memento, not for its intrinsic value but as a slight token of our esteem. Signed on behalf of your neighbors and the Elora Road North Bible Class—Lillie McDougall, Maggie McArthur, Katie Campbell, Edna Sparrow.

GRESHAM

—We welcome our new teacher, Miss Hanna, who is now in charge of the school

—Mr Arthur Tanner and family were calling on friends here lately.

—Mrs Fenston of Huron is visiting her daughter, Mrs Cameron.

—Miss Lettie Young has gone to Big Fork to resume her duties as teacher.

—Mr Lyman Kaake has bought Mr Geo. Hood's residence in Underwood where he will move shortly.

—Mr and Mrs. Orford son and daughter of Owen Sound visited at the home of her sister Mrs Neil McKinnon and other friends lately.

—Mr Allan McKinnon, Sr., is visiting his daughter Mrs Begg at Port Elgin.

—The students from here who are attending Paisley Continuation School are Jessie Young, Etta Brown, Wesley Nelson, John G. Brown.

—Mr Joseph Shipley has gone west and Miss Bella Shipley has gone to teach near Woodstock. They will be very much missed here.

—Miss Isobel Cameron is attending Clinton Model School.

—Mr L. McPhail is moving to his farm on the 10th con. shortly.

—Arrange to come to Paisley Fair and meet your friends.

Children Cry
FOR FLETCHER'S
CASTORIA

EBENEZER

Mr and Mrs Ernie Grant, Mr and Mrs Sam Fleming, Mr Eph Grant and Mrs Dright Potts were down to Toronto Fair.

Alf Powell and Ernie Jackson, who have been working for John Grant and Dright Potts respectively, returned to the city last week. These are two more of the city high school boys who made good on farm work this season.

John McKelvey is able to be up again, and we are glad to see his smiling face once more.

Pte's George and Wilbert Martin have returned to London camp after a month's furlough.

Will Grant and Mrs Grant, sr., and Thos Peacock visited at Geo Munson's in Derby on Sunday.

Rev J T Stapleton and family being away on holidays at Lion's Head, the pulpit was occupied here on Sunday by Mr John Bambidge, who did exceptionally well for a layman.

Miss Stella Bambidge and Miss Della McFadden, of Port Elgin, visited their friend, Miss Gertie McFadden, on Sunday.

Mr and Mrs Wm Johnston and son, Mr and Mrs Geo Fleming, of Owen Sound, visited at Mr Sam Fleming's on Sunday.

The frost last week touched the corn and tender vegetables

PINKERTON

Rev John A. McIntosh, of Toronto, spent a few days here renewing acquaintanceships.

Mr Jas Gale, of Alma, spent Sunday at the manse.

Mr and Mrs T Cummins, Mrs Elliott and daughter Grace, of Molesworth, visited at Mr J Murray's last week.

Mr and Mrs T Birrell and Mr Wm Birrell attended the funeral of Mrs Birrell's brother at Bradford.

A memorial service in honor of the late Pte John McAfee was held in the church here on Sunday afternoon, conducted by Rev Mr Gale. A large congregation, composed of members of many churches, listened to an excellent sermon. The church was suitably draped and decorated and special music was provided.

School re-opened on Tuesday of last week, with Miss Diehl of Paisley in charge.

Mr Tom Garland is attending business college in Toronto.

Senator and Mrs Donnelly, with their daughters Mertis and Nellie, attended the wedding of Miss Nellie Garvey in Ashfield last week.

CANTIRE

Harvesting operations will be almost wound up this week and farmers are looking for a good turnout of grain. Harvest mitts are generally used when it was found a "hot job" handling sheaves, but this year they are a necessity to keep the hands warm.

The government tractor plow, which was started on the farm of Reeve Case, is now plowing for Blackburn Bros. The work is being daily inspected by farmers who are willing to give this machine a trial if the work done was satisfactory. The consensus of opinion seems to be that the work is good in a place where the land is not too heavy. As this engine draws three plows a great surface can be turned over in a day. However, the engine does not appear to give satisfaction to the operator so far, and he seems to be the sickest man on the job.

Morris Gowanlock, Jean Reid and John McIntyre are attending Paisley High School.

Miss McCurdy, our new teacher, seems to have got off to a good start, and is training a bunch of young hopefuls to do the grand at the school fair.

That there is easy money in hens seems to be the opinion of some parties who recently raided the hen house of Mrs John McDonald. As this lady, who is a widow, kept about forty, she was surprised upon going to feed her flock one fine morning recently to find that only two old scrawny ones seawered her call. Evidently there proves to be some midnight prowlers with a dash of darky blood in them.

George McNeill, from near Chesley, visited his friend Gordon Reid last week.

Mr Angus Bell has recently had a gasoline engine installed which pumps water for all his stock.

Mrs John McBeath is spending a couple of weeks with her daughter Mrs D Keith of Owen Sound.

In last Mondays casualty list appeared the name of D Jay, of Walkerton, which turned out to be Douglas Jay, who before enlisting had been in the employ of Mr John Black. Mr Jay came from England was a man of fine Physique and well educated, and during his stay here made many friends and if spared had expressed a wish to come back to his old employer. Needless to say Jack Black feels that the war is coming very near.

Mr and Mrs A D McKay, who are enjoying the sights on the prairies these days, are expected home about the 23rd Sept.

Dr and Mrs Bell and family of Milan, Michigan, are paying a visit to the Dr's mother Mrs Jas Bell and also his brother here. The Dr reports the same campaign of patriotism and production was carried on across the line as we had in this country with the result that fine lawns and gardens were plowed up and potatoes are in abundance.

Mrs Thompson, of Thessalon, Miss Bervice and Myrtle Pringle and Mr Henry Cruickshanks of Shallow Lake, were last week visitors at Mr John Pascoe's. While here Mrs Thompson paid a visit to her friend, Mrs Birchall of Paisley High School staff.

Children Cry
FOR FLETCHER'S
CASTORIA

—Knox church, Tara, has extended a call to Rev. J W Currie, of Blenheim.

Gravel Contracts to Let

THE undersigned will be at Rankin's Hill, Township of Arran, on Friday, Sept 14th, at 10 o'clock a m to rate a contract of gravelling.

A COMMITTEE of Progress Council will sit at McArthur's sideroad at 9 o'clock p.m. and on McGillivray's sideroad at 1 p.m. of same day, to let contracts for gravelling.

SECOND CON. ELDERSLIE

Mrs Geo Addison has returned from visiting her mother at Owen Sound, who has been seriously ill.

Mr and Mrs T Nicoll and children, of Gillies Hill, spent Sunday at J Vancise's.

Mr and Mrs Stinson, of Peterborough, are visiting the latter's sister, Mrs A Lillico.

A few of the afternoon and evening farmers of this section have some grain to haul in yet, but the bulk of the work is done.

Messrs Jas Allen, Tom Patterson, And Hetherington, S Thompson and Hughie Campbell spent Sunday week at Southampton beach.

The 2nd con S S has reopened for the fall and winter term.

Mrs J B Allen, Miss M Birrell and Miss Lillie Greaves were visitors at Toronto Fair last week.

—Paisley's genuine Farmers' Fair, Sept. 25 and 26. Be an exhibitor.

TURNER'S

—Mrs H Dier and Mrs F Gibbons spent a day at Lion's Head with Henry Dier.

—Mrs Hyde has returned home after spending some weeks with her son Joe on the 4th of Bruce.

—Mr D Forrester of Paisley was a visitor here last week.

Miss Helen Carlisle is attending high school in Port Elgin.

—Mr R Hyde of Dundas spent a day at Archie Pollock's.

—Mrs Hall of Guelph, who has been visiting with her brothers and sisters here returned to her home last week.

TWELFTH CON BRUCE

Threshing has again commenced on this line. Some are through harvesting while others have a lot to do.

Messrs Wm and Milton McKittrick took in Toronto Fair and report a good show.

Mr John McKay visited at Harvey Neilly's over Sunday.

Mr Cottrill Morris happened with a painful accident one day last week. When they were threshing, he climbed up to open a trap door and slipped and fell about 12 ft, catching on a nail which tore a wound in his side that required eleven stitches to close. He is doing as well as can be expected.

Mr and Mrs John Hammond and family visited the Archer Bros on Sunday.

We are sorry to say that Mr Geo McGillivray is dangerously ill.

Mr Bill Barnes sold a valuable horse last week.

Mr Geo Greer has gone on a two month visit to the west.

This is the school for those who want the practical training and the good positions. Commercial, Shorthand and Telegraphy departments. Free catalog. W J Elliott, Pres. D A McLachlan, Prin.

Vision Your Sons, Mothers of Canada!

Vision them at early morning when through the rising mists, there bursts a hurricane of fire---

See your valiant boys---calm, grim, but cheerful, "stand-to-arms" until the Hun's "morning hate" dies away.

Picture them at breakfast, the meal that must bring them the bodily sustenance to carry them through the strain of another day.

Then think what might happen if, one morning, there was no breakfast ---no food, and word went down the lines that Canada had failed them.

Vision all these things, and then--- as Women of Canada---Mothers of Men---Answer this Call to Service.

Canada must send to Her Own, and to the Allies Fighting Forces, more wheat, more beef, more bacon, and more of such other foods as are non-perishable and easily exported.

Canada can do this without depriving her own population of a fair share of any of these foods if You Women will but help.

All we ask of you is, that instead of buying so much white flour (if you do your own baking) you vary your baking by using one-third oatmeal, corn, barley or rye flour. Or, if you buy your bread, that you order a certain proportion of brown bread each day.

Second, instead of using as much beef and bacon as formerly, you vary your family's diet, by substituting for beef and bacon such equally nutritious foods as fish, peas, lentils, potatoes, nuts, bananas, etc.

Third, and this is most important, ---positively prevent the waste of a single ounce of food in your household.

They Must Be Fed

Statistics show that, everyday, in Canada, sufficient food is thrown into garbage cans to feed the entire Canadian Overseas Army.

Travellers have often remarked that many a European family would live well upon the quantity and quality of food wasted in some Canadian homes.

Such waste is shameful at any time; but in these times it is criminal.

Our only hope is that with these truths before you, and in view of the vital issues at stake, we may count upon your earnest co-operation in stopping this appalling waste; and in substituting other foods for the wheat, beef and bacon that must be sent overseas.

Next week a Food Service Pledge and Window Card will be delivered to you. It is your Dedication to War Service. The Window Card is your Emblem of Honour.

Woman's Auxiliary, Organization of Resources Committee, in Co-operation with The Hon. W. J. Hanna, Food Controller.

Helped the Harvesting

Brown's Limited, of Portage la Prairie, Man., the big general store operated by former Paisley business men, closed its store each day at 5 p m and went in entire staff to stook grain in the surrounding country. In speaking of the work, the Daily Graphic of Portage la Prairie says: "Last evening the stooking gang from Brown's Ltd. visited the farm of F Brown, at High Bluff, and in two hours the 20 men stooked 80 acres of barley. Mr Brown was satisfied with the work. It is learned to-day that Brown's Ltd gang is booked up fully for next week."

—The food service pledge cards will soon be distributed to Paisley householders.

—The business of making alcoholic beverages in the United States has been brought to an end by the Food Act of the republic. Statistics tell us that 100,000,000 bushels of grain went into U S distilleries in a year, about 40 per cent of which came out in the form of beverages and drinks, the remainder being made into alcohol used in perfumes, toilet waters, bay rum, etc, and denatured alcohol used for industrial purposes. Most of the large distilleries will continue to produce the latter class of wet goods, while a lot of small plants producing brandy from grapes, apples and peaches will be put out of business.

Everything for the Bugs

Paris Green, Arsenate of Lead, Bug Finish, Bug Death, Bluestone, Hellebore, Insect Powder, Creolin, Sabidilla, Moth Balls, Instant Louse Killer, Fly Killer, Etc.

The AUTOMOBILE

Clean Car With Soap And Water

"The best preparation to use in keeping the finish of an automobile looking like new are clean water and plenty of care," says an expert.

"It should be remembered that several different kinds of finish are used in different parts of high grade cars, and that each kind of finish should have its own brand of treatment in the course of a washing.

"The first thing to do in washing a car is to give it a thorough flushing with a low pressure stream from a hose. The purpose of this is to 'flow' off gently the accumulated dust and dirt in such a way that the hard particles will not scratch. In some cases the mud will stick hard enough to resist the stream from the hose, and when this occurs the particles should be quickly sopped off with a wet sponge.

"The second step is to go over all parts of the car with a clean sponge and cold water, to remove and grease or dirt remaining. Soap may be used if necessary, preferably a pure castile soap.

"Then another thorough flushing should be administered, taking care that soap used in the second step of the bath is not permitted to dry, for it will leave streaks and spots that are difficult to remove.

"After all vestige of dirt has been remover, the polishing begins. Two chamois skins should be used; one for radiator, hood, tops of fenders and body; the other for the chassis and under sides of fenders. The rubbing with the chamois should be accompanied by frequent rinsing and wringing out the chamois so that no grit may possibly scratch the polish and surface. In rubbing a long, smooth, easy motion should be used.

"The top should be permitted to dry before folding to prevent mildew and creasing of the fabric.

"Gasoline should never be employed in cleaning either the top, body or any other parts where a lustrous finish is desired.

"Plain cold water, a judicious application of soap, and plenty of care are without rivals in preserving the finish of an automobile, whether it be the top, the leather cushions, the varnished body or the enamelled fenders. A non-scratching polish may be used on the nickled parts

"Care in washing a car is well worth while, for it pays a big return in appearance."

H.M.S. MINESWEEPER

JUST ONE OF THE MANY SHIP'S LOST AT SEA.

A Haunting Little Sketch About a Lonely Sailor Who Now Rests Beneath the Waves.

His name was David.

He supposed that it was because he was born beneath Snowden's shadow.

She was called just Mary.

And the manner of their acquaintance was in this wise, says an English writer. Being confidential secretary to the editor man, Mary was bound to see the letter David wrote. It impressed the chief, and it more than impressed Mary. Her heart simply ached.

"You see, sir," the letter ran, "I'm all alone in the world, and it makes a chap feel out of things when the other fellows hear from their wives and sweethearts. I've never had a letter since I've been out on this old tub, for there's nobody to write me a line. I'm not good at making friends easily. I wish, sir, you could put me in touch with a girl who'd correspond." And then David went on to say how he'd heard the call in the heart of Mexico and had come over to do his bit for the old country he hadn't seen since he was a boy.

"Chapter 1."

"A pity our Lonely Soldiers' and Sailors' Bureau is closed, eh?" said the editor. "I'd like someone to write to that chap. He's genuine."

It was then that Mary asked if she might have the letter.

"I'd like to write to the poor boy," she said. "He seems so very lonely."

"If you would," said the editor with relief.

Now the day was one of grey and gold, when sweet-scented mimosa was sold at the pavement's edge and the wintry sun sank like an orange ball. Mary, being an impressionist, revelled in the sunset and the flower scents, and spent a shilling on what she called "soul food" instead of taking home something sensible for her supper. In her little home that night she wrote a long letter to David, and if the mimosa helped her pen, you need not wonder. "Soul food" inclines to sentiment. Anyhow, the budget was addressed to H.M. Minesweeper ——, somewhere in the North Sea. And thus the acquaintance began.

After "a fortnight out" that letter was very welcome to the lonely one. He devoured its six pages of fine writing, and, at the first opportunity, sat down to open his soul to the writer. What the chance to do so meant to him only a starved soul can know.

Romance Begins.

By the time the fourth fat budget had passed they exchanged photographs. By that time an understanding of each other's life stories was very complete and the link of sympathy held them. Mary's womanliness supplied a blank in the lonely one's life, and those tobacco-scented sheets she received stirred her strangely. Having always been shy with men in person, this correspondence gave her a chance to reveal herself. David knew more of Mary in three letters than an average man would have known in three years.

It was after the passing of the 66th budget, when her photograph had reached him, that romance crept in.

Both began to dream dreams.

The letters grew more lengthy and were exchanged at regular intervals. Soon, he expected, he'd be having leave, and then——

Mary seemed very happy through the April days, and surprised her editor by blushing when he asked her, casually, if she ever wrote to "that lone chap on the minesweeper." For a woman whom the office had begun to label "old maid" a blush was surprising.

"The End."

May came in, and with the month should have arrived his next budget, which he'd promised for "when we get back to port after two weeks out." But no letter came.

An inch-length announcement in the daily papers that one of H. M. Minesweepers had been lost in the North Sea, together with the bald fact that the next-of-kin had been informed, caught Mary's eye while she was wondering and waiting. That paragraph haunted her, but still she put David in her prayers and listened eagerly for the postman's knock.

It was a fortnight later before she remembered that uncertainty might become certainty by seeking information from the Admiralty. But the revelation of a name only confirmed that of which her heart was sure. It was his "old tub" that had gone down, and her little romance was over.

Care of the teeth is more and more being recognized as an important measure bearing upon health. Begin early with the children and keep it up; they will then learn to do it for themselves.

Opportunities are neither lost nor found, we make them for ourselves, or they come to us unsought. If we do not take the proper advantage of them, they go to some one else who will. It will never do to ignore an opportunity because it seems small to us; we may mistake its importance, or its power of development.

If some kind generous concern writes you a nice friendly letter saying, "We are holding subject to your order a beautiful set of silverware which you won by correctly answering a puzzle," don't bite. All the letter-writer wants is ninety-eight cents to pay shipping charges. You'll never see the silverware, or if you do it will prove to be dell stuff of no value.

PLAIN TALES OF HEROISM

HOW EIGHT MEN HAVE WON THE VICTORIA CROSS.

Daring Deeds Which Earned For Them the Most Coveted Decoration of the British Empire.

Like the wildest tales of fiction read the stories of how eight men recently won the Victoria Cross for remarkable deeds of daring on the western front. Where thousands of men are doing more than their duty every day it is difficult to single out those who are more outrageous or who take upon themselves greater responsibilities than others to a sufficient degree to merit this honor from the King. None could doubt that these eight men deserved it.

Lieutenant Robert Grierson Combe received the honor for conspicuous bravery and for the effect of his action upon his men. Steadying his company under intense rifle fire, he led them through an enemy barrage and reached his objective with only five survivors. Procuring a sack of bombs, he himself set the example for what men remained to him, inflicted heavy losses on the enemy, managed to collect small groups of survivors from other units and finally managed to capture the company objective, together with eighty prisoners. He repeatedly led his men in charges upon the Prussians, driving them before him, and was killed by an enemy sniper while personally leading his bombers. It was entirely due to his courage and inspiring example that the position was carried, obtained and held.

Charged Single-Handed.

Company Sergeant Major Edward Brooks was fortunate enough to survive the fight in which he won the coveted decoration. He was in the second wave of an attack. Seeing that the first wave had been checked by a Prussian machine gun in a close position, he leaped from the ranks of the second wave, charged the position single-handed, killed one of the gun crew with his revolver, another with his bayonet and drove away the others. He then turned the weapon against the Prussians and later carried it back to his own lines.

Sergeant Albert White also won the Cross for his action against a machine gun crew, although he deliverately gave up his life in doing so. An attack had been ordered. Sergeant White knew that a certain machine gun, which was partly hid been located, was almost certain to check the advance. Without instructions from any one, when the charge was ordered he dashed directly at the machine gun position, drawing its fire. He fell riddled with bullets, but so fierce and sudden had been his onslaught that a whole drum of ammunition was practically expended, and before the machine gun could be made effective again his companions had avenged his death and destroyed the crew.

Attacked With Bayonet.

Corporal Edward Foster won the Cross for action against intrenched machine guns in a village street. During an attack the advance was held up in a village by two Prussian machine guns, intrenched and strongly protected by wire entanglements. Corporal Foster, who was in charge of two Lewis guns, succeeded in entering the trench and engaging the enemy guns, but one of his own weapons was lost. Foster went forward alone and bombed the Prussians who had captured the weapon, regaining possession of it. His men joined him, both Lewis guns were once more turned upon the enemy and the Prussian gun crews annihilated. The advance was then pushed home successfully.

Corporal Julius Howell won the Cross before the eyes of his entire battalion. Seeing that a strong party of the enemy were likely to outflank the battalion, Howell climbed to the parapet of the trench and, exposed to rifle and bomb fire, began pressing back the enemy along the bottom of the trench. When his bombs were gone he attacked the Prussians with his bayonet. When he was severely wounded enough time had been gained for the battalion to press on, safe from the flank attack. The corporal's action, witnessed by all the members of his command, so inspired the men that the heaviest fire from rifle and machine guns failed to check them.

Saved Several Lives.

Lance Corporal James Welch also won his Cross via the machine gun route. He first entered an enemy trench and killed one man, stampeding four others with his empty revolver. After a run across the open he captured them, then returned to his machine gun, which he maintained in operation for more than five hours, repeatedly going out in the open exposed to close range fire to search for ammunition and parts which he could use to replace worn pieces of his own weapon.

A private may win the Victoria Cross as easily as an officer or a non-commissioned officer. "Tom" Dresser did it by carrying important despatches from battalion headquarters to the front line trenches, although he was severely and painfully wounded twice on the way.

Private Jack White also won the Victoria Cross. He was a signaller and with other men of his company was crossing a river on pontoons. The two pontoons ahead of his were swept by machine gun fire, and every man on his own raft except White himself was either killed or made helpless by wounds. Unable to control the pontoon, he leaped into the water and by means of a length of telephone wire towed it back to shore, thereby saving the life of an officer and several men, whose wounds were treated in time to prevent their dying.

REAP GRUESOME HARVEST.

Spanish Fishermen Grow Rich From Wrecks of Boats and Craft Sunk.

German submarine warfare in the Mediterranean has been a source of enormous profit to the fishermen of Spain and has offered a means of making large sums of money without the expenditure of great effort. This in a way explains why a large element is pro-German, made so by riches reaped from the seas and also through receiving German money direct in an effort to complicate an already complex political situation.

In addition to earning money for "help," the proceeds of wreckage from torpedoed ships along the Spanish coast have run into hundreds of thousands of dollars. The majority of ships which have been sunk by submarines in the Mediterranean have been attacked along the Spanish coast, often in Spanish territorial waters, and within sight of the coast, and no sooner a ship goes down or is abandoned in sinking condition by its crew than Spanish fishermen rush to the spot like sharks. As a result the inhabitants of the Spanish coast towns and villages are pro-German.

While it is impossible to estimate how much money the Germans spent in Spain in organizing secret bases to supply their submarines, wireless stations to signal the movements of vessels and "zones" in secluded parts of the coast where cases with oil, gasoline, explosives and spare parts for submarine engines could be anchored just below the water, some idea of the money made by Spanish fishermen from beach combing may be gathered from the following item of news in a Madrid newspaper:

"According to news from Badalona (a fishing village near Barcelona) the proceeds of the sale of gasoline, oil, greases and other goods picked up by fishermen since the beginning of the month and belonging to some ships torpedoed in the neighborhood amounted to £20,000. The feast of their patron saint, St. Peter, on the 29th of June will accordingly be celebrated with greater solemnity."

THE PERFECT ONE.

She loved three men in her lifetime—
Her father, her husband, her son;
And one she considered perfection.
Now which do you think was the one?

Not her husband, of course. Though she loved him,
To her womanly eye it was plain
That he had many faults and shortcomings;
And often they gave her great pain.

Not her son. She excused all his foibles,
But nevertheless knew them as such.
Indeed she oft fancied his failings
Were what made her love him so much.

'Twas her father. Though others might flout him,
The daughter no blemish could see;
And often she wondered why other
Men weren't so perfect as he.

MIRRORS OF OLDEN DAYS.

Secret of Glass-Making Originated With the Venetians.

They say that a man's first thought on entering a room is, "Where is there a place to sit down?" but a woman's first thought is, "Where is there a mirror?"

Whether that has always been man's first thought is difficult to state, but it doubtless has been woman's from time immemorial for from time immemorial there have been mirrors.

It is only since the beginning of the sixteenth century that mirrors have been used as articles of household furniture and decoration, and there are few women of the present day who do not realize and make use of their artistic value in adorning their homes.

The mirrors of antiquity were principally of bronze, highly polished and about the size of an ordinary hand mirror. They were usually provided with a handle and sometimes were mounted on a stand. The principal feature of these ancient mirrors was the design incised on the back. They belong to the period about 400 to 500 B.C.

During the Middle Ages, from the twelfth to the end of the fifteenth century, picket mirrors or small hand mirrors carried at the girdle were considered a necessary part of a lady's toilet.

The pocket mirrors were small circular pieces of polished metal fastened in a circular box and covered with a lid. These mirror cases were made of the costliest of materials and were oftentimes lavishly decorated with jewels. The mirrors carried at the belt had no cases but were provided with short handles.

The method of backing glass with metal for mirrors was well known in the Middle Ages, though steel and silver mirrors were almost exclusively used. Small convex glass mirrors were made in Southern Germany before the beginning of the sixteenth century, but it was in Venice that the making of glass mirrors on a commercial scale was first developed.

The Venetians guarded their secret jealously and for about a century and a half that enterprising republic enjoyed the monopoly of the manufacture. By their statutes any glass maker carrying his art into a foreign country was ordered to return under pain of imprisonment to his nearest relatives, and if he disobeyed this command he was followed and slain.

Notwithstanding these circumstances the knowledge leaked into France and French mirrors soon excelled in quality the Venetian products.

From then on the secret of mirror making became generally known and soon spread to other countries.

OUTWITTING THE SHARK.

Divers Are a Match For the Sly Fish When Not Taken Unawares.

Persons who know the coastal aborigines of Australia say that he is not greatly afraid of a shark—that he is indeed a match for the big sabre-toothed fish when he is not taken unawares. He may lose a leg or an arm or he may be carried off bodily; but, in any event, writes Mr. Norman Duncan in Australian Byways, the damage will be owing rather to the running approach of the shark than to the limitations of the diver. Fairly warned, he will dive to the bottom, roll the water, and thus elude the attack; and if pugnaciously disposed at the moment, he will fight.

One young diver, who was taking a crawfish to the surface, all at once found himself in a furious engagement. It was incautious of the diver to have a crawfish in his possession, for the sharks are inordinately fond of crawfish; and this indiscreet diver came out of the encounter with a lacerated thigh and one arm missing.

Another story that seems credible, although I cannot vouch for it, having had no means of authenticating it, is as follows: A black boy, swimming, naked and abstracted, close to the reef in search of slugs, awoke all at once to an amazing situation. It was not that the shark was near, not that it had turned and was darting, but that his head was actually in the shark's wide-open mouth. The black boy acted sharply: he withdrew his head in a flash, having at the same time punched the shark to distract its attention; after a brisk tussle he rescued himself, and lived to prove the adventure with a scarred cheek.

A farm paper is the farmer's preserve jar.

SMALL REPUBLICS OF EUROPE

ISOLATED STATES THAT ONE RARELY HEARS OF

Smallest in Extent is Barely Square Mile—Smallest in Population.

Has 70 Citizens.

To many people the fact that there are a number of independent republics flourishing amid this world-conflagration untouched by the ravages of the war with all its horrors will doubtless seem incredible. There are, however, bijou States in various parts of Europe so completely isolated from the rest of the world that it is quite possible that many of their inhabitants are not aware of the gigantic and deadly struggle that is raging all round them, and on which hang the destinies of the world's mightiest nations. Indeed, it is very few maps on which any trace of them can be found. But for all that they are very important communities in themselves and can boast of a prosperous existence which would be a credit to any State, especially nowadays.

One of the most interesting of these Tom Thumb republics is St. Gouat, situated in one of the most inaccessible parts of the Basses-Pyrenees, which, so far as area is concerned, enjoys the distinction of being the smallest self-governed State in the world. It is hardly a square mile in area. The population numbers 130 souls, who rule themselves mainly owing to the fact that the little State is so hard to get at that no one will take the trouble to alter its constitution. Perched on a rocky mountain, St. Gouat has such a steep descent that when anyone dies it is quite impossible to have an ordinary funeral.

A coffin could not be carried down the mountain side, and consequently the inhabitants have cut a groove in the face of the rock, and the coffin is made fast to a rope and allowed to slide down to the cemetery in Ossun Valley below, where all baptisms and marriages are performed. The President of St. Gouat, who, by the by, is also tax-collector, assessor, and judge, is elected by a council of twelve, who are chosen for five years by the people, the little republic having been freed for more than two thousand years though a "Council of Elders."

Standing Army of 1,100 Men

About 150 miles from St. Gouat is to be found the republic of Andorra, an almost inaccessible State of about 7,000 inhabitants, situated in the Eastern Pyrenees. Andorra was declared a free State as long ago as the ninth century by Charlemagne. The republic is governed by its own representatives, who constitute a sovereign council of 24 members, which council elects a President every four years.

The chief occupations of the Andorranos are agriculture, cattle breeding, trade in wool and charcoal, and smuggling. At the same time they are good-natured, hard-working, hospitable people, and, needless to say, are devoted to liberty, which they are prepared to defend with a standing army of 1,100 men.

A Republic of Seventy

The smallest republican State in regard to population is Tavolara, a little-known island about five miles long with an average width of half a mile, situated off the north coast of Sardinia. Many maps and geography books totally ignore the existence of this State. Yet it is a free and independent republic of about 70 inhabitants, who are their own rulers.

The people of Tavolara declared their independence as recently as 1836, the island having previously been made over in 1836 by King Charles Albert of Sardinia to the Bartoleoni family. None of the Great Powers objected when the island threw off the yoke of monarchy, and during the last 17 years the inhabitants have lived in peace with the world. They elect a President every six years, and a council of six members, all of whom serve the State without payment.

Why do some folks so dread raking up the rubbish in the garden? Women sweep the floor every day. Isn't it just a matter of thinking it a fine thing to do and then going right at it?

Is not this what we want—to be safe with a security that is not cowardice or palsy, to be alive with a vitality that is not wearing us out—safety and progress?—Phillips Brooks.

The Doings of the Duffs.

Don't Eat Less—But Eat Better. There is no need of anyone going hungry. Canadians should eat foods that supply the greatest amount of nutriment at the lowest cost. The whole wheat grain is the most perfect food given to man. **Shredded Wheat Biscuit** is the whole wheat grain prepared in a digestible form. Every particle of the whole wheat berry is used—nothing wasted, nothing thrown away. Two or three of these biscuits with milk, sliced peaches or other fruits make a nourishing, satisfying meal at a cost of only a few cents.

Made in Canada.

GARDEN NOTES.

Madonna lily bulbs may be planted this month, but most other bulbs should not be set until October.

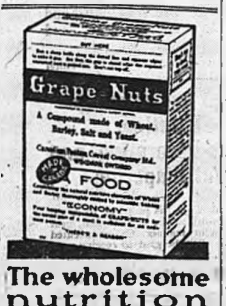
Protect cauliflower heads from the hot sun, thus: Gather some of the outer leaves over them and tie in place.

Won't take long to throw old blankets, cloths or papers over the tomatoes in the garden when it looks like frost, and may save them for a number of days.

We have had good luck ripening late tomatoes by pulling the vines and letting them lie with the fruit on in an old cool shed. A great many of the tomatoes turned out fine.

Late celery should be cultivated throughout the month or as long as it is possible to get through without damaging the plants. But, remember, the roots are near the surface, and deep tillage will do more harm than good.

Spinach for the early spring market can be sown now, either broadcast, or in drills twelve to fifteen inches apart and one inch deep on well-manured ground. It is hardly possible to get the land too rich for spinach. The hardy prickly variety will winter better than other kinds. On the approach of freezing weather cover with leaves or straw.



Like celery, late cabbage should be cultivated as long as possible. A leaf broken off now and then will not matter. Fewer will be broken if the cultivating is done during the middle of the day.

Early celery will be wanted the latter part of this month, or the first of next. It should now be "handled"—that is, straightened up and the soil drawn to it with the hoe. If boards, paper or other devices are to be used for blanching, handling is not necessary. A week or ten days after handling more earth should be plowed up to the plants, leaving only the tops above the ridge. If banked too long in warm weather celery is likely to spoil, and it is safer to blanch only as needed to fill orders.

After the first slight frost bulbs of the dahlia, canna, tuberose, elephant ear and Madeira vine should be taken up and stored. When the foliage of the dahlia or canna is frost-bitten, cut off the upper part and leave about six or eight inches of the stem attached to the roots. Aim to remove the roots as a clump and with dirt attached. This is the time the root should be tagged if color or varieties are to be remembered. The best time to dig is in the morning. Then the roots can be spread out in the sun and exposed to the wind so that they will dry well and cure. Be sure that the dirt attached to the bulbs is thoroughly dried before storing in a cool dry cellar. They are best spread out on the floor in one corner, or placed on shelves where it is cool and the ventilation good.

Water raspberries and blackberries during dry weather to insure strong canes for next season's crop.

The Food Controller is lending his help to the farm labor situation in Ontario where it is acute. Representatives of the large industries met in Toronto and considered ways and means of releasing men from their regular work to help with the harvest.

The wholesome nutrition of wheat and barley in most appetizing form

OUR FRIEND IN THE GARDEN.

He is not John, the gardener,
And yet the whole day long
He makes himself quite useful
The flower beds among.

He is not Tom, the pussy cat,
And yet the other day,
With stealthy stride and glistening eye,
He crept upon his prey.

He is not Dash, the dear old dog,
And yet, perhaps, if you
Took pains with him and petted him,
You'd come to love him, too.

He's not a blackbird, though he chirps,
And though he once was black;
Yet now he wears a loose, gray coat,
All wrinkled on the back.

He has a very dirty face,
And very shiny eyes;
He sometimes sits beside our door,
And looks—perhaps is—wise.

But in a sunny flower bed
He has his fixed abode;
He eats the things that eat my plants—
He is a friendly toad.
—J. H. Ewing, in Our Dumb Animals.

FREQUENT HEADACHES

People with thin blood are much more subject to headaches than full-blooded persons, and the form of anaemia that afflicts growing girls is almost always accompanied by headaches, together with disturbance of the digestive organs.

Whenever you have constant or recurring headaches and pallor of the face, they show that the blood is thin and your efforts should be directed toward building up your blood. A fair treatment with Dr. Williams' Pink Pills will do this effectively, and the new red blood made by these pills will remove the headache.

More disturbances to the health are caused by their blood than most people have any idea of. When your blood is impoverished, the nerves suffer from lack of nourishment and you may be troubled with insomnia, neuritis, neuralgia or sciatica. Muscles subject to strain are under-nourished and you may have muscular rheumatism or lumbago. If your blood is thin and you begin to show symptoms of any of these disorders, try building up the blood with Dr. Williams' Pink Pills, and as the blood is restored to its normal condition every symptom of the trouble will disappear. There are more people who owe their present state of good health to Dr. Williams' Pink Pills than to any other medicine, and most of them do not hesitate to say so.

You can get Dr. Williams' Pink Pills through any dealer in medicine or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

A PET CHIPMUNK.

With 22 Peanuts in Her Cheek Pouches Couldn't Enter Hole.

The chipmunks in my yard, says Mr. Enos A. Mills, who lives in the Colorado Rockies, are fed so freely upon peanuts that they have come to depend upon them for winter supplies. They prefer raw peanuts to the roasted ones. The chipmunk near my cabin sometimes becomes a little particular and will occasionally reject peanuts that are handed to her with the shell on. Commonly, however, she seizes the nut with both paws. Her cheek pouches hold from twelve to twenty of these. As soon as she has filled them she hurries away to deposit her stores in her underground granary.

One day she managed to store twenty-two, and her cheek pouches stood out abnormally! With this swelled and uncouth head she hurried away to the storehouse, but when she reached the hole her cheeks were so distended that she was unable to enter. After trying again and again she began to enlarge the hole. This she presently gave up. Then she rejected about one third of the nuts, entered, and stored the remainder. In a few minutes she was back for more. One day she made eleven round trips in fifty-seven minutes.

Early one autumn morning a coyote, in attempting to reach her, dug into her granary and scattered the nuts about. After sending him off I gathered up three quarts of shelled nuts and left about as many more scattered through the earth. Over these the jays and magpies squabbled all day.

Once a lady, who was unsympathetic with chipmunks, was greatly startled when one of the youngsters scrabled up her clothes and perched on her head. She screamed wildly, and the young chipmunk, in turn frightened, fled with all haste. He took consolation with his mother, several yards away. She, standing erect, received him literally with open arms. He stood erect, with one arm upon her shoulder, while she held one arm round him. They stood thus for some seconds, he screeching a frightened cry, while she, with a subdued mottering, endeavored to quiet him.

It is a conquest when we can lift ourselves above the annoyance of circumstances over which we have no control; but it is a greater victory when we can make those circumstances our helpers, we can appreciate the good there is in them.—Lucy Larcom.

Two Favored Designs

There is no doubt that the long tunic will be popular for the coming season, for in the very newest models it is featured. In the smart dress illustrated above the long tunic, pressed into straight pleats and parted at the side, shows one of the favored designs. McCall Pattern No. 7319. Ladies' Dress, in 39-inch length. Pattern in 5 sizes; 34 to 42 bust. Price, 20 cents.

The fancy pocket continues to be a style feature on children's as well as grown-ups' frocks. The little straight pleated frock with a deep yoke is particularly noticeable for the pockets in front, which are attached to both the front panel and the belt. McCall pattern No. 7866, Child's Dress; in 5 sizes; 2 to 10 years. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

AVIATORS, DON'T SNEEZE.

Nine-tenths of Accidents in the Air Caused by Thus Losing Control.

A recent issue of the American Magazine contains an account of Miss Katherine Stinson, the girl aviator, from whose school in San Antonio, Texas, many of the aviators now flying in Europe were graduated. Miss Stinson herself has performed some of the most difficult aerial feats.

When asked if she ever was afraid of falling, she replied that sneezing was the only thing she feared. She declared that nine-tenths of the accidents in the air are caused by aviators losing control of their machines by sneezing.

"The aviator," she said, "passes through numerous strata of air of different temperatures. He often sneezes violently. When you sneeze you lose all control of yourself for the moment, and if you don't catch yourself quickly it is probable that your friends will gather up your remains."

Albert of Belgium.

Immortality crowns the man who acts. The royal insignia of Albert of Belgium gave him no crown among the immortals; but the royal stature of his soul, as revealed to the world in the glorious defence of his people under fire, has now been writ in gold for the eyes of generations unborn. When before in all recorded time did the world's geniuses render a fellow-mortal such a tribute as the "Book of King Albert"? Whether it be Joan of Arc burning on her pyre, or a common soldier bleeding in the trenches, they who risk their lives for the cause they love are illumined by the fame that shall be as light forever. The world is full of heroes whom perhaps only the angels sing. But of all those whom the world honors finally each one has taken a superhuman risk and so achieved a superhuman task. This alone repays for the ills and hurts and heartbreaks of life, and this alone makes one immortal.

Visit your neighbor occasionally and see how he does things. Not all the good farming methods are used within the line fences on your farm.

Minard's Liniment Cures Dandruff.

KEEP CHILDREN WELL DURING HOT WEATHER

Every mother knows how fatal the hot summer months are to small children. Cholera infantum, diarrhoea, dysentry and stomach troubles are rife at this time and often a precious little life is lost after only a few hours illness. The mother who keeps Baby's Own Tablets in the house feels safe. The occasional use of the Tablets prevents stomach and bowel troubles, or if trouble comes suddenly—as it generally does—the Tablets will bring the baby safely through. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

BLAME SPIES FOR CRISIS.

Disaffection Among Russian Troops Due to German Agents.

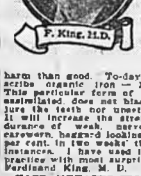
Events of the greatest magnitude are crowding on the heels of each other with such rapidity it is hardly possible to chronicle them, much less to give a reasoned statement. The future of discipline in the regiments of the 11th Army, which let the Austro-Germans through, was due entirely to the agitation of extremists which every day shows more clearly is the work of the bidden hand of German spies. The impudence of this propaganda is almost past belief. In the 11th Army the effect has been to nullify the advantages of the recent advance to Halics. In case the Russian troops composing the advanced forces are retiring west of the Sereth it is grave danger.

As if this is not enough the communique indicates insubordination has made headway in all parts of the army. If this had happened in any other army one might confidently predict its final defeat, but Russian psychology is capable of such extraordinary changes it may yet be possible that the situation may be saved. There is still left some common sense amongst the leaders of the ignorant masses in the riots in Petrograd. If it is used properly it may just enable the government to save the situation, particularly as the provisional government has declared itself a Committee of Public Safety with the support of the vast majority of the Committee of Soldiers' and Workmen's delegates.

Kerensky, supported by Tseritelli, Nakrassoff and Terestchenko, is virtual dictator. His disinterestedness is beyond suspicion, while his fervor, eloquence and driving force are what are necessary to bring Russia through the crisis. The revolution and the State are undoubtedly in danger. Directly the situation was taken in hand with a strong grip the extremists vanished. The question of the reintroduction of the death penalty is already raised. As soon as it can become effective the Committee of Public Safety will have an instrument with which to operate. The masses are too much out of hand to be deterred by anything now.

Minard's Liniment for sale everywhere.

The Contrast.



When the Napoleonic wars were at their height a petition was presented to the emperor asking for the release of some English civilians imprisoned, or, as we should put it now, interned in France. Napoleon at first gave an abrupt refusal. But the secretary, glancing down, noted that the petition was signed by Dr. Jenner, the discoverer of vaccination against smallpox. "Ah," said Napoleon, when he was told this, "we can refuse nothing to that name. Let them go." Can any one, even with stimulants, imagine the kaiser showing such magnanimity? Napoleon was a good deal of a brute—at least he was deemed so by the unsophisticated generations which knew him. But by comparison with Hohenzollern standards Napoleon was a mild, high-minded gentleman.

Clean up the house before fowls go into them in fall.

Dr. Ferdinand King, New York Physician and Medical Author Says:

EVERY WOMAN EVERY MOTHER EVERY DAUGHTER NEEDS IRON AT TIMES

To put strength into her nerves and color into her cheeks.

There can be no beautiful, healthy, rosy-cheeked women without iron. The trouble is the past has been that when women needed iron they generally took preliminary medicine often curroused the stomach and did far more harm than good. To-day doctors prescribe organic iron — Nuxated Iron. This particular form of iron is easily assimilated, does not blacken nor injure the teeth nor upset the stomach. It will increase the strength and endurance of weak, nervous, irritable, careworn, haggard looking women 100 per cent. in two weeks' time in many instances. I have used it in my own practice with most surprising results.—Ferdinand King, M. D.

NOTE: NUXATED IRON recommended above by Dr. Ferdinand King can be obtained from any good druggist, with an absolute guarantee of success or money refunded. It is dispensed by all good druggists.

MY OWN LAND.

Thou beautiful for sunset skies,
For spacious lake and plain;
For mountains where the night is deep,
And fields of amber grain.
O Canada—my own land—
Rise with the morning sea,
Acclaim thy right to Freedom's might—
Strong and sufficient be.

Thou beautiful for comradeship
When move the pilgrim feet,
Where tattered wigwams once were spread,
With star-hung roof to greet.
O Canada—my own land—
Thy mighty chorus sing—
The soul of Empire none can stay.
God bless our noble King.

Thou beautiful for heroes brave,
With firm and valiant tread;
Who fear no unseen threat, nor pain,
And naught of death do dread,
O Canada—my own land—
I've bound my soul to thee.
God shed His grace on our loved race,
From sea too farthest sea.
From sea to farthest sea.
—Charlotte Carson-Talcott.

Ontario this year will have the biggest oat crop in the history of the province, according to Dr. A. C. Creelman, Commissioner of Agriculture for that province. "We will have 125 million bushels as compared to the average crop of 100 millions."

St. Joseph, Levis, July 16, 1903.
Minard's Liniment Co., Limited.
Gentlemen,—I was badly kicked by my horse last May, and after using several preparations on my leg nothing would do. My leg was black as ink. I was laid up in bed for a fortnight and could not walk. After using three bottles of your MINARD'S LINIMENT I was perfectly cured, so that I could start on the road.
JOS. DUBES,
Commercial Traveller.

Four things a man must learn to do
If he would make his record true:
To think without confusion clearly;
To love his fellow man sincerely;
To act from honest motives purely;
To trust in God and heaven securely.
—Van Dyke.

Minard's Liniment Relieves Neuralgia.

If we would live up to our own ideals instead of attempting to find out what the other fellow's ideals are, we would miss lots of trying experiences, for you are in your small corner and I in mine. You can not wear my coat nor I yours; we are separate individuals and must live our own lives in our own way, not in the other fellow's way.

PAIN? NOT A BIT!
LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house.

MADE IN CANADA

Used for making hard and soft soap, for softening water, for cleaning, disinfecting and for over 500 other purposes.

The King as a Clubman

The King is using the Marlborough Club a good deal when in London these days. It has the advantage of securing for him the same privilege of non-interference as belongs to the ordinary clubman. That is to say that no special notice is taken of his visits. When he wants to talk to fellow-members he does so; when he prefers to sit quiet and listen to any talk that is going on, he can do so. The Marlborough is one of the few places where the Sovereign can forget his sovereignty.

MONEY ORDERS

Pay your out of town accounts by Dominion Express Money Orders. Five dollars costs three cents.

What we have always seen done in one way we are apt to imagine there was but that one way.—Bentley.

Minard's Liniment Cures Burns, Etc.

The Paris sewers are the largest and most complete in the world.

CANCER, TUMORS, LUMPS, ETC., internal and external, cured without pain by our home treatment. Write us before too late. Dr. Bellman Medical Co., Limited, Collingwood, Ont.

The Soul of a Piano is the Action. Insist on the "OTTO HIGEL" PIANO ACTION

It's wonderful how quickly a hot bath with Cuticura Soap followed by a gentle anointing with Cuticura Ointment relieves itching, burning eczemas, rashes and chafings, permits sleep for infant and rest for mother, and points to speedy healment in most cases which it seems nothing would do any good. This is only one of the many things Cuticura does for the skin when used for every day toilet purposes.

Sample Each Free by Mail. Address postcard: "Cuticura, Dept. N, Boston, U.S.A." Sold throughout the world.

MRS. KIESO SICK SEVEN MONTHS

Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Aurora, Ill.—"For seven long months I suffered from a female trouble, with severe pains in my back and sides until I became so weak I could hardly walk from chair to chair, and got so nervous I would jump at the slightest noise. I was entirely unfit to do my housework, I was giving up hope of ever being well, when my sister asked me to try Lydia E. Pinkham's Vegetable Compound. I took six bottles and today I am a healthy woman able to do my own housework. I wish every suffering woman would try Lydia E. Pinkham's Vegetable Compound, and find out for themselves how good it is."—Mrs. Carl A. Kieso, 630 North Ave., Aurora, Ill.

The great number of unsolicited testimonials on file at the Pinkham Laboratory, many of which are from time to time published by permission, are proof of the value of Lydia E. Pinkham's Vegetable Compound, in the treatment of female ills.

Every ailing woman in Canada is cordially invited to write to the Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass., for special advice. It is free, will bring you health and may save your life.

The Paisley Advocate

PAISLEY, SEPT. 19th, 1917

LOCAL AND DISTRICT NEWS

Now for the Fair

The directors have done everything possible to promote the Paisley Fall Fair for 1917, and now it is up to the people of the district to do their bit in providing a good exhibit and turning out on show day. Get into the show game!

To The Woods For Fuel

To meet the fuel shortage, Messrs Jas Hope and Wm Sparrow bought a piece of bush from Mr Jas McRae, 12th Bruce, and have started to cut their winter's supply of wood. Although these men are been off the farm for some time, they now a good "spell" in the wood line when they see it, and know how to get out of the bush.

A Prize-winning Driver

Those who have been admiring Mr Robt Fullerton's new black driver perhaps were not aware that the steed is not a top notcher. At Hanover Fair last week it won first as single roadster, and having also captured the red ticket in 1916, is carried off a silver trophy this year which was offered for the horse beating its class two years in succession. Mr Fullerton will compete at other fairs in the district

—Best of Music at Paisley Fair, by Hanover Brass Band.

Appointed to Exemption Tribunals

Mr S Ballachey is named by Judge Klein to sit on the tribunal at Paisley under the Military Service Act. Mr Frank Reaume is appointed at Walkerton, and Warden Izard at Port Elgin. Judge Klein also forwards the name of one or two men from each locality from whom the Minister of Justice can choose one in case the first man appointed becomes incapacitated. The other member of each board is to be selected in a few days by the Ottawa Commission, and either the young men subject to call for class 1 may come forward for examination and if not desirous of going into army service may make their application for exemption

Poy Lee Leaving Town

There is no business in the small towns that has been hit harder by the war than that of the laundrymen. Their trade has fallen off to such an extent, owing chiefly to the absence of the young men in the army, that one cannot any longer make a living in a town of less than 3000 population. The result is that Paisley will be without a laundry establishment after this week. Poy Lee goes to Wingham where he has bought a business and building. Poy is not only an excellent workman, but has been an honest, respectable and clean-living citizen for about twenty years, and his removal is regretted on all sides. His son Wee Lee, who has been in Southampton, goes with him to Wingham.

—Grand Concert on Fair Night.

Business Change at Cargill

C. W. Keeling, who has been a resident of Cargill for 37 years, and a general merchant in that village for many years, has sold his stock and good will to Hunwicks and Wittick, of Mildmay. The post office, telephone and express offices are included in the deal. Mr and Mrs Keeling, who are well-known residents of Bruce, are moving to California for the fall and winter and they may reside permanently in that state which has such a salubrious climate. Mr Keeling has not been in good health for some time. Their son Lieut. Lorne Keeling is with the Divisional Signallers in Siberia and is soon to proceed overseas. He was assistant in Paisley Continuation School staff three years ago. Miss Keeling is a member of the teaching staff in Oakville public school.

Grounds for Exemption

Exemption from service under the military service act, may be claimed on eight seperate grounds. The forms of application, which will be available at postoffices throughout the Dominion in the course of a few days, make this clear. The grounds are: 1. The importance of continuing employment in habitual occupation. 2. Importance of continuing employment for which he is specially qualified. 3. Importance of continuing education or training. 4 Serious hardship owing to exceptional financial obligations. 5. Serious hardships owing to exceptional domestic position. 7. Ill-health or infirmity. 8 Adherence to religious denomination, tet which the articles of faith forbid combatant service.

Heavy Cattle Shipment

The past week has been a notable one in live stock annals of this district, the largest shipment ever sent out by a single dealer from Paisley station being made by Mr Andrew Cormack, who sold some 300 head to the Swift Canadian Company. Many of these were choice steers, one of which is specially worth mentioning, being a big rangy fellow that tipped the scales at 1840 lbs. This ox was bought by Mr Cormack from Mr Harry Sergison when a calf. Mr Cormack has for many years been one of the most extensive graziers and dealers in this district, and the activity with which he has pursued this class of trade has been amply rewarded by a healthy and profitable development. He has always also endeavored to induce others to raise more and better stock. The County of Bruce is not surpassed for grazing purposes, and that our farmers are alive to the possibilities of the beef and dairy cattle business is evidenced by the premiums which they give cattle over other branches of farm production. The market never has been so strong as at present, and on account of the world-wide scarcity of cattle there is little doubt that prices will be relatively higher than any other farm products for years to come. This fact alone, aside from patriotism, should induce many farmers to plan for increasing live stock production. One hindrance is the lack of sufficient breeding stock of proper type and quality. Proper care in selection of breeding animals and the weeding out of inferior ones will raise the standard of the herds and produce the highest grade of butcher stle which will give the best market returns. Conditions were never better in Ishkemlin than during this summer, so ial large numbers of cattle are now ady and being shipped weekly to mar-

Change of Mail Carriers

Tenders having been called for delivery on rural routes No 2 and 4 resulted in a change of contractors. Mr E C Wilkinson was the successful tenderer on the No. 2 route on 10th and 12th of Bruce, while Mr D Dunlop's tender was accepted on the No 2 or Greenock route.

Slams the Bowlers

In a tipping war-time speech at the patriotic social on Mr Julius Holm's lawn in front on Friday evening last, Mr John Rowland, Walkerton's warm weather orator, gave the bowlers a passing slam when he said that while he was pleased to say that there was a bunch of men in Walkerton that had gone out to help the farmers get in the grain, yet he was sorry also to say that there were between 250 and 260 nine bottled men rolling polished wooden balls up and down the green night and day in town that week, and to show what an enthusiastic bowler he was the speaker said he was thinking for a nice it would be if an aeroplane could be happened along and dropped a bomb that would have scattered them off to the lonest fields. Whether many will agree with Sir Rowland or not regarding the bowlers all will admit that he has a peculiar way of telling them that they are jolly good fellows.—Herald and Times.

No Nightwatchman Appointed

The resignation of Nightwatchman Wilkins went into effect on Sept 15th, and since then there is no one on the nocturnal beats, as a successor has not been appointed. The council, as has been the case at other times when the question came up in this way, are disposed to do without a nightwatch, unless the citizens insist upon having one. It is a matter in which the insurance companies have a good deal to say, and they are yet to be heard from. The average citizen is not much concerned as to whether this particular "protection" is provided by the municipal fathers, but there are others with large property interests who feel that, because of the demand of the insurance companies, that a nightwatchman should stand guard throughout the night hours. The item of fire protection is growing larger in the expense account of the town, owing to the increased cost of fuel, etc., and the council figures out that the hiring of a nightwatchman should be dispensed with if possible. Thus the matter stands at present.

Died at Courtright

Mrs T Kerr was called to Courtright on Tuesday of last week by the serious illness of her sister, Mrs Jas Kerr, and on Saturday the sad news was received that Mrs Kerr had passed away. Pneumonia was the cause of death. Mrs Kerr was born 61 years ago in Greenock township, the third daughter of Mr and Mrs Richard Jolliffe, and in the seventies was one of Paisley's most popular young ladies. She was married in 1879 to James Kerr, and the early years of their married life were spent in Paisley, subsequently moving to Greenbush and then to Courtright, where Mr Kerr has been in business for a number of years. Mrs Kerr was possessed of a fine personality and classed with the good women of the community, a member of the Anglican church, always active in missionary and ladies' aid societies. Since the war broke out she had been most zealous in patriotic and Red Cross work, and at the time of her death was president of the local branch of the Red Cross Society. But in her own home circle Mrs Kerr will be most sincerely mourned, as she was greatly loved and revered by her husband and five daughters, two of whom are married. Mrs Geo Daniels, Bloss road north, and Mrs Thos Kerr of Paisley, are sisters, and Mr John Jolliffe, of Rockwood, is the only brother.

Township Cases in Division Court

At Division Court in Tara on Tuesday of last week the case of C J Henry against the Tp of Elderslie was disposed of. The township had been getting gravel from the pit on Henry's farm and last July when the ground was very wet sent teams to the pit to haul gravel. The main road on the farm leading to the pit was in bad condition and the teams deviated from the road and made several new tracks which Henry claimed damaged the grass. Henry pastured cattle on the farm and was at the expense of keeping a man at the gate while the teams were drawing the gravel and he also claimed allowance for this work. Several witnesses were called who swore that the ground was badly cut up. Henry asked damages to the amount of $60.00. The judge gave judgment in favour of Henry for $17 to and this included the cost of the gravel to pay also cost of the Court.

Another case was that of Thos Best vs Arran Tp. This was an appeal case, the former having appealed against the decision of magistrate McDonald, when on August 13th he fined Best $5 and costs for allowing noxious weeds to grow on his farm on Con 9, Arran. Mr C E Stark who appeared for Best, claimed that the Weed Inspector did not give Best the proper notice. The appeal was purely on technical grounds and the Judge confirmed the Magistrate's decision, only that he disallowed the Weed Inspector's fees of $5.—Leader.

A GLORIOUS ARMY TO JOIN

Among the millions of armed men who are engaged in this war there are no troops of which Canada's soldiers are not the peers. At Lens as at other points on the Western front the finest regiments of Germany's mighty army are pitted against the men from Canada and are getting the worst of it. The picked soldiers of the Prussian Guard and the stubborn veterans of the Bavarian army meet more than their match when they encounter an equal number of our expeditionary force. The Canadians took Brenoy and held it, and it was only after their places had been taken by other troops that the important point was lost. It is a glorious army that the men of our forthcoming selective drafts are to be recruited into. Those new soldiers will be admitted to a fraternity of heroes, and we have no doubt they will prove worthy of the fellowship. It was not to overcome cowardice that conscription was resorted to, but to enlist a hundred thousand of those who could not otherwise be made to feel the seriousness of the war and their personal responsibility for the country's defence. They needed a peremptory message to come to the help of the men who volunteered, and we believe they will willingly respond to the voice of the State's authority. The Canadian conscripts, like the British conscripts, will stand the test of war should they be subjected to it.

—School Children are preparing for the competitions at Paisley Fair.

TWO LONG YEARS HE SUFFERED

"Fruit-a-tives" Made Him Feel As If Walking On Air

ORILLIA, ONT., Nov. 28th. 1914.

"For over two years, I was troubled with *Constipation, Drowsiness, Lack of Appetite and Headaches*. One day I saw your sign which read "Fruit-a-tives" make you feel like walking on air." This appealed to me, so I decided to try a box. In a very short time, I began to feel better, and *now I feel fine*. I have a good appetite, relish everything I eat, and the Headaches are gone entirely. I recommend this *pleasant fruit medicine* to all my friends".

DAN McLEAN.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

H. PFAFF & SON

THE COAL MONOPOLY

There is neither free nor fair trade in fuel in the borders of the U.S. An Ironclad monopoly prevents the private citizen from obtaining the product of the coal mine at prices, or upon terms, other than those fixed by questionable combinations. An incident that recently came to light in a certain American city illustrates this point. Certain families learning that coal for which they were charged $11 per ton could be purchased at the mine, according to published reports, at $4 50 a ton, formed a pool for the purpose of paying for a carload of the commodity. The money to defray all cost was deposited to the credit of the mining company, but that corporation, instead of filling the order sent back word that it "could only through regular channels," which meant virtually that the mining company was acknowledging its participation in a conspiracy to restrain trade. Why, in such circumstances, should the people hesitate to compel the taking over of the coal mines by their Government?—Christian Science Monitor.

—Boys and girls, get into the Bankers' Competitions at Paisley Fair.

BARN GASES AND FIRES

The number of barnes struck by lightning during harvest time, after hay and grain crops have been stored in the mows as compared with those struck earlier in the summer, when barns are empty, seems to indicate that the new crop must in some way be responsible for attracting the electric current. The theory is propounded by experts that the gases from newly gathered hay or grain stored in barns rises to the roof of the barn and in some way acts as an attraction to the lightning. Elmer Lick says that if farmers would leave the doors of their barns open to permit a circulation of air, lightning would pass them by. He says that in Lincoln County farmers see to it that barn doors are left open during a thunder storm. Farmers will rise in the night, during a storm, and go out to open the barn doors.—Whitby Gazette.

Is the Church Dying?

St Marys Argus

The First Presbyterian Church and Knox Church have between them about one thousand members on the roll. They are both holding union services since the first of July. Last Sunday night only five weeks after the close of the Hanley-Fisher meetings, the attendance at the union service was about forty. What conclusion is one driven to? Attention is not drawn to this fact in captious criticism, but in serious and solemn earnestness. What is wrong? Are the people losing their grip of the great fundamental truth of the existence of a God and of human responsibility? Are churches really necessary and is church attendance really important? Have the churches failed beyond recall? What are we going to do about it?

CARD OF THANKS

The undersigned desires to thank neighbors and friends for the great kindness shown his late wife at all times during her long illness and the sympathy expressed since her death. A McPHEE.

D. SPARROW, Church St.

Why "Anuric" is an INSURANCE Against Sudden Death.

Before an Insurance Company will take a risk on your life the examining physician will test the urine and report whether you are a good risk. When your kidneys get sluggish and clog, you suffer from headache, sick-headdizzy spells, or the twinges and pains of lumbago, rheumatism and gout. The urine is often cloudy, full of sediment; channels often get sore and sleep is disturbed two or three times a night. This is the time you should consult some physician of wide experience—such as Dr. Pierce of the Invalids' Hotel and Surgical Institute, Buffalo, N. Y. Send him 10 cents for sample package of his new discovery, "Anuric." Write him your symptoms and send a sample of urine for test. Experience has taught Dr. Pierce that "Anuric" is the most powerful agent in dissolving uric acid, as hot water melts sugar; besides being absolutely harmless it is endowed with other properties, for it preserves the kidneys in a healthy condition by thoroughly cleansing them. Being so many times more active than lithia, it clears the heart valves of any sandy substance which may clog them and checks the degeneration of the blood-vessels, as well as regulating blood pressure. "Anuric" is a regular insurance and life-saver for all big meat eaters and those who deposit lime-salts on their joints. Ask the druggist for "Anuric" put up by Dr. Pierce, in 50-cent packages.

STRENGTH AND BEAUTY

Come with Dr. Pierce's Golden Medical Discovery. This is a blood cleanser and alterative that starts the liver and stomach into vigorous action. It thus assists the body to manufacture rich red blood which feeds the heart, nerves, brain and organs of the body. The organs work smoothly like machinery running in oil. You feel clean, strong and strenuous instead of tired, weak and faint.

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Office help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places and they need training.

Owen Sound Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circulars free on appli ation.

C. A. FLEMING, F.C.A., Prin.

STEELE'S For Horse Collars and Sweat Pads, Rubber Lap Rugs, Whips, Auto Plush Rugs, Bickmore's Gall Cure, Star Harness Soap, &c

Our Harness includes quality, durability, appearance and high-class workmanship found in no other makes of Harness.

Baggage Trunks, Suit Cases, Club Bags, Grips. Good assortment and close prices.

For Sale

NEW two-storied stucco house. Bath, hot and cold water, and other conveniences. Also new good spring coal in good position. Will be sold at cost. Apply to T. H. GEORGE

An Agricultural Crime

It is just three years ago since the great war broke out. Canada realized at once the need for her troops overseas . . .

That officialdom did awaken to the fact is evident by the mass of exhortatory literature that has flown farmward ever since. Duplication and reproduction mattered not. Organizations of many kinds, commission, farm bureaus, and the various division of the minutely organized departments of agriculture, were loverishly busy—advising.

What has been done? How have we shown up at the end of the third year in our total returns of the field crops and animal products? Had a kind Providence not showered on us, in 1915, one of the greatest harvest in recent times, even to the extent almost of the miraculous, and have kept up the normal in each succeeding year, where would all our urgent exhortings have been? And what about 1918, the year that will see the world nearest to the starving point since the time of the Ptolemies

Practically there is nothing done inexpacity, bustling from one proclamation to another, 'draws nothing big but its salary. . . .

Talk is cheap, and plans are as numerous as the sands, but it takes man power, horse power, up-to-date machinery, mechanical power, soil fertility, good seasons and markets, that are not here to-day and gone to-morrow, to greatly increase the nation's food supply. Foremost of all, what is wanted is leadership in this agricultural wilderness. Something ought to be done in a big statesman like way to markedly increase the production of the chief food crops, such as wheat, oats, rye and beans. And be done now.

It is criminal to expect these extra supplies to come out of a soil that needs the fertility of phosphates and potash in many cases; out of a depleted manpower on the farm, out of a low equipment of mechanical power, with the ever hovering bogey of uncertain prices before the producer, without the active intervention of the state in the controlling of transportation, if the marshalling of power machinery into the fields, or the turning of skilled labor into the work. A state justifies itself only by serving all its people.

The getting of food supplies is amenable to the laws of cause and effect as is the over-supplying of shells. We get what we go after—In the right way. So can get the wheat if we want it. Lloyd George is getting it. And that without the farmers standing to lose out. In Canada we have, as every student of agriculture knows, an enormous capacity for production of a variety of human food quality. Millions of acres of the finest fertility out-of-doors are scattered, in big stretches, all over this great country. We very much doubt whether there is a land under heaven that surpasses or even equals its unfailing annual output. For any department not to consider the problem of such importance, as to putting business acumen, and energetic accomplishment at the task is nothing short of criminal. . . .

Surely it is not too late yet for the Dominion Department of Agriculture to shake itself free and to get something done.

Senator Richardson before the Senate Committee urged that the Government do something at once, as it was almost criminal. He believed that with proper study and Government encouragement the production of wheat from the Canadian Northwest could be doubled in three or four years.

Ontario has been doing a little towards getting more land under the plow, by placing a few tractors at those points in the province where there has come a call for them. With 65 at present set up, and saving the situation with the likelihood that there will be a hundred or more at work inside of a few weeks, a few thousand acres of fall plowing may be done that otherwise would not be. The unusual conditions that have confronted us this year whereby the haying and the harvest, both delayed, have been carried over into September, the usual amount of fall plowing is not going to be done. The acreage of fall wheat, will also likely be no more than normal, while a poorly plowed field or an unplowed stubble, is likely to lessen the next year's yield considerably. This is the situation all over the East. In the West, while there has been a fair amount of summer fallowing done, there has not been any concerted action to bring new areas under the breaking plow.

It is useless to say that more could not be done. Leaders do things. If we had a wide awake leader of the Agricultural Department at Ottawa the whole plan of crop production could have been drafted long ago and all the forces mobilized to that end, in a way that would have amazed the Empire. He could have carried the tractor into every part of the country. He could have had tractor plants producing the engines just as the munition plants are turning out a surplus of shells. Engineering schools for teaching their operating would have been provided at every experiment station and agricultural college. Tractioners would have thus been ready for the fields in plenty and the main difficulties of the operating of the machines overcome.

Greater use could be made of the few tractors we have in the country. Many are lying idle half the time. Others are resting in fence corners for the lack of competent operators. Let the Government establish training schools, get the men out riding these iron horses to food victories and assist the farmers in their call for help. Hundreds of farmers want to buy light tractors. They find the price too high. Why not pay the duty for them? Thousands of acres have called for the power plows and the answer is not forthcoming. Why is it? What are our exhorters waiting for? Why don't they do it?

Some advocate a bounty on the production of neat crop. Such a thing might be feasible if the bounty were high enough to cover the labor costs of the transaction. Others say the only way to get the maximum of returns is to guarantee a minimum price for the wheat and it will be forthcoming. With this feature, we confess that we are much in sympathy. Assure the farmers that they will get, say, $2 a bushel for the next crop and self interest will soon to it, as in the case of the shell makers and the packing concerns, that the spout is kept flowing to Europe.

Munition workers are being let out by the thousands in Canada. These could be induced by a good wage paid by the Government to go into traction plowing now. It would not be impossible to put in a million acres of fall wheat in Ontario and another million in Saskatchewan and Alberta. Quebec and the Maritimes could increase their acreage. Following this, the acreage of fall rye, a splendid and sure crop, could be largely increased in October. While the preparation by fall plowing of all farm lands in Ontario as never before would ensure, as nothing else, a bumper yield in 1918.

Moreover, our Eastern soils need phosphates. These could be rushed into all the District Representative centres and distributed to farmers sowing wheat this fall. The charges could thus be reduced considerably and a better crop assured.

With the Federal Department of Agriculture alive to this work, it could infuse into the provincial organization the needed help and inspiration. The harmonious team work of these big organized units, would assure a doubling of Canada's wheat production in every province in a short time. To sleep on is criminal.—Farmer's Magazine.

Paisley Fair, Sept. 25, 26.

—Since the drop in prices for live hogs, flour has also come down one dollar a barrel. The cost of each is still so high, however, that the Food Controller need have little worry about most of people wasting or overfeeding on either pork products or baking. – In the majority of homes it's not the statutory meatless days that are the subject of greatest consideration, but the days when the family purse will afford the purchase of a nice cut.

September Rod and Gun is out and shows the usual list of good things for readers and lovers of out of doors. This issue is a good one to put in the late summer vacationist's knap-sack. Such stories as "The Hide Builders," Bonnycastle Dale; "Two Weeks without a Care," T. N. Hewitt; "Duck Hunting on the Small Slough," George Belton; "A Cruise in the Sloop Katharine," Amelia Saunders; "The Time, The Place, the Game," Archie McKishnie; and "Fishing in Little Streams," Reginald Gourley, make the vacationist glad he went and the stay-at-home man sorry he can't go and maybe determined to get away into the north woods when the hunting season comes on. Among the special departments, that devoted to dog men's interest, The Kennel, contains this month a full report of the recent Regina Dog Show. Rod and Gun is Published by W. J. Taylor, Ltd. Woodstock, Ont.

—Baron Rhonda, the British Food Controller, visited Canada a year or more ago, and knows Canadian conditions. "We look to the resources of Canada and to the indomitable energy of Canadians for an answer that will shatter Germany's threat of starvation," said Lord Rhonda in a cabled message to the Canadian Food Controller by way of the Canadian Government. "The certainty that we can rely on your whole-hearted co-operation not only in utilizing every ounce of national energy to increase production, but in equitable adjustment of prices, gives me the greatest encouragement."

—Britain and her Allies need 160,000,000 bushels of wheat more than there is available for export from the two countries to whom they look for supplies—Canada and the United States—according to a statement by Hon. W. J. Hanna, Canada's Food Controller, and this is calculated on the decreased scale of consumption already practiced in Great Britain. To make up this shortage, the people of Canada and the United States are organizing to substitute other foods and reduce consumption of flour foods by one-sixth. Household scientists say it can be done without loss of health or comfort.

Overland

Big, Powerful Real Family Cars

We know through years of experience that a thirty-five horsepower motor placed in a car of proper weight, makes an ideal driving combination for all but the most radical speed demons.

Year after year for many years the demand for the thirty-five horsepower Overland models has increased in Canada and this year the sales of the Model Eighty-Five have eclipsed all previous records.

You can have your choice in this Eighty-Five Model of either a four or a six cylinder motor. The wheelbase of the Four is 112 inches—that of the Six 116 inches.

Both are comfortable easy riding cars. Each represents what we believe to be the best motor car value for the money in Canada.

Come in and see them. Ask for a demonstration. We are at your service.

If you prefer a closed car, we have a wide variety of types to choose from in Light Fours, Model 85-Fours, Light Sixes, Willys Sixes and Willys-Knights

Plans Went Wrong

TRICK OF A SPECTACULAR SPECULATOR FOILED BY AN HONEST MAN

By H. M. EGBERT.

"The Alpaca Oil company, sir, is the biggest thing in Texas to-day," said "Colonel" Ware, looking up at Ormsby from his plate of asparagus. "And what is more, our friends believe in us and are doing all they can to help us—most of them."

There was no mistaking the challenge in the Colonel's words. Ormsby looked across the table at Mildred and then fell into a brown study.

Ormsby was assistant editor of "The Financial Observer," a staid, accurate, old-fashioned financial paper, with fifty years of undiminished reputation behind it. That was why it was trusted as few financial papers were. Nobody had ever doubted the honesty of the "Observer" or imagined that it was representative of any special interest. During the editor's absence on a prolonged sick leave Ormsby had been in full control. He was only twenty-six, but he had won the editor's and the owner's confidence as being proof against all influence.

But other influences than money may be at work in a man's mind. Mildred Ware and Ormsby were acknowledged lovers. And "Colonel" Ware was a speculator—a spectacular one. He had won and lost half a dozen fortunes. Just now his whole fortune was placed in Alpaca oil. He was not a dishonest man, but it was known that he was not above turning a sharp trick or two. And Ormsby had not yet been able to ascertain whether Alpaca oil was a genuine investment or a colossal fraud. And he had challenged Ormsby to further his interests with the stock.

The "Observer" had delayed offering its opinion upon this stock, and in that it had exceeded its customary caution, for Alpaca oil was the sensation of the week. The rush for shares had been phenomenal; it had forced up the stock from 55 to 108 since Monday. People were demanding the "Observer's" opinion. And while Ormsby was pondering it Ware had flung out his ultimatum. The few quietly spoken words meant, in effect, "Boom my stock or relinquish Mildred."

Ormsby knew that Mildred understood the situation. He knew, too, that while she would wait for him for any number of years she would not leave her father to marry without his sanction. And they were anxious to be married. They had loved each other for two whole years.

Ormsby kissed her good-bye and went down to his office with a heavy heart. That editorial must be written soon.

"There's a man waiting to see you, sir," said the office boy as he entered.

"Show him in," said Ormsby, and a moment later he was looking into the face of his visitor. The man was of a type that Ormsby knew well and instinctively distrusted; the shady, shabby adventurer, who hangs round newspaper offices, offering surprising

"Then Look at That."

information for a small sum. Ormsby was not surprised at the man's opening words.

"The 'Observer' hasn't touched on Alpaca oil yet, I notice," he said.

"Well, sir?"

"It's a swindle, isn't it?"

"If it were a swindle the 'Observer would say so."

"Would it be worth a hundred to me if I prove to you that it's a swindle?" sneered the man.

"No, sir," said Ormsby. "The 'Observer' does not pay for information from outside. I wish you good-evening."

The fellow leered at him and sat down at the table. He pulled a shabby pocketbook from his coat.

"What would you say, young man, if I was to prove that for nothing?" he asked. "Old Ware did me a bad turn once and I'd be glad enough to get even with him."

"I should say that your facts were probably malicious and inaccurate," said Ormsby.

"Then look at that," said the man, handing Ormsby a photograph. "Taken three days ago by me, at the risk of my life. They've put armed guards round the oil-hole since the flow dwindled down."

Ormsby started. He knew the photograph of the oil gusher, as it hung framed in the colonel's office, with the huge spout of oil playing over the countryside. What he saw was a tiny oozing dribble, and an armed man pacing beside it, rifle in hand.

"Looks good, don't it?" sneered the man. "Read these."

The most cursory survey of the papers and letters flung down on the table showed Ormsby that his suspicions were more than justified. A lengthy perusal convinced him that the man's charges were entirely true. A letter signed with Ware's name, and in his inimitable writing, disclosed the fact that the whole scheme was a trick on a confiding public, to rake in thousands. And when Ormsby put down the papers and stared haggardly at the fellow he knew that his castle in the air lay ruined upon the ground.

Ten minutes later he had begun the most impassioned article that he had ever written. He denounced Alpaca oil as a fraud, he shower up Colonel Ware as an unmitigated scoundrel. Each word might have been written with his heart's blood, for each seemed to place a mile between Mildred and himself. When he had ended they might have been separated by illimitable space.

He finished the editorial, sent a proof by the boy to Manton, instructing his subordinate to have the article set as soon as Manton's formal acknowledgement came over the wire, and hastened home. He fell asleep after hours of agonized wakefulness.

When he awoke he sat up in bed, wondering why his head ached and all his life seemed hopeless. Then he began to remember. The news must have become general property long ago. Doubtless a panic reigned on the Street. He pictured chaos in a hundred homes, the colonel's fury, Mildred's tears. Then, putting on his dressing gown, he telephoned his office.

"Hello, Blake," he called to his assistant, "what price is Alpaca oil this morning?"

"It's being quoted at 119," answered Blake without hesitation.

"What!" shouted Ormsby. "What about that editorial in the paper?"

"There's nothing about Alpaca oil on our editorial page," said Blake.

"Then those scoundrels have omitted to print it," shouted Ormsby, beside himself.

"Just a minute, please," said the man at the other end. "Here's Mr. Manton. He wants to talk to you."

A moment later the owner's voice came over the wires.

"Hello, Ormsby," he said. "Say, what in thunder did you mean by that piece about Alpaca oil? I caught it just as I was going to bed and stopped it just in time. Why, that's the biggest proposition that's listed to-day. It'll touch 150 before the week is out."

"You must be mistaken, Mr. Manton," said Ormsby. "I have positive information that—but wait! I'll be down in an hour. Can you wait for me?"

"Come up to my house," said Manton curtly, and hung up the receiver.

Ormsby, amazing and indignant, dressed himself hurriedly and snatched a few mouthfuls of breakfast; then he took a street car up to Manton's house at Carrington Park, a fashionable residential district. He arrived fuming with indignation. He was shown into Manton's study—to find not only Manton but Colonel Ware and Mildred. The colonel was looking sour and Mildred despondent.

"Ah, Mrs. Ormsby," said Manton, "you nearly got us into a fine scrape. The 'Observer' has never made so big a break as you seemed bent upon making for us last night. Lord, if I hadn't caught that editorial of yours in time! I placed such trust in you, Ormsby, that I've passed everything you've written automatically for weeks. But I happen to be interested in Alpaca oil and—"

"Then I'll write you my resignation, sir," said Ormsby.

"Well, it isn't as bad as that," grumbled the owner. "But—"

Colonel Ware took two or three strides up and down the room. He looked at Mildred, whose lips were trembling; then all at once he stopped and thumped his fist down on the table.

"Manton," he said, "I'm pretty tough, but I can't stand for this. I'm the culprit. I meant to tell you, but I didn't know how you'd take it. That boy isn't to blame."

"What do you mean, Colonel?" inquired Manton stiffly.

"You remember George—shabby little fellow with a lisp who used to spy on the Knack properties? Well, Manton, it may not have been quite straight, but I meant to let you fellows in on it. I tried to work Mr. Ormsby to give us a fair write-up. When he wouldn't I sent George to him with some fake papers and photographs in hopes he'd write just such an article as he did. If that had got into the paper our stock would have been down to 40—and I'd sold half my holdings to buy it in then. Next week, when it was found that Alpaca oil was absolutely sound, it would have jumped to 100 again and I'd have cleared $75,000. And as it is I've skinned out about $20,000 to the bad. And you can thank your stars, Manton, that Alpaca oil is sound, or that article would have blown us all skyhigh."

"Then the mine is good?" gasped Ormsby.

"None better in Texas, sir," said the colonel shortly. "And since you've skinned me out of $20,000 with your confounded honesty I guess you'd better take care of Mildred for me. I don't think I'm a fit father for her, somehow."

About the House

DOMESTIC SCIENCE AT HOME

Ninth Lesson—The Process of Digestion

The growth of the human body is likened to that of a tree. In order that we may know just what foods are necessary for us, we will begin a study of digestion.

Chewing or mastication of food is the first act in the process of digestion; for this operation one should have good teeth. If the teeth are decayed or gone the food will not be thoroughly chewed; if this is the case, then a large portion of saliva which the mouth secretes will be lost. The adult with good teeth will secrete about one quart of saliva a day.

The purpose of the saliva is twofold: first, it lubricates and softens the food so that it may easily be swallowed. Second, the saliva brings about a chemical change in the starch contained in the food, which, when thoroughly chewed or broken up, is transformed into a convert sugar called glucose. The food is then swallowed, and, on entering the stomach, this process continues from twenty to thirty minutes. If the food is carelessly chewed or hastily swallowed, this action ceases as soon as the food reaches the stomach. Starchy indigestion is the result.

Food Adjuncts

Food adjuncts cannot be termed foods because they do not furnish nutrition, but rather act as a stimulant to the digestive organs and thus become an aid to the digestion of true food.

Food adjuncts are classified as beverages and condiments.

Beverages.—The primary service of beverages is to quench the thirst. Thirst is nature's call for water. Water constitutes the fifth class of food principles. It does not produce heat, and is therefore incombustible, but because it has a great many uses in the body it is an absolute necessity. Water is the best known of all solvents. It acts as a carrier to all parts of the body and assists in regulating the temperature of the body.

Coffee is the berry or seed of a tropical tree that bears fruit similar to our common cherry. It acts as a stimulant to the nerves, relieves fatigue. The flavor is extracted from the berry after it has been roasted and ground; then it is boiled, percolated or steamed as in drip coffee.

Tea is valued for its theine, which is a pleasant stimulating constituent of tea. It also contains tannin, which, if allowed to develop by permitting the tea to stand considerable time after brewing, is injurious to the stomach. The use of fresh boiling water when making tea is a necessity. Do not boil tea.

Chocolate and cocoa have a recognized food value, whether they are eaten or made into a drink. Cocoa is insoluble, but when added to boiling water the starch thickens sufficiently to hold the particles in solution.

Condiments.—Flavoring extracts, seeds, herbs, spices and sauces are called condiments. They are used to give food a pleasing flavor and should be partaken of moderately. Salt is classed as a condiment as well as a food. Persons living in hot climates soon learn to like pungent hot spices, which become necessary articles of diet. They act directly upon the liver. Vinegar is the fermented juice of apples, fruit or sour wine.

Catsup and Pickles

Great care must be taken if you wish to avoid muddy, soggy pickles, when starchy foods are chewed well, the starches have been partly acted upon by the saliva in the mouth, and then, when they are transformed into the glucose state, the action is continued by acid fluids in the stomach.

The remainder of the food is converted into a thick fluid, consisting of solids and undigested particles, suspended in a yellowish liquid called chyme. This is the food now prepared by the saliva and stomach ferments for further digestion in the intestinal canal.

In the intestines this liquid food becomes mixed with the bile, pancreatic fluid and the ferments from the various intestinal glands. Each of these fluids has a part to perform. The bile emulcifies the fats and prevents decomposition. The pancreatic fluids complete the digestion of fats.

The intestinal fluids finish the process of digestion for the albumens and sugars.

Digestion is a complex process, where any interference from wrong or improperly cooked foods, combined with careless mastication, is very liable to produce serious results.

watery catsup, etc. Do not use aluminum, copper or tinware in making catsup or pickling, owing to the action of the acid in the vinegar.

Cucumber Catsup.—Six cucumbers, four large onions, one cupful of salt. Peel the onions and cucumbers and then cut in thin slices. Cover with salt and then stand aside for twenty-four hours. Chop fine and place in a porcelain preserving kettle. Add one pint of good cider vinegar and then boil for thirty minutes. Rub through a fine sieve and then add: one tablespoonful of cayenne pepper, one tablespoonful of mustard, one teaspoonful of allspice, one teaspoonful of cinnamon. Boil gently for ten minutes, then fill into sterilized bottles and cork. Seal by dipping in parowax. Store in a cool, dry place.

Sweet Pickles.—Peaches, pears and plums may be used. Peel and remove all the blemishes and then cut into small pieces. To three pounds of mixed and prepared fruit, weighed after cutting, add: three cupfuls of brown sugar, two cupfuls of best cider vinegar, one cupful of seeded raisins. Bring to a boil and then stand aside for twenty-four hours. Repeat this and then on the third day, add: one tablespoonful of cinnamon, one tablespoonful of allspice, one-half tablespoonful of cloves, one-half tablespoonful of ginger one-half tablespoonful of mace. Tie the spices in a piece of cheesecloth and cook until thick. Then store in glasses and jars. Seal in the usual manner.

Cabbage Catsup.—One large head of cabbage, three large onions, four green peppers, four large cucumbers. Chop very fine and cover well with salt. Stand aside over night. In the morning drain well and add enough good cider vinegar to cover. Place in a porcelain preserving kettle and cook until soft enough to rub through a fine sieve, then add: One-fourth pound of mustard, one tablespoonful of cinnamon, one tablespoonful of allspice, one tablespoonful of cloves, one tablespoonful of mace, one tablespoonful of celery seed, one tablespoonful of cayenne pepper, one cupful of brown sugar. Stir well and then cook gently for one-half hour. Bottle into sterilized bottles and cork. Seal by dipping the tops of the bottles in melted parowax. Store in a cool dry place.

A BATTLE OF 100 AEROPLANES

TURNING THE HEAVENS INTO A VERITABLE HELL.

Hairbreadth Escapes in the Aerial Service Are Matters of Everyday Occurrence.

An officer of the Royal Canadian Flying Corps tells the following story:—

There were one hundred of us—fifty on a side—but we turned the heavens into a hell, up in the air there, more terrible than ten thousand devils could have made running rampant in the pit.

The sky blazed and crackled with bursting time bombs, and the machine guns spitted out their steel venom, while underneath us hung what seemed like a net of fire, where shells from the Archies, vainly trying to reach us, were bursting.

We had gone out early in the morning, fifty of us, from the Royal Canadian Flying Corps barracks, back of the lines, when the sun was low and my courage lower, to bomb the Prussian trenches before the infantry should attack.

Our machines were stretched out across a flat tableland. Here and there in little groups the pilots were receiving instructions from their commander and consulting maps and photographs.

At last we all climbed into our machines. All along the line engines began to roar and sputter. Here was a 300 h.p. Rolls-Royce, with a mighty, throbbing voice; over there a $10,000 Larona rotary engine vying with the others in making a noise. Then there were the little fellows, humming and spitting, the "vipers" or "mauggots," as they are known in the service.

At last the squadron commander took his place in his machine and rose with a whirr. The rest of us rose and circled round, getting our formation.

Over No Man's Land.

Crack! At the signal from the commander's pistol we darted forward, going ever higher and higher, while the cheers of the mechanicians and riggers grew fainter.

Across our own trenches we sailed and out over No Man's Land, like a huge, eyeless, pock-scarred earth face staring up at us.

There was another signal from the commander. Down we swooped. The bomb racks rattled as hundreds of bombs were let loose, and a second later came the crackle of their explosions over the heads of the Boches in their trenches.

Lower and lower we flew. We skimmed the trenches and sprayed bullets from our machine guns. The crashing of the weapons drowned the roar of the engines.

I saw ahead of me a column of flame shoot up from one of our machines, and I caught a momentary glance at the pilot's face. It was greenish-ash color. His petrol tank had been hit. I hope the fall killed him and that he did not burn to death.

Away in the distance a number of specks had risen, like vultures scenting the carrion that had already been made. It was a German squadron. The Archies had not bothered us much while we were spraying the Prussian trenches, but now we had that other squadron to take care of. Our orders were to bomb the trenches. We could not spare a bomb or a cartridge from the task of putting the fear of Britain into the hearts of the infantry below before our own "Tommies" should start over the top.

A Parting Message.

I don't know what it was, but suddenly, just after my partner had let go a rack of bombs, there was a terrific explosion just beneath us. My machine leaped upward, twisted, then dropped suddenly. Death himself was trying to wrench the control levers from my grip, but I clung to them madly and we righted. A few more inches and I couldn't have told you about this.

There was no longer any chance to worry about flying position. There were too many things occupying my attention—that line of gray down there that we were trying to erase and the Hoche squadron thrumming down on us.

One drum of our ammunition was already used up. My partner whirled around on his stool—a sort of piano stool, which always made me think of the tuneless, tin-panny instrument back in quarters—grabbed another drum and slammed it into the machine gun. It was to be a parting message for the Prussians, for the commander was just signalling to retire.

My partner lurched forward. He was hit. A thin red stream trickled down his face.

I raced westward, the air whistling through the bullet-holes in the wings of the machine and my partner leaning against the empty bomb rack, silent.

As we sailed over the foremost Prussian trench some Scotch were just leaping into it. The "ladies from hell" the Germans call them because of their kilts.

A Race With Death.

Several machines had landed before I took the ground. Ambulances were dashing back and forth across the flying field.

They lifted my partner out of the aeroplane, but they did not put him into an ambulance. He had answered another recall. I walked to quarters ill—ill at heart, at stomach, at mind. I'll never know a better pal than was Tom.

On the way I managed to help with a machine that had just landed. A big Rolls-Royce it was, and the radiator had been hit by a bit of shrapnel. The pilot and observer were both terribly scalded.

Just by the aerodrome another biplane fluttered down. The observer was dead. The pilot was hit in a dozen places. Somehow he brought the machine in, switched off his engine and stepped forward in his seat, stone dead.

Ten minutes later I was sound asleep. The next day we were at it again.

In battles of this kind it is more or less a matter of good fortune if you escape with your life. Flying ability and trickiness can play but little part. It is in the lone adventure that stunt flying helps.

For Acid Stomachs Use Magnesia

Quickly Stops Sour Burning Feeling and Makes Digestion Painless.

The almost universal use of magnesia by physicians and specialists in the treatment of stomach troubles, is due to the fact that it stops food fermentation and neutralizes the acid—the direct cause of nearly all stomach troubles. Of the many forms of magnesia such as oxides, citrates, carbonates, sulphates, etc., the most suitable and efficient, and the one prescribed by leading specialists is bisulated magnesia, a teaspoonful of which in a little warm water immediately after eating will instantly neutralize the acid, stop fermentation, and thus ensure painless normal digestion. Care should be taken to get bisurated magnesia, as its action is infinitely more effective. It is also the way usually stocked by druggists in convenient compressed tablets, or sold in the ordinary powder form. Stomach sufferers and dyspeptics who follow this plan and avoid the use of pepsin, charcoal, soda mints, drugs and medicines are immediately astonished to find that the stomach, relieved of the irritating acid and gas, soon regains its normal tone, and can do its work alone without the doubtful aid of artificial digestants.

Farm Crop Queries

Henry G. Bell.

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—R.E.W.:—I have a field of corn which is now clean and growing very rapidly. I wish, however, to grow a green crop to plow under next year; and have a farm that has been run quite badly; but as you know, the corn crop this year is very late, and its value, if matured, will be greater than usual. Will the sowing of a cover crop now interfere with, or detract in any way from the present crop ripening early? And how much vetch and rye should be sown per acre?

Answer:—Regarding sowing a cover crop in your corn at this stage, I believe it will do no injury to the corn. You will gain in green material which you can plow under to improve the condition of the soil. A good mixture to sow is a bushel of rye to about three pecks of vetch.

The seed should be scattered between the corn rows and then worked in by a levelling cultivator or a narrow sectional harrow. It would be best done, of course, by a single row drill.

The addition of 200 lbs. to the acre of fertilizer analyzing approximately 2 per cent. ammonia and 10 to 12 per cent. available phosphoric acid would insure a good catch, and would also assist the ripening of the corn.

Question—F.W.G.:—I am told repeatedly that one should not cultivate beans after they bloom. They can it than old saying but cannot give any good reasons. Will you kindly advise me through your columns if there is anything to this and if so state why it should not be done.

Answer:—Growing beans should be cultivated very carefully. Men who handle large areas of beans say that most of the work should be put on the seed-bed and just sufficient cultivation should be given to keep down the weeds. If you will carefully dig up a plant of beans you will find that its roots spread out fairly near the surface and sufficiently wide to extend over half the distance between the rows. This being the case, a deep cultivation of beans, when the plant has made maximum growth, such as you will find at blossoming time, will cut off a large percent. of the small roots between the rows. The roots are the conveyors of plantfood. Then if you cut off the roots, you are to a certain extent starving the plant. From blossoming time to the filling of the pods of beans is a critical period for the bean crop. At such a time it requires a good supply of water; hence any injury to its root system should be carefully avoided. Another reason for avoiding cultivation at blossoming time is that there is a tendency during damp weather to spread bean disease, by the bean spores being carried by the cultivator or on the shoes or clothing of the workman.

Question—R.F.D.:—I have this year planted beans on heavy clover sod and have a fine crop of beans. I have been told I could plant another crop of beans next year without any added fertilizer on this same soil. I would like your advice on this subject. Another question I would like to ask is, should I be compelled to use commercial fertilizer? When is the best time to use it, fall or spring? Should I drill it in or spread it broadcast, and how much to the acre? This is a light loam sand soil.

Answer:—As a rule, beans should not follow beans. They should follow a cultivated crop like corn or potatoes. Of course, if your soil is in good shape and you have used a large amount of fertilizer this year, and if the beans have been absolutely free of disease, you may safely plant another crop next year where these stand. The last point is really the point of greatest importance, since bean diseases live in the soil for one or two years. On your light sandy loam soil you certainly will have to provide plantfood for next year's crop if you expect a good crop. The problem is just the same as is faced in feeding calves. If you expect the calf to do well from one year to another, you have to look out to supply an abundance of suitable food. Now fertilizers are carriers of plantfood and although the plantfood which you added this year may not all have been used up, yet I am of the opinion that you will find it profitable to make an addition of plantfood on next year's bean crop. On light sandy soils, especially if they are low in organic matter, it is profitable to top-dress the land after plowing in the spring with 6 to 8 loads of well rotted manure to the acre. This should be supplemented by the addition of acid phosphate or a complete fertilizer high in available phosphoric acid, at the rate of 200 to 400 pounds per acre, if largest yields of best quality are to be harvested. The fertilizer, of course, should be applied in the spring fertilizer through the fertilizer attachment of the grain drill seven to fourteen days before planting the beans. If no grain drill is available any broadcast distributor will work, applying the fertilizer broadcast and working it in by harrowing and disking. When fertilizer is applied with a grain drill at planting time it should be allowed to run in the hole to each side of the one which drops the beans and not in the hole dropping the seed. Some successful bean growers go over the field twice, the first time drilling the fertilizer and the second time sowing the seed. This works the fertilizer into the soil and avoids the fertilizer and the beans coming in contact, the one with the other. While this method takes twice the time it mixes the fertilizer thoroughly with the soil, and the tender bean plants are never injured.

Question—I.B.:—As I have a field of alfalfa which I think would yield larger returns as seed I take the liberty of writing you for information in regard to the same. If you will kindly answer the following questions I will appreciate it very much. (1) Is the second crop the one to cut for seed? (2) About how many bushels per acre is an average yield? (3) Does it injure the future crops to cut it for seed? (4) Do you think the past hot weather has injured the prospects for seed?

Answer:—As a rule the second crop of alfalfa will produce the largest yield of seed in Canada; this for the reason that there are more bees at the time that the flowers of the second crop are in blossom than there are for the same period of the first crop. The seed should be cut when about two-thirds of the pods are filled; otherwise the earliest filled pods will shatter and some seed will be lost. From two to five bushels per acre is an average yield of alfalfa seed.

If the alfalfa crop has made a good strong growth and is well established, little injury will be done to the alfalfa by allowing it to come to seed, especially if after cutting the seed the crop is top-dressed with manure or fertilizer so as to give it strength to meet the coming winter conditions. The hot weather which has just past should not have injured the seed prospects unless the ground is very sandy and has dried out.

Question—H.J.:—I am trying alfalfa this year for the first time without a nurse crop. I will give you a brief outline of what I did and ask your advice as to the next move. Plowed seven acres this spring, three acres bean ground last year, four acres two-year meadow; worked it until about June 25th; sowed ground limestone on it, using about ten tons to the seven acres. Then I inoculated alfalfa seed and put it on about one peck per acre and dragged it in at once with a peg-tooth. The field is heavy clay for the most part, with a few sandy places. The field is rolling so it is pretty well drained. The seed came fine, a good stand. To-day the alfalfa stands six to eight inches high and is commencing to blossom, but in a good many places the leaves are turning yellow or pale green. Also quite a few thistles and sow-weeds have come up along with it. Now the ground was so wet last spring that we could not draw out manure and we have 200 spreader loads or better in our barnyard. I decided this afternoon upon looking the field over to go over with mower and clip it quite high, then top-dress it quite heavy. What would you advise?

Answer:—I believe you have handled your new alfalfa field wisely. I would not top-dress it too heavy with manure just at the present time, but would give it a second top-dressing either late in the fall or early in the spring. My thought is that too heavy a top-dressing might smother out some of the tender plants. If after cutting and manuring, the crop does not make a good healthy growth, I would advise you to top-dress still further with 200 lbs. per acre of fertilizer carrying 1 to 2 per cent. ammonia, and 10 to 12 per cent. phosphoric acid. This will tend to invigorate the plant and give the crop strength to withstand winter conditions.

Storing Potatoes.

In storing potatoes a cellar or half cellar is best. The material used in building a storage house does not greatly matter. Either wood or stone masonry will serve. The material should be waterproof. Depth under ground is not of moment so long as it is sufficient to insure against freezing. Of course if the storehouse is heated you do not have to consider this. The ordinary house cellar is safe enough in this part of the country, though houses with a double cellar, the first in one part and the other part for vegetable storage, are particularly favored.

There are three things to keep in mind:

The temperature must be kept as low as possible without freezing.

The air must be as dry as possible all the time.

The place must be kept dark.

Keep the temperature as near 32 deg. Fahrenheit as you can; the ideal range is between 30 and 36 Fahrenheit. Potatoes in large quantities will not freeze at 28 deg. Fahrenheit if exposed to this temperature for not more than an hour or two.

To figure space allow 1½ cubic feet for each bushel of potatoes.

There must be ventilation. If you are building a storehouse or semi-cellar build it in line with the wind generally prevailing through the winter. In spring leave the door open at night, closing it in the day. Doors or windows at either end to secure a draught through are desirable.

Store only clean potatoes. Potatoes breathe. Dirt chokes their respiration. Cover the floor completely before you begin putting them on top of each other.

Silage As A Grain Substitute

By E. W. Cage.

The prevailing high price of grain feeds in the face of very moderate prices paid for dairy products have reduced the dairy farmer's profits to a point where it is an open question with many whether it is possible to make the cow pay for the large grain ration necessary. Several dairymen have found that if they are able to dispense with half the grain he formerly fed without materially reducing the milk production and butter-fat, the chances for profit have increased at a smaller cost of production.

Tests Show Advantages

Several feeding experiments have been held in various sections of New York State to determine just what position silage may be made to occupy in the dairy cow's ration, and the relative basis for feeding as compared with purchased grains. In one of these tests ten cows were used, representing five different breeds, to determine what effect the feeding of more silage than is usually fed, with a corresponding reduction in the grain portion of the ration might have upon the production of milk, butter-fat, gain in weight, cost of ration, and consequent profit.

The general plan of this experiment was to compare two rations which should carry as nearly as possible the same amount of dry matter and nutrients. In one ration these nutrients were to be derived largely from roughage, mainly silage; in the other ration no silage was to be fed and as little roughage as seemed wise, the bulk of the nutrients being derived from concentrates. The two rations fed carried practically the same amount of dry matter. In one over fifty per cent. of this dry matter was derived from silage and less than eighteen per cent. from grain. In the other over fifty-seven per cent. of the dry matter was from grain, no silage being fed.

The silage used in the test was a mixture of one ton of soy beans and cowpeas to two and a half tons of silage corn. There were nearly twice as many soy beans in the mixture as cowpeas. The silage corn was very low in dry matter, owing to an unfortunate season. The silage was found to contain 18.03 per cent. dry matter, 2.36 per cent. protein, 4.68 per cent. crude fibre, 0.92 per cent of fat, and 9.36 per cent. of nitrogen free extract, being richer in protein and poorer in carbohydrates than average corn silage on account of the admixture of soy beans and cowpeas.

The cows fed the silage ration produced 96.7 pounds of milk and 5.08 pounds of butter-fat per hundred pounds of dry matter; those fed the grain ration produced 81.3 pounds of milk and 3.9 pounds of butter-fat.

The cost of feed per hundred pounds of milk produced was $0.687 with the silage ration and $1.055 with the grain ration. The cost of feed per pound of butter-fat was 12.1 cents with the silage ration and 22.1 cents with the grain ration. The average net profit per cow per month (over cost of feed) was $5.864 with the silage ration and $2.465 with the grain ration.

Silage is a Grain Substitute

Comparing the average daily product of each cow for the entire test with her average daily product for the month previous to the change in ration (or the first month of their test in the case of two cows), the cows fed the silage ration shrank 2.84 per cent. in milk and gained 1.89 per cent. in butter-fat production. The cows fed the grain ration shrank 9.11 per cent. in milk and 14.18 in butter-fat production. Upon the conclusion of the experiment each lot of cows was found to have gained in live weight—the silage-fed cows an average of forty-seven pounds per head; the grain-fed cows an average of fifty-seven pounds.

The facts reported seem to justify the conclusion that silage can be made to take the place of considerable grain that is being fed to dairy cows in various dairy sections. Growing more feeds rich in protein—clover, alfalfa, soy beans, cowpeas, field peas, vetches—and ensiloing them, or feeding them as hay, will be possible to further reduce the amount of feed cost, and to increase the profits of the dairy herd.

The Sunday School

INTERNATIONAL LESSON
SEPTEMBER 23.

Lesson XIII. Daniel in The Lions' Den—Daniel 6. Golden Text—Psa. 34, 7.

According to Dan. 1. 21, Daniel continued at the court of Babylon from the days of Nebuchadnezzar to those of Cyrus, who, according to the author, succeeded Darius, under whom the events narrated in the lesson text are said to have taken place (Dan. 6. 1). Under earlier kings Daniel had had opportunity to prove his loyalty to the God of Israel as also his usefulness to the kings; under Darius his faith was subjected to a new test. The situation was this: The friendly attitude of Darius toward Daniel displeased the officials, who plotted against his life (verses 1-9). As a part of their scheme, they induced Darius to sign a decree forbidding any man to ask anything of any god or man, except the king, for a period of thirty days (verses 6-9). At this point the narrative of the lesson text begins.

Verses 10-17. Daniel continues his custom to pray to the God of Israel; he is discovered, and though the king seeks to save him, is finally thrown to the lions. Chamber—Better, roof-chamber: that is, a room raised above the flat roof of an Oriental house, a place of quietness and retirement. Toward Jerusalem—A standing custom in later Judaism to pray with the face turned toward Jerusalem, or to the temple, which signified a turning toward Jehovah. Three times—Perhaps in the morning, at noon, and in the evening (Psa. 55. 17). Deliver—Unable to save Daniel, the king seeks to cheer him. Changed—That nothing might be done by the king or anyone else to rescue Daniel.

18-23. Contrary to all expectation, Daniel was miraculously delivered. Instruments of music—Word of uncertain meaning; perhaps, dancing girls, or concubines. The king was troubled that he did not indulge in the usual diversions. Lamentable—Better, pained, or agonized. God . . . angel—A full recognition that the deliverance is due to divine interference. The king rejoiced over the rescue of Daniel and then ordered the accusers thrown to the lions. He also issued a decree exalting the God of Daniel, and heaped new honors upon the latter.

Horse Sense

Colts show to best advantage if taught to stand and lead before they are taken into the show ring. Teach them to walk and go through all the paces to which they will be subjected by the judges. Grooming the coat, combing and decorating the mane and tail, add much to the appearance of a show animal.

The exposure of young horses to the short spells of severe weather which occur frequently during the fall, causes a shrinkage in live weight and is a hindrance to rapid and economical development. Older horses seem to stand this sort of treatment with less loss. It it doubtless true that animals become accustomed to winter weather but frequent changes from fine fall weather to bad storms retard gains in colts without shelter.

Four yearling Percheron fillies with an average weight of 1160 pounds on pasture, with a ration of six pounds of corn and oats (one-half of each by weight) daily shrunk an average of 32 pounds each during the spell of severe weather on October 18 to 20 of last year, at an Experimental Station. Aged mares in foal lost only slightly during the same period.

Inexpensive sheds which will protect colts from wind, rain, sleet, and snow will prevent part of such loss in weight. Growing horses should not be housed too closely and prevented from taking plenty of exercise, but they should not be subjected to extremely bad weather if they are expected to make satisfactory growth.

Why sow choice wheat and timothy seed on land, and weeds and yellow dock and plantain in the heart?

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 224 Beaching Ave., Toronto.

Daughter:—The author of "Martha By The Day" is Julie M. Lippmann. This entertaining story may be had at any of the large bookstores for sixty cents.

Stephanie:—A healing lip salve is made of one ounce cold cream, 15 drops of tincture of benzoin and 30 drops of glycerine. Rub the cold cream and glycerine together and then incorporate the benzoin with the mass. Rub with a spatula or flexible knife on a flat tile or plate. A mixture called cream of roses is also good. Melt an ounce of white vaseline and half an ounce of white wax and best. When nearly cold add three drops of attar of roses.

E.B.S.:—1. Here is a good recipe for oatmeal muffins: Take one-half cupful milk, one well-beaten egg, one teaspoonful butter, one tablespoonful sugar, one cupful flour, into which has been sifted two teaspoonfuls baking powder and one cupful oatmeal mush. Stir well together and bake in hot muffin pans in moderate oven. 2. Perspiration stains can be removed from a blouse by soaking in strong salt water before washing. 3. The best and simplest way to mend a torn net curtain is to dip a square of net cut to fit into cold starch, lay on the wrong side of the curtain over the rent and iron with a hot iron. 4. A letter of acknowledgement for a wedding gift which has been sent by a whole family should be addressed to the mother but should contain mention of the other members. 5. It is good form to display wedding gifts in a room especially set apart for them. 6. When wedding gifts are on view the cards of the donors should be removed. 7. The best man usually takes charge of the wedding ring and the clergyman's fee.

Would-be Benefactress:—How does the following idea appeal to you: A woman living in a small town originated a novel plan for circulating reading matter among her neighbors of the outlying country districts. Her first step was to collect among her acquaintances all the used books and magazines that she could find. After sorting and arranging the collection she divided it up with an eye to suitability and variety, made each stack into a neat package and distributed the packages among the farm vehicles that stood hitched every day in the market place and wagon yards. It was not long before the farmers found her out and came to tell her what the contents of the bundles meant to them. They passed the reading matter, they said, from one family to another, so that each might have the benefit of it all. They reported also an unwritten law of their own making—that for every lost or badly injured book or magazine a fine should be paid, in the shape of a bit of farm produce, to be delivered to the giver of the books for the town poor among whom she worked.

The fines filled as real a need as the reading matter had filled; and since the farmers have begun to realize the fact, they carry their tributes straight to the doors of the recipients. Scarcely a week comes that the country people of the magazine circuit fail to bring in a little farm produce—turnips or berries or, in early spring, samples of the new green vegetables that city dwellers crave.

The outcome of the plan has been the establishment of a friendly circle that widens steadily. Good reading is put into the hands of appreciative people; the people themselves are brought into touch with others whose material needs are greater than their own; and the poor become the beneficiaries of a unique form of spontaneous giving. A great deal more than reading matter, in fact, is put into circulation.

Mrs. C. D.:—Yes, there are munition factories in the towns you mention, but they in common with all other plants in Canada just now are not engaging any more workmen. On the contrary they are dismissing their employees, as the supply of ammunition is abundant and the demand is steadily decreasing. It would be better to seek employment at some other occupation.

Bedtime Stories

Alan's Great Surprise.

When Laura's and Mary Anna's big brother, Alan, was a little fellow, he had to go to bed at eight o'clock every night except Friday and Saturday. He thought it was a hard thing to do, especially in the spring and early summer. Perhaps if he had been a country boy it would not have seemed so hard; but he lived in the city, where dozens of other boys were his near neighbors. The other boys went to the same school that Alan attended, and they were allowed to stay up and to play outdoors until nine o'clock every evening, and sometimes later.

Long after Alan was in bed, with his head on his pillow, but with his eyes wide open, he used to hear the boys playing ball in front of their houses, or hide and seek round the houses, or shouting like Indians, just for fun.

Spring, summer, fall and winter, it was all the same while Alan was a little boy; his bedtime when he went to school was eight o'clock.

Alan was well, and he learned his lessons easily. Both his father and his mother told him that he was well and that his eyes were bright and that he learned his lessons so easily because he went to bed early every night. He thought they were mistaken, but he did not say so. Instead, he kept his thoughts about it to himself.

Then one day came his great surprise. It was in June, a few weeks before the long vacation, and just the kind of day when everyone wishes to be outdoors, even the teachers. Birds were singing, and the air was sweet with the smell of roses. A gentle breeze wandered into the schoolroom, as if to call the boys and girls outside to play.

The children were not studying their lessons as if they cared at all who General Wolfe was, or where the highest mountains are, or the longest rivers or the largest cities, or how to spell hard words.

Alan was thinking of his big brother, Lee, who was in the high school. The high school boys had a holiday that afternoon, and Lee had planned to take the baby sisters, Laura and Mary Anna, in the automobile for a ride out into the country. Little brother Alan was thinking of that when the teacher said to all the children, "You may lay aside your books for a moment, if you please."

Quickly all the children closed their books and sat straight, glad to listen to what the teacher had to say; they were expecting a surprise. The next moment Alan wished that he was anywhere else except in that schoolroom, because this is the question that the teacher asked:

"How many boys and girls in this room are in bed before nine o'clock every night except Friday nights and Saturday nights? All who are, please stand."

Alan despised a lie; so he stood beside his desk and tried not to notice that the boys who were his neighbors were snickering behind their hands.

A moment the teacher waited, thinking that others would stand; but no one else rose. Alan stood alone. He felt utterly miserable and wretched until the teacher said, "You may be seated, Alan."

Then came the great surprise: The teacher made a speech; she said she knew that Alan always went to bed early. How did she know it? Because he always came to school fresh and rested, bright of eye and ready for work. She said she could tell who sat up late and who went to bed early by the work they did in school. She could pick them out and name them if she chose.

When the teacher said that, several little girls turned red, and at least one boy looked foolish and ashamed. But the teacher did not mention any names; she only said that she was sorry that Alan was the only one who dared to stand. Then she advised all except Alan to open their books and study their lessons. But she told Alan to go home and have a good time; he had earned a holiday.

Alan walked a step at a time,—a step at a time, politely,—until he reached the big outside door; then he flew down the steps and ran home at the top of his speed, to get into the automobile on the front seat beside Lee for the ride into the country!

Orchid is Oddest of Plants.

Oddest of all plants are the orchids. They grow in all sorts of queer ways—some of them deriving the whole of their sustenance from the air. They are mostly tropical plants. Their flowers, in some instances, mimic butterflies. Altogether there is a good deal of the weird about them. But most remarkable of them all is the Holy Ghost orchid—so called because in each one of its beautiful blossoms there sits a miniature dove, with outspread wings, as if just ready to fly away. It is perhaps the most remarkable of nature's many curious imitations.

GLAMIS

Mr Bald, School Inspector, visited the schools in our vicinity last week.

Miss Emma Howson left on Monday for an extended visit to Toronto, Campbellford and other places.

Mr and Mrs Jas Thompson and sons of their family motored to London last week and took in the fair.

Miss Jessie McKeeman left on Monday to visit friends in Blackstock.

Mr and Mrs J K McLennan spent Sunday on the 6th Bruce at Robert McKay's.

Mr and Mrs Alex McKaunit and Mr and Mrs John Dechan attended the anniversary service in Zion Church on Sunday morning.

Mr and Mrs McLennan, Miss McGregor and Mrs McIver of Ashfield motored up from Ashfield and spent Sunday at Mrs H Campbell's.

Mr and Mrs Donald McIver of Kincardine Sundayed with friends here.

The Red Cross workers are securing Rev. Mr Gilmour, of Ripley, to give his lecture entitled "With Kitchener in Kartoum" on Friday, Sept 28th, in the Presbyterian Church.

Mr Dan McLean, on the 2nd, received a letter from his brother, Peter, who was wounded on the 15th, which may be of interest to his many friends here :-

Manchester Royal Infirmary, England.
Aug 28th, 1917

Dear Brother:—I would have written sooner, but I was waiting till after my operation. The doctor put it off for a few days more, as don't know when I may have to get a shrapnel ball through my thigh, right below the hip bone, and it is lodged close to my appendix. I was under the knife on the 24th and don't have to go under it again before I am operated upon. I don't suffer much now so long as I lie still. It was very painful the first few days, as I was travelling all the time. I was hit on Wednesday, Aug 15th, the morning the Canadians started their offensive around Lens. I was north of Lens, at Hill 70. Our casualties were very heavy, but nothing to what Fritz's were. The first two lines of trenches were piled full of dead and wounded Boches, as they fought to the last. They won't use their bayonets, but just throw hand bombs and use their rifles to the last. It was the hardest fighting we have had to do this summer, as the Boches are making a terrific effort this time. Our boys have been fighting for four years over the hill. They have nearly surrounded it, but it is hard work, with lots of hand to hand fighting, the same as we had at Vimmy Ridge April morning the crowded down on us. Believe me, our casualty lists are not small these days. It is the hardest place on the Western Front to take. Our brigade took Hill 70. It was taken twice before this summer by the British and Fritz drove them back both times. He can't give the Canucks back; any price they take they hold. We were just going over the top of Hill 70 on Wednesday morning at 4.25 a.m. I got hit about 6 a.m. We went ten miles behind the lines at 10 a.m. to rest. I was carried about two miles on a stretcher, by the prisoners we took, to our advance dressing station. It was a terrible place. I was wounded as we were shelling our [illegible] on one of our battalion very heavy. It is a civilian internment camp by the city. It is a dandy place, and the nurses are no slouch. I landed here Aug 18th. After I am operated on it won't be long till I get across. I will be ready for the trenches about Christmas, I hope to God I never see them Gibb winter. I don't mind the [illegible] in summer, but it's not fun in winter. The war will be going on this time next year unless the Germans people have an uprising, as they have lots of men left, and their ammunition is not yet played out yet. There is no cause over here, so will write a long letter soon and give you all the news. I saw Private Quackenbush and Allan McKechnie a few days before I was hit. Also Pat Scobbie, which won't be long in England now. We had 26 casualties in our battalion last April in the thirty days we were fighting, and out of 30 in our platoon there were only three of us came out. Our casualties were very heavy. I have lost everything this time, even my pay book, so I can't draw any money until I get back. After I leave here I go to Convalescent, and may not get back to the reserve depot before three months. There are some fine lovers down here, which, I will be able to visit when I am better. Those sisters and nurses are nearly worn out when they arrive here, on account of so much handling. I received a nice lot of things from the Red Cross to-day, nine lot of things from the Red Cross to-day, nine lot of the 1st I was up to see me the rest of the day, so I got all the smokes I required. As I am tired, I will stop off.

PINKERTON

Pinkerton Fair, Sept 21st bigger and better than ever.

Rev Mr Gale attended the Guelph Presbytery at Guelph last Friday.

Mr and Mrs T Birrell and Mr Wm Birrell returned on Saturday from a trip up the St. Lawrence River.

Mr William Donnelly and bride of Wiarton are visiting at the home of his parents Mr and Mrs E Donnelly.

Miss Athen Pinkerton leaves this week to attend Normal school. We wish her every success.

Many mourn for some time from an incurable disease, Mr Thos Pinkerton passed away on Wednesday morning. He was a son of the late Mr and Mrs. Thomas Pinkerton and spent his boyhood years in the village. For the past few years he has been in Toronto but a short time ago —— up to the home of his sister Miss Lena Pinkerton where he died. He was 42 years old and besides his sister and brother he leaves to mourn his loss, his wife and three young children to whom the sympathy of the whole community is extended. The funeral took place on Thursday to Douglas Hill cemetery and was largely attended.

At the meeting of the Red Cross society on Thursday the following were packed for shipment:—Soldiers' Comforts—81 pair socks 20 flannel shirts without collars, 1 pair mitts 1 toque—21 suits pyjamas, 1 bundle old white linen. The following motion was also passed and carried:—Moved by Mrs Taylor, seconded by Mrs Mutrie, that we, the members of the Pinkerton Red Cross Society extend our sympathy to Mrs McAfee in the loss of her valiant son Pte John McAfee. Though it is some time since Pte McAfee has lived in our vicinity we are proud to claim him as one of the Pinkerton heroes. He has made the supreme sacrifice in a noble cause and while we grieve at his untimely death we cannot but be proud of his heroism.

Children Cry
FOR FLETCHER'S
CASTORIA

TWELFTH CON BRUCE

Mr and Mrs D Wales, of Elderville, visited their daughter, Mrs Alex McGillivray, last week.

We are glad to say that Mrs Charles MacArthur and Mrs Geo McGillivray are both improving.

Alex Rose, from Paisley, was engaged at Mr Dan McGillivray's last week.

Miss Georgina McBeath, from Paisley, spent a few days nursing at Geo McGillivray's.

Maxwell Scott Sundayed at his home here.

Joseph Stoddart and Lillie, from Elderville, were visiting on his sisters, Mrs John Cumming and Mrs John Dunlop.

Ed Hoover Sundayed at his home here.

Mr and Mrs Wm Archer, of Paisley, visited the Archer brothers.

Joe Beaton, of Paisley, has been employed with Dan McGillivray.

Miss Edna Cumming has gone to attend Normal school at Stratford. She was accompanied down by her mother.

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

—Every summer many head of live stock are killed by lightning when standing near wire fences. Sometimes the cattle are a long distance from the place where the lightning strikes the wire. It is easy enough to guard against the danger by running a wire here and there from each strand of the fence well into the ground.

GRESHAM

McLean Young and R Fullerton attended the fair at Hanover last week.

D McKinnon of Belton was in this neighborhood last week.

T R Corry visited friends in Saugeen lately.

Sylvester Parker, of Brant, visited his brothers here last week.

Wm McDuff of Port Elgin is threshing in this vicinity.

George Brown received a telegram last week acquainting him of the death of his brother Thomas, near Tantallon, Sask. His brother William just returned from the west last week, so the end came suddenly, though he was suffering from liver trouble for some time. The late Thomas Brown went west over 35 years ago, when just a young man, in company with his brother James, now deceased. Two other brothers, John and Walter, went a few years later, also their only sister, Mrs Alex Abel, all of whom have been very prosperous. The late Mr Brown married Miss Ann J McCaubrey, who also was a former resident of this locality. She and their only daughter are left to mourn the loss of a loving husband and affectionate father. Thomas was the second son of the late Mr and Mrs Thomas Brown of Gresham, where he was born and educated, and later, like a great many of our young men, went west, took up a homestead and prospered. His death will be much regretted here by his many relatives and friends. His age was 65 years. He was down on a visit here about five years ago. In religion he was a Presbyterian and in politics a Liberal.

Don't miss the Fair Night Concert.

TARA BUSINESS BLOCK BURNED

Early on Wednesday morning, at about half-past three o'clock, fire was discovered in the rear of Spears' building in Tara, occupied by Mr J N Monkman as a pool room. The building was a frame one and shortly was a mass of flames. The alarm was sounded and the chemical fire engine was soon out, but unfortunately did not work for some time. The fire had by this time worked into the brick dwelling house of Mr J G Scarrow on the south side and into the frame harness shop of Mr P J Walker on the north side. Frank King's livery stable and other small buildings went next. By this time the fire had gone through the brick dwelling house of Mr Scarrow and his furniture and undertaking rooms were next consumed, followed by the old post office, and just recently occupied by Mr Morton as a barber shop. Morrow's general store came next, which took the fire to the corner of Yonge and Matilda streets, and here it was stopped from going further south. The stable and store room of Mr Morrow were also burnt, as well as Spears' ice rink in the rear of the pool room. The buildings being mostly frame, the heat was so intense that the fire spread to the opposite side of the street, the hardest work being to save the British Hotel, Rudolph's butcher shop and Walker & Merriam's hardware store. The chemical engine did good work in helping to save these buildings, but it was only by sheer hard work on the part of many willing helpers that these buildings were saved. If the three storey brick block owned by Jas A McDonald and occupied by Walker & Merriam as a hardware store had not been saved the whole business part of the town on the east side of Yonge street would have been consumed. Rudolph's butcher shop was almost ruined and the British Hotel got a scorching. The roofs of several other buildings caught fire, but were put out before getting serious headway. It was fortunate there was but little wind. The losses will be in the neighborhood of $20,000, three quarters of which may be covered by insurance.

The following is a list of the losses so far as we have been able to gather:—Morrow's building $1800, insurance $900; Morrow's stock $5000, insurance $900, stock mostly saved; Morton's barber shop, most of the contents saved; Jos Scarrow, stock $6000, insurance $1000; Robt Henderson, store and house occupied by Mr Scarrow; Spears' building occupied as pool room by J N Monkman, no insurance; Walker's harness shop, building owned by C G Dalton, Toronto; P J Walker, stock $1200, insured for $700, stock partly saved; Frank King's livery stable $1500, insurance $900; Mr King lost also in stock; damage to British Hotel, $500; Rudolph's butcher shop, $300; Noah Rudolph's household goods, $300; Walker & Merriam's hardware store, damage to building, $500; Merchant's Bank, plate glass windows broken; J R VanDusen, general store, plate glass windows broken; Tara Leader office and bookstore, windows broken; J N Monkman, pool tables and cigars, etc; Orange Lodge, over Walker's harness rooms, furniture and equipment; F T Hill & Co, plate glass windows broken.

—Paisley's genuine Farmers' Fair, Sept. 25 and 26. Be an exhibitor.

GILLIES HILL

(Intended for last week)

The discourse of Rev R D Campbell, who was the speaker at Gillies Hill on field day, has been the subject of comment by the people of this community. The rev gentleman based his remarks on several passages in the Book of Revelation, which he claimed was a portion of the holy writ which was being shunned by ministers and church members as being too deep to be understood. We were living in a day, said the speaker, when the words of this prophecy were being literally fulfilled and men were beginning to understand this word. In this terrible world conflict our young men were seeing visions and our old men dreaming dreams. The nations of the world were being punished for their sins and the desertion of the true God. Belgium, that little nation which we all idolize for the noble part it played in stemming the tide of the German onslaught, was at the time of the outbreak of war nothing less than a seething cauldron of vice. Russia was being punished for her persecution of the poor Jews. Turkey for her massacres of the Christian Armenians. The sins of Italy, France and Germany were also exposed, the latter country substituting the worship of God for that of man, namely, the Kaiser. Britain was being punished for her hand in the iniquitous traffic in opium which was forced upon China against the will of that country. The liquor traffic and social evil were burning sins which Britain must put away if the war was to be won. The speaker hoped that soon the light would dawn on the people of the mother country and that it might be a time of humiliation and prayer. The vials of wrath spoken of by John were being poured out now on the treaches in the liquid fire, and the gentleman was there in the trench fever. Truly, said the speaker, we are living in an age of the fulfilment of prophecy and the day of the Lord is near at hand. This is just the beginning of the end.

—Arrange to come to Paisley Fair and meet your friends.

Brant Pioneer Dead

Mrs Wm Kerry, sr, a Brant pioneer, died suddenly from heart failure at her home east of Eden Grove on Wednesday morning of last week, aged 73 years, 4 months and 1 days. The deceased, who hadn't been feeling well of late, was sitting up conversing cheerily with members of the family some minutes before her death, when she was stricken with heart failure and passed suddenly away. Born in Halton, Mrs Kerry, whose maiden name was Catherine McDonald, came with her parents, the late Mr and Mrs John McDonald, to Brant township over sixty years ago. She was married about five years later to Mr Wm Kerry, the young couple taking up farming on lot 3, con 11, Brant, where they have continuously resided for the past 55 years. She was a woman of sterling character, and was well known and highly esteemed in the township. Besides her aged husband she is survived by a family of five sons—William, John, George, Harvey and Robert, all of Brant; and three daughters—Mrs Wm Fennell, of Walkerton; Mrs Robt McKeen, of Arran, and Mrs Edward McGaffin, of Sonningdale, Sask. The funeral took place to Douglas Hill cemetery on Friday afternoon.

They Shall Not Pass

The Immortal Cry of Canada at the Second Battle of Ypres.

The defence of Ypres following the first ghastly gas attack April 22, 1915, exalts all history. By it our men were transfigured and the undying, imperishable Soul of Canada revealed.

In the name of these Heroes of Ypres, Festubert, Givenchy, Vimy Ridge, Lens, The Somme, Verdun—aye and the Deathless "Old Contemptibles"—we beseech you, Women of Canada, to Dedicate Yourselves and Your Families to War Service by signing the Food Service Pledge.

The sacrifice is not great. We merely want you to substitute other foods for part of the white bread, beef and bacon your family now eat.

"What follows almost defies description. The effect of these poisonous gases was so virulent as to render the whole of the line held by the French Division practically incapable of any action at all.

The Stand of the Canadians

"The left flank of the Canadian Division was thus left dangerously exposed to serious attack in flank, and there appeared to be a prospect of their being overwhelmed and of a successful attempt by the Germans to cut off the British troops occupying the salient to the East.

"In spite of the danger to which they were exposed the Canadians held their ground with a magnificent display of tenacity and courage; and it is not too much to say the bearing and conduct of these splendid troops averted a disaster which might have been attended with the most serious consequences."

From
Sir John French's Seventh Despatch,
General Headquarters,
15th June, 1915

Thou Shalt Not Want

The Undying Pledge of Canada's Mothers to Her Sons.

When baking use one-third oatmeal, corn, barley or rye flour. – Or, order some brown bread from your baker each day.

Substitute for beef and bacon such equally nutritious foods as fish, peas, lentils, potatoes, nuts, bananas, etc.

Third, and this is most important — positively prevent the waste of a single ounce of food in your home.

A Food Service Pledge and Window Card has been or will be delivered to you. The Pledge is your Dedication to War Service—The Window Card is your Emblem of Honour.

Sign the one and display the other.

Woman's Auxiliary, Organization of Resources Committee, in Co-operation with The Hon. W. J. Hanna, Food Controller.

Sign and Live up to Your Food Service Pledge

Cement, Lime, Lath, Shingles, Glazed Sewer Pipe and Flue Lining, Mortar Color, Etc.

Philharmonic Concert

Arrangements are being made for a concert to be given in Paisley by Walkerton Philharmonic Society at an early date, under patriotic auspices. Watch for further announcements.

Died at Calgary

Miss Ross, of Albert St, received word on Thursday last of the death of her brother, Mr John Ross, at Calgary, which occurred suddenly on Wednesday night. The deceased was a well known resident at Glamis prior to going west some fifteen years ago, and his death will be much regretted by all in the district.

Prices Will be Fixed and People Forced to Sell

Food Controller Hanna now proposes to do considerable regulating of prices. His plan seems to be to name the figures which would represent the demand price that must not be exceeded by the producer.

Elora Road on Highway System

If it is necessary that municipalities along the Elora Road should make a push to have this road in the Provincial highways system, it is about time that representatives were getting together. Scotia-Sampton Board of Trade seems to be the only body that has been heard from so far.

Pay Up

Some of those who subscribed monthly contributions to the Women's Patriotic League fund have neglected to pay regularly. All who are not fully paid up to date are requested to hand in their arrears to the secretary, Mrs D McArthur, at once, as it is desirable that the books be balanced up.

No Restrictions on Home Canning

That the food controller had ordered the confiscation of all canned fruit and vegetables over 50 pint jars per family, is a rumour that has become circulated strongly in some places and last week reached Paisley. There is no truth in the rumour, however, and housewives, it is hoped, will still feel free to can all they can while the fruit and vegetable season lasts. In the regulation of August 24th there was a suggestion of confiscation, the idea being to compel the use of fresh vegetables.

Paisley Boys Among the Casualties

Mrs Bain received notice on Thursday that her son, Pte D J Bain, had sustained gunshot wounds in head and thigh, and had been admitted to Eighth Casualty Clearing Station on Sept 14th. A second message received on Sunday stated that Pte Bain's wounds are serious. Mr F Purdy is in receipt of a card from the son Gnr Guy Purdy, stating that is in hospital. "But don't worry," he says, "I'm not bad." Two former Paisley boys, Pte Wallace Lusk and Pte Wm Bowes, are among those reported suffering from gas poisoning.

Mills Not Sold

The advertised sale of Fisher's mill property brought out no bidders on Tuesday last. The sale was held for the purpose of closing up the estate of A Fisher & Son. Now that this stage of the proceedings has been passed, and the property remains in the same hands, work on repairing the dam has been resumed and the break in the wooden structure which was made by the June freshet will soon be made over in more durable form, cement replacing wood wherever possible. When repair work ceased a few weeks ago it was feared that these mills would be closed down permanently for lack of power, but when the work now under way is completed the firm will be in a better position than ever to operate in any season except at high water.

Call To Repentance And Prayer

To Editor of Paisley ADVOCATE:

DEAR SIR—In this, the most serious crisis our Empire and the nations of Europe have ever passed through, we feel deeply the need of ostenly seeking the face of our God and Father, and humbling ourselves before Him. He has, after many are of patience and forbearance, pealed His judgments to come upon the nations and yet we have not turned to Him. Surely it is time for His children seriously to lay to heart the state of things which compels the continuance of His discipline, and to set apart time for humiliation, repentance, and prayer believing that in answer to this cry, He will in wrath, remember mercy. As a nation we have been in a special way the recipients of His favour, and yet we have largely turned our back upon the supreme revelation of His love—the Lord Jesus Christ. As a people we have despised and neglected His gift and His Holy Law and in thought and deed have determined that we will not have this man to reign over us. Of this, greatest sin of all, we need most humbly to repent, as well as of all the sins of personal, family, church and national life, of which we are already aware, and which will be made yet more manifest to us as we wait upon God. That God has not left Himself without witness in the midst of the prevalent unbelief and apostasy, is evident. Everywhere groups of praying people have been entering into the secret place during these dark and terrible days, with broken and contrite hearts seeking after Him, and we earnestly invite the inhabitants of Paisley to attend the monthly union prayer meeting to be held in the Baptist Church on Thursday, Oct. 4th, at 8 p. m. to supplicate the throne of grace, that God may so inspire our prayers, that greater victory may be won in the spiritual realm, and that an outpouring of the spirit may quicken His church into new life and power for her work and witness to God: to pray for our soldiers and sailors; to bless the dying and give them peace: to cheer the prisoners of war and give them hope; to comfort the bereaved and give them joy. "Come thy people, enter into thy chambers, and shut the door about thee: hide thyself for a little moment until the indignantion be overpast." Isa. 26: 20.

Yours faithfully,
REV. M NEILSON

The Fair is On

A splendid exhibit in the building live stock coming in on Wednesday morning, and the weather too beautiful for anything, there is every promise of a big crowd for our Fair.

The Late Mrs. McPhee

Sarah Buchanan, beloved wife of Angus McPhee, of Elora Road north, passed to her rest on Sept 13th, after years of suffering borne with Christian patience and fortitude. The deceased was born in Colonsay, Argyleshire, Scotland, 67 years ago, and came to Canada with her parents, the late Mr and Mrs John Buchanan, who for about twenty years were residents of Paisley, but went about 45 years ago to Mobile, Miss. Mrs McPhee was married 34 years ago. Besides her husband, their family of two sons and one daughter are left to mourn her loss—John W, of Wilcox, Sask; Malcolm A, also in the west; Mrs Watson McKinnon, Elora Road north. Mrs McPhee was converted and baptized under the ministry of the late Rev D McNeill, and united with the Paisley Baptist church, of which she remained a faithful member till her death. The funeral on Sept 15th was conducted by her pastor, the Rev M Neilson, after which the remains were laid to rest in Rusk's cemetery, 10th Elderslie. Three brothers and three sisters of deceased are living—John and Forbes, in Montana; George, in Salt Lake City; Mrs Chas Poole, of Toronto; Mrs Firth and Miss Margaret, in Mobile, Miss.

The AUTOMOBILE

Stitches in Time.

Be careful to dry the spokes of a wire wheel after washing. As the enamel chips off the metal rust starts and loosens more of it. Careful drying will prevent this to a great extent.

Every time you change a wire wheel put grease on the metal surfaces of wheel spindle where the hub touches it. If this is not done the wheel will rust and stick to the spindle and it will be extremely difficult to separate.

Be careful that the spare tire on the rear of the car does not hide part of the number plate, and that the plate is properly lighted at night. The police in many sections are enforcing the law very strictly, and you will find that paying a fine is a very expensive way to learn of such mistakes.

When following other cars on a crowded country road, watch out for a sudden stop. Get in the habit of running the car slightly off the road, if there is room, so that if the brakes do not hold you will be in no danger of hitting the car ahead.

Among the necessaries when touring should be a supply of tire valves and caps. A slight leak in a valve will cause as much delay as a blowout. A good valve is often hard to obtain when on the road and considerable annoyance can be avoided by carrying these accessories. A valve tap and die should also be added.

When using the self-starter be sure that the spark is retarded as a back kick may wreck the mechanism. This is not necessary if the car is equipped with a magneto, as the engine starts best when magneto spark is advanced.

The novice jacks up his wheel to put on a chain—not so the experienced motorist. There are two ways of applying the chain. One is to drape it over the wheel, the other is to lay it on the ground and run the car over it. The latter method, apart from the difficulty of steering in straight line something you cannot see, has the added disadvantage that the chain on a muddy road is in bad condition to handle. So drape it over the wheel and you will have a much cleaner job. Apply it in such a way that the points of the cross links are away from the tire, so as to prevent them from cutting into it.

The proper use of the extra or spare tire which every autoist should carry will enable him to make such examinations and repairs at the proper time. At regular intervals the extra tire can be used to replace one of the service tires, and the one removed should be gone over immediately. All the cuts, cracks, and breaks should be sealed by vulcanizing, and the weak places reinforced. If a car is in constant service, one tire exchange per week, and in rotation, will enable one to keep all the tires in as good condition as possible. Of course, this period depends upon the driver and condition of the roads travelled. By this arrangement the extra tire will be kept in good repair for emergency calls, with the emergencies reduced to a minimum, and in most cases the tire mileage will be almost doubled.

WRITING WITH LEFT HAND.

Sensible Method Which Will be of Value to Many Soldiers.

The difficulty of educating a right-handed person to write with the left hand, and the best method of overcoming it, is described by Major Edwin H. Nashe, of the British Army Medical Corps, in a letter to The Lancet. As many persons, by reason of an injury to the right arm or hand find themselves faced with this problem, what Dr. Nashe says is important, especially as it is based upon personal experience.

Dr. Nashe undertook to treat a thirteen-year-old boy whose right side was paralyzed and who had been given up as hopeless by the teachers of many schools. He found the trouble was that the teachers, unable to write with their left hands, tried to get the boy to copy with his left hand the motions they were making with their right. His brain was unable to perform this locking glass act of translation. So Dr. Nashe determined to learn to write with his left hand and then to get the boy to copy his motions. This he did with highly satisfactory results.

The secret of success lies in exactly reversing the right hand position of paper and pencil. Instead of the upper edge of the paper sloping up to the right, it should slope up to the left. The line of the writing should slope down from left to right at an angle of about fifty degrees with the edge of the desk, and the slope of the writing should be backwards at an angle of about 45 degrees to the writing line.

"In this method," writes Dr. Nashe, "it will be found that the fingers are in the most natural position for writing, the arm and the wrist being in a straight line, and there being a wide sweeping motion of the wrist if required." This is much easier to learn than writing straight across, and results in less cramping of the fingers.

A fine pen is the tool to use; a broad pen results in blots because its point is cut for right handed writing, and there must be no attempt at hurry in the beginning.

She Ought to Know.

Charles, aged five, having been told that baby sister had just arrived from heaven, marched into the room and said: "Now, Miss Baby, tell us all about heaven 'fore you forget it."

Why owe a letter interminably when, after all, the actual writing of the letter is no work at all?

The greatest eel breeding farm in the world is in Italy, the industry having been carried on in a swamp for centuries.

AT DUTY'S CALL.

(Lines written on the death of Angus McIntosh, of Port Elgin, Ont.)

By W. A. Sherwood.

From far-off farm and college hall
they go,
First at their country's call and
scarcely deem
A matter of much consequence to show
The world how Christian lads can
cross life's stream,
Though high the flood of raging torrents flow.

The length of days is not life's
measurement,
Nor years of toil the fulness of the
man;
Nay, he whose mind is on high purpose bent
Treads well life's path, ere youth's
fair morn is spent,
And wins the goal for which he early
ran.

Thus do we sing of those at Vimy
Ridge,
At Lens and other fields of martial
fame,
Who at the call leaped headlong o'er
life's bridge,
Into the tide of death unstained by
shame.
With McIntosh we link each glorious
name.

Thus college hall and farm will better
be,
To know that youth sees still life's
holier way,
Though friends in sorrow wait in vain
to see
His fair young face. Yet with these
we say,
'Tis sweet to live with heroes such as
he.

Transcendent faith that like the morning star
Glows still more beauteou as the
night departs,
So when the darkness of this wicked
war
Shall pass away, communion then of
hearts
Will bind us here in love that none
can mar.

The persistency with which the use of corn-bread is being urged in order to conserve wheat flour, will no doubt have the effect of keeping the price of corn at a profitable figure.

To make fly-papers, melt some resin, and, while soft, add some sweet oil, so that when cold it is about the consistency of honey. Spread the mixture on newspapers, and burn when covered with flies.

6,000 MILES IN A COCKLESHELL

FROM MONTE VIDEO, URUGUAY, TO ENGLAND.

Amazing Voyage by One Who Wanted to Cross the Ocean for the "Big Scrap" in Flanders.

In these days of enemy submarines and mines any kind of sea voyage is a hazardous undertaking. What, then, must have been a six-thousand-mile trip, in rough weather, on board a tiny tug?

Quite recently the writer undertook such a trip. It occupied over eleven weeks, and involved enough hair-breadth death-dodging to last him a long lifetime.

For some time I had been in the employ of a meat-canning concern at Monte Video, Uruguay, South America; but for various reasons, both national and personal, I wished to return home, says Mr. A. M. Smith, in a London paper. In wartime, however, getting a passage to England was neither easy nor cheap. After one or two disappointments I heard of a favorable chance, and lost no time in grasping it. Heroes were wanted to take a tug to Cardiff, and I, who knew little and thought less of the kind of job I was rushing at, engaged for the service. I rued only once, and that was practically from the moment of sailing until the day I set foot in the Welsh coal capital.

Bedlam Aboard.

Our "ship," some eighty-five feet long, fifteen or sixteen feet beam, with a gross tonnage of ninety, would have been an ideal boat for some ornamental lake in a park. Perdix was the name she owned to, though I shall always associate her with a similarly-sounding word of three syllables.

Owing to the lack of bunker-room for coal our voyage was to be made in stages. The first stage was to Rio Janeiro, a distance of just over one thousand miles. We made it in discomfort, and six days.

At Rio our skipper left us, and the first-officer, a young fellow of about two-and-twenty, took charge. I am certain he was many times sorry afterwards that he did.

Pernambuco was our next port, or should have been, but, owing to serious engine trouble, we had to put back into Rio, and stay there for repairs four days. Once again shipshape, we reached Bahia all right, and then trouble arrived in heaps.

It began among the men—a very mixed and lively lot. Against their own agreement when signing on they now demanded shore leave and money to spend. As an alternative to wholesale desertion the skipper gave way to them, and dished out a small sum per man. After that we had Bedlam aboard, and three men were paid off as potential murderers.

Riding the Storm.

From Bahia we next headed for St. Vincent, in the Cape Verde Islands—a run of nearly seventeen hundred miles. Here I might mention a fact which will illustrate the really risky nature of our voyage.

The bunker capacity of our vessel was not more than thirty tons, yet, to reach St. Vincent, we needed at least eighty tons of coal. To manage this we stowed on deck, in sacks, fifty tons of fuel, a risky proceeding at any time, and in our circumstances exceedingly dangerous. The overload sank our craft until she was awash aft, and when we ran into rough weather—as we did two days out from Bahia—she was flooded from stem to stern. Cabin, galley, and engine-room were deep in water, our clothes and nearly all the food being drenched, so that we could get neither a dry change nor a warm meal.

For sixty hours we rode the storm, pumping until the pumps choked. Then we bailed for life for two days and nights. To make things worse, several of the men fell sick, and this entailed extra work on the others, who were already worn out. Another engine breakdown seemed to presage a dive, but somehow we managed to keep on top. Immediately we touched St. Vincent half the men were put under a doctor, which is saying enough.

Five days in port did all of us a power of good. More hopeful, if not exactly cheerful, we started for Madeira, but an avalanche of fresh trouble compelled the skipper to make for Teneriffe instead.

Drifting Sideways and Backwards.

Once more it was the engines. The boiler pipes would not draw, and all attempts to make them do so proving vain, the engine-room hands were forced to take strong measures. Drawing the fires, they waited hours for the boiler to cool, then unscrewed the door, and filled up the tank with water from buckets. Replacing the door, the fires were relighted and steam got up again. This laborious process never took less than four-and-twenty hours, and all the time our vessel was drifting, sideways and backwards.

Once we went through the operation in a terrific gale, with four feet of water in the stokehold. I think the only reason why we did not founder was that some member of our crew was born to be hanged.

At Teneriffe, which was reached on the ninth day out, all but two of the men demanded to be paid off. On the captain refusing to comply, the discontents began to steal the ship's stores and sell these ashore, with the result that one or two of the ring-leaders found their way into gaol. Eventually five were discharged, so that when we resailed we were more than ever short-handed.

As it happened, however, though we were now in the war zone and encountered rough weather until we reached home, the final stage of our trip was almost without incident. All the same, when we dropped anchor at Cardiff nobody felt regret at leaving the Perdix, and I am sure none of us would voluntarily court disaster in such a tub again.

TRUE TO FORM.

Easier to be Heroes in the Trenches Than to be Heroes at Home.

In France, nowadays, the soldiers who have won medals are almost ashamed, since they know that nearly all of their comrades merit them. But it is often easier for them to be heroes in the trenches than to be heroes in their own families.

One of the men in our hospital at Royanmont, says Miss Kathleen Burke in The White Road to Verdun, had been in the trenches during an attack. A grenade thrown by one of the French soldiers struck the parapet and rebounded among the men. With that rapidity of thought that is part of the French character, Jules sat on the grenade and extinguished it. For that act of bravery he was decorated by the French government, and wrote home to tell his wife. I found him sitting up in bed, gloomily reading her reply, and I inquired why he looked so glum.

"Well, mademoiselle," he replied, "I wrote to my wife to tell her of my new honor, and see what she says: 'My dear Jules. We are not surprised you got a medal for sitting on a hand grenade; we have never known you to do anything else except sit down at home!'"

BUILDINGS OF CANADA.

Seventy Per Cent. Are Frame Which Makes Fire Reduction Difficult.

Of approximately 2,000,000 buildings in Canada, less than one-tenth of one per cent. have been built with proper consideration of safety from fire. In the cities and towns from which statistics are available, almost 70 per cent. of the construction is frame. The vast majority of brick buildings are structurally defective and inadequately protected; and only one in every 1,200 is even nominally fireproof.

With such conditions prevailing, the enforcement of measures regulating future construction cannot immediately affect any substantial reduction in the volume of fire waste. There are sufficient combustible buildings in Canada to supply the present rate of loss indefinitely.

Upon the average, fire occurs every year in one out of every 80 buildings in cities and towns. Fire prevention is concerned, therefore, not only with the erection of new buildings, but with what is of equal or even greater importance—correction of the worst faults in existing buildings so that they may be less liable to destruction.

Strawberries like good, clean cultivation, fertile soil, and that really is all they do require.

Professor — "What planets were known to the ancients?" Student—"Well, sir, there were Venus and Jupiter, and"—after a pause—"I think the earth, but I am not certain."

BRITANNIA'S ROLL CALL.

As in a dream I saw a host
Like sands beside the sea,
And every man was but the ghost
Of what he used to be.
Yet still they marched with martial mien,
Scars healed and cripples whole,
And answered, while with sobs between
Britannia called the roll.

We are the men who died for you
From castle, court and hall,
The gilded youth, the tried and true,
Who had, and gave you all;
Noblesse oblige—at your command,
Through war's red gate we passed
To that strange unimagined land
Wherein the first are last.

We are the men who died for you
In stifling, baffling waves;
For us no tears, as tribute due,
On peaceful churchyard graves.
Instead, our weary bones are tossed
To silent deeps and bourns,
Where only for the loved and lost
The lone seabird mourns.

We are the men who died for you,
From factories, shops, and farms;
We dropped the tasks we used to do
And changed our tools for arms.
And in the inch by inch advance
Through labyrinths of caves,
We filled the ruined fields of France
With harvests of fresh graves.

We are the men who died for you,
The disinherited,
The low-born, slum-bred, reckless few
Who also fought and bled.
In life dishonored and denied,
With the elect we stand.
They asked us where we lived and died,
We said—In No Man's Land.

We are the men who died for you,
Gathered from ends of earth.
As welcome and as loyal too
As men of English birth,
We gave to serve our mother's needs
Our love, our blood, our breath,
Of different breeds and different creeds,
But brothers all in death.

We whom the gods love died for you,
By water, air or fire,
And some to war's wild wreckage threw
Rent lute and unstrung lyre;
Others shall hear your trumpets blow
When victory ends the strife,
We are content, for now you know
We loved you more than life.

—Julia S. Dinsmore.

FISHES THAT CARRY VENOM.

Natives of the Southern Coasts of North America.

If you a-fishing go anywhere along the New England coast, you are more likely than not to catch a Cape Cod minister.

Such, one regrets to say, is the disrespectful name given to a particularly hideous kind of fish, about six inches long, that is an angler's plague in those waters. It is mostly mouth, and nobody, so far as known, has ever tried to eat it.

Its other name is "toadfish"—which, descriptively speaking, is not inappropriate. At worst, it is harmless.

But there is another species of toadfish, native to the waters along the southern coasts of the United States, that is very dangerous. It carries on its back, just behind the head, two spines that are hollow and connect at their bases with venom glands.

The whole arrangement, indeed, is structurally very similar to that of the twin fangs in the upper jaw of a rattlesnake, with the venom glands thereto pertaining.

Experiments have proved that pressure on these spines causes them readily to eject their venom, which is thrown out with such force as to squirt for a distance of two feet.

There is no question of the dangerous character of the glandular secretion, and Dr. Barton A. Bean, of the Smithsonian Institution, who has made a study of this toadfish, is inclined to believe the fishermen's stories of deaths caused by careless handling of specimens captured.

The loss to Britain caused by farm pests—the rat, the mouse, the house sparrow, and the wood-pigeon—is estimated at £40,000,000 annually.

In 1913, South Africa imported 21,263,000 eggs. This year it will be found that over 2,000,000 have been exported after local requirements had been filled.

You Can Do Your Bit in preventing waste by demanding the whole wheat in breakfast foods and bread. **Shredded Wheat Biscuit** is 100 per cent. whole wheat grain prepared in a digestible form—contains more real nutriment than meat or eggs or potatoes and costs much less. Serve with milk or cream, sliced peaches, bananas or other fruits.

Made in Canada.

CARVING FACES FOR WAR HEROES

WOUNDS OF BATTLE COVERED BY MASKS.

War Now Makes Art a Supplement to the Surgeon's Skill in Badly Mutilated Cases.

An entirely new form of art has been produced by the war, that of carving and painting artificial faces for men whose features have been badly mutilated either in war or by a serious surgical operation. Francis Derwent-Wood, Associate of the Royal Academy and a famous sculptor, is attached to the staff of the Third London General Hospital as a lieutenant, and it is his work to make art supplement surgery.

In an article in the Lancet, Lieut. Wood describes his methods. Where the surgeon leaves off he begins; his "cases" are usually those which plastic surgery has been obliged to abandon because the grafting of bone and muscle and skin has been carried to the limit of possibility, and the unfortunate subject is left with his wounds healed, but noseless, eyeless, sometimes with a deep hole where cheek bones and jaws have been, a hole covered with grafted flesh and skin, but that makes the face such a horrible object that even the truest of friends would shudder at the sight of it.

"The features," writes Lieut. Wood, "may have been originally ugly or beautiful. As they were in life so I try to reproduce them, beautiful or ugly; the one desideratum is to make them natural."

Silver-Plated Mask.

First of all a plaster-of-Paris cast of the patient's face is made. From this a positive model is made. A mould from this is built up to match the corresponding features or from prewound photographs. When this is perfect and accurately fitted, an electrotype is made in copper 1-32 of an inch in thickness. Such attachments as glass eyes are added and the whole is silver plated.

The mask is usually secured to the face by means of spectacles, but spirit gum and ribbons have sometimes to be used, varying with the character of the wounded area.

The mask is now painted to match the patient's complexion. This is done in oil colors on a thin coating of cream-colored spirit enamel.

"I do not use false hair for eyebrows and eyelashes now," writes the sculptor. "The eyebrows are painted to match and the eyelashes I make of thin metallic foil, carefully soldered to the plate, cut finely by scissors and tinted to match. I purchase the plain glass eye-sections and paint the eye match on the concave reverse myself. Sometimes I do not use glass at all, but paint a semblance to match direct upon the metal mask."

Readjustments have to be made from time to time as the contours and colors of the face change.

Cheese contains the same flesh-building material as meat, and can be used in place of meat.

The Doings of the Duffs.

THE BUSINESS WOMAN

To-day, more than ever before, is woman's opportunity. Many new occupations are now opened to her, which, before the war, she was deemed unfitted to fill. And truth to tell she has risen to the opportunity, and now shares many business responsibilities in former times confined to men. But, as women are subject to more frequent fluctuations of health than men, many will be handicapped early, if they regard their health requirements too lightly.

The nervous strain, long hours and prolonged mental or physical fatigue thin the blood and weaken the nerves. Such conditions as women are now called upon to undergo can only be enjured by a full-blooded constitution. This is as true for men as for women, every weaker women suffer soonest. The woman worker, in any line, requires her blood replenished frequently. She needs new, rich blood to keep her health under the trying conditions of business life, and to fortify her system against the effects of overwork. This applies also to the woman in the home, who, perhaps, has more worries and anxieties than usual. So let all girls and women take heed and renew their blood promptly at the first approach of pallor, lack of appetite, headache and backache. This can be best and most effectively accomplished by taking Dr. Williams' Pink Pills which make new, rich blood and thus help womankind so perfectly. No woman need fear failure of health if they take these pills occasionally to keep them well, or give them a fair trial if they find themselves rundown.

You can get Dr. Williams' Pink Pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

ORCHIDS WITH ICE CREAM.

Flavoring Extract, Vanilla, Is Obtained From Highly Prized Flower.

Few people think of orchids, which are highly prized and admired for their beauty as flowers, as contributing any edible product, yet one of the most widely known and commonly used flavoring extracts—vanilla—is obtained from an orchid.

The commoner forms of the orchid are very widely scattered throughout the world. Out of a total of 15,000 different species there is only one genus known to have any practical value.

There are but a few species of this genus and the most important one of these is that from which the vanilla bean of commerce is obtained. The genus is native in the warmer parts of Mexico and in portions of Central America, but it has been introduced and is now extensively cultivated in parts of the West Indies and in Islands of the East Indian archipelago.

The various species of vanilla are all climbing plants. The slender stems send out aerial roots and by these the vines climb upon the trunks and limbs of trees.

The fruit consists of long slender pods, resembling a thick, somewhat flattened lead pencil in shape, being firm but slightly wrinkled. The pods are gathered and dried before they are fully ripe, the drying process being a very important feature of their preparation, developing their color and giving them the peculiar quality desired for flavoring purposes.

Britain's Hero.

A London schoolmaster named Wiman, who enlisted and lost an arm and a leg in France, returned to teaching after his recovery and became the idol of his students.

The discipline among members of his class was perfect, the boys enforcing it among themselves. Finally, after the authorities discovered him to be a better teacher than ever, the school arranged for an exhibition hearing of one of his history lessons. At this exhibition Wiman asked:

"Now, boys, who is the greatest outstanding British military hero of all time?"

The boys instantly stood, cheered thrice and shouted in chorus "Mr. Wiman!"

POSTUM

A wholesome table beverage with winning flavor.

Used everywhere by folks who find that tea or coffee disagrees.

DANGER FOR THE TOURIST.

Strange Animal Inhabits the Desert Valley of California.

That most frightful of deserts, Death Valley, in California, lies between two lofty ranges, one of which is called the Funeral Mountains.

The higher levels of these mountains are rather densely forested, with here and there little meadows and "parks" (natural clearings), in which dwells a strange animal known as the tarrasbot. So inaccessible are those inhospitable heights, however, that the creature, rarely seen, has remained almost unknown.

Respecting its habits little can be said. There is no reason for supposing that it is dangerous to man. Nobody knows even whether it is carnivorous or a plant feeder. It has a coffin-shaped body, six or seven feet long, with a sort of shell running the whole length of its back.

Having (it is presumed) few natural enemies, the ferrashot increases in numbers until it is seized with an impulse to migrate—possibly because its food supply no longer suffices. The animals then form long processions, marching down into the desert in single file, with the evident intention of crossing the valley to the mountains on the other side.

But none of them ever get across. As they encounter the hot sands they rapidly distend with the heat, and one after another they blow up with loud reports, the places where this happens being marked by deep, grave-shaped holes.

W. T. Cox, State Forester of Minnesota, has found records which show that early Mormon emigrants observed this remarkable animal, chancing to witness such a procession as that above described; and beholding the tragic fate of the creatures.

A MARVELLOUS MEDICINE FOR LITTLE ONES

Mrs. Dolvina Pelletier, Ste. Perpetue, Que., writes: "I have much pleasure in stating that Baby's Own Tablets have been a marvellous medicine in the case of my baby. I have been using the Tablets for four years and don't think there is anything to equal them." In using the Tablets the mother has the guarantee of a government analyst that they do not contain one particle of opiates or other harmful drugs—they cannot possibly do harm—they always do good. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

GOD BLESS YOU.

So I breathe a charm
Lest grief's dark night oppress you.
Then how can sorrow bring you harm
If 'tis God's way to bless you?

And so, not "all thy days be fair
And shadows touch thee never,"
But this alone—God bless you, dear,
So thou art safe forever.

—Julia A. Baker.

Little Mary had been sent to the store to get some fly paper. She was a long time in returning, and her mother began to feel a bit anxious.

Going to the door, she spied the little girl coming up the street, and said, "Mary, have you got the fly-paper?"

"No, mother," cried Mary, "it's got me; but we're both coming together."

Minard's Liniment Cures Dandruff.

The Pen of Destiny.

Sir Douglas Haig signs all official despatches and other official documents with the gold fountain pen that was a present to his wife from Queen Alexandra. The British Commander-in-Chief devotes half an hour out of what is often a working day of fifteen or sixteen hours to signing official documents. This is the outside limit of time he can afford to devote to work of this kind. Sir Douglas Haig is as fit as can be and has an iron constitution, but he has nevertheless lost over fourteen pounds in weight in the past twelve months. The burden of responsibility that the Commander-in-Chief of the B.E.F. in France carries on his shoulders would wear most men to a shadow in a few months.

Volcano is Hottest on Top.

Notwithstanding what the old textbooks say, it now appears that a volcano is hottest on its surface. This is the conclusion drawn by a scientist who has made extensive investigations in craters in Hawaii and has obtained samples of gases and lava before they reached the air. Laboratory studies of these samples make it appear probable that much of the heat required to keep an open lava basin in fluid condition is supplied by the chemical action of the gases. From these investigations the scientist concludes the temperature at the surface of a volcano undoubtedly is higher than that below the surface.

Kisses and rumors go from mouth to mouth.

Minard's Liniment for sale everywhere.

DODD'S KIDNEY PILLS
CURES RHEUMATISM, BACKACHE, KIDNEY DISEASE, DROPSY, BRIGHT'S DISEASE, DIABETES
NUMBER 23 THE PROPRIETORS

DEEDS.

As 'round some forgotten tome,
Among whose leaves a rose has lain,
Lingers perfume;
Though the tome and rose have each become,
The yellow hue of time's slow stain,
That robbed its bloom.

So memory of deeds we've done,
If good or ill, they still live on to follow far;
After this earthly course is run,
Blessing or curse the meed we've won
To help or mar.

—Winfield Lionel Scott, Detroit.

This is to certify that I have used MINARD'S LINIMENT in my family for years, and consider it the best liniment on the market. I have found it excellent for horse flesh.

"Woodlands," Middleton, N.S.

To disinfect a bathtub, scrub and scald it well, then allow a little water to run into it and drop into this a small quantity of carbolic acid and brush every part of the tub with this

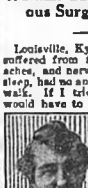
Seed corn for next year's crop, if selected in the field from standing corn, may be chosen more wisely, be stored more carefully and will then produce a larger yield in return than if picked from the shock or crib.

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN

Apply a few drops then lift corns or calluses off with fingers—no pain.

Just think! You can lift off any corn or callus without pain or soreness.

A Cincinnati man discovered this ether compound and named it freezone. Any druggist will sell a tiny bottle of freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.



Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.

Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't freezone, tell him to order a small bottle for you from his wholesale drug house.

A FRIEND'S ADVICE

Woman Saved From a Serious Surgical Operation.

Louisville, Ky.—"For four years I suffered from female troubles, headaches, and nervousness. I could not sleep, had no appetite and it hurt me to walk. If I tried to do any work, I would have to lie down before it was finished. The doctors said I would have to be operated on and I simply broke down. A friend advised me to try Lydia E. Pinkham's Vegetable Compound and the result is I feel like a new woman. I am well and strong, do all my own house work and have an eight pound baby girl. I know Lydia E. Pinkham's Vegetable Compound saved me from an operation which every woman dreads." — Mrs. NELLIE BURNES, 1521 Christy Ave., Louisville, Ky.

Everyone naturally dreads the surgeon's knife. Sometimes nothing else will do, but many times Lydia E. Pinkham's Vegetable Compound has saved the patient and made an operation unnecessary.

If you have any symptom about which you would like to know, write to the Lydia E. Pinkham Medicine Co., Lynn, Mass., for helpful advice given free.

THE PATHS OF PAIN.

The paths of pain are lonely,
But the loneliest path of all
Is trodden by the children,
Pitiful, weak and small;
The fatherless and motherless
Who live unloved, and die,
Sobbing their little souls away,
Under a silent sky.

The paths of pain are holy,
But the holiest path of all
Is sacred to the children,
Innocent, frail, and small;
The friendless and forsaken,
The lambs without a fold,
Till He shall call them to Him
Over the sands of gold.

—Ernest H. A. Home.

Minard's Liniment Cures Horse, Etc.

A quart of canned peaches or tomatoes on the shelf is worth a bushel rotting on the ground.

The white of an egg when used instead of water for mixing mustard poultices prevents the skin from blistering.

SELDOM SEE a big knee like this, but your horse may have a bunch or bruise on his ankle, hock, stifle, knee or throat.

ABSORBINE

will clean it off without laying up the horse. No blister, no hair gone. Concentrated—only a few drops required at an application. $2 per bottle, delivered. Describe your case for special directions and Book 4 M free. ABSORBINE, JR., the antiseptic liniment for mankind, reduces Painful Swellings, Enlarged Glands, Wens, Varicose Veins; allays Pain and Inflammation. Price $1 and $2 a bottle at druggists or delivered.

Like A Boy at 50 Bubbling Over With Vitality--Taking Iron Did It

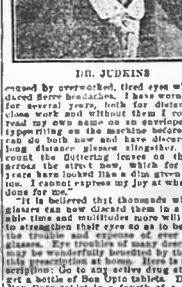
Doctor says Nuxated Iron is greatest of all strength builders—Often increases the strength and endurance of delicate, nervous folks 100 per cent. in two weeks' time.

NEW YORK, N. Y.—Not long ago a man came to me who is nearly half a century old and who, on examining him in preliminary examination for life insurance, was astonished to find him with the blood pressure of a boy of 22 and as full of vigor, vim and vitality as a young man. He did not look it nor really was not with the aging his age. The secret he told was taking Nuxated Iron. He had filled him with renewed life. At 50 he was in bad health, and now he was careworn and nearly old. Now at 50 after taking Nuxated Iron a miracle of vitality and vim and beaming with the buoyancy of youth. As I have said a hundred times over, iron is the greatest of all strength builders. If people would only take Nuxated Iron when they feel weak or run-down instead of gulping down drugs with habit-forming drugs, stimulants and alcoholic beverages they would escape in this way they could ward off disease, preventing it becoming chronic in thousands of cases by the time it does. Hundreds of thousands might be saved who now die every year from pneumonia, grippe, kidney, liver, heart trouble and other dangerous maladies. The real and true cause which started their diseases was nothing more nor less than a weakened condition brought on by lack of iron in the blood. Iron is absolutely necessary to enable your blood to change food into living tissue. Without it, no matter how much or what you eat, your food merely passes through you without doing you any good. You don't get the strength out of it and as a consequence you become weak, pale and sickly looking just like a plant trying to grow in a soil deficient in iron. If you are not strong or well you owe it to yourself to make the following test: See how long you can work or how far you can walk without becoming tired. Next take two five-grain tablets of ordinary nuxated iron three times per day after meals for two weeks. Then test your strength again and see for yourself how much you have gained. I have seen dozens of nervous run-down people who were ailing all the while double their strength and endurance and entirely get rid of all symptoms of dyspepsia. Liver and other troubles in from ten to fourteen days' time simply by taking iron in the proper form. And this after they had in some cases been doctoring for months without obtaining any benefit. Don't take the old forms of reduced iron, iron acid tonics or tincture of iron simply to save a few cents. You must take iron in a form that can be easily absorbed and assimilated like nuxated iron if you want it to do you any good, otherwise it may prove worse than useless. Many an athlete or prizefighter has won the day simply because he knew the secret of great strength and endurance and filled his blood with iron before he went into the affray, while many another has gone down to ingloricus defeat simply for the lack of iron.—E. Sauer, M.D.

NOTE: Nuxated Iron, recommended above by Dr. E. Sauer, is not a patent nostrum nor secret remedy, but one which is well known to druggists, and its iron constituents are widely prescribed by eminent physicians everywhere. Unlike the other inorganic iron products, it is easily assimilated, does not injure the teeth, make them black, nor upset the stomach; on the contrary, it is a most potent remedy in many forms of indigestion as well as for nervous, run-down conditions. Most druggists carry it in stock, but insist upon having it. Nuxated Iron that they offer to forfeit $100.00 to any charitable institution if they cannot take any person, under 60, who lacks iron, and increase their strength 100% or over in four weeks' time, provided they have no serious organic trouble. They also agree to refund your money if it does not at least double your strength and endurance in ten days' time. It is dispensed by all good druggists.

Dr. Beck, The Well Known Eye Specialist and Doctor Judkins, The Medical Author, Publish Astonishing Report on Wonderful Remedy To Strengthen Eyesight

Say it Strengthens Eyesight 50% in One Week's Time in Many Instances



DR. BECK

A Free Prescription You Can Have Filled and Use at Home.

New York—Dr. Beck, a New York State eye specialist, and Dr. Judkins, a Massachusetts physician, were asked to make a thorough test of the popular eye remedy, Bon Optic. Their reports were most interesting. Here they are:

Dr. Beck reports, "When my attention was first called to the wonderful eye remedy, Bon Optic, I was inclined to be skeptical. I make it a rule to test every preparation which is brought to my attention, having specialized in eye work for the past seven years, I believe I am qualified to express an intelligent opinion on remedies applicable to the eyes. Since Bon Optic has created such a sensation throughout the United States and Canada, I welcomed the opportunity to test it. I began to use it in practice a little over a year ago and I am frank to say that the results obtained are such that I hesitate to tell of my experience for fear it will sound incredible. Some of the results I have accomplished with Bon Optic not only astonished myself but also other physicians with whom I have talked about it. I have had many individuals who had worn glasses for years for far sightedness, near sightedness, astigmatism and other eye weaknesses, tell me they have dispensed with them through the adoption of the Bon Optic principal. Many eye troubles can be traced directly to muscular contraction and relaxation and since Bon Optic method tells how to exercise and develop the eye muscles, it reaches conditions not possible through other means. I advise every thankful physician to study Bon Optic principal, give it the same carefull trial I have and there is no doubt in my mind they will come to the conclusion I have, namely, that the Bon Optic method opens the door for the cure of many eye troubles which have heretofore been impossible to cope with. The treatment is so simple in its application that it can be used at home by anyone of average intelligence. In my own practice I have found it strengthens the eyesight more than 50 per cent in one week's time. I have also used it with marvelous effect in cases of worn strained eyes, pink eye, inflammed lids, catarrhal conditions, smarting, painful, aching, itching eyes, eyes weakened from colds, smoke, sun, dust and wind, watery eyes, blurred vision, and in fact many other conditions too numerous to describe in this report. A few of cases of eye trouble, Bon Optic has in my opinion, is a remarkable remedy for the cure and prevention of many eye disorders. Its success in speedily overstrengthening the eyesight will soon make eye glasses old fashioned and the form of treatment by the Bon Optic method prescribed, will make its use as common as that of the tooth brush. I am convinced from my experience with Bon Optic that it will strengthen the eyesight at least 50 per cent in one week's time in many instances. Dr. W. H. Devine, director of medical inspection in the Boston schools, in his report published February 16, 1917, states that only 14,416 out of 69,176 examined, need to wear glasses, a marked decrease over the previous report. Bon Optic is lessening the eyeglasses age in bespectacled Boston."

Victims of eye strain and other eye weaknesses and those who wear glasses will be glad to know that according to Dr. Beck and Dr. Judkins, there is real hope and help for them. Many whose eyes were failing say they have had their eyes restored by this remarkable prescription and many who once wore glasses say they have thrown them away." One man says, after using it: "I was almost blind. Could not see to read at all. Now I can read everything without my glasses and my eyes do not hurt any more. At night they would pain dreadfully. Now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses but after using this prescription for 10 days everything became clear. I can read even the print without glasses." Another who used it says: "I was bothered with eye strain

DR. JUDKINS

caused by overworked, tired eyes which induced severe headaches. I have worn glasses for several years, both for distance and close work and without them I could not read my own name on an envelope or the typewriting on the machine before me. I also do both now and have discarded my long distance glasses altogether. I can count the Gothic letters on the street across the street now, which for several years have looked like a dim green blur to me. I cannot express my joy at what it has done for me."

"It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be successfully treated at home by this prescription at home. Here is the prescription: Go to any active drug store and get a bottle of Bon Optic tablets. Drop one Bon Optic tablet in a fourth of a glass of water and let it dissolve. With this hold bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly from the first and inflammation and redness will quickly disappear. If your eyes bother you even a little, it is your duty to take steps to save them now before it is too late. Many hopelessly ruined sights have been saved sight if they had cared for their eyes in time.

NOTE—Another prominent physician to whom the above article was submitted, said: "Yes, the Bon Optic prescription is truly a wonderful eye remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. I have used it very successfully in my own practice on patients whose eyes were strained through overwork or badly diseased. It is one of the very few preparations that I would have no hesitancy in recommending almost every family." Bon Optic referred to above, is not a patent medicine or secret remedy. It is an ethical prescription, the formula for which is printed on the package. The manufacturers guarantee it to strengthen eyesight 50% in one week's time in many instances or they will refund your money. It is sold by all good druggists, including general stores also by G. Tamblyn and J. Eaton & Co., Toronto.

The Paisley Advocate

PAISLEY, SEPT. 26th, 1917

LOCAL AND DISTRICT NEWS

Died at Alma

Mr Robt McLelland, harness maker, formerly of Paisley, died at his home in Alma on Saturday. A few months ago he was stricken with paralysis which left him wholly disabled. The deceased was well known here, having learned his trade with Mr P C Kennedy. His age was about 47 years. He was married to Miss Mary McCully, of Paisley, who survives him, with their one child, who have the sympathy of all friends here in their bereavement.

Killed in Auto Accident

Lawrence McVittie, of Southampton, was instantly killed when the Ford car he was driving turned over on the roadside just south of Port Elgin on Tuesday night. The cause of the accident is not known, but is is supposed a wheel struck a large stone, which caused the car to bounce upward and lose its balance. Two other occupants of the car escaped with out serious injury. The deceased was about seventeen years of age, a son of Mr McVittie, hardware merchant of Southampton. He had joined the Canadian Flying Corps some months ago, but after training for a time was rejected because of being under age.

The Food Campaign

Whatever may be your opinion of the efforts of the Dominion Food Controller it is your duty and privilege to assist in the campaign that is being carried on by the Women's Auxiliary Organization of Resource Committee in co operation with the Food Controller. Unnecessary consumption of the necessaries of life is a waste that should not be considered too small to avoid in this serious war time. You may never come to real want because of slight waste, but bear in mind that the soldiers who are fighting for you and the people of Britain may suffer for the need of that 'small matter' you save in the course of a few months. Read the advertisements in this and other paper which lay before the public some striking facts as to the food situation. Everyone should realize the need of conserving the food supply.

GREENOCK COUNCIL

Knox's Hotel, Pinkerton
Sept 17th, 1917

Council met as per adjournment, all the members present, the reeve in the chair. Minutes of last meeting were read and adopted.

The following accounts were presented for payment:

G I R, 19 pieces rails, 4305 lbs at 2c and 28 cuts at 25c		$90 60

Jos Hehn, operating grader		20 00

Sawyer—Gilchrist—That the foregoing accts being found correct be paid, and that the reeve and treas be instructed to sign checks for same.—Carried.

The timber on 25th sideroad between the Durham Road north to the 2nd con was reported sold by Thos Symons for the sum of $5 25, to Steve Sebastbach.

A communication was read from A Collins re a ditch on the 20th side line which Jos Bester claims backs the water on his property. The clerk was instructed to reply.

A communication was read from S L Squire re the question of abolishing statute labor, also asking a few questions re its success in Greenock.

Gilchrist—Sawyer—That this council do now adjourn to meet at Riversdale on Monday, Oct 15th, for general business. —Carried. THOS H PURDY, Clerk

TWELFTH CON. BRUCE

Threshing is order of the day.

Miss Harriet Barnes has returned to Guelph for the winter months after spending the summer here.

Mr and Mrs John Dunlop have gone to Owen Sound to attend the funeral of their uncle.

Well, if it don't soon rain we will have a long dry spell.

Miss Elizabeth Barnes has returned home after spending the summer with her sister, Mrs D Beaton.

Kennie Foster motored a load to Port Elgin for the fair. James Archer, John Cumming, Hector McGillivray, sr, and Hector McGillivray, jr, also took in the fair. We understand that John Cumming got the red ticket for his team.

Eldon McGillivray Sundayed at his home here.

Mrs Geo. Scott spent a few days in Port Elgin visiting her parents.

Hearsplal for the fair on Wednesday.

Letters from the Soldiers

Pte Lawrence Putman, writing home from Somewhere in France, Aug 26th, gives his experience in acting as a stretcher bearer during a hot engagement: "It is again Sunday evening and my thoughts turn to the dear old home as they do very often every day. I received a couple of letters from you when I came out of the line from the great battle that you have read about most likely in the papers. Also got your parcel and one from Bertrude. Thanks very much for the parcel and the money enclosed in the letter just bought me a nice bit of fruit to make me feel better. Well, I suppose you will want to know how I got along in the greatest battle the Canadians have as yet been in. I write you on the 14th and told you that something was coming off and you would see by the papers how soon we went into action. Well, we left our billets that night and the rain fell in torrents on us. Most of us had very little to protect us from the rain. On an ordinary trip in the line we generally take our overcoats and rubber sheets, etc., but this time we were going to be for battle and we were loaded with ammunition, bombs, etc., so we did not carry our coats, and of course got wet to the skin. Well, as we went on it began to clear and by twelve or one o'clock the sky was almost clear again. About this time we arrived at the assembling post for our battalion. We got a rest here and got things ready to move forward in to No Man's Land, where we took up our various positions. I was acting as a stretcher bearer and was along with another bearer by the name of Thorn. He and I were in a shell hole with our stretcher waiting for the battle to begin. It was quite dark but was beginning to show signs of day in the eastern sky. We were not there long before a big rocket went up a little to my left. It was one of those rockets like you see at Toronto Fair, that all breaks into stars, that was the signal. At once our guns opened up, and the whizzing of shells over our heads was awful. The sky was lit up and I could see all the boys getting up and running forward with fixed bayonets. We came across two wounded boys of our platoon in a shell hole and we fixed them up. One was wounded in both legs and one arm, not very bad though; the other said he could fix up himself and told me to go on, so we went. By this time there were bullets on our right that were all on fire from top to bottom. I stopped and looked at the sight—it was so awful, and yet so wonderful. Between the houses and I were the men with fixed bayonets running every direction. It is just like the pictures you see of a battle. There was a German wagon broken at the axle. Well, I ran on, got mixed up with another battalion and when I thought of Thorn, the other stretcher bearer I was with, I couldn't find him. I then came across a wounded fellow and fixed him up. He didn't belong to my Batt., but it was all the same, anyway. When I got through with him I ran on. I was getting close to where we were to stop and was close to a Corporal of this other batt., when two Hines officers appeared in the trench we were in. They fired three times, and each time hit the Corporal. The Corporal fired and the first one dropped then he ran forward and put his bayonet into the second. They were both officers, a little more than ordinary rank. I dressed the Corporal's wounds and he then proceeded to relieve the Hiner's of their belongings. The Corporal was wounded very slightly. I left him then and proceeded to find my platoon. I soon found it and helped them dig in. Our company went right to the front line and we held it for four days although Hiney counter attacked on us several times. Being a stretcher bearer I had no firearms of any kind, but when I saw Hiney coming over on us I got a Hiney belt and ammunition and rifle and helped our boys keep him back. Well, I must close now, I am feeling fine. Saw Sir Douglas Haig to day. He reviewed our troops.

From Pte. Ross Woods

Mr and Mrs D Woods have received word from their son, Pte Ross Woods, telling them that his wound was a rifle shot above the left knee, which he received while fighting at Hill 70, on the morning of Aug 15th. He is now in Brighton Hospital, England

EBENEZER

Anniversary services were held here last Sunday. As the weather was beautiful a good crowd attended. Rev Daniels of Tara preached two excellent sermons. Harry Potts of Regina, who is making a short visit to his old home here, rendered a fine solo at the evening service which was well appreciated by his many friends here.

L H Lipsett and family of Chesley visited friends here on Sunday.

Mr and Mrs H T Potts of Tara and Miss Eva spent a couple of days with their son J H of this place.

John Robinson is visiting his brother Sam in Orillia.

Mr and Mrs P Fleming of Kilsyth visited Mr E H Grant's on Sunday.

Mr and Mrs Frank Quigley and Mrs G Grant motored to Desboro fair last week.

E H Grant met with a bad accident last week. While building a load of hay the team started quickly and Harris was thrown to the ground, alighting on his head. His collar bone was broken, and some ribs. We hope he may soon recover.

Sam Fleming received the sad news last week that his brother, Pte John Fleming of the 50th Batt in France, is missing. We hope that brighter news will soon be received.

Mr and Mrs G Munson of Derby visited at John Grant's on Sunday.

Wm Alexander and family visited at Geo Grant's on Sunday.

Miss Annie McKelvey entertained a few of her friends one evening last week.

Mr and Mrs C Apps on attended the Chesley fair and visited friends there for a couple of days.

Next Sunday is being observed as Rally Day in the Sunday school here.

Frank Quigley has purchased a new car and is helping to raise the dust.

BORN

LYON—At Paisley, on Sept 23rd, to Mr and Mrs D Lyon, a daughter.

WINCH—In Elderslie, on Sept 15th, to Mr and Mrs Robt Winch, a son.

LOGIE—At Bruce Co. Hospital, on Sept. 18th, to Mr and Mrs John Logie, of Paisley, a daughter.

DIED

LOGIE—At Bruce Co. Hospital, on Sept. 18th, Jessie Moore, infant daughter of Mr and Mrs John Logie, of Paisley.

SEVEN YEARS TORTURE

Nothing Helped Him Until He Took "FRUIT-A-TIVES"

ALBERT VARNER

Buckingham, Que., May 3rd, 1915.

For seven years, I suffered terribly from Severe *Headaches and Indigestion*. I had belching gas from the stomach, bitter stuff would come up into my mouth after eating, while at times I had nausea and vomiting, and had chronic Constipation. I went to several doctors and wrote to a specialist in Boston but without benefit. I tried many remedies but nothing did me good. *Finally, a friend advised* "Fruit-a-tives". I took this grand fruit medicine and it made me well. I am grateful to "Fruit-a-tives", and to everyone who has miserable health with Constipation and Indigestion and Bad Stomach, I say take "Fruit-a-tives", and you will get well".

ALBERT VARNER.

50c. a box, 6 for $2.50, trial size, 25c. At dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Fall Boots and Shoes

We have a full display of shoes for Men, Women and Children. They are stylish and at the same time possess durable qualities, yet are not excessive in price. Call in and see them. It is a pleasure for us to show them to you.

Repairing

Shoe prices get higher every month. Save money by having them repaired.

Fresh Groceries

Fruit and Confectionery always in stock.

The Blow that Tells the Tale

Creditors Demand Sale

Sale Commences Saturday, Sept. 29th, at 8.30 a.m.

OWING to the trouble of one year ago, and having been forced to pay out our ready cash, we allowed our creditors to remain unpaid, thus putting ourselves face to face with a **critical situation**, which causes us once more to put our entire stock into your hands. **$4784.21 must be raised in 10 days to meet their demand.** Prices have advanced 50 per cent in some lines since then, but they remain the same here. **Comprehend the immense saving. Act quick and get the plunder.** $1000 New Goods just arrived, so these are among bargains. **Nothing held back. The price is cut on everything in the house. Have competitors shaking in their boots.**

GREAT FOREST FIRES

That in Ontario's Clay Belt Ranked as Third Most Destructive

The Northern Ontario forest fire of July, 1916, takes rank as the third most serious fire catastrophe in the history of this continent. The Hinckley fire in Minnesota, 1894, was responsible for 418 lives and the burning over of 160,000 acres. The famous Peshtigo fire in Wisconsin, 1871, killed 1,500 and devastated 1,300,000 acres of timber. In 1825 occurred the Miramichi fire of New Brunswick and Maine, with a loss of 160 lives, six towns, 1,000 head of cattle, and damage of 300,000 acres of forest. The Clay Belt fire in Ontario, with 243 lives lost and 800,000 acres fire-swept takes its place with the great disasters of history. The Porcupine fire in 1911 killed 84 persons.

It is noteworthy that Wisconsin, Minnesota, Maine, and New Brunswick have taken comprehensive measures to prevent further disasters by organizing their forest patrol systems on modern lines, building trails, lookout towers, telephones, etc., as well as carefully supervising settlers' clearing fires, one of the worst sources of danger.

GIGANTIC ARUM LILIES

"As Large as Elephants' Ears," Says British Visitor

A British aviator sent from East Africa a graphic description of an immense valley filled with the huge "Arum lilies," over which he flew somewhere in the region of Zanzibar. As he passed over the valley he was 3,000 feet high, but the perfume of the lilies reached his nostrils for a long distance. By means of his glasses he observed that the lily flowers were "as large as elephants' ears," and that the whole of the valley had been monopolized by the beautiful flowers. The luxuriance of the vegetation was particularly remarkable. He learned later that the scent of the flowers was so overpowering in the valley that no native had ever dared to penetrate within its borders.

How Chinese Prepare Tea

In order to preserve the seeds and the flavour, the tea is compressed by the bare feet of Chinese girls. The Chinese prepare their tea in various ways. A favourite method is to tie it in bundles and pour boiling water on the bundle when serving. Afterwards the bunches are preserved in vinegar for a few weeks and then they are made into leaf-salad.

Password to the Tower

It may not be generally known that the Lord Mayor is the only person—other than the King and the Constable—who knows the password to the Tower of London. This password is sent to the Mansion House quarterly, signed by His Majesty. It is a survival of an old custom.

The first census of the kind ever taken in Denmark, which has about one-third the area of Wisconsin, credited the country with more than 5,400,000 inhabitants.

Iron ore is found in almost every Chinese province, but it is mixed extensively in only a few.

A GREAT HIT

The Family Herald and Weekly Star of Montreal certainly made a pop lar hit when they issued their new war map of the European fighting area. It is said they are overwhelmed with orders. The map is not for sale at any price, but is given free to all who pay a year's subscription to that great paper. The price for the full year is $1.50; map included. It is wonderful value and it is no wonder they are securing thousands of new readers. Renewals also, many months ahead are being sent in in order to get the map now. The map is very complete and alone well worth the price asked for both paper and map.

ARBON COUNCIL

Council met Sept 11th. All present. A number of unimportant communications were read and filed.

On motion of Brunton and George the Reeve was instructed to procure five dollar gold pieces for the boys who have lately joined colors and send them to their parents with a short address on behalf of the Council. On motion of Pearsons and Thomas Hoist Mc-Innes all C E. Given Board, was appointed assessor under the Ditches and Watercourses Act for the Township of Arran, and By-Law confirming the same passed. Councillors George and Hamilton were appointed to have the conditions of the award re Ash ditch carried out as far as the township is concerned. Moved by Pearsons and Brunton, that where as parties are asking for the use of the gravel pit on part of Concession A, Arran, permission be granted, providing they pay the sum of three dollars per car, plus cost of operating and repairing any injury to the machine—Carried. There number of orders were issued. Sheep and orders for statute labor. Council adjourned until the 4th of October next. H T Purvis, clerk.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

—There are places in Canada where bread is selling at 7½ cents per lb, says the Canadian Food Controller. "There are other places where it is selling at 12 and 14 cents and they have no possible excuse, except that someone is in control of the markets and they dictate what they like.

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Office help is scarce now—will be scarcer very soon. Young women and boys under military age must fill the vacant places and they need training.

NORTHERN Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circular free on application.

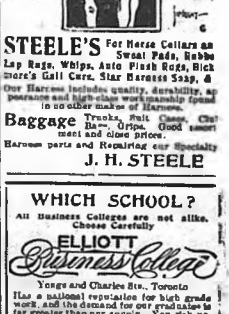
Leave your order with us for Tomatoes, Cucumbers, Onions, Plums, Pears, Peaches, Grapes.

F. CARTER & SON

Shoes, Crockery and Groceries

A PROMINENT NURSE SPEAKS.

Many Nurses in Canada and Elsewhere Say the Same.



Chatham, Ont.—"Being a nurse I have had occasion to use Dr. Pierce's Favorite Prescription quite a lot. I always recommend it to my patients and it has been a wonderful help to many of them. I never knew of a case where it failed. I have a patient who is using it now and she is doing fine since taking it. I have taken it myself and got the very best results. I consider it the best medicine there is to-day for women who are ailing." —Miss. Estrie Moore, 30 Degge St., Chatham, Ont.

THAT WEAK BACK

Accompanied by pain here and there—extreme nervousness—sleeplessness—may be faint spells, chills or spasms—all are signals of distress for a woman. She may be growing from girlhood into womanhood—passing from womanhood to motherhood—or later suffering during middle life, which leaves so many wrecks of women. At any or all of these periods of a woman's life she should take a tonic and nervine prescribed for just such cases by a physician of vast experience in the diseases from which women suffer.

Dr. Pierce's Favorite Prescription has successfully treated more cases in the past 50 years than any other known remedy. It can now be had in sugar-coated tablet form as well as in the liquid. Sold by medicine dealers or trial box by mail on receipt of 50 cents in stamps. Dr. Pierce, Invalids' Hotel, Buffalo, N. Y.

Dr. Pierce's Pleasant Pellets clear the complexion.

Changed Her Mind

LOVER OF A VIVISECTOR AT LAST TAUGHT THE LESSON OF LOVE.

By HARVEY PRENTICE.

Hamlin sat beside the bed, watching the house surgeon as he examined the little patient. Three hours before the boy had been brought to St. Mark's hospital, his little oddly arched like a bow. Nobody had believed a cure to be possible at that stage—until they sent for Hamlin.

Hamlin was looking at the boy, who now lay quietly sleeping. The desperately large injection of the serum had saved him, dragged him back from the jaws of death. Twelve days previously, on the Fourth of July, the child had injured his hand while setting off firecrackers; tetanus had developed, and but for Hamlin's serum, a fatal termination would have occurred. Now recovery was assured.

"This must be the hundredth life you've saved, doctor," said the house surgeon.

But Hamlin did not answer, for the words had only deepened the bitterness in his soul. What were these hundred lives saved for the one life lost to him?

It was nearly six years since Miriam Gray had broken their engagement. It had occurred so quickly, with such dramatic swiftness, that he had not even felt the pang till she was gone out of his life irrevocably. Their engagement had been a dream of happiness. During the four short weeks that it lasted Hamlin's soul had seemed as though winged; his work was consecrated now. It had been formerly a vague desire to benefit humanity; now it was for Miriam.

She knew he was a doctor, attached to the institute, but she did not know the nature of his duties. He had told her when three weeks remained before their wedding day. He had told her eagerly, enthusiastically, of his specific researches into the cause and cure of tetanus. There was a serum, he said, but it was, in the main, unsatisfactory. He had improved on it; soon it was to be given to the world and humanity would bless his name. That, the fruition of his years of toil, he dedicated to her.

"But, dearest, how does one know that these sera will prove efficacious?" Miriam asked. "Does it not mean the death of many poor people who trust to the hospital doctors?"

"O, no," he answered, patting her cheek and smiling. "We try it on the dog—literally."

"You are—a vivisector?" she gasped.

"I am," he answered, with proud obtuseness. "Why—of course I am! What is the painless death of a few animals compared with the lives of human beings?"

"I won't argue it with you," she burst out, passionately. "But I will never marry a man who tortures animals. You must choose between your tortures and me."

And all his remonstrances failed to change her. She would hear no reason, listen to no appeal. Her mind was obstinately fixed. Either Hamlin must give up his life work or her. And then he knew that his decision was already made—because, to him duty meant more than anything in the world. So he had left her.

He had never seen her again. But he had heard of her marriage the following year. Her sister Evelyn had told him, meeting him by chance in the street.

"The mother has been outside the ward for fifteen minutes, doctor," said the house surgeon. "Shall I let her come in for one moment? She has her feelings under control. She's a fine woman, that Mrs. Keith."

Keith! That was the name. It had slipped out of his mind, with many bitter memories, but he remembered it now. Miriam had married Abel Keith, a quiet, oldish man; this must be her child, then. It was the faint resemblance to her that had started his thoughts along their old, well-worn channel.

"Wait, Mercer," said Hamlin, rising abruptly. "Tell her she can come in a moment. I don't want to meet her. I knew her once. I want to get out of this."

He rose up hastily and passed out through the door at the opposite end of the ward, while the house surgeon looked after him in wonder, scenting a tragedy. But Hamlin hastened down the stairs, heedless of the impression he gave. What an irony, that he should have been the means of saving her child—Miriam's child!

Yet the next morning he found a letter upon his table which set the blood hurrying through his veins. Too well he knew that writing. He opened it slowly, fighting down the impulse to fling it into the fire unread.

"Dear Dr. Hamlin," it began. "I want to see you, to thank you for saving Ronald's life. Will you forget and forgive everything that has passed? I cannot rest until I have your forgiveness. Now all my views have changed. MIRIAM."

The house of the Keiths was opposite the park—four miles away from the dingy, old-fashioned quarter in which St. Mark's was set. Hamlin had not been near the place for years. Yet that afternoon, being free, he did tramp into the park, and so tramping through the cool groves that eased the oppression of that fiery July day, he found his footsteps inevitably trending toward the place which had been forbidden him.

And at last, toward the cool of the afternoon, he found himself seated upon a bench facing the Keith mansion, dreaming vain dreams. He remembered that spot well; there Miriam and he had sat together when keeping company.

He had been dreaming for half an hour when he was suddenly recalled to himself. A quiet, elderly man was standing in front of him. The face seemed familiar. The man stretched out his hand.

"Are you not Dr. Hamlin, sir?" he asked. "Yes, I was sure I knew your face. My name is Abel Keith. Surely you remember me?"

"Indeed I do, Mr. Keith," said Hamlin, springing to his feet courteously. So this was Miriam's husband. He could well imagine how the disparity in tastes and years must have weighed on her.

"Miriam sent you a letter yesterday," said Mr. Keith, taking a place beside him. "We hoped that you would ... ily wife and her sister will be passing this way in a few moments on their return from the hospital; they always walk through the park. Now, you must stay and meet them—indeed you must, doctor. I cannot, of myself, thank you sufficiently for having given us back our child. It is our only one," he added wistfully.

"—I can't," Hamlin stammered. "I have an engagement. I—"

"Now, my dear fellow," answered the other, smiling, "pray don't be so foolish. I know all about that misunderstanding of yours with Miriam, and I don't say I regret it now, for it gave me a wife. But old friends must not be unforgiving. Stay a while, doctor!"

Hamlin looked at him in disgust. The old dotard! Did he, then, know nothing, immersed as he was in his books—did he know nothing of the intensity of his love for Miriam, that he should seek thus to revive it?

Mr. Keith was prattling beside him, telling of a hundred little things that harrowed Hamlin's heart. He would find that Miriam had not changed in the least, he said.

"I won't deny," continued the old scholar, "that when Miriam told me she had changed her views and repented having broken the engagement between you—I won't deny that I did have hopes that things might be adjusted."

Now Hamlin was sure that he was dreaming. The old man babbled on.

"I'm going to tell you about my little romance, my boy—for you are a boy in years, compared with me, and I feel that I have you to thank for having given me the most charming wife in the world. You know I was engaged to Miriam, but I always felt she didn't love me. And I offered her her freedom three times, but she refused to accept it. And so things went on until the very day before our marriage. And then I—I welched."

"You what, sir?" exclaimed the other.

"Welched! Made myself scarce. Rejected her. Yes, my boy, I was absent in Europe a year, and when I came back Miriam saw things the same way that I did. And you know it always had been Evelyn whom I really loved. She is older and our tastes are more alike. So that is how I came to marry Evelyn."

"You married—Evelyn?" said Hamlin, choking.

"Indeed I did, and very happily, too," answered the old scholar. "Don't you think Ronald looks like her a little? Why, what ails you, my boy? The heat must be too much for you. Dear me—let's come into the house. Why, here are the ladies! Evelyn, dear, you remember Hamlin. Miriam! Eh? Why, you seem to remember each other very well!"

A Quiet, Elderly Man Was in Front of Him.

VULTURES AS UNDERTAKERS.

The Parsees, a Tribe of India, Have a Weird Method of Burial.

The weirdest methods of burying the dead is that adopted by the Parsees. When anybody dies the body is respectfully conveyed to the "cemetery," which is a lofty circular structure of stone, called a "tower of silence."

Inside of it in a series of low-walled, box-shaped inclosures of stone arranged in concentric circles, each one big enough to contain a body. In the middle is a deep well lined with stone.

A flock of vultures in regular attendance disposes of the remains. It is a subject too unpleasant for details. But after a certain time has elapsed attendants who make this gruesome work their business gather up the bones and throw them into the central well.

There are two such "towers of silence" in the immediate vicinity of Bombay, which has a considerable Parsee population.

Faith of the right sort consists in always looking for the best whether we are old or young, rich or poor. We have a right to think each day the best day yet, and to try to make it so by living a little better than we ever did on any other day.

CHOWFA VAJIRAVUDH.

Siam, No. 16 of the Allies, Has a Population Larger Than Canada.

Yes, it does sound rather like a glorified answer, but it is merely the name of the King of Siam—King Vajiravudh, son of the late King Chulalongkorn.

I hear that King Vajiravudh has grown very enthusiastic over the war since Siam entered the arena, says a recent writer. His sentiments are distinctly pro-British, for he spent his early days in England, and was educated at Sandhurst and Oxford. I do not know what battle-cry he has selected, but it should be one to strike terror in the heart of the kaiser if it breathes the spirit of the usual Siamese harangue. Take, as an example, the following passage from the Oath of Allegiance:

"We pray the powers of the Deities to plague with poisonous boils and with all manner of diseases the dishonorable, the disobedient, and the treacherous. When they have departed this life upon earth, may they be sent to terrible Hell, where they shall burn with unquenchable fire through limitless transmigrations."

King Vajiravudh's father, by the way, had ninety children!

The entry of Siam into the war shows that the revolt against the ruthlessness of mail-fisted Germany has travelled to the outermost fringe of further India.

Siam is bigger than Japan proper—the country is. She has 195,000 square miles of territory. And the highcheated Japan proper is not quite 148,000 square miles in area. Siam is only 15,720 square miles smaller than Germany herself.

As to the number of the people in Siam, she herself was not any too clear until 1910. In November of that year fairly accurate figures were obtained—as census figures go—and published. The number given was 8,149,487. It included women. For years the serious trouble with the Siamese census figures had been a startling fact that to them women were no people at all.

To be sure Siam can not make much impression on the war finance of the entente allies. Her revenue for the fiscal year 1916-17 is estimated at $26,692,000; the entire amount does not cover just one day's war expenditure of Great Britain alone.

Foot Work

The late Jack London once fell behindhand in a story which he had promised a New York magazine. The editor, after repeated efforts to get the story, at last called at London's hotel and sent up the following note:

"Dear Jack London: If I don't receive the story within twenty-four hours I'll come up to your room and kick you downstairs, and I always keep my promises."

London replied:

"Dear Dick: If I did all my work with my feet I'd keep my promises, too."

If your shoe pinches where the big joint comes, take it to the shoemaker and have him stretch the leather a bit. If the shoe is not heavy, you can pack it full of paper, crowded in hard. Leave it so for a few days and you will be surprised to find how much easier it will feel to that sore joint.

DOMESTIC SCIENCE AT HOME

Tenth Lesson—Sugar.

Cane sugar is the crystallized product of the juice extracted from the sugar cane. The cultivation and manufacturing of sugar was introduced into Europe from the East early in the ninth century. Venetian historians state that sugar was imported by their countrymen from Cicily in the twelfth century.

The first European plantation of note was at Valencia in Spain. Since its cultivation at this time, it has been grown extensively in every semitropical country on the globe.

The Manufacture of Sugar

The canes are gathered, freed from all long leaves, and then passed through heavy rollers, which crush them into a pulp, thereby extracting all the juice from the cane. This juice is of a sweetish taste and muddy brown in color. It is then collected in a reservoir, and there treated by special processes. After this it is run into large caldrons, where the process of obtaining the sugar commences.

While the temperature of the juice rises, as heat is applied, a thick scum comes to the top. This scum is removed by running out all the cane juice through a spigot. In this way the scum is left in the kettle. The juice is further processed until the sugar crystals begin to form, when it is run into prepared vessels and allowed to cool. The surplus syrup is drained off, the residue remaining is the raw sugar of commerce, which must be refined before it can be used.

From every hundred pounds of sugar cane, about sixty to seventy-five pounds of cane juice is extracted.

The Use of Sugar in the Body

Sugar is an important energy-giving or fuel food. It is soluble in cold water, and readily dissolves in hot water. The digestion of sugar commences in the mouth, and is finally completed in the intestines. The process of the digestion of sugar is comparatively simple.

When used in moderation, sugar is beneficial, and a producer of heat and energy in the body. Because of this it should be used sparingly during the warm weather. This is one of the reasons why heavy rich desserts are injurious to the health during the heated season of the year. However, it is valuable in cold weather because it quickly furnishes the required energy and heat. Exiors in cold regions carry large quantities of sugar.

Sugar may be cooked by adding a certain percentage of water until it forms a hard, clear candy; this is called barley sugar. Heated beyond this stage, it becomes carmel or burnt sugar.

Mothers should pay particular attention to the source of supply of the candies that their small children buy. Cheap and dangerous substitutes used in candies may prove fatal to the little ones. It is very easy and pleasant to make at home the few simple candies that the children crave.

Beet Sugar

In the middle of the eighteenth century it was found that sugar could be obtained from beets. About 1747 the first factory was established in Austria for the purpose of manufacturing beet sugar. The beet from which the sugar is obtained flourishes in moderate climates and is not hard to raise. Other known sugars are fruit sugar, which is found in fruit; sugar of milk, found in milk; corn sugar, obtained from corn, and maple sugar from the sap of the maple tree.

Home Canning

September is the best month of the year for the forehanded housewife. This is the real canning season. Now is the time of preparedness for winter.

Green Tomato Preserve.—One-quarter peck of green tomatoes, three lemons. Scald the tomatoes and then remove the skins. Cut into quarters and put in a preserving kettle. Cut the lemons in half and then remove all the seeds. Chop fine and then add to the tomatoes and also the following: two cups of water, three pounds of sugar, one tablespoonful of ginger, one tablespoonful of cinnamon, one cup of raisins. Cook until very thick. Seal in sterilized jars. Cover with paraffin and then store in a cool dry place. Parboil lemon until tender before adding to the tomato mixture.

Spiced Plums.—Rinse the plums in plenty of cold water and then remove the stems. Prick several times with a fork to prevent bursting. Cook for twenty minutes in a syrup made of four pounds of sugar, one quart of water, one-half ounce of white ginger root, one-half ounce of stick cinnamon, one-quarter ounce of whole cloves, one-quarter ounce of allspice, one tablespoonful of blade mace. Tie the spices in a bag and cook the syrup for ten minutes before adding the plums. Bring to a boil and cook gently for twenty minutes. Seal in sterilized jars. Test for leaks and store in a cool, dry place.

Ginger Pears.—Use your favorite variety of pears. Peel and then cut them into quarters if large and into halves is small. Put the fruit while peeling in a pan of water to keep it from discoloring, until the entire amount of pears is prepared. Cook the pears until soft in clear water. Drain and use one quart of this water, the water in which the pears were cooked, and also two pounds of sugar, thinly pared rind of two lemons, two ounces of white ginger. Cook for ten minutes and then add eight pounds of prepared pears and cook until the pears are transparent. Seal in sterilized jars and then store in a cool place. All ginger root used in pickling and preserving should be well washed and then sliced very thin.

Peach Jam.—Use soft ripe peaches of the yellow variety. Peel, slice thin and then put in a preserving kettle. Add two cupfuls of water and ten pounds of prepared peaches. Cook until very soft. Mash with a potato masher and then rub through a fine sieve. Measure and return to the kettle and add one cupful of sugar to every two cupfuls of prepared pulp. Cook very slowly, stirring constantly to prevent scorching, for one hour. Try a little of it in a saucer. It it holds, that is if it does not spread and run, then fill it into sterilized glasses and cover with paraffin. Store in the usual manner for jellies. Use an asbestos mat under the kettle to prevent burning. This jam should be a beautiful golden color. It is a delicious accompaniment to hot or cold roast fowl or game and is equally delicious with chicken salad. It is most important to use a porcelain kettle that is in good condition for all pickling and an aluminum or agate kettle for preserving jams.

THE DESTRUCTIVE TORNADO.

Only Two Natural Phenomena Are More To Be Dreaded.

If a volcanic eruption or great earthquake be excepted, such a "cyclone twister" is the most destructive of all natural phenomena. The funnel-shaped cloud revolves at a rate of at least 500 miles an hour, and the forces it develops are powerful enough to destroy any of the works of man.

The oddest thing about it is its almost humorous freakishness. It will pluck chickens clean of their feathers, without hurting them; strip women of their clothing, yet leave them uninjured; empty wells of water, and fill them with mud; drive straws clean through inch planks. But it is no more inspired with a sentiment of mercy than a Prussian. It kills persons and spreads wholesale and utter destruction. This year, 1917, has been a bad tornado year in the Middle Western States.

Gas In The Stomach is Dangerous

Physicians Recommend the use of Magnesia.

Sufferers from indigestion or dyspepsia should remember that the presence of gas or wind in the stomach invariably indicates that the stomach is troubled with excessive acidity.

This acid causes the food to ferment and the fermenting food in turn gives rise to noxious gases which distend the stomach, hamper the normal functions of vital internal organs, cause acute headaches, interfere with the action of the heart, and charge the blood stream with deadly poisons which in time must ruin the health. Physicians say that to quickly dispel a dangerous accumulation of wind in the stomach and to stop the food fermentation which creates the gas, the acid in the stomach must be neutralized and that for this purpose there is nothing quite so good as a teaspoonful of pure bisurated magnesia taken in a little water immediately after meals. This instantly neutralizes the acid, thus stopping fermentation and the formation of gas, and enables the inflamed, distended stomach to proceed with its work under natural conditions. Bisurated magnesia is obtainable in powder or tablet form from any druggist, but as there are many different forms of magnesia it is important that the bisurated which the following prescription should be distinctly asked for.

"Britannic."

Hitherto, says the Paris Daily Mail, all inhabitants of the British Isles, including Irish, have generally been described in French as "Anglais." General Verraux, who writes in the Œuvre, is trying to rectify this. He tells his readers that Miraumont was taken not by "les Anglais," but by "les Britanniques." The Journal des Debats heartily endorses the use of the new word, and suggests that Frenchmen in future should say "Brittannie" instead of "Angleterre" when referring to Britain in general.

A Unique Service

One of the most remarkable burial services ever held on a European battlefield is described by the chaplain of a Western Ontario battalion. It was that of an Indian killed by a bomb. Sixty Indians, commanded by an Indian lieutenant, attended the funeral. They represented the Mohawks, Oneidas, Onondagas, Cayugas, Mississaugas, Delawares, Iroquois and Blackfeet.

UNWITTINGLY A BURGLAR.

How a Japanese Poet Helped to Rob a San Francisco House.

Soon after Mr. Yone Noguchi, the Japanese author, came to America, prompted by the best of intentions he helped to burglarize a San Francisco house. He tells how it happened in his autobiography.

While at San Francisco, sometimes I stayed at a Japanese boarding house where I paid nothing, since I made a service of English letter writing for the proprietor, and sometimes at a certain William Street, one of the most insignificant of little alleys, where my friends published a comic weekly. Here I happened to become an actor in a farce that set the whole town to laughing under the heading, How a Japanese Poet Helped a Burglar.

One afternoon I was reading a book in the room that was parlor, sleeping room and editorial office by turns (we occupied the lower floor; the upstairs rooms were occupied by a Spanish tailor who happened to be out that afternoon), when a young boy, Spanish, or Mexican, about the same age as myself, knocked at my door and asked for a key that might fit the rooms upstairs.

It was his intention, he declared, to move the things away by the command of the tailor, who had engaged some other house.

"I lost the key on my way here," he said.

How could my mind of innocence doubt him? I helped him to open the upstairs rooms, and also assisted to move down a few things of some importance. I even offered him my service to help him with the large looking-glass. We had walked some seven or eight blocks when we were pursued by a large, fat Irishman, who took us by force to a police station, and duly locked us up there.

To clear myself from the charge next day, I made the first and last public speech of my foreign life. I believe that it was a masterpiece. I said that the incident was a case of Japanese etiquette or humanity turned to crime in America by wrong application.

We have a right to take pleasure in our own development. It should be encouraging to watch our powers develop; to know that we are able to do something to-day which we could not do yesterday, should give us happiness.

Where there is enough help or where small areas only are grown the beans may be pulled by hand. For large crops of beans it is generally profitable to use bean harvesters which consist of the ordinary two-wheeled cultivator, equipped with two flat knives placed to form a V cutting two rows at a time and placing both rows into one windrow. The beans may be bunched by hand or by means of the side delivery rake, which places from three to five rows together. After cutting, the beans should be kept clean and should be stored with as little weathering as possible.

Farm Crop Queries

Henry G. Bell

Conducted by Professor Henry G. Bell

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

WINTER WHEAT POINTERS

Ontario farmers at this time are busy with their preparation of the winter wheat areas. They are taking special care to give the ground the very best preparation, since winter wheat this year means money. Prices are high and there seems every indication that they will remain so. In fact, wheat prices have but a very few times surpassed that obtained at the present time. The United States has just harvested a moderately large crop and the government is calling for an increase of over 20% of the crop produced in 1917. Uncle Sam aims at over a billion bushels of wheat this coming year.

Now, there are ways and means by which the average farmer can increase both his wheat and his net profits. Be sure to see that the seed-bed has very thorough preparation. A rough, lumpy wheat seed-bed leads to uneven planting, since many seeds are buried too deep and others fail to get sufficient covering.

If, after the ground is plowed, it has been carefully disked and harrowed, possibly rolled and harrowed also, the kernels of soil are packed sufficiently so that the moisture supply for the young growing wheat will be sufficient. This moisture supply is all important, because it is the carrier of plantfood.

The plant obtains nearly all of its food through its roots, and this food can be taken up only when it is dissolved in the soil moisture and root juices. If this very simple explanation were fully comprehended by all Ontario wheat growers, it would eliminate a great number of failures.

Winter wheat cannot grow in a pool of water. It has to face the rigors of a rather severe winter, hence bad drainage conditions tend to retard its development and subsequently weak, ill-nourished wheat makes an unsuccessful attempt to face the severity of the Canadian winter. It will be of little avail to seed winter wheat in ground that is poorly drained. Use well drained ground so that the plant may have suitable growing conditions.

Volumes have been written about best varieties of wheat. The Canadian farmer is fortunate in that he can refer to his provincial or Dominion tests. On both the experimental fields of Ontario Agricultural College and the Dominion experimental farms, leading varieties of wheat are carefully tested year by year. Only those that show superior value are retained. After these have been carefully studied, recommendations are made on the basis of the results obtained. For Ontario the following varieties have been found to give good results: Banatka, American Banner, Imperial Amber, Yarmhal, Crimean Red. The first variety of wheat is especially good milling wheat, since it is hard and flinty and makes strong flour. Most farmers know that Dawson's Golden Chaff is one of the good varieties. This is a heavy yielder, but produces a rather soft grain.

There is something beside variety, however. All cows are not record-breakers. There are some that give ten, twelve and fifteen thousand pounds of milk in a year, and then again there are some that do not give enough milk to pay their board and are an actual expense to the farmer. To counter-balance this, there are a few that produce extraordinary high milking records, upwards of twenty thousand pounds or over a year. These are very valuable and their calves are eagerly sought as breeding stock.

It is just the same story with wheat. Just because a sample of wheat is of a particular variety is no criterion that it is of first-class quality. You should use a fanning mill to sift out the small and shrivelled grain, because inferior plants take up soil room, absorb moisture, consume plant-food and fail to return the good results obtained from superior seed. If you have time, by all means test the vitality of the seed, that is, count out 100 wheat seeds. Place them between damp blotters, and keep them near the stove. In about four or five days the wheat should have sprouted sufficiently, for you to count the number that are going to grow. If you find that the wheat sprouts but 80%, increase your quantity 20%, if you expect to get a normal stand.

Most farmers have wheat drills, but many good farmers have to rely upon sowing the winter wheat on the harrowed ground and then covering it by harrowing and rolling. If such is the case, be sure to take care that the seed is thoroughly covered. There should be very little difficulty, this year as to the seed sprouting after it is planted, because the land has been blessed with seasonable showers.

In preparing the seed-bed, be very careful to avoid using sprouted seed. In sprouted seed the little germ covering is broken. If seed has been sprouted and the sprout has been broken off, there is little likelihood that it would produce a good healthy plant.

You took good care to feed up the young calf or the young pigs early in the spring, because you determined to have strong, vigorous stock. The same care should be taken in the feeding of the wheat crop if best results are to be obtained.

Many farmers are interested in fertilizers this year, but unfortunately not all understand what fertilizers are, or how they should be used. Fertilizers are carriers of plant-food in such form that the plant-food quickly dissolves in the soil moisture and can be used by the crop. Now, some of the elements of the milk which the calf drank went to building its flesh. Other food in the milk went to building the bone of the animal. It is somewhat similar in the food of the plant. So that the farmer may know the relative amount of plant-grower, plant-ripener and plant-strengthener that the fertilizer carries, the Dominion Government in 1909 decreed that this should be stated on the bags in which the fertilizers are sold, and that the analysis should be guaranteed. Now, the farmer reads that the fertilizer contains 2 to 4% nitrogen, we shall say. That means that the mixture contains 40 to 80 lbs. of that kind of plant-food, which causes the wheat plant to grow rapidly. Manure contains to the ton about 15 lbs. of this kind of plant-food. Of course every bit of stock manure should be carefully spread on the ground and worked in, in order to increase the growth of the crops. Fertilizers should be used to supplement the manure, or to make it go two or three times as far.

We said that some of the food in the milk which the calf drank went to building the bone of the animal. Bone is composed of a combination of lime and phosphoric acid. Now, strange to say, it is the phosphorus from this same kind of a compound which is used by the plant to give strength to the growing plant and to hasten its maturity. The per cent. of phosphoric acid (P2O5) shown by the analysis on the bag, will tell you how much of this kind of plant-food there is in the mixture.

Under present international conditions, there is a great scarcity of the next p ot-food ingredient, potash. Some fertilizers offer one per cent., but many are sold with only the first two ingredients of plant-food in them. Potash causes the formation of starch or the filling of the kernel. It also gives the plant power to resist disease. Speaking generally, wheat soils are fairly well supplied with potash, so the lack of this plant-food for wheat is not seriously noticed, as yet.

Now the plant never uses pure nitrogen, which is a gas, or pure phosphorus or potassium, which are metals. We said a ton of fertilizer carries from 40 to 80 lbs. of nitrogen, from 160 to 200 lbs. of phosphorus and possibly 20 to 40 lbs. of potash. The rest of the ton is made up of the carriers of these various plant-foods.

Fertilizers will not supply humus, as manure does. They induce rapid root growth and consequently add to the humus of the soil, in so far as they produce this result, but they are not essentially a source of humus. They should be used then intelligently, knowing that they are concentrated plant-food.

Fertilizers may be new to some Ontario farmers, but they are not new in their use in wheat-growing sections. England has been using immense quantities of fertilizers for nearly 100 years. So have the eastern provinces of this country and the eastern states of our neighbors to the South. The State of Ohio, which produces large quantities of winter wheat, makes wide use of fertilizers. Prof. Thorne, Director of Ohio Agricultural Experimental Station, has recently pointed out that if the farmers in the county where the experiment station is located followed the fertilizer practices of the station, they would have increased their wheat yields 14 bushels per acre. It is not a question of theory, it is a point already demonstrated. Ohio Experiment Station has increased its wheat yields from 12 to 14 bushels per acre by proper fertilization; Indiana, 11.6 bushels; and Missouri, from 4 to 10 bushels where careful tests have been carried out. If such an increase can be accomplished on the Ontario farms this year, the farmers of the province can take great advantage of the high prices which must prevail this coming year.

Decide to have a poultry house this Winter. Don't let the birds roost in the horse stable for another season.

An electric shock is felt most at the elbow joint; the latter obstructs the current, which leaps from one bone to the other.

THE CHILDREN'S FOOD

Questions Every Mother Should Ask Herself.

Did each child take about a quart of milk in one form or another?

Have I taken pains to see that the milk that comes to my house has been handled in a clean way?

If I was obliged to serve skim-milk for the sake of cleanness or economy, did I supply a little extra fat in some other way?

Were the fats which I gave the child of the wholesome kind found in milk, cream, butter, and salad oils, or of the unwholesome kind found in doughnuts and other fried foods?

Did I make good use of all skim-milk by using it in the preparation of cereal mushes, puddings, or other, wise?

Were all cereal foods thoroughly cooked?

Was the bread soggy? If so, was it because the loaves were too large, or because they were not cooked long enough?

Did I take pains to get a variety of foods from the cereal group by serving a cereal mush once during the day?

Did I keep in mind that while cereals are good foods in themselves, they do not take the place of meat, milk, eggs, fruit, and vegetables?

Did I keep in mind that children who do not have plenty of fruit and vegetables need whole wheat bread and whole grains served in other ways?

Did each child have an egg or an equivalent amount of meat, fish, or poultry?

Did any child have more than this of flesh foods or eggs? If so, might the money not have been better spent for fruits or vegetables?

If I was unable to get milk, meat, fish, poultry, or eggs, did I serve dried beans, or other legumes thoroughly cooked and carefully seasoned?

Were vegetables and fruits both on the child's bill of fare once during the day? If not, was it because we have not taken pains to raise them in our home garden?

Did either the fruit or the vegetable disagree with the child? If so, ought I to have cooked it more thoroughly, chopped it more finely, or have removed the skins or seeds?

Was the child given sweets between meals, or anything that tempted him to eat when he was not hungry?

Was he allowed to eat sweets when he should have been drinking milk or eating cereals, meat, eggs, fruit or vegetables?

Were the sweets given to the child simple, i. e., unmixed with much fat or with hard substances difficult to chew, and not highly flavored?

Was the food served in a neat and orderly way and did the child take time to chew his food properly?

The Sunday School

INTERNATIONAL LESSON
SEPTEMBER 30.

Lesson XIV. The Goodness and Severity of God—Review. Golden Text Psa. 103. 8.

1. The God of love. Modern Christianity has been passing through a period in which the love and forgiveness of God have been emphasized. His relations to the individual have been dealt with almost exclusively. His lessons for the nations and for humanity have only recently come again into prominence. With this emphasis on the other half of the law and the gospel there comes a fuller vision of the character and purpose of God. As the old prophets, some of them in exile, saw his character in all its fullness, so we are beginning to get an all-round vision of God as we see him revealed in social progress. We find the God of love is also the God of law. We discover that he deals with sin and evil not by whim and fancy, but by fixed laws. In these laws the operation of divine love is seen seeking to save the individual and the community from the consequences of sin.

2. The God of strength. Law involves retribution. Cause and effect work out irresistibly in the moral universe. They operate constantly in social progress. We discover famine and pestilence to be not the sudden whim of an angry God, but the direct effect of broken law. Nations have refused to work economic righteousness, they have refused to obey the moral laws that are related to health, and hence they pay the cost in suffering. This is the severity of the moral universe, but it is still the strength of love. It is not punitive, but corrective. It is penalty, not merely punishment. This makes it possible for men who learn the consequences of sin to discover and remove its causes. The penalty of social sin is a challenge to the community to discover and remove its roots.

3. To whom vengeance belongeth. There is a constant desire of men to take a situation of wrongdoing into their own hands and to punish the violators of law. The result is evident in the old penal system, which, seeking to work vengeance, has failed to benefit either the community or the criminal. When men learned that the consequences of sin for the sinner must be left in the hands of God, then they faced their proper task of reclaiming the sinner and preventing the sin. It must be the same in the relations between nations. Criminals and crime must be prevented, but the awful consequences inherent in the sin of those who offend against international justice and righteousness will after all be visited most severely upon their own heads. The penalty can be left with God. The prevention lies with man.

The Dairy

Do not feed the dairy herd as a herd, for cows differ in their food requirements just as human beings do. By feeding all cows in the herd alike, some are sure not to get enough for the greatest profit and others will get more than they can use to advantage.

Cows need much water and should be induced to drink two or three times a day if possible. The average milch cow requires nearly ten gallons of water a day and more than two-thirds of that must come as drink and the balance from water in the food. Always provide clean fresh water.

Salt should be supplied at the rate of five to seven ounces a week, given as often as twice during the week. Do not use a common salt box in the yard unless all the cows are absolutely free from disease.

It pays in dollars and cents to give the cow extra care. The cow that is kept comfortable will give the best returns.

It is always desirable to grind all grains for the dairy cow because of the large amount of feed that a cow must digest in order to produce well.

There is no advantage in cooking or steaming feeds for dairy cows. Some unpalatable feeds may be consumed in larger quantities if cooked but cooking does not ordinarily add much to the palatability of grains and may even decrease their digestibility.

It is estimated that eighty per cent. of the Canadian farmers sold their wheat last fall at $1.40 per bushel. Who received the difference between that price and $2.80 per bushel, the price which recently prevailed?

Hogs

Even though the hog furnishes the most meat for a given amount of feed and will produce it in the quickest time, it is pointed out that this meat should be produced mainly from food wastes and not from good grain that would furnish food directly to man. The great economy in pork production comes from the fact that pigs furnish a food by-product from these wastes and do not need the high-grade feeds that beef cattle must have.

Wastes on farms and in the towns make good hog feed; by-products from canneries, bakeries, fisheries, packing plants and the like can be utilized as hog feed and to better economic advantage than in any other way. Dairy wastes are particularly valuable as hog feed and promote rapid growth with a good money return for every gallon fed.

The farm orchard furnishes large quantities of wind-fallen or defective fruit, which is relished by hogs, and is beneficial if fed in small quantities frequently, and not all at one feed. Garden wastes, tops of vegetables, culls of all sorts, even weeds, are readily eaten, and such as may not be eaten will be worked over, going into the bedding and adding to the manure.

Kitchen wastes are an excellent source of food for hogs, but should be kept at a minimum, because practically all food prepared for man's use should be eaten by him.

Franklin observed that "he who leaves the table with an appetite is sure to return with one." Here is a point for food conservers.

Your Problems

Conducted by Mrs Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 238 Woodbine Ave., Toronto.

Mother:—Here is a sample day's diet for a three-year-old child. Breakfast, scraped fresh apple or orange juice, strained oatmeal and top milk, milk to drink. Morning lunch, milk, biscuit. Dinner, poached egg, tender vegetable put through sieve, stale bread and butter, corn starch pudding, milk to drink. Supper, rice and top milk, seedless jam sandwiches, milk to drink.

School Girl:—Try the following games at the party for your school friends:—

Hands and feet guessing—To play this game divide the party into two bands. One is sent out of the room, the other stays in it. Place a screen (one of the folding kind) in front of an open door. The members of the band that has been sent out of the room then walk past the open door behind the screen holding up one of their hands as they pass. The members of the band left in the room mist then guess whose hand it is. For every hand guessed correctly a point is scored for the band. After all of one side has shown a hand it is the turn of the other side to go out and do the same. The side scoring the most points is the end wins.

If the feet are to be guessed instead of the hands, the screen should be raised a foot or so from the floor so that the shoes may be seen underneath and the rest of the body hidden.

Obstacle Race—There is plenty of laughter in this game. Those who do not know it are sent out of the room and let in one by one. The boy or girl who is called in is shown two or three small objects, such as a footstool, a vase, milk bottle, etc., that have been placed in a line on the floor. The order is, "walk blindfolded past these objects without touching them." The player is accordingly blindfolded, but before the hazardous trip is begun all the obstacles are removed. The boy or girl will pick steps very carefully, trying to sidestep what is really not there at all. At the end of the game, when all the players who have been tricked except the last one whose turn it then is are present, there a very great deal of merriment.

Word game—Choose sides and appoint a scorer and a timekeeper. A player from A's party is sent out of the room while B's party picks out a letter. The A player is then called in and the timekeeper says "Go." The letter is told and then he must say as fast as he can as many words beginning with that letter as he can think of on the spur of the moment. At the end of a minute the timekeeper stops him and his score is counted. One of B's side then goes out and does the same thing. So on the game goes until all players alternately have had a turn. The scores of each side are then counted, the one with the greatest number of words winning. Z and X may not be chosen.

Mrs. S. D.:—Lunch-box bills of fare are very important, and you are a wise mother to pay special attention to them. Pennies spent in the candy store at noon can undo all the good of the nourishment taken under watchful eyes in the morning and at night, and a nice lunch is the very best rival of a penny candy store. Here are some bills of fare that can be made up from dinner left-overs:

Crisp rolls hollowed out and filled with chopped meat or fish; season with a little salad dressing; a peach and an apple.

Cold slices of meat loaf, soda crackers, buttered; stewed fruit put in a little jar with screw-on top, and a piece of ginger-bread.

Baked-beans sandwiches, orange and a couple of pieces of candy.

Hard boiled eggs, rye bread and fruit.

Minced-beef sandwiches, apple sauce (in jars) and cake.

Honey and nut bran muffins are a valuable addition to the lunch box. Here is the receipe: ½ cup honey, 1 cup flour, from ¼ to ½ teaspoon soda, ¼ teaspoon salt, 2 cups bran, 1 tablespoon melted butter, 1½ cups milk, ½ cup finely chopped English walnuts. Sift together the flour, soda and salt, and mix them with the bran. Add the other ingredients and bake for 25 or 30 minutes in a hot oven in gem tins. This will make about 20 muffins.

Bedtime Stories

MENDING MELISSA'S DRESS

Elizabeth sat on a hassock mending Melissa's dress. Melissa was her oldest and largest doll, and Elizabeth did not know how she had managed to tear her new summer dress. Still, it did not matter much how it happened, after all. The only thing to do was to mend the dress, and since Melissa was not able to mend it herself Elizabeth was trying hard to do it for her. Besides, it was Elizabeth's birthday, and she was going to have a party in the afternoon. Of course Elizabeth must allow Melissa to wear a torn dress to the party.

It was a beautiful summer morning, and it was the hardest thing in the world to stay in the house on such a morning, let alone mending a dress that should not have been torn. Just outside the window there was a robin singing in a maple tree.

"Oh, come out! Oh, come out! Oh, come out!" the robin was singing, almost as plainly as a person could speak the words.

"I can't stand it much longer!" sighed Elizabeth. "But I just must mend this dress so that Melissa can go to the party. O dear! It's such a job!"

Then, just as she was putting some more thread in her needle, Teaser came bounding in through the door.

"Don't you dare to bother me, Teaser!" said Elizabeth. "I'm as busy as I can be!"

But Teaser was not to be put off in that way. He jumped round the room in little, short leaps, stopped in front of Elizabeth long enough to bark sharply, and then bounded to the door and back again.

"Yes, yes, Teaser," said Elizabeth, "I know that it is a beautiful day, and I want to go out and play with you, but this dress simply must be mended."

Teaser barked again. No doubt he knew very well what she said, but he had no idea of giving up so easily. Suddenly he seized Melissa's dress in his teeth and pulled it.

"Stop, Teaser!" cried Elizabeth. "Stop, I say, or you will tear it worse!"

But Teaser did not stop. He only pulled the harder. Suddenly, with an extra tug, he pulled the dress from Elizabeth's hands and dashed through the door, with the dress flying behind him. Elizabeth leaped from her hassock and ran after him.

"Come back! Come back!" she cried. "Come back here this instant, Teaser!"

Teaser looked over his shoulder and tried to bark, but, with the dress in his mouth, he did not succeed very well. Out of the yard he ran and down the road, with Elizabeth, now on the verge of tears, calling to him in vain as she pursued him.

Not far from the house Teaser suddenly stopped in the middle of the highway. He dropped Melissa's dress and began to sniff at a parcel that looked as if it had just fallen from a passing wagon. At first Elizabeth was so eager to pick up Melissa's dress, now more soiled and torn than ever, that she did not see the parcel; but Teaser barked again and danced round her in such a way that she had to notice it. She picked it up and ran with it back to the house.

"See, mother!" she cried. "See what Teaser found in the road, where he had dragged Melissa's dress—the horrid thing!"

The parcel bore no address. It was a long box, wrapped in plain brown paper. What could it be? Who could have lost it?

Melissa's mother decided to open it. Perhaps there would be a name or an address inside. And when they took off the wrapping paper and removed the cover, what do you suppose they found? A beautiful doll, about the size of Melissa, dressed in the loveliest clothes!

"Oh! Oh!" was all that Elizabeth could gasp; and Teaser, who was much excited over the box and its wrappings, barked two or three times as loudly as he could.

Just then Elizabeth's father came in.

"Would you like that doll?" he asked.

"Like it!" cried Elizabeth. "Of course I would like it, but of course I can't have it! Some little girl has lost it—or some little girl's father was taking it home to her."

Then Elizabeth's father laughed, and took her on one knee and the wonderful doll on the other knee.

"Well," he said, still laughing, "that new doll has come to your birthday party. I was bringing her home from the village, and the parcel fell from the wagon just before I got here. Teaser saw it fall, but it was too large for him to carry, and he made you go and get it before I could go for it myself."

"Oh, then she's mine, after all!" said Elizabeth, and she seized the beautiful new doll from her perch on her father's other knee and hugged him and the doll at the same time. "And Teaser knew it all the time and was trying to tell me!"

A little later, when Elizabeth looked deeper into the box that the doll had come in, she found there several extra dresses. One of them she promptly gave to Melissa to take the place of the soiled and torn dress that was now fit only to be thrown away. And what a merry birthday party they had that afternoon, and Teaser enjoyed it quite as much as Melissa and the new doll enjoyed it!

Cut out and burn the old blackberry and raspberry canes as soon as they've fulted.

CANTIRE

Corn cutting may commence any time after Jack Frost's performance on Saturday night.

Old grain in farmers' graneries is a mighty scarce commodity just now and the sound of the threshing machine would be welcome in this neighborhood. There is a good opening for a thresher on the fourth this fall as there is five miles out of face for any one who would come in with a good rig.

Henry Winch's neighbors will watch with interest his fall wheat field next harvest, for, besides the tractor plow, he had helping him to prepare the ground, a merchant, druggist, banker and an editor, who all danced the Highland fling or the Irish jig at the end of the plow handles, and the druggist was awarded the first prize for plowmanship, the editor who is as supple as an eel took first in Highland fling and now the merchant complains he had not a fair show as he had to drive and plow at the same time. Henry Winch is now convinced that the business men of our towns are vitally interested in the welfare of Bro farmer.

Mr John Black delivered a bunch of twenty steers to Mr W J Allen of Chesley for which he received the neat sum of 3070.

Mr and Mrs A D McKay sang "Home Sweet Home" on Thursday night after a six weeks' trip to the west. They visited friends at Winnipeg, Regina, Lanigan, Maunville, Edmonton and Erskine, and are unstinted in their praise of western hospitality.

Miss Cook of Southampton is a visitor at Mr Stewart Muir's.

Mr Matt Wilson of Chesley, accompanied by her friend Mrs Greenley of Hamilton, were visitors for the week end at Mrs W A Blue's.

Mr D Eason, Miss Maud Eason Mrs O Eason Mrs and Miss Barrie spent last Friday at John Eason's. The party motored from Peterboro and touched at Beaverton, Orillia, Barrie, Collingwood, Owen Sound and Southampton. Thus summer tourists cheat the railroad companies.

Mr Jas Blue is erecting a cement block silo which when completed will be thirty feet high and twelve feet across inside.

The barn and contents of Mr Sternall who lives on lot 35 on this line, were destroyed by fire on Thursday evening last. The blaze commenced just about dusk. The owner has no idea of the cause of the fire, as he was out cutting corn when the flames burst out.

Children Cry
FOR FLETCHER'S
CASTORIA

GLAMIS

Rev Mr McRae of Kincardine preached in the Presbyterian church on Sunday in the absence of the pastor, Rev Mr Reith, who is in Toronto.

Mrs J K McLennan left on Monday for a week's visit at Meaford and Wiarton.

Miss Ferguson is visiting her aunt Mrs Alex McKinnet.

Mr and Mrs Jas Rowan, from the Lake shore, spent Tuesday of last week at Jas McLennan's.

Mr and Mrs Melvin Peacock and two daughter spent the week end at Neil McFarlane's.

The Misses MacIntyre, Cunningham and Deehan, spent Thursday at Inverburen. The former have closed up their cottage for the season.

Quite a number took in both Pinkerton and Kincardine fairs last Friday.

Threshing is in full swing now, the farmers have ideal weather for it.

Mr W J McKeeman, who has been away, with a touring party through New York state and city, returned on Tuesday accompanied by his daughter Jennie, who has been spending some time with friends in Blackstock, Toronto and Beamsville.

Mr and Mrs McDougald of Underwood, Mr and Miss McDonald of Tiverton Sundayed at Mr Hector McLean's on the boundary.

FARMERS, ATTEND THIS SALE

Registered horses and high-grade Durham cattle will be offered for sale, also implements, fowl and pigs at Colin Campbell's, lot C, con. 4, Arran Tp., Friday, Oct 5th, at 1 p.m. Terms—12 mos. credit on approved joint notes bearing 6 per cent. interest. D. C. Cavin, Auct.

The National Drug and Chemical Co. of Canada, Limited, Toronto

SECOND CON. ELDERSLIE

Corn cutting is the order of the day.

Miss Maude Dawson has gone to attend Normal at Stratford.

Mrs Bruce of Chicago visited last week with Mrs W Hope.

Mr and Mrs Robt. Jefkins spent Sunday week with Tara friends.

Mr and Mrs Geo. Addison, Mrs W. J. Allen and Mr Jas. Allen attended the funeral of the late Mrs Lamont of Owen Sound, last week.

Mr and Mrs T. Nicoll of Gillies Hill visited friends on this con. on Sunday.

Mrs Thomas, of Brantford, is spending a few weeks with her friends, Mrs A. Dawson.

Everybody on this con. attended the Chesley and Vesta Fairs. A number of the kiddies were proud prize winners. All aboard for Paisley this week.

Ezra Pfohl has been laid off work for the past three weeks with an attack of bronchitis.

Thos. Lamont of Owen Sound is visiting his sister, Mrs Geo. Addison.

J. B. Allen spent Sunday with Queen Hill friends.

Mr and Mrs McCullough attended a tea meeting at Williamsford one evening recently. Mr McCullough was one of the speakers.

Miss Myrtle Wright visited her friend Miss Jessie Young over the week end.

Clifford Wright was also a Sunday visitor on this con.

The 2nd con. S. S. will hold rally day service on Sunday, Oct. 6th.

Arthur Lillico, who has been a fire ranger in the Parry Sound District during the summer months visited his parents here last week and left again on Monday to resume his law studies.

Myrtle, the little eight year old daughter of Mr and Mrs H Speck, has returned from Walkerton Hospital where she underwent an operation for appendicitis.

PINKERTON

The Annual Exhibition was held in the show grounds on Friday of last week. The crowd was not as large as in former years nor was the competition in the stock show as keen as in other years. The exhibits in the palace were excellent with the exception of the apple show. A crowded house listened to an excellent programme in the C. O. F. hall in the evening. The entertainers were Eddie Piggot, a comic singer and Miss Davies, a soloist of Toronto. The Formoso orchestra supplied music at intervals during the programme.

Rev. Mr Gale attended the funeral of a friend, the late Mr McLennan, at Alma on Monday.

The annual S S Convention of this district will be held in the Presbyterian Church hereon, Thursday, Oct 4th. There will be an afternoon and evening session.

Mr Jas. Gale is spending a few days here before resuming his studies at Toronto University.

The annual meeting of the local Red Cross Society will be held on Wednesday, Oct 3rd. All members urged to be present.

The ladies of the Red Cross Society wish to thank Mr Wm Taylor for kind donation of $25.

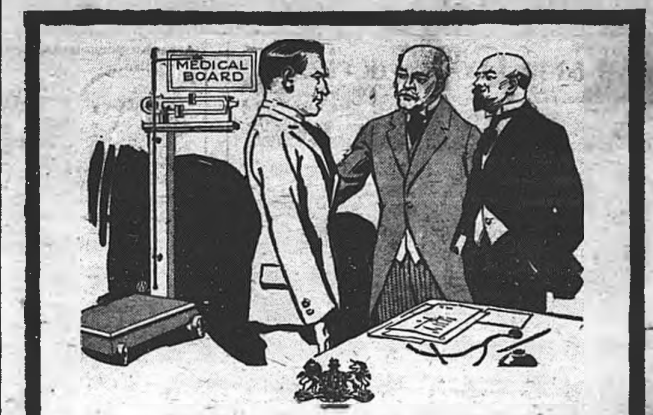
ELORA ROAD NORTH

Chris Ernest, jr., of the tenth con. is getting a new threshing outfit.

Miss Katie Campbell spent a few days with friends in Chesley.



John Rae stepped on a rusty nail last week and as a consequence is going around with a cane in his hand and a decided limp.

Archie Bryce has obtained a small seperator for his own use.

Some of our sports took in the concert at Port Elgin on Thursday night.

Jack Bryce was away to the Western Fair.

Robt Cole of Underwood called on Elora Road friends on Sunday.

These Men Will Help You Decide

Are you liable to be selected for service under the Military Service Act?

The answer to this question is being made readily available for you. Remember that the first class to be called includes only men between the ages of 20 and 34, both inclusive, who are unmarried or widowers without children, those married after July 6, 1917, being deemed single for the purposes of the Act.

Medical Boards are now being established throughout Canada. These Boards will examine, free of charge and obligation, all men who wish to be examined as to their physical fitness for military service. They will tell you in a very short time whether your physical condition absolves you from the call or makes you liable for selection.

It is important that you obtain this information as soon as possible. A certificate of unfitness from a Medical Board will secure for you freedom from responsibility under the Military Service Act from any Exemption Tribunal. A certificate of fitness will not preclude an appeal for exemption on any ground.

In order that you may be able to plan your future with certainty, visit a Medical Board as soon as possible and find out if you are liable to be selected. Your family and your employer are interested as well as yourself.

Issued by
The Military Service Council. 131

WALKERTON

Dr Porter and Dr Stalker of town were called to assist Dr Bricker of Cargill on Monday night in connection with a serious mishap which befell Mr Wm Rosmer on his farm near Cargill, where in doing some repair work to the seperator on his threshing machine a large revolving knife swung around and struck him on the leg above the heel, completely severing the large cord at the back of the foot known as the Achilles tendon. The doctors succeeded in stitching the severed cord together, but it will be many weeks before the injured man can be about.

Mrs Samuel Stevenson of near Gillies Hill, Elderslie, underwent a serious breast operation by Dr Hall in the Bruce County Hospital on Friday morning last. Although for a time in a serious condition, she is now making a good recovery.

A large number of Walkertonians are leaving their work and places of business and going forth in bands into the country to assist farmers in getting in their crops which on the whole have been abnormally heavy this year and should bring the planters in a big return when they come to market them this winter. As the men who are going out are, in most cases, we hear, not accepting anything for their services, but are rather incited with patriotic desires to rescue the crop and solve the food problem for the Allies, yet the farmers to whom such aid is extended are expected, where pay has been refused by the men, to hand over to the patriotic fund later on the equivalent of the men's wages now. One of the men, who has been out frequently, suggested that we call attention to this, for while most farmers understand it this way, an odd one might think that the town helpers are doing it for the good of their health or for the purpose of boosting the farmers' receipts, which owing to the inflated prices of all food products, are now probably heavier than that of any other trade or calling. If, therefore, those who are being assisted, come across a bequatey for the help given, the local patriotic funds ought to shortly get a considerable boost from this source.—Herald and Times.

BURGOYNE

Wm D Gowanlock, who has been visiting his parents, Mr and Mrs Walter Gowanlock, has gone west again. Mrs Gowanlock and two boys remain here until his return.

Corn cutting is the order of the day.

Messrs Cunningham and Reany are getting Wm Howe of North Bruce over with his ditching machine this week. It one could judge by the amount of tile they are hauling they must be putting in miles of it. Messrs Rusch, J B Lemon, Alex Geddes, J L Duke and J H Schwass are putting in small amounts. If what the experts say is correct, tiling the land should be a good investment. They say that it pays for itself in from one to two years in increased production. Mr Ferguson, assistant to Agricultural Representative McKay of Walkerton, did the surveying for them.

A memorial service in honor of the late Pte's Willme Lyness and Robt Gowanlock, who were killed in France, was held here on Sunday. Rev Strachan preached a very impressive sermon.

Mrs J W Reany and Masters Stanley and Clifford spent the week end at Chesley.

TURNER'S

Mrs Ed Forrester, of Kincardine, is spending a short time with friends here.

Mr and Mrs Archie Pollock spent a few days with friends at Dundas.

Russell Hopper, of Burgoyne, is threshing with Wm Atkinson.

Mr and Mrs A J Lamont spent the week end with friends at Parkhead.

A Munro has had his storehouse renovated and a grain elevator installed, which will be run by a gasoline engine, and is now ready to buy grain.

—Linen Tea Towels—Dozens of them, 10c each. Ballachey, Laidlaw & Co.

—LAUNDRY—We are agent for Walkerton steam laundry. F. STEVENSON.

—Full lines of 25c engagement and wedding rings at Lethoemaker's jewellery store

—Do you remember the last and first Big Sale of Spoffordʼs? This is bigger and better.

—WANTED—Two housemaids for Ontario Agricultural College, Guelph. Apply to matron.

—Highest prices paid for hides and sheepskins. H. McGregor, Butcher, Steele Block.

—All twine and repairs must be paid by Oct 1st, 1917, to our agents, P Carter & Son. THRESHING & CO.

—Parties requiring repairs for the Mellotte cream separator may obtain them at Fisher's flour mill.

—Accounts for all Massey Harris repairs must be settled for on or before Oct. 1st. J A ELWES, AGENT.

—Highest price for beefhides, horse hides, calfskins, sheepskins, tallow, &c. F. OLTSHER, Paisley Meat Market.

—FOR SALE—Horse, harness, cutter, buggy. A quantity of window sash and 500 fire brick. J N Collins, Paisley.

—Workmen wanted, for factory and bush, also wish to purchase a team of horses. Krug Bros & Co., Ltd., Chesley.

—Avoid coughs and colds by keeping your feet dry. We have the footwear which will do it. Ballachey, Laidlaw & Co.

—Auction sale of farm stock and implements, on lot 26, con 10, on Tuesday, Oct. 16. S Haney, prop., R C Pearce, auct.

—Auction sale of ten milch cows and 16 young cattle on lot 4, con. 21, Greenock, on Wednesday, Oct 10th, at 1 p.m. C Parker, prop, R C Pearce, auct.

—We have a number of Men's and Women's raincoats priced at $3.95. These are useful for coats. Ballachey, Laidlaw & Co.

—Please take notice that in order to wind up the estate of the late A Fisher all accounts must be settled by Oct 15th. After Oct 1st the same will be run on a cash basis. J P FISHER.

—F Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—FOR SALE—Comfortable frame house of 7 rooms, good cellar, good water and good stable, with about 3 acres of fine garden land, Queen St North. Apply to Jas. Daniel, Prop., on the premises.

—Home seekers' Excursions to all parts of Canadian Northwest every Tuesday—May 8th to end of October. For maps, tickets, and all information, call at the old reliable C P R agency, Paisley.

—FLOUR, FEED, SEEDS, GRAIN—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Blatchford's molasses meal, poultry foods and tonics. Always in the market for coarse grains. W STARK.

—The oil and gas fields of Ontario seem to be extending very widely. Recently drilling commenced at Rockwood and now about 10,000 acres of land about Wingham and Belgrave have been leased by prospectors who intend to commence drilling in that locality.

Sparling—McDougald

On Sept 25th the marriage of Miss Flora McDougald, of Owen Sound, and Mr John Sparling took place at the Baptist parsonage in Hanover. The bride is a former Gillies Hill girl, a daughter of the late Hugh McDougald and Mrs McDougald now of Owen Sound. She was for a time book keeper for a Hanover business firm.

—Mrs A Neelands, of Sarnia, has been visiting friends here.

—Mr W H Brown, of 10th Bruce, was in Harriston for a days on business.

—Mrs Edgar Annes and two sons were in Toronto last week visiting friends.

—Mr Howard Rae who went west on the harvest excursion, is home again.

—Mrs Woods of Owen Sound was a visitor at Mr M Daniels' last week.

—Mr and Mrs McInnes, of Chatsworth, were visitors at Dr Allen's on fair day.

—Mr Neil Cameron was up from Toronto visiting his sisters for a couple of days.

—Mrs Robt Haney and children, of Regenia, are visiting friends in Elderslie and Bruce.

—Mr Wm Dudgeon and daughter Mrs T Iliffe arrived home from their western trip on Monday night.

—Wilfred and Lena Grant and Miss Pheme Currie visited friends in Tara and Owen Sound last week.

—Mr and Mrs Alex McDonald and son Louis, of 10th Bruce, were visiting friends in Wingham last week.

—Miss Marjorie Patterson, of Wiarton was the guest of her friend, Miss Jean McKerracher over Sunday.

—Pte Bert Mewhinney of the 160th at Witley Camp is reported in hospital with a severe attack of pleurisy.

—Miss Sophia Munn of Elora road north has gone to work at Mr Hugh Hunter's, near Tiverton.

—The monthly union prayer meeting will be held in the Baptist Church on Thursday evening at 8 o'clock.

—Mr Alex McLean and Mrs McDonald of Calumet, Mich., were here last week visiting their sister, Mrs I Stanley.

—Mr and Mrs Robt Brown, of Bruce, Mr and Mrs Jas Brown of Paisley, visited Mr and Mrs Bowes at Chatsworth on Sunday.

—Mrs Wm M Keyes, daughter and son, are visiting friends in Saugeen. Mr Keyes was in Paisley on a business trip on Wednesday.

—While threshing at Mr R T McGregor's, 6th Bruce, on Friday last, Mr E Holtzman, of the 12th, had his fingers caught in the knives and so badly sliced that one had to be amputated.

—Dr Jas. Bone, V. S., of Hagersville, motored up last week and spent a day or two in town renewing acquaintances, meeting a great many at the fair. He was accompanied by Mrs Bone.

—Rev Mr Crichton, Mesdames Crighton, Putnam, Tucker, Gregg, George, Carmichael and Miss Thompson were delegates from Paisley Methodist W M S to the district meeting of that society in Chesley on Friday.

—Mr W H Marmion, of Long Beach, California, is spending a few days in town and on his return will be accompanied by Mrs Hogg, who will spend the winter in the sunny state. Mr Marmion is a former Paisleyite, having been in business here about 35 years ago and still has many friends in town and vicinity.

—Harvest Thanksgiving Services will be held in the church of the Ascension on Sunday next, Oct 7th, when the Rev. Rural Dean Pardue of Walkerton will (D. V.) preach at the morning and evening service and will address the children of the Sunday School which is now changed from the morning to the afternoon at 2.30 p. m. Everybody welcome.

Methodist Church

Everybody welcome next Sunday

MORNING SUBJECT:
"Protection of Life"

EVENING SUBJECT:
"Jacob Away from Home"

Thanksgiving Day Service

The usual union Thanksgiving service will be held in the town hall on Monday at 11 a.m. Rev M Nelson will preach. The collection will be in aid of the Lord's Day Alliance, envelopes for which are to be distributed in the churches on Sunday and handed in with contributions on Monday.

Pinkerton Field Grain Competition

The result of the Standing Field Crop Competition for White Oats, in connection with Pinkerton Agricultural Society, has been announced, the following being the prize winners:—1. James A Garland, Cargill; 2. Henry Young, Cargill; 3. John Mutrie, Pinkerton; 4 Julius Helm, Walkerton; 5. Garland Bros., Pinkerton; 6. David Pinkerton; 7. Arthur Alexander. There were 13 entries.

Wall Paper

NOW is the time to buy Wall Paper, as the price is much lower now than will likely prevail in the spring. We have a good assortment that will save money for present purchasers.

Cash for Hides and Skins — Bruce and Bell 'Phones

J. S. DEWAR
PAISLEY

Builder, Contractor and Cement Worker

Brick or cement buildings erected, brick work cement work and plastering contracts taken.

Cement Supplies Furnished

Building Blocks, Window and Door Sills, Culvert Tile, Well Curbing, Lawn Rollers, Lawn Vases, Verandah Columns, Balusters and other fancy Cement Products.

Building Material

Cement, Lime, Lath, Shingles, Glazed Sewer Pipe and Flue Lining, Mortar Color, Etc.

W. P. L. Annual Meeting

—The annual meeting of the Women's Patriotic League will be held in Putnam's hall, on Friday afternoon at 3 o'clock. A full attendance is requested.

Former Paisley Man for Dominion Cabinet

Rumors of cabinet reconstruction are still floating out from Ottawa. Among the men now spoken of as certain to be taken in from the Liberal party is Hon. Edward Brown, provincial treasurer of Manitoba. Mr Brown was born in Bruce Tp at Gresham and as a young man was head of the firm of Brown Bros, general merchants, of Paisley, now of Portage la Prairie.

Ashamed To Make Fuss

A man in town, who was victimized has made a quiet complaint that he sent five dollars to Montreal for whiskey, and that he never received the stuff. He says that many others have been served as he has been. They have no redress. If they had sent the good money to a reputable shoe store and not received the shoes what a howl they would have made! But they are ashamed to make a fuss about a fake whiskey vendor. It would put them in a mean position. No man wants it published that he gave way to self indulgence in war time.—Herald and Times

Teachers' Institute

The program of the West Bruce Teachers' Institute to be held in Paisley Continuation School on Thursday and Friday of next week (Oct 11th and 12th), includes many professional topics that are to be introduced and discussed by those present. On Thursday evening a public meeting will be held in the town hall when a lecture will be given by Prof Jones of Toronto University on "The Development of the Imperial Conference." This speaker takes the place of Dean Pakenham who was expected to lecture on "The Public School After the War," but whose services had been engaged elsewhere for that date.

Very Sudden Death

Mrs J D Shuttl, of Cargill, expired very suddenly on Sept 22nd, while attending to her household duties. She had been conversing with her husband, who was preparing to go out on a business drive to Pinkerton. Suddenly she cried out, "Joe Joe!" and Mr Shuttl, rushing to her assistance, met her coming towards him, and with the words, "Something awful is happening to me," she fell forward and expired in his arms. Mrs Shuttl was a quiet, unassuming, motherly woman of lovely disposition, and was a devout Roman Catholic. She was in her 42nd year. Besides her husband, she leaves five small children to mourn the loss of a loving wife and mother, who have the heartfelt sympathy of the whole community.

Grain Not Being Used to Make Liquor

There is an outspoken protest being made by women of Canada against the waste of grain which goes into making intoxicating beverages and thousands are refusing to sign the food pledges until the food controller puts the ban on the distilling of strong stuff. The W C T U and other women's organizations are determined that the food controller shall do something more than merely advise in the matter of saving grain. In the face of this attitude comes the statement from the Inland Revenue Department, to the effect that very little liquor is now being manufactured in Canada for beverage purposes. Practically all the whiskey being consumed was manufactured before the war began. The distilleries have been given over to the manufacture of alcohol used in the making of high explosives and for industrial purposes. Inland Revenue officials further state that in any case the small proportion of wheat that is used is damaged wheat and that if it were not used in that way it would probably be destroyed as it is quite useless for food purposes.

Will Probated

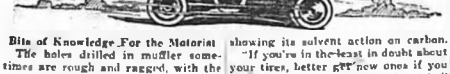
The will of the late Patrick O'Hagan of Elderslie has recently been probated. The value of his estate was between twenty-five and thirty thousand dollars. The chief beneficiaries by his will are his only surviving brother, Dr O'Hagan, his widow, his four nephews: John, Thomas, Nicholas and Patrick O'Hagan, his nieces, Mrs W Beninger, Mrs Dorsey, Helen O'Hagan, and the late Mrs Albert Deitrich, and his cousin, Mrs P Keane of Buffalo. To Catholic Charities the late P O'Hagan left: $1000 to the Catholic Church Extension Society, of Canada, $1000 to the Catholic Orphan Asylum in Hamilton, $1000 to St Joseph's Hospital, Guelph, and $1000 to the Altar Society of St Michael's Church North Bruce.

Aviator Flies to Visit in Bruce Township

Flying machines from Camp Borden training camp have been making flights in all directions from there but the first that Paisleyites have seen went directly over the village on Tuesday afternoon passing from south-east to north-west. We have learned that the aviator is J A Burwash, and he came by air line to visit at Mr Col McDougall's, 5th Bruce, near Underwood. The descent was made on Mr Keake's farm, 5th con, where the machine is at time of writing. Aviator Burwash formerly lived in Port Elgin, but was in the west when he enlisted. His appearance overhead was an interesting diversion to our citizens for the few minutes the airship was in view. Paisley school children were out for recess at the time, and in their excitement drowned out the sound of the motor with their cheering and screaming.

School Fair a Great Success

There was a much larger number of people at the school at S S No 9, Bruce, (Gresham school) on Thursday last than were seen at the average township fair this year. The grounds were crowded, while motor cars and horse vehicles lined the roadways in each direction from the four corners. The large tent in which the exhibits were shown was crowded all the time. The exhibits in grain, roots, cooking and fancy work, clothes and young live stock, were all products of the children's efforts in agriculture, domestic science and raising of live stock. The juvenile members of rural families in the district comprising Bruce Tp and parts of Greenock and Saugeen had evidently been applying themselves to the task of carrying out this scheme. So well did they wield the hoe, the seed pail, the needle or the rolling pin that their products did not appear to be any different to similiar exhibits seen at the big Paisley Fair the day before. There seemed to be no lack of competition in any department and the winners were justly proud of their ribbons. The course over which the footraces were run was closely surrounded by an interested throng, and the drill competitions and singing held the entire crowd while that part of the programme was on. The prize list will appear in next issue. School fairs were first introduced in 1913, when only twenty-five were held in Ontario. Last year there were about 300 throughout the province, embracing 2,381 rural schools, taking in 48,386 pupils who grew their grain and vegetables on over 31,000 plots. 6,868 settings of eggs aggregating over 75,000 eggs altogether, mostly of the barred rock strain, were given out from the department. There was an attendance of 74,000 children and 84,000 adults, and entries totaled 11,600. The fairs in this district are managed by Mr N C McKay, agricultural representative at Walkerton.



BORN

MCARTHUR—In Saugeen, on Oct 2nd, to Mr and Mrs Alex C McArthur, a son.

HUNTER—In Bruce Tp, on Sept 15th, to Mr and Mrs Hugh Hunter, a son.

MCALLISTER—At Paisley, on Sept 26th, to Mr and Mrs Neil McAllister, a daughter—Edna May.

The AUTOMOBILE

Bits of Knowledge For the Motorist

The holes drilled in muffler sometimes are rough and ragged, with the result that the escaping gases set up a whistling noise anything but agreeable. Smoothing off the rough edges will usually eliminate the unwelcome sound.

A set of carbon scrapers should be part of the equipment of every car. Besides using them to clean the cylinders of carbon they are useful for scraping mud from the engine or other places.

It is not advisable to use them alone when removing carbon. The lumps of soot fall down on top of the pistons and help to clog the muffler unless they are blown out by an air hose or a tire pump.

If it is inconvenient to have the cylinders burned out, then use a carbon solvent. One of the best is half ammonia and half kerosene. Put the piston at top of compression stroke so that the valves will be closed. Fill cylinder full of mixture, scraping the piston head and head of the cylinder with the carbon scrapers. The liquid must then be removed with air oil gun.

If you are in doubt as to the value of this treatment try the following experiment: Place some soot in a bottle and pour in equal parts of kerosene and ammonia. Shake it thoroughly. The mixture will become so discolored as to be opaque, showing its solvent action on carbon.

"If you're in the least in doubt about your tires, better get new ones if you are going to drive on a vacation trip," says a service man. "You don't want to carry the haunting thought that you have a casing or two that may let go any minute when you are supposed to be out for enjoyment. The tires you take off may be carried as spares, and you'll be assured of a trouble-free trip."

When following other cars on a crowded country road, watch out for a sudden stop. Get in the habit of running the car slightly off the road, if there is room, so that if the brakes do not hold you will be in no danger of hitting the car ahead.

Keep your eye on the road. Many operators are continually looking down at their feet, at the accelerator pedals, etc., while operating. This takes their attention away from the road, which is dangerous. With a little practice you can soon locate all the necessary pedals, etc., without looking for them. This is the only safe way to drive.

Make sure your breathing tube screen is not clogged. Hold your hand over it while the engine is running and see if air is puffed out. If not, investigate and clean out the obstruction. If allowed to remain it will put a harmful back pressure on the pistons, which will cut down the power of the engine.

From the Ocean Shore

BITS OF NEWS FROM THE MARITIME PROVINCES.

Items of Interest From Places Lapped By Waves of the Atlantic.

The New Brunswick hay crop is expected to be the heaviest in recent years.

The potato crop in New Brunswick is suffering badly from rust or early blight.

What promised to be a bumper crop of oats and wheat in New Brunswick has been spoiled by early rains.

The rain in Fredericton seriously interfered with the operations at the lumber mills, and some were compelled to suspend operations.

Staff Sergt. Ed. E. Kelley, formerly of Moncton, is in an English hospital convalescing from wounds inflicted by a half wild broncho.

Nine-year-old Hilbert Scott of Oxford, N.S., accidentally shot and killed his little sister while playing with a gun. His father is overseas.

A serious railroad accident occurred near River Dean's, not far from New Glasgow. The air brakes on the head engine of a working train gave way, and the rear engine crashed through the van. One man was killed and one fatally hurt.

The strike of the York and Sunbury Milling Company employees of the newly-incorporated town of Devon, for shorter hours, has been settled.

Donald Baxter MacMillan, who arrived at Sydney, N.S., last Sunday, was one of the assistants to Capt. Peary when he set out in July, 1908, on the "Roosevelt" for the purpose of reaching the North Pole.

The Fare in the Periscope.

Anyone who has used a periscope knows that unless you hold the instrument properly you will see your own visage instead of the landscape reflected in the lower glass. The Anzac Book tells the story of one Bill, a soldier at Gallipoli, who did not hold the periscope correctly. He saw in it a dark, dirty face with a wild growth of black stubble, glaring straight back at him; whereupon he dropped the periscope, seized his rifle and scrambled up the parapet, fully intending to finish the Turk who had dared to look down the other end of his periscope. But he found no one at the top, and returned to the trench amid the laughter of his comrades.

Paris has established a museum of the horse, presenting a complete history of the animal from the earliest known period to the present day.

CONSERVE PERISHABLE FOODS.

An Appeal to the Citizens of Canada On a Matter of Vital Importance.

The Food Controller is informed that avoidable waste of valuable orchard and garden products is taking place in many towns and villages throughout Canada.

In order to prevent this waste, an appeal is made to the Mayors, Reeves and Officers of the respective municipalities to take immediate steps to conserve such products as cannot be made use of by the producers or disposed of through the usual channels.

To accomplish this object the following suggestions are made:

1. Citizens are urged: (a) To use every means in their power to conserve for their own use their full requirements of fruits and vegetables. (b) To dispose of any surplus they may have through the usual channels of trade, or turn such surplus over to a local conservation committee.

2. That the head of every Municipality organized from representatives of the various local societies, organizations and religious denominations, a civic conservation committee to take charge of the assembling of all surplus orchard and garden products that may be donated by the individual citizens by enlisting the co-operation of the public and high school teachers, utilizing parties organized from amongst the pupils, aided by conveyances donated for the purpose by the citizens.

3. That the various conservation committees make immediate and adequate arrangements for the safe storing of all such surplus products until such time as they can be disposed of to the various charitable organizations or soldiers' homes or sold by such committee to those unable to purchase at regular prices, or disposed of through the regular trade channels and the proceeds of all such sales donated to the Red Cross or similar organizations as the discretion of the committee shall direct.

It is urged that the widest possible publicity be given to this appeal and the earnest co-operation of all citizens enlisted to its behalf.

Sliced bananas sprinkled with brown sugar and juice of lemon is an "economy" dessert that should have a place often on a wartime menu.

In Dutch Guiana the women carry upon their persons all the family savings in the shape of heavy bracelets, anklets, necklaces, and even crowns of gold and silver.

Many plant students are led to wonder how care of flowers became so well pollenated that no vacancies occur among the kernels, for the tassels are so far above the silks and winds blow freely throughout the fields. But close observation has shown that there are 7,000 pollen grains to every ovule, and only one is necessary.

PERILOUS DUTIES OF WINGED NAVY

TAKING PHOTOGRAPHS OF THE ENEMY LINES.

Men Find They Have Other Things to do Than Use a Camera and Dodge the Archies.

Recently the Royal Navy Air Service undertook a photographic reconnaissance of the entire Belgian coast from Nieuport to the Dutch frontier. The work in progress at Ostend and Zeebrugge, the activities of submarines and destroyers inside the basins, locks, quays and gun emplacements and the results of bombs dropped thereon the night before were all faithfully recorded by these aerial cameras. The negatives were developed and printed, the resultant birdseye pictures enlarged, studied through stereoscopic lenses and finally given to the monitors "for information and guidance." Since it is not given to every one to recognize the entrance to a dugout or a group of searchlights as they appear from a height of 20,000 feet, the photographs were embellished with explanatory notes for the benefit of any one unaccustomed to such unfamiliar aspects of creation.

The Germans say they are a modest people. They were as busy as beavers, and they resented these importunate photographers with all the fervor that springs from true modesty. Their anti-aircraft guns plastered the intruders with bursting shrapnel, and from every coast aerodrome Boche machines rose like a cloud of angry hornets to give battle. Yet day after day fresh plates find their way to the developing trays, and a comparison between the official reports of the flight, couched in a laconic terseness of phrase that is good to read, and the amazing results obtained given perhaps the truest measure of the work performed by these very gallant gentlemen.

Every Detail Photographed

Not a spadeful of earth can be turned over or a trowel of cement added to a station along the coast but a note appears a day or two later upon the long chart which adorns the record office of this particular squadron. A crumpled escorting machine may have come down out of the clouds, eddying like a withered leaf, to crash somewhere behind the German lines; there may be somewhere near the shore a broken buoy or goggles and leather lying amid the wreckage of his last flight. Such is the price paid for a few more dots added in red ink to a couple of feet of chart.

The work of these photographic recorders, pilot and observer alike, differs from all other forms of war flying. Their sole duty is to take photographs, not haphazard but of a given objective. This necessitates steering a perfectly steady course, regardless of all distraction, such as bursting "Archies" and angry Albatross fighters. They leave the fighting to their escorts and their fate to Providence.

The observer, peering earthward through his view finder, steers the pilot by means of reins until he sights the line on which the desired series of photographs are to be taken; once over the pilot flies the machine on an undeviating course, and the observer proceeds to take photographs. When all the plates have been exposed they turn around and return home with what remains of the escort. On occasions the escort have vanished, either earthward or in savage pursuit of resentful though faint hearted Boches; this is when the homing photographers' moments are apt to become crowded with incident.

Adventure 12,000 Feet Above Earth

One such adventure deserves to be recorded. It happened about 12,000 feet above Mother Earth. The official reports, typed in triplicate, covered some dozen lines; the actual events, an equal number of minutes; but the story should live through eternity.

"While exposing six plates," says the official report of this youthful recording angel, "observed five H. A.'s cruising." H. A. stands for hostile aeroplane. "Not having seen escort since turning inland, pilot prepared to return. Enemy separated, one taking up position above tail and one ahead. The other three glided toward us on port side" (observe the navy speaking) "firing as they came.

"The two diving machines fired over one hundred rounds, hitting pilot in shoulder."

As a matter of acher fact, the bullet entered his shoulder from above and behind, breaking his left collarbone, and emerged just above his heart, tearing a jagged rent down his breast. Both his feet, furthermore, were pierced by bullets, but the observer was not concerned with petty detail.

"Observer held fire until H. A., diving on tail, was within five yards."

Here it might be mentioned that the machines were hurtling through space at a speed in the region of one hundred miles an hour. The pilot of the H. A. having swooped to within speaking distance, pushed up his goggles and laughed triumphantly as he took his sight for the shot that was to end the fight. But the observer had his own idea of how the fight should end.

"Then shot one tiny into pilot's face," he says with curt relish, "and watched him stall, sideslip and go spinning earthward in a trail of smoke."

Wounded Pilot Lands Machine

He then turned his attention to his own pilot. The British machine was barely under control, but as the observer rose in his seat to investigate the foremost gun fired and the aggressor ahead went out of control and dived, nose first, in helpless spirals.

Suspecting that the mate was badly wounded in spite of this achievement, the observer swung one leg over the side of the fuslage and climbed onto the wing—figure for a minute the air pressure on his body during this gymnastic feat—until he was beside the pilot. Faint and drenched with blood, he had, nevertheless, got his machine back into complete control.

"Get back, you mut!" he said through white lips in response to inquiries as to how he felt. The ass got back the way he came and looked around for the remainder of the H. A.'s. These, however, appeared to have lost stomach for further fighting and fled.

The riddled machine returned home at 100 knots, while the observer, having nothing better to do, continued to take photographs. "The pilot, though wounded, made a perfect landing." Thus the report concludes.

NEW ROADS IN FRANCE.

French Highways, Always Good, Are Being Improved by British Troops.

Hundreds of miles of the smooth, white macadam roads of Northern France will remain for many years after the war as a real memorial to the devastated towns the Germans left after their retreat in the spring.

All over Northern France the roads are being widened and resurfaced with stone and rubble taken from the wrecked houses of Peronne, Albert, Arras and countless other ruined towns and villages.

As fast as the British soldiers clear away the debris of the towns it is piled into lorries and distributed in heaps along the main roads. There German prisoners toil the day long, pounding it into level patches, which the great steam rollers, many of them bearing familiar American names, grind quickly into smooth macadam for the business of transport.

The brick and stone of these old buildings make as good road material as could be obtained anywhere, and the work of the German dynamiters has been so thorough that much of it is crushed fine enough to need no further preparation.

The roads of Northern France always were excellent, but they never were better than to-day. The only complaint travellers had against them in the old days was that the paved strip in the centre was too narrow. That complaint cannot be made after the British highway plans have been completed, for all the main highways will be macadamized to a width permitting three broad gauge lorries to run abreast, and even the byways will have a paved surface wide enough to allow traffic to pass easily at any point.

Excessive dustiness is the only fault to-day, for war economics will not permit the use of precious oil on roadways.

There is little need anywhere in this district for straightening roads or altering routes, because the roads of Northern France mostly run straight as an arrow's flight. Most of the great highways were laid out in Napoleon's time by military surveyors, and their strategic value and importance always has been kept primarily in mind by the French Government.

A mash, made of milk with a mixture of shorts and crushed oats, will reduce the cost of feeding fowls.

CANADA WILL PROTECT BIRDS

Farmers and Sportsmen Benefit by New International Measures.

The International Convention for the protection of migratory birds in Canada and the United States, ratified in December last, constitutes the most important and far-reaching measure ever taken in the history of bird protection. It affords the best means of ensuring not only a cessation of the decrease in the numbers of our migratory birds such as the insectivorous birds, the wild fowl, waders and sea birds, but, in many cases, it assures an increase in their numbers which have been ruthlessly depleted. It affects over 1,000 species of our chief insect-eating and game birds. It guarantees to the farmer the continued existence of the insect-eating birds, the most powerful and active allies he has in the fight against the destroyers of his crops; and it guarantees to the sportsmen a never-failing supply of ducks, geese, and other game birds.

In fulfilment of its obligations under the Convention, the Canadian Government introduced the Migratory Birds Convention Bill to carry out the provisions of the Convention, and this measure has recently passed both houses of Parliament. As soon as assent is given to the bill, regulations will be promulgated fixing close seasons.

In the case of insectivorous birds, it will be unlawful to kill them or to take their eggs at any time of the year. The close seasons on ducks and geese will not exceed three and one-half months, and the dates of opening and closing will be fixed in accordance with local conditions and after consultation with the proper authorities in the different provinces. On a number of birds, such as the cranes, swans, curlew and most of the shore-birds, with the exception of woodcock, snipe, certain plover and yellow-legs, which are becoming greatly reduced in numbers, a close season of ten years will be provided. The wood duck and eider duck will also be given special protection. Where they are injurious to agricultural or other interests, provision will be made for the killing of protected birds under special permit. Regulations will also be made to prohibit the shipment of migratory birds or their eggs during the close seasons and generally to govern the traffic in them and their eggs.

While the numbers of the migratory birds in Canada and the United States have been most seriously depleted by various causes, confidence is felt that, with international co-operation, and, particularly, the prohibition of spring shooting, a gradual increase in the abundance of our wild bird life will take place.

THE TRYST.

She came with luring looks; she came
With golden beck and wiles;
And will you go with me," she said,
"Adown the amber aisles?"

Right willingly with her I went;
A rustling path she took;
With her eyes there were the dyes
Of gentians by the brook.

Her hair gave back the dappled sheen
Of sunlight on the corn.
And she had all the lovely mien
Of one to beauty born.

Hark!—'tis her wooing voice again
Calling from wood and rill!
'Tis Autumn bids me to the tryst
Beneath the crimsoned hill.

—Clinton Scollard.

A MOONLIGHT RAID.

Where riseth Britain
Like a strong castle,
Moated and girt by sea
Ocean her vassal—

See, in the moonlight,
From the North Sea flying,
Come the great man-dragons
All earth defying!

Out of the Norseland,
Past where the Maelstrom roars,
Once sailed the twilight gods
Unto her shores;

Chained a millennium
Were Thor and Odin
Who came with their raven wings—
Now cometh Woden.

Rule, rule, Britannia,
Moated by sea—
Yield unto Dragon Gods
No sovereignty!

—M. E. Buhler.

ARRAS: CITY OF DESOLATION

MONUMENT TO THE BARBARITY OF THE GERMANS.

This Once Beautiful French City, a Noted Centre of Culture, in Ruined Beyond Repair.

It was raining and a chilly wind blew as we passed beneath a battered arch into the tragic desolation of Arras.

I have seen villages pounded by gunfire into hideous mounds of dust and rubble, their very semblance blasted utterly away; but Arras, shell torn, scarred, disfigured for all time, is a city still—a City of Desolation. Her streets lie empty and silent, her once pleasant squares are a dreary desolation, her noble buildings, monuments of her ancient splendor, are ruined beyond repair. Arras is a dead city, whose mournful silence is broken only by the intermittent thunder of guns.

Thus, as I paced these deserted streets, where none moved, save myself (for my companions had hastened on), as I gazed on ruined buildings that echoed mournfully to my tread, what wonder that my thoughts were gloomy as the day itself! I paused in a street of fair, tall houses, from whose broken windows curtains of lace, of plush and tapestry flapped mournfully in the chill November wind like rags upon a corpse, while from some dim interior came the hollow rattle of a door, while in every gust a swinging shutter groaned despairingly on rusty hinge.

Relics of a Vanished People.

Wherever I looked were evidences of arrested life, of action suddenly stayed; in one bedroom a trunk open with a pile of articles beside it to be packed; in another, a great bed, its sheets and blankets tossed askew by hands wild with haste; while in a room lined with bookcases a deep armchair was drawn up to the hearth, with a small table whereon a candle, a decanter and a half emptied glass and an open book whose damp leaves stirred in the wind now and then as if touched by unseen fingers. Indeed, more than once I marvelled to see how, amid the awful wreckage of broken floors and tumbled ceilings, delicate vases and chinaware had miraculously escaped destruction. Upon one cracked wall a large mirror reflected the ruin of a massive carved sideboard, while in another house hard by a magnificent ivory and ebony crucifix yet hung above an awful twisted thing that had been a brass bedstead.

Here and there on either side this narrow street ugly gaps showed where houses had once stood, comfortable homes now only unsightly heaps of rubbish, a confusion of broken beams and rafters amid which divers familiar objects obtruded themselves, broken chairs and tables, a grandfather clock and a shattered piano whose melody was silenced forever.

Through all these gloomy relics of a vanished people I went slow-footed and heedless of direction until by chance I came out into the wide Place and saw before me all that remained of that stately building which for centuries had been the Hotel de Ville, the City Hall, now nothing but a crumbling ruin of noble arch and massive tower; even so, in shattered facade and mullioned window one might yet see something of that beauty which had made it famous.

Oblivious of driving rain I stood bethinking me of this ancient city; how in the dark ages it had endured the horrors of battle and siege, had fronted the catapaults of Rome, heard the fierce shouts of barbarian assailants, known the merciless savagery of religious wars and remained a city still only for the cultured barbarism of to-day to make it a desolation.

The potato, long regarded by the fastidious as vulgar, is now joyously hailed as a life preserver.

Instead of planting a horse-chestnut, why not plant a real nut tree? Pecans, hickories, or English walnuts cost very little more than horse-chestnuts, make less litter, and produce a valuable crop.

Men Of All Sorts

BUT NOT OF CONDITIONS, AND HARTRIDGE WAS THE ONE AMONG MANY.

By H. M. EGBERT.

Hartridge knew that he would be chosen, though there had been thirty-seven applicants, by the head nurse's count, in answer to the hospital's brief advertisement. Thirty-six others! Hartridge had never realized before how low he had sunk, until he actually found himself sitting in a line with them in the reception room. There were men of all sorts and ages, but not conditions.

The men rose awkwardly as the physician sauntered in, accompanied by the head nurse. He looked the men over as though they were animals. "You can go—we don't want you," he said to the first. "Nor you," he added, to the next. The third man looked more reputable, but when the doctor approached he detected the smell of spirits upon his breath. "Nor you—nor your kind," he continued angrily. So he went down the line, dismissing the majority at a glance. He looked at Hartridge and passed him over and continued his monologue until at last there remained only Hartridge and three others.

"Now, men," said the doctor, "it's between you four. You read the advertisement; we want a healthy man for blood transfusion, to save a woman's life. It won't be a trifle, either. It's going to mean more than you estimate, to lose a couple of quarts of blood. Don't think you'll earn your five hundred easily. You may die. Now then, does anyone want to go?"

There was a pause; then two men shuffled out awkwardly. Poor, broken-spirited creatures though they were; the love of life was strong in them. Dr. Briggs looked at the two who remained, and his choice fell upon Hartridge. He selected him. Two minutes later he was taking down his pedigree.

"You're willing to sign an agreement absolving us from further responsibility?" he asked, when the medical tests were ended. "Good! Have you any friends to be communi-

"Dr. Briggs Has Spoken to Me About You."

cated with, in case the operation is unsuccessful?"

Hartridge knew what that meant. "No, sir," he answered.

"But why do you want to risk your life for five hundred dollars?" continued Dr. Briggs. "Are you out of work?"

"No," answered Hartridge quietly; "out of prison."

The doctor looked at him keenly.

"I was sent away ten months ago for forgery," said Hartridge, in explanation. "I was a bank clerk in the Merchants' and Oriental—underpaid, wretchedly poor, and married. I wanted to play the market, and I lost. The judge let me off with a year as a first offender. My wife divorced me. Now I want the five hundred to go west."

Half an hour later Hartridge, bathed, clothed in a clean nightrobe, was lying in bed, waiting the summons to the theater. His nurse enlightened him as to the process of the operation.

Strapped in his stretcher, he was carried to the operating room and transferred there to the glass table. On one side of this a flimsy screen of linen had been erected, and on the other side, so near that he could feel the screen tremble with every breath she took, was the patient. Hartridge wondered whether she were young or old. Somehow he obtained the impression that she was a young woman. He felt a sudden dignity in his position; the thought of the money made him wince now. He who had done as much harm and ruined one woman's life—might he not have gratuitously given this much to save another? After an inappreciable interval the surgeon began his work. Hartridge felt the momentary sting of the lancet; he saw the other doctor's head over the top of the screen as he performed the same service.

He felt comfortable. His mind more active than was its wont, recurred incessantly to the woman not a cubic distant, so near that once his hand touched hers, with only the frail linen barrier between them. The money had now become a hideous menace to his peace of mind, robbing him at once of his self-esteem, so much as was left of it, and of his chance of making reparation for his sin. He must refuse it. He must tell the surgeon instantly. He tried to speak to him, but there was an uncanny silence in the room which he did not dare disturb. Something had gone wrong with the lights, too, for all had gone out except a tiny globe in one corner, which burned with a strange sputtering sound that seemed to keep time with the beating of his heart. And all this sacrifice was vain, for he was selling his soul—selling his right to reparation for five hundred dollars! He must stop the operation and make a new bargain. He found his voice at last and shouted, but the light was roaring like a dynamo and the sound drowned his cries. He wrenched his arm away and—

"How are you feeling?" asked the nurse.

He opened his eyes. He was back in his bed and the daylight was streaming in through the open window near his head. He looked at her, astonished, uncertain.

"You fainted," she explained. "People generally do. But you'll be all right in a little while. It's only ten minutes since they brought you back."

"But the operation—?"

"Perfectly successful."

"I didn't—do anything? Didn't I shout or struggle?"

Hartridge was silent for awhile.

"Nurse," he said presently, "do you think she would see me before she goes?"

"Why?" asked the nurse bluntly. "That's never allowed, Mr. Hartridge. She wasn't allowed to see you on the table—they threw a blanket over you. If you'll think a little you'll understand that that's the only thing possible."

"But if she wanted to—" he faltered.

"Well, of course, in that case I suppose she could. But why do you want to see her?"

"Because," said Hartridge slowly, "I want to thank her for doing something that she never dreamed of. She looks on me, no doubt, as you all do—as a convenience, as a poor man who has sold something which he possessed for money. There can be no thought of obligations on either side, of course. But I'm not going to take the money. I'm a jail-bird. I've just come out of the penitentiary where I served a year's sentence for forgery. She has given me back my self-respect. I feel that I've done some good in the world at last—I can't very well explain it, but I want to thank her. Won't you tell her at least?"

The nurse was looking at him very strangely. "Yes, I'll tell her," he heard her say, and he resigned himself to the feeling of intense weariness that was creeping over him.

Two days passed. Hartridge made no further reference to the fulfilment of his request, and until Dr. Briggs sent he would not accept the money.

"There's a gentleman coming to see you this morning," the nurse announced triumphantly the next day.

"A gentleman?" repeated Hartridge with a puzzled frown. "I don't know anyone. It must be a mistake. What is his name?"

But the nurse would not tell Hartridge his name. At twelve o'clock, however, the ward doors were thrown open to the stream of visitors who came to see the patients. Hartridge, who had been dozing, heard his name spoken and looked up. A man with very well remembered features was standing by his bed.

"Mr. Hartridge—my dear fellow—" he began, somewhat nervously.

"Mr. Cumming!" gasped the man in the bed and bowed his head miserably.

The bank president sat down beside him and placed one hand on his shoulder.

"I want to tell you," he said, "that Dr. Briggs has spoken with me about you and made clear some things that I did not understand last year. If I had realized your circumstances I might have been less harsh in exacting justice. None of us can afford to exact that to the uttermost. They tell me you have refused compensation for your brave sacrifice. Hartridge, we are starting a branch bank at Clifton. I want you to go there as assistant cashier. You will know of your past. That is all atoned for. You will go with our complete confidence—and as a salary adequate to support yourself and your wife comfortably."

"My wife?" said Hartridge bitterly. "Perhaps you don't know that—"

"Here's somebody come to see you and thank you for your—for her life," said the nurse, coming up softly. Hartridge glanced up. A woman came swiftly toward his bed and sank down beside him. She flung her arms round his neck and drew down his head to her breast and her tears, falling on him, washed his soul clean at last from all its bitter memories.

About the House

DOMESTIC SCIENCE AT HOME

Tenth Lesson.—Vegetables

Vegetables are classified into two distinct groups, as green vegetables, composed of stems and leaves, and starchy vegetables, consisting of roots and tubers, such as white and sweet potatoes, turnips, carrots, beets, radishes, parsnips and onions. Vegetables are also classified into the carbohydrate group. They contain starch, sugar, cellulose and mineral salts.

Peas, beans and lentils are classed as legumes, because they contain valuable protein, which may take the place of meat. Green vegetables are valuable for their salts and acids, and also for the cellulose, which is very necessary to the body, as it furnishes material for bulk, diluting the highly concentrated foods.

The starch is inclosed within the tiny cellulose wall, which, when cooked, softens, permitting the grains of starch to expand, and therefore be easier to digest.

All vegetables contain a large percentage of water, and with the exception of the legumes and corn little protein and fat.

Classification of Vegetables

Beets are valuable for their carbohydrates, which is in the form of sugar. Carrots, turnips and parsnips contain large amounts of cellulose, and are difficult to digest. Onions are rich in an aromatic oil which contains a large amount of sulphur. The onion is also valuable for its diuretic qualities. Radishes contain large amounts of cellulose, and are very valuable for bulk.

Asparagus is easy to digest, and is of diuretic nature. Cauliflower, cabbage and brussels sprouts are of the same family. Cucumber contain mineral salts and cellulose. Spinach has well known aperient qualities.

Endive, celery, lettuce, romaine, corn salad and cress and chickory are easily digested and are cooling, also purifying the blood stream. Potatoes are rich in starch and mineral salts. Tomatoes are of a diuretic nature and are especially valuable for their flavor and the variety that they furnish to the menu. They contain various mineral salts, and are easily digested.

Method of Cooking

Proper cleansing and preparation of vegetables are as necessary as the cooking. Wilted vegetables may be restored by placing them in cold water. All stale or decayed vegetables should be discarded, as they contain bacteria and molds that may cause trouble.

Be particular. Thoroughly wash and rinse the vegetables to remove all sand and dirt. A small brush should be kept for this purpose, scrubbing them quickly removes all dirt, saving both your hands and your time.

Cooking

Place all vegetables in boiling water to cook, and keep the water boiling gently until the vegetables are tender. They should then be taken at once from the water, seasoned and placed in hot dishes.

Overcooking or too rapid boiling spoils the color, shape and appearance as well as the flavor. Do not cover green vegetables while cooking. Spinach, beet tops and squash should be steamed or cooked in a small amount of water.

Timetable for Cooking

Potatoes. From 20 to 30 minutes, according to size.

Turnips. From 30 to 50 minutes, according to size and age.

Beets. From 45 minutes to 3 hours, according to size and age.

Carrots. From 15 to 40 minutes, according to size and age.

Cabbage. From 15 to 50 minutes, according to method of cutting.

Spinach. For 15 minutes.

Peas. For 20 minutes.

Beans. From 20 to 30 minutes, according to size.

Asparagus. From 20 to 30 minutes, according to size.

Boiling potatoes in the skins and peeling them afterward, then rolling them in melted butter and parsley, gives old potatoes the appearance of new ones. Boil the potatoes for ten minutes, then grease the skin and bake. After draining the water from boiled potatoes, cover them with a napkin or towel. This absorbs the water and makes the potato mealy.

Preserving the Autumn Fruits

Apple Butter.—One-quarter bushel of windfall apples, two gallons of water. Wash the apples and remove all blemishes. Cut in quarters and do not peel or core. Place in a preserving kettle. Start cooking. Use a wire potato masher to mash and stir the pulp. Cook gently for forty minutes or until the mixture is very soft mass. Cool and then rub through a fine sieve. Return to the kettle and add one quart of vinegar, two pounds of sugar. Stir to dissolve the sugar. Now tie the following spices in a piece of cheesecloth and add to the apple mixture: one cupful of cinnamon, four tablespoonfuls of nutmeg, two tablespoonfuls of cloves, two tablespoonfuls of allspice, one tablespoonful of ginger. Cook slowly until thick like apple butter, stirring frequently to prevent scorching. When thick pour into pots or crock. Seal with paraffin in the usual manner for jellies.

Apple butter that contains large amounts of sugar is liable to ferment. Use in tarts, pies and cakes. Spread it on bread and save the butter.

Pear Marmalade.—Use four pounds of pears, peeled and cored and then cut into slices. Place in a preserving kettle with one pint of cold water. Cook very slowly until the pears are soft, adding the following spices tied in a bag: one tablespoonful of allspice, two tablespoonfuls of cinnamon, one tablespoonful of cloves, one teaspoonful of mace. Remove the spice bag when the pears are soft. Now add two and one-quarter pounds of sugar and the juice of two lemons. Cook slowly until thick. Store in sterilized glasses, sealing in the usual manner for jellies.

Canned Pears.—Peel and cut the pears in half. Place in an enamel preserving kettle. Cover with cold water and add the juice of one lemon to each six quarts of water. This will prevent discoloration. Place on the fire and cook until the pears are tender. Drain and pack into sterilized jars. Measure the liquid and add one cupful of sugar to each two and one-half cupfuls of liquid. Boil the syrup for five minutes and then pour it over the pears. Add a small stick of cinnamon and two cloves to each jar. Place the rubber and lid in position and then partially tighten. Process for thirty minutes after the water starts boiling in a hot water bath. Remove and fasten the lids as securely as possible. Test for leaks and then store in a cool, dry place.

Crushed Peach Pulp.—Peel and cut into very thin slices over-ripe peaches. To six quarts of prepared peaches add a syrup made of: three pounds of sugar, one pint of water. Place in a saucepan and boil for five minutes. Pour over the peaches. Stir with a spoon to mix thoroughly and then fill into sterilized jars, taking care to fill to overflowing. Press the peaches down well. Place the rubber and lid in position. Partially tighten them. Place in a hot-water bath and process for forty minutes after the water starts boiling. Remove and fasten the lids as securely as possible. Test for leaks and then store in a cool, dry place.

Grape Jelly.—Pick grapes from the stems and wash them. Measure them and add two cupfuls of water to each quart. Mash well with a potato masher and place on the fire. Bring slowly to a boil and cook until the grapes are soft, mashing frequently. Strain through a jelly bag and measure the juice and allow an equal amount of sugar. Place the juice in a kettle and bring to a boil. Cook for ten minutes and add the sugar. Continue cooking after the boiling point is reached. Boil juice just eight minutes. Remove from the fire and pour into sterilized glasses, and when cool cover with paraffine. Stir well until the sugar is dissolved and then no longer. If you have a candy thermometer cook to 222 degrees. Remove from the fire and pour into the prepared glasses.

Spiced Grapes.—For spiced grapes use three quarts of berries. Pick from the stems and wash. Place in a porcelain-lined preserving kettle and add two pounds of sugar, one-half cupful of water one-half cupful of vinegar. Stir until the sugar is dissolved. Bring quickly to a boil and then add the following spices tied in a piece of cheesecloth: one tablespoonful of cinnamon, one teaspoonful of cloves, one teaspoonful of mace, one teaspoonful of ginger. Cook slowly for one hour, then pour into sterilized jars. Place the rubber and lid in position and then process in a hot-water bath for twenty minutes after the water starts boiling. Seal and then test for leaks and finally store in a cool, dry place.

Telephone lines are to be extended to Tromsoe, Norway, 200 miles north of the Arctic circle.

It is said that moths will not attack green fabrics. Arsenic is used in dyeing green, and the moths are also enough to shun that deadly drug

Worth Protecting

A good article is worthy of a good package. A rich, strong, delicious tea like Red Rose is worth putting into a sealed package to keep it fresh and good.

A cheap, common tea is hardly worth taking care of and is usually sold in bulk.

Red Rose is always sold in the sealed package which keeps it good.

JAPAN'S PART IN THE WORLD WAR

THE POSITION SHE OCCUPIES IN UNIQUE.

What the Island Empire Has Done and is Doing For the Allied Cause.

The position Japan occupies in the world war is singularly unique. It has few parallels, if any, in the history of war, writes Dr. Toyokichi Iyenaga, the Japanese journalist. She entered the war in obedience to the terms of the Anglo-Japanese Alliance, which imposed upon her the duty of conducting military operations in common with her ally in the regions of Eastern Asia and of safeguarding mutual interests therein. Japan also joined the solemn agreement entered into between the Allied Powers to make no separate peace.

The war has brought to Japan an era of prosperity never known before. Her foreign trade has already reached the billion mark, counted in Canadian dollars. Her mills, her shipyards, her factories are busy day and night and are reaping enormous profits. The present financial strength of the Island Empire, as compared with that before the war, stands in general terms something like this: Bank clearings have more than doubled; industrial and steamship shares have trebled and quadrupled in value; earnings of some concerns have gone up one hundred, two hundred, even three hundred per cent.; national banks are up four to six points; the commercial discount rate has dropped from eight per cent. to five—even three.

While these fortuitous circumstances of war and geography were bringing to Japan unforeseen riches, she has lain idle, amiss in the fulfilment of the duty allotted to her by her ally. No, not quite that. She has done her part with fidelity and thoroughness. Let me dwell upon it for a moment.

Japan's Work in the Far East.

The story of the destruction of German power in the Far East and in the South Seas, with which Japan was entrusted by her allies, is a simple one. Soon after the declaration of war against Germany Japan despatched one division of her army to Shantung and, in conjunction with the British troops, under the command of Major General Bernadiston, reduced Tsingtao on November 7, 1914, taking 4,669 German prisoners and other spoils of war. Japan also despatched the First and Second Japanese fleets and other squadrons to blockade the harbor of Kiaochow, to locate the enemy warships among the adjoining seas, to capture their bases in the South Sea and to convoy the troops of Australia and New Zealand to Europe.

The Kiaochow campaign was, of course, but child's play compared with the colossal battles fought on the western, eastern and Balkan fronts of Europe. Nor was the work undertaken by the Japanese navy so nerve racking and arduous as the task imposed upon the allied fleets in European waters, although it was extraordinary of the sphere of activity allotted to the Japanese fleet and the consequent enormous cruises they made over the eastern seas, the South Sea and in the Indian and Pacific Oceans are not generally known. In summing up the results of Japan's operations I may be pardoned when I say that she achieved the maximum effect by the minimum of effort, and that what she has accomplished is, so far, among the few aims of the Allies that have been completely realized.

Activities Within Her Province.

While I do not wish to overrate the part Japan has taken in the war, I cannot let pass unchallenged the charge now and then made that she is indifferent to the cause of her allies because she is not fighting on the European battlefields. It was neither the wish of her allies nor that of Japan that she would thrust herself upon the European stage, for it is none of her part to act therein. This is the strongest reason why she has not sent her troops to the European front to take an active part in the conflict. In the meantime she has done to her best ability that which is within her province to do. Her navy has for three years past been keeping vigilant watch over the wide sweep of waters from the Yellow Sea to the Red Sea and a large part of the Pacific. Recently she has despatched a fleet of destroyers to the Mediterranean to assist in the operations against German and Austrian submarines.

She has subscribed to the loans of her Allies to the full extent of her financial capacity. And, above all, Japan has supplied munitions and other war material to her Allies, and especially to Russia has she assured an almost interrupted flow of guns, rifles, ammunition, clothing, foodstuffs and other materials. Mountains of these supplies are to-day piled upon the wharves of Vladivostock because of the lack of transportation facilities.

True to Her Allies.

No emphasis is needed that Japan stands ready to do everything within her power for the successful prosecution of the war against a common foe. That Japan is unfalteringly loyal to her Allies was strikingly and unexpectedly demonstrated a few months ago by the publication of the notorious Zimmerman note, which, while on one hand it exposed to the world the complete bankruptcy of German statesmanship, revealed at the same time the true and firm attitude of Japan. How spontaneous, how unanimous was the verdict of the Japanese nation in condemning that preposterous plot!

RULES OF HEALTH FOR DYSPEPTICS

DIETING UNNECESSARY

There are two ways in which people who suffer from indigestion, dyspepsia, sour stomach, flatulence, etc., can overcome the trouble. First as practically all cases of the above are directly or indirectly traceable to acidity and fermentation, they can eliminate from their diet all foods which ferment and form acid, such as all starches and sugar and foods containing them, thus prohibiting cereal potatoes, fruits and most meats. About the only safe foods are gluten breads, spinach and small quantities of white meat of chicken or turkey. This diet is although a satisfactory, but it is sometimes quite effective. The second way which appeals certainly to those who like to eat hearty meals of good foods is to eat whatever is reasonably digestible, neutralize the acid and check fermentation by the use of a good antacid such as bisurated magnesia, a teaspoonful of which in a little water immediately after eating or whenever pain is felt, instantly neutralizes the acid, stops the fermentation and permits the stomach to do its work in blissful calm or blindness. Owing to its alkalinity, convenience and effectiveness this latter plan is now being adopted instead of the old fashioned, expensive, weakening starvation process. In this connection it is interesting to note that since the widespread use of bisurated magnesia was established, many druggists have arranged to supply it in 5 gr. tablets, 2 or 3 of which are equivalent to a teaspoonful of the powder form and are much more convenient to carry.

Redpath SUGAR

2 and 5 lb. Cartons—
10, 20, 50 and 100 lb. Bags.

From "Ye Olde Sugar Loafe" of grandmother's day, to the sparkling "Extra Granulated" in your own cut-glass bowl, Redpath Sugar has appeared three times daily, for over half a century, on thousands of Canadian tables.

"Let Redpath Sweeten it."

Made in one grade only the highest!

The Paisley Advocate

PAISLEY, OCT. 3rd, 1917

THE FAIR

Splendid Exhibits, Glorious Weather and Big Crowd

Favored with a perfect day, the Paisley Fair came up to the standard of a perfectly excellent farmers' fall exhibition. Everything shown, from big beef steers to shelled beans, was a good sample of the products of the district, and some were so exceptionally meritorious as to eclipse those that were seen at the big provincial exhibitions this season.

It may not be altogether credible in the minds of most of our own people, but we are told that government judges in the horse and cattle departments came here not at all prepared to view such high class stock as appeared before them in the ring. Farmers and breeders who brought out their animals may well feel flattered to know that both in number and quality the showing surpassed that of Toronto Fair. Spectators, too, expressed in superlative terms their admiration of the horses particularly, and the cattle show was the best for years.

In the building there was a very attractive display in many departments, although in some, such as fruit, there was a gaping vacancy owing to the failure of the crop. Roots and vegetables were very good, with entries numerous and competition close. The cut flowers section was the beauty spot of the show. On the cookery tables there was a greater array of exhibits than usual, and dairy butter also was more in evidence than last year. Ladies' work and fancy goods was a well filled department also, and the articles were closely scrutinized by the lady visitors to the fair. Paintings and other samples of fine art were not very numerous, but in the school pupils' writing competitions there was considerable rivalry for the honors. The poultry pens contained many fine birds of the utility and fancy breeds. Throughout the whole list the exhibits were such as would be a credit to any section of this fair province, and the attention that was devoted to all departments showed that interest in a good show is not falling off at all.

Special exhibits were made by W H Davison in stoves, &c., Ballachey, Laidlaw & Co., in dry goods &c., Hope & Cavill in furniture, &c., P McKinnon with Bell pianos, &c.

The Women's Patriotic League had a busy afternoon in their large tent selling refreshments.

The Hanover brass band were engaged to furnish music for the afternoon, and lived up to the letter of their contract, their program being almost a continuous one, and their repertoire included many fine selections. There is nothing like a good band to enliven the fair.

The concert in the town hall at night drew one of the largest crowds that was ever put within the walls. Proceeds amounted to $185. Harry Bennett the comedian, Howard Russel one of the best Canadian baritone singers, Mme Coutts-Bain an old favorite vocalist here, with Mrs M Stauffer as pianist, are a strong combination of entertainers, and put on a program that highly pleased the big audience.

PRIZE LIST

HORSES

AGRICULTURAL—Brood mare, John Desmond, John Eason, W G Nicholson; foal, Wm Howe, Wm McAngus, Alex Greenlock; 3 yr old, Paul Kingston, Wm Crawford, John M Hopper; gelding or filly 1 yr old, Geo Munro, D McKinnon, John McDermid; span, McDermid, D A McIntyre, McDermid; gelding or filly 3 yrs old, McDermid, Paul Kingston.

HEAVY DRAUGHT—Brood mare, Sam Kingston, Wm Howe 2nd and 3rd; foal, Wm Howe, Sam Kingston, W G Nicholson; gelding or filly 2 yrs old, Fred Swinton, W H Brown, Paul Kingston; gelding or filly 1 yr old, H J Thornburn; span, Sam Kingston, Wm Howe; gelding or filly 3 years old, J A McDermid 1st and 2nd, H J Thornburn.

GENERAL PURPOSE—Span, Alex Vance, J A Cumming.

ROAD—Brood mare, S Kingston, E Clayton; foal, E Clayton, S Kingston; gelding or filly 2 yrs old, R Reed, Wm Howe; gelding or filly 1 yr old, Wm Cassidy; span, Arch McLean, W Mink, Chas Fuller; driver, R Fullerton, D G Cameron, J R Laidlaw; driver 3 yrs old, Alex Robb, Specials—Best lady driver, Miss Mabel Dudgeon, Miss Ola Lowes; best turnout, R Fullerton, D G Cameron; best groomed team, Bart Wright, Alex Vance.

CARRIAGE—Gelding or filly 3 yrs old, R Reed, J W Hopper; gelding or filly 1 yr old, Paul Kingston, Geo A Brooks; span in harness, Bart Wright, R C Pearce, J A Cumming; driver, Ernest Martin, Wm Crawford, Alex George; driver 3 yrs old, Wm Miller; halter broke colt, Wm Howe.

AUTOMOBILE SPECIAL—Miss Ola Lowes.

CATTLE

DURHAM—Bull under 2 yrs, Donald Dorrock; bull calf, Jas Maxwell, W H Rudolph, Alex Cowanlock; cow 4 yrs, John Scott 1st and 2nd, W T Hopper; cow under 4, W T Hopper 1st and 2nd, J H Turner; heifer under 3, Turner, Scott, Maxwell; heifer under 2, Turner 1st and 2nd, W T Hopper; heifer under 1, Scott 1st and 2nd, Turner.

JERSEY—Cow 3 yrs or over, R Johnston; heifer under 3 yrs, Wm Rowand; heifer under 2 yrs, R Johnston 1st and 2nd.

GRADES—Cow 4 yrs or over, Pearce Bros, W H Rudolph, Pearce Bros; cow 3 yrs or over, Pearce Bros, Rudolph 2nd and 3rd; heifer 3 yrs old, W G Brown, Rudolph, Pearce Bros; heifer 1 yr old, J H Turner 1st and 2nd, Rudolph; steer under 3 yrs, Pearce Bros, A Cormack, Rudolph; steer under 2 yrs, Cormack, Pearce 2nd and 3rd; steer under 1 yr, Cormack, Turner, Rudolph; heifer under 1 yr, Cormack, Rudolph 2nd and 3rd.

FAT CATTLE AND MILCH COWS—Fat ox or steer, W H Rudolph; fat cow or heifer W T Hopper, Rudolph; pair milch cows, Rudolph 1st and 2nd; milch cow (village) Alex Brown.

Canadian Bankers' Competition for boy and girls—Calf, pure bred or grade 1st prize, $5, Reta Cormack, grade heifer 2nd, $4, Maurice Cowanlock, pure bred bull; 3rd, $3, John Pearce, grade calf.

SHEEP

LEICESTER—Ram aged, John Wright & W Johnston, McKay Bros; ram shearling, Wright, Johnston; ram lamb, Wright Johnston, Wright; ewe 2 shears or over Johnston, Wright, Johnston; ewe shearling, Wright Johnston 2nd and 3rd; ewe lamb, Johnston 1st and 2nd, Wright.

OXFORD—Ram aged, Fred Horning W H Rudolph; ram shearling, Wm Emke Horning; ram lamb, Emke 1st and 2nd, Horning; ewe 2 shears or over, Emke 1st and 2nd, Rudolph; ewe shearling, Emke 1st, 2nd and 3rd; ewe lamb, Emke, Horning, Emke.

LONG WOOL GRADE—McKay Bros, 1st for ewe 2 shears or over, 1st for ewe shearling, 1st for ewe lamb.

SHORT WOOL GRADE—Ewe 2 shears or over, Pearce Bros, Fred Horning; ewe shearling, Pearce 1st and 2nd; ewe lamb, Pearce 1st and 2nd.

SWINE

FELT LIKE A NEW PERSON

After Taking Only One Box Of "Fruit-a-tives"

EAST SHIP HARBOUR, N. S.

"It is with great pleasure that I write to tell you of the *wonderful benefits* I have received from taking "Fruit-a-tives". For years, I was a dreadful sufferer from *Constipation and Headaches*, and I was miserable in every way. Nothing in the way of medicines seemed to help me. Then I finally tried "Fruit-a-tives" and the effect was splendid. After taking one box, I feel like a new person, to have relief from those sickening Headaches".

Mrs. MARTHA DEWOLFE.

50c. a box, 6 for $2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Fall Boots and Shoes

We have a full display of shoes for Men, Women and Children. They are stylish and at the same time possess durable qualities, yet are not excessive in price. Call in and see them. It is a pleasure for us to show them to you.

Repairing

Shoe prices get higher every month. Save money by having them repaired.

Fresh Groceries

Fruit and Confectionery always in stock.

H. PFAFF & SON

GIRLS NEEDED IN OFFICES

Voluntary enlistment has taken thousands of men from office work. Conscription will take more. Office help is needed now—will be scarcer very soon. Young women and boys under military age must fill the vacant places—and they need training.

Northern Business College

Owen Sound, Ont. is the very best place to get a practical training and prepare to meet the demand for trained office help. Students may enter any time. No increase in fees. Circulars free on application.

C. A. FLEMING, F.C.A., Prin.

We Want Now

A Reliable Agent in Bruce County to sell Pelham's Peerless Fruit and Ornamental trees during fall and winter months. Good pay, exclusive territory. Free selling equipment.

Over 600 Acres

of the choicest Nursery Stock, including New varieties controlled by us. Handsome up-to-date selling equipment and a splendid, established home stock to offer customers. We are not jobbers. Write us for agency terms to

PELHAM NURSERY CO., Toronto

N.B.—Catalogue sent on request to applicants for agencies or purchasers of Nursery Stock

AUCTIONEERS

R. C. PEARCE, Licensed Auctioneer. Sales attended to all parts of the County of Huron at reasonable terms. Orders left at the ADVOCATE office will receive prompt attention. Telephone at house.

R. J. NESBITT, Licensed Auctioneer for the County of Bruce, is prepared to conduct sales in any part of the county. Terms reasonable. Leave order at ADVOCATE office or address Glenelg P.O.

R. T. Robinson

CARPENTER AND CONTRACTOR

ESTIMATES furnished for the erection of and any class of building. Large or small contracts undertaken.

Address Chesley or Cargill P.O.

BALLACHEY, LAIDLAW & CO.

The Store with the Stock

We take pleasure in announcing that Mrs. J. B. Allen was the winner of our prize given for

Overseas Fruit Cake

Here is her recipe:

1 cup sugar
½ cup butter
½ cup molasses
½ cup sweet milk
3 eggs
½ teaspoon soda
½ tablespoon each of cloves, mace, cinnamon and allspice
½ nutmeg
¾ lb. raisins stoned and chopped
¼ lb. currants
¼ lb. citron
2 cups flour
Bake 2 hours in slow oven

For all choice cooking ingredients the wise ones come to us

BALLACHEY, LAIDLAW & CO.

Both 'Phones Top Prices for All Produce

Rimless Glasses

Are Fashionable

Not invisible but nearly so.
They can be made up with either solid gold, gold filled (warranted 10 years), or nickel trimmings.
They are not expensive.
We adjust them so that they are perfectly adapted to the features.

Useless Time Pieces

If there is a watch or clock in your house that refuses to go let us have a look at it. You know it would go if it could. Something somewhere is wrong. It may be nothing serious. A few minutes' time at a few cents' cost may make it as good as new.

We will look it over for you and if it can be fixed we can fix it.

I. SHOEMAKER

Jeweler and Optician

Central Business College Stratford, Ont.

Ontario's Best Commercial School

Courses are thorough, instructors are experienced, and graduates individual satisfaction graduates are placed in positions. During 3 months we turned down over 200 calls for trained help. This is the school for those who want the practical training and the good positions. Commercial, Shorthand and Telegraphy departments. Free catalog. W. J. Elliott, Pres. D. A. McLachlan, Vice.

CUSTOM TAILORING is More Important than ever this Season

Custom Tailoring is your only assurance of clothes satisfaction. It is your only guarantee of getting all wool fabrics, high quality workmanship correct style and absolute perfect fit.

The ready-to-wear market is in an unsettled condition—many poor fabrics are being used, poor workmanship is employed, and you get no guarantee of satisfaction.

Play safe. Buy good clothes—smart, individual refined clothes—in short, buy our custom tailored Fall Suits and Overcoats at $18 to $35.

To the Ladies:

Our Ladies' Tailoring trade has now developed to such an extent that we have a larger number of orders than at any time in the past, and we are in a position to produce the new designs in styles most satisfactory to patrons

PRIZE LIST—Continued

cucumbers, green, A Sparks, Alex Brown, W Megraw; celery, Mitchell, A Sparks, S Sparks; blood beets, long, Schmidt, Harmer, B Sparks; turnip beets, Schmidt, J Miller, J Jacques; onions from seed, J Milne, D Darroch, Harmer; onions, potato, Harmer, Jacques, Schmidt; onions, pickling, Mrs J B Allen, Mitchell, Mrs Milne; onions from top or set, S Sparks, Harmer, Jacques; radish, Mitchell, A Schmidt, Mrs Allen; mushmelons, A L McKinnon; citrons, Mitchell, A Sparks, S Sparks; coll of garden herbs, Mrs Milne, A Sparks; coll of seeds, Alex Thomburn; coll vegetables, etc, Mitchell, A Sparks, S Sparks; coll vegetables (special), D McKenzie.

FLOWERS

PROFESSIONAL—Coll and display, W A Mitchell; wreath, Mrs J B Allen, W A Mitchell; floral cross, Mitchell, Allen; floral design, Mitchell, Allen.

AMATEURS—Fuschia, single specimen, single, in flower, W Rowand; geraniums, 2 double, in flower, Mrs I McLaughlin, Rowand; geraniums, 2 single, J N Collins, McLaughlin; geranium, single specimen, double, McLaughlin, Collins; geranium, single specimen, single, McLaughlin; pansi, McLaughlin; coleus, 4, Collins, Rowand; coleus, single specimen, Rowand, Mrs G R Irwin; dahlias, 6 varieties, Mrs J B Allen, Mrs G Falconer; ferc, Mrs G R Mitchell, McLaughlin; flowering maple, Rowand; begonia, single specimen, tuberous, Mrs Milne, Mrs Mitchell; begonia, single specimen, s o w, Rowand, McLaughlin; coll begonias, rex, W T Hopper; coll begonias, tuberous rooted, Mrs Milne, Mrs Mitchell; coll begonias, fibrous, Rowand, W T Hopper; coll geraniums, McLaughlin; coll cactuses, Mrs Milne, McLaughlin; coll to plants, Rowand, McLaughlin; coll for foliage, McLaughlin, Collins, Rowand; coll for bloom, Rowand; hanging basket, Rowand, McLaughlin; mixed work, Allen, Mrs Milne; hand boquet, Mrs Mitchell, Mrs Milne; table boquet, Falconer, Allen, Mrs Mitchell; coll sweet peas, Allen, G McKay, Falconer; coll dahlias, Falconer, Allen; phlox, Drummondi, Allen; panaies, Jas Rwing, Mrs Milne; asters, Allen, Rwing, Wm McKenzie; ten weeks' stock, D Eason, Allen; verbenas, Mrs Milne, Allen; pansies, single, Falconer; dianthus, Allen, Falconer; cut flowers, Allen, Falconer; gladiolus, Falconer.

DAIRY PRODUCTS

Firkin butter, John Davis, W Megraw, Alex McRae; 15 lbs, M Nelson, A Lamont, W T Hopper; 5 lbs, M Nelson, W Megraw, D Darroch; cheese, dairy, Alex Lamont.

PROVISIONS

Bread, homemade, Mrs J B Allen, Wilfred R Thompson, W T Hopper; bread (special), Mrs H E McGregor; best doz buns eggs, D Darroch, L C Spofford, Mr Nelson; honey, clear, A D McKay, J L B Watson, Jas Ewing; honey in comb, Watson; maple syrup, W Megraw, H Boettger, Wilfred Thompson; tea biscuits, W Minto, A Lamont, N D McKinnon; tea biscuits (special), Wm Minto, Mrs G R Irwin; tea biscuits (special) Wm Minto; oatmeal cakes, Mrs G R Mitchell, Mrs M Nelson, Mrs C McInnes; jelly cakes, A Lamont, W Megraw, Mrs E Mitchell; homemade buns, Mrs J B Allen, Neil D McKinnon, D Darroch; sponge cake, A Lamont, Mrs G R Mitchell, D Darroch; fruit, preserved, Mrs G R Mitchell; jelly, Mrs G R Mitchell, Mrs J B Allen, A L McKinnon; pickles, Mrs Mitchell, S Sparks, Mrs Milne; tomato catsup, Mrs Mitchell, Falconer, A L McKinnon; hard soap, homemade, M Nelson, N D McKinnon, D Darroch; fruit cake, Mrs J B Allen.

LADIES' WORK

Serviettes, Jean Munro, Mrs W J Savage; braiding on linen, Mrs Falconer, Savage; Battenberg lace, Mrs E C Reed, Miss T Hyde, Falconer; library table runner, Munro, Savage; brass work, pierced, Mrs G R Irwin, Falconer; ladies' 3 piece set underwear, Falconer, Savage; centre piece, silk emb, Falconer, Reed, Savage; centre piece, s o k, Reed, Irwin, Hyde; crochet work in wool, Savage, Falconer, Munro; crochet work in cotton, Reed, Savage, John M Hopper; coronation bead work, Falconer, Irwin, Reed; fancy corset cover, Munro, Irwin, Savage; drawn work, Irwin, Mrs H S Petrie, Hyde; emb on silk or satin, Savage, 3rd; emb on cotton or linen, Irwin, Hyde, J F Pearce; emb on bolting cloth, Reed 2nd, Savage 3rd; emb, hardanger, Reed, Petrie; emb, Roman, Reed, Savage, Falconer; eyelet, Reed, Hyde, Irwin; emb, s o k, Irwin, Hyde, Falconer; emb shirt waist, Savage; fancy pin cushion, Munro, Irwin, Hyde; fancy table drape or cover, Savage, Munro, N D McKinnon; fancy apron, Savage, N D McKinnon, J N Collins; flower wreath, Mrs Milne; hem stitch, Collins, Savage; honiton work, Reed, Falconer, J L B Watson; knitting, fancy, in wool, Irwin; knitting, fancy, in cotton, Savage, Falconer, Mrs C McInnes; emb pillow case, Hyde, Irwin, Savage; lamp shade, Hyde 2nd, Irwin 3rd; mountmellic work, Reed, Petrie; mat, any kind, N D McKinnon, Petrie; needlework; plain, Savage, A Lamont; netting, Reed 2nd, Falconer 3rd; point lace, Reed, Irwin; pair day alpha, Hyde, Irwin, Reed; quilt, patchwork, N D McKinnon; crochet counterpane, Petrie; quilt, knitted, Falconer, Irwin; quilt, s k not on list, Savage, Falconer; emb sofa cushion, Irwin, Falconer, Savage; sofa cushion s o k, Irwin, Petrie, N D McKinnon; pair slippers, s k, Falconer, McKinnon, Petrie; grey wool socks (special), J L B Watson; fancy work bag, McKinnon, Irwin, Munro; tea cosey, Irwin, Munro, Petrie; table mats, Hyde, McKinnon, Savage; tatting, Falconer, Watson, Munro; toilet set, Irwin, Munro, Mrs G R Mitchell; tray cloth, white linen, Munro, Hyde, Irwin; pair wool socks, hand knit, Hyde, Irwin, Watson; white mitts, Mrs C McInnes, Mrs W Milne, Mrs M Nelson; pair wool gloves, Savage; wool work s k, no prize awarded, unworthy; any knitted goods, Mrs Milne; emb towels, Hyde, Irwin, J F Pearce; fancy handkerchief, Savage, Munro, N D McKinnon; sideboard scarf, Munro, Savage; poker work, J F Pearce, Reed, Savage; wood carving, Mrs J B Allen, Munro, Falconer; coll fancy work, Irwin, Munro, Reed.

FINE ARTS

Animals from life or copied, oil, E C Reed, H S Tattle; any subject from life or copied, J L B Watson, Reed, Savage; animals, water color, Reed; any subject, water color, Reed, W H Rudolph; antique or marble, water color, Reed, Robt Bell, Savage; painting on panel or plaque, Reed; crayon, colored, Reed, J L B Watson; charcoal drawing, no prize awarded; pencil drawing, Watson, Mrs I McLaughlin; sepia, any subject, Reed; hand painted china, Reed; snapshot collection, still life, Watson, J F Pearce; snapshot collection, life, J B Allen, J F Pearce; coll pictures for dwelling, Reed.

PUBLIC SCHOOL COMPETITIONS

Map Dom of Canada, Catherine Pearce, Eva McMahon, Meryl Hepburn; pen and ink sketch, Gilbert Little, Rose McKenzie, Meryl Hepburn; map Bruce Co, Isabel Pearce, John Pearce, Wallace Brown; penmanship, over 10 years, Charlie Rae, Catherine Pearce, Meryl Hepburn; penmanship, 10 years or under, Melville Brown, Nellie McGillivray, Fletcher; water color sketch, Rosa McK

FRUIT

Snow apple, J Ewing 3rd; Duchess, D Darroch, F Barnes; Greenings, J J 3rd; maiden's blush, Harmer, Darroch; Stevens, Harmer, Darroch; a o fall apple, golden russet, Harmer 3rd; northern Spy, Harmer, Darroch; King, Harmer, Darroch; Ben Davis, A L McKinnon, Ewing; Baldwin, McKinnon, Darroch; greenings, Harmer; ribstone Pippin, McKinnon, A Schmidt; Fallwater, Ewing; Tolman Sweet, H Eat, Darroch 3rd; a o v, winter, named Kinnon; a v cooking, named, Harmer, Kinnon; a v dessert, McKinnon; Bascum, Ewing, Falconer; Flemish Beauty, Kinnon; pears, a o v, Falconer, Darroch; plums, red or blue, John McDougall; green or yellow, Schmidt, Ewing; largest, s k, George Munro; plums, named, Schmidt, Ewing; peaches, a v, Fisher; grapes, white, D McKenzie; black, Geo Grant.

FURNITURE, CARRIAGES, LEATHERWARE, Etc.

FURNITURE—Parlor set, Hope & Cavill; bedroom set, Hope & Cavill; cooking W H Davison; parlor stove, Davison Dinsmith's work, Davison.

CARRIAGES—Coll carriages, D McGregor top buggy, D McGregor.

LEATHERWARE—Set team harness, driving set single buggy harness, J H S coll boots and shoes, A W Pfaff.

MISCELLANEOUS—Single specimen bird, Teddy Ellis; geological specimens, M stopper.

FARMERS, ATTEND THIS S.

Registered horses and high-grade ham cattle will be offered for sale implements, fowl and pigs at Colin bell's, lot C, con. 4, Arran Tp., 1 Oct 5th, at 1 p.m. Terms—12 mos. ss approved joint notes bearing 6 per Interest. D. C. Cavin, Auct.

Preserving and Pickling

We have a full line of Pure Spices, White, Cider and Malt Vinegars, Sugars, Jars, Rubbers, Parafine—everything you will require for your Canning and Pickling.

Leave your order with us for Tomatoes, Cucumbers, Onions, Plums, Pears, Peaches, Grapes.

THE NEWEST REMEDY FOR Backache, Rheumatism and Dropsy

Kidney, Bladder and Uric Acid trouble bring misery to many. When the kidneys work of diseased, these natural filters do not cleanse the blood sufficiently, and the poisons are carried to all parts of the body. There follow depression, aches and pains, heaviness, drowsiness, irritability, headaches, chilliness and rheumatism. In some people there are sharp pains in the back and loins, distress, bladder disorders and sometimes obstinate dropsy. The uric acid sometimes forms into gravel or kidney stones. When the uric acid affects the muscles and joints, it causes lumbago, rheumatism, gout or sciatica. This is the time to take "Anuric." Send 10c. for trial package.

During digestion uric acid is absorbed into the system from meat eaten, and even from some vegetables. The poisons get tired and backache begin. This is a good time to take "Anuric," the new discovery of Dr. Pierce for Kidney trouble and Backache. Neglected kidney trouble is responsible for many deaths, and Insurance Company examining doctors always test the water of an applicant before a policy will be issued. Have you ever set aside a bottle of water for twenty-four hours? A heavy sediment or settling sometimes indicates kidney trouble. The true nature and character of diseases, especially those of the kidneys and urinary organs, can often be determined by a careful chemical analysis and microscopical examination. This is done by expert chemists of the Medical Staff of the Invalids' Hotel. You can wish to know your condition send a sample of your water to Doctor Pierce, Invalids' Hotel, Buffalo, N. Y., and describe your symptoms. It will be analyzed without any expense to you. Doctor Pierce or his Staff of Assistant Physicians will inform you truthfully

KNOW THYSELF!

Read all about yourself, your sexual physiology, anatomy, hygiene, simple cures, etc., in the "Common Sense Medical Adviser," a book of 1008 pages. Sent to Dr. V. M. Pierce, Buffalo, N. Y., 10 cents in one-cent stamps for a cloth-bound copy. Customs prepaid.

WHICH SCHOOL?

All Business Colleges are not alike Choose Carefully

ELLIOTT Business College

Yonge and Charles Sts., Toronto

Has a national reputation for high grade work, and the demand for our graduates far greater than our supply. You risk nothing by attending this school. It is the tried and truly found. Write for our catalogue. Enter any time. Toronto is the best place to obtain a business education.

W. J. ELLIOTT, PRINCIPAL

Farm Crop Queries

Conducted by Professor Henry G. Bell

Henry G. Bell

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

A.E.P.:—We are going to sow wheat this year on a piece of muck land. It has had timothy hay cut off it for three years, a very good hay crop each year. This summer it was ploughed as soon as the hay was taken off and has been thoroughly disced and cultivated since. It is a muck with sand bottom. We had no fertilizer to put on, and would like to know if a basic slag or a phosphate would be suitable, either one or both.

Answer:—The soil on which you are planning to grow your wheat is relatively low in nitrogen and will undoubtedly give you a strong growth of straw. I would advise you to add at least 200 to 300 lbs. of fertilizer carrying 10 to 12% acid phosphate and 1% potash. You have handled the soil correctly in preparing it. I would impress upon you the importance of giving the seed-bed thorough preparation. If the soil tends to be too open and light, follow the sowing with rolling and then a light harrowing. I have advised acid phosphate since I believe you need a readily available form of phosphoric acid.

A. M.E.:—I have quite a number of celery plants which began to go to seed three weeks ago. I tried cutting off the seed top as soon as it appeared but it merely grew up again. I sowed the seed of this in boxes the last of February, 1917, and set the plants out in the open ground about the middle of June in clay soil which had been an old pig yard before. We dug trenches ten inches deep putting in the bottom five inches of rotted manure mixed with a little earth and planted them in this. Now they are grown to a good height, are kept hilled and look healthy plants but would like to know the cause of it going to seed and how to prevent it.

Answer:—The cause of the celery plants going to seed is that the habit of the plant has been changed. In its wild state the celery plant tends to be an annual. The gardener grows it as a biennial, that is, he tries to get the full grown plant without the seeds. You see the same habit in wheat when you plant winter wheat seed or winter rye in the spring. Very few of the plants send up shoots the first year, but some do. If you select the seed from the plants which send up heads the first year, by the second and third generation you will have entirely changed the habit of the plant and it would be a one-season plant. The only way to prevent celery from seeding is to transplant it late, cause it to make rapid growth by balancing plantfood, and harvest it before it has an opportunity to form seed shoots.

Possibly your manure is running short of ammonia or nitrogen. This is the kind of plantfood which causes the celery stalk to grow. If the plants are small and slow in growth there is an indication of nitrogen being lacking. The addition of manure or a fertilizer high in ammonia will tend to prevent this.

E.O.P.:—Would you advise sowing both lime and acid phosphate on land that is to be sown to wheat in the spring? When would you advise sowing the lime and how much per acre? Would it be better to sow the acid phosphate shortly before sowing the wheat, and how much per acre? Could I mix the lime and acid phosphate and sow both at one operation in a lime drill?

Answer:—Lime and acid phosphate are both beneficial on land to be used for wheat in the spring. The benefit of the lime is not so directly traceable in wheat yields but is clearly shown if the grain is seeded with clover and timothy or alfalfa. Lime may be applied any time this fall or through the winter, or if the ground is to be left for spring plowing it could be applied immediately after the ground is plowed, just before it is disked and harrowed. An application of 2 to 4 tons of ground limestone or one ton per acre of air-slaked lime will give you good results.

The acid phosphate can be drilled on at the time the wheat is sown. Modern drills are provided with both the seed and fertilizer dropping attachment. Applications at the rate of 200 to 300 pounds to the acre give good results. If you have not manured your land just before the wheat, I would advise you to use a mixture of fertilizer analyzing 2 to 3% ammonia, which will provide nitrogen to start the early growth of the young crop, and 10 to 12% phosphoric acid, which will greatly hasten its ripening and the plumping of its kernels.

By no means would I advise the mixing of the lime and acid phosphate. Such a mixture would tend to turn back the soluble phosphoric acid in the acid phosphate to a form which is much more slowly available.

ECONOMIC PRODUCTION OF WHEAT IN RELATION TO FOOD PRODUCTION

By Henry G. Bell, Agronomist.

Civilization is in the balance. At no time in the world's history has so critical a period faced the peoples of the earth. The fundamental principles of democratic nations must now be successfully defended or democracy is destined to vanish from the earth. The triumph of civilization depends upon men, munitions, food and a patriotic devotion to the cause. Not one of these factors must be neglected or triumph will rest with our enemies. The farmers of this continent and of Europe have done nobly during the past year, but gigantic problems face them in the coming months.

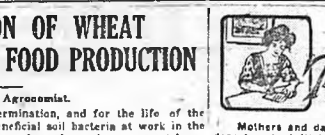
The Canadian Commissioner of Agriculture has recently made a statement that Canada will be prepared to export at least 200,000,000 bushels of 1917 wheat. The wheat crop of the United States will probably total 605,000,000 bushels, of which at least 450,000,000 will be necessary for their own needs. Recent reports from the International Bureau of Agriculture, Rome, indicate an increase in wheat for British India, of over 16%. Favorable wheat reports came also from Italy. A year ago a vigorous campaign for larger wheat acreage in the United Kingdom was successfully carried out, but unfavorable weather has damaged the British wheat crop to so great an extent that in July it ranked 94% as against an average crop estimated as 100%. It is obvious then that the entire people of this continent must exercise every energy in conserving food; farmers, every intelligence in producing more food; bakers, every economy and device in making the food stock go as far as possible so that the needs of our own and allied people may be met.

Methods of Increasing Crop.

The question the farmer is asking to-day is, how can I economically increase my wheat yield? My answer is in five divisions; first, by drainage. Winter-killing is frequently caused by surplus water not being able to run off or percolate through the soil, and as a result, freezing about the young wheat plant.

Second: proper soil tillage. The advantages of proper seed-bed preparation are so apparent that it is unnecessary to go into a detailed discussion of the profit of good tillage in wheat production. If the soil is to catch and hold a sufficiency of moisture, it must be deeply stirred and thoroughly pulverized. Such tillage will allow for the desirable circulation of air, which is required for seed germination, and for the life of the beneficial soil bacteria at work in the area where the grain roots stretch out in quest of food. Thorough stirring of the soil allows for maximum root growth with the consequent development of a strong crown, which in itself goes a long way to providing the crop with strength to withstand the cold weather of autumn and winter.

The third method of increasing the wheat yield is by the selection of proper varieties of wheat and high-grade seed of those varieties. Soft wheat produces, as a rule, weak flour. Sound, plump, flinty wheat of either spring or winter varieties produces flour that rises well in the pans, and produces bread of fine texture and quality.



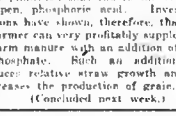
The fourth method of wheat increase is by proper soil fertilization. Men cannot work without food, neither can crops. The tiny wheat plant must be supplied with a sufficiency of suitable, well-balanced plantfood just as much as the fighting soldiers at the front must receive an abundance of well-balanced diet.

The Question of Plantfood.

What can be done then to increase crop yields through attention to plantfood?

First of all, the farmer can give the soil the most careful tillage, as already stated, which operation will of course bring as much of the soil plantfood as possible into shape for its consumption by the plant. Second, every grower of wheat should as far as possible, manure his wheat fields. Livestock manure supplies three of the important constituents of plantfood, nitrogen, which causes the wheat straw to grow; phosphoric acid, which hastens the ripening of the crop and plumps the kernels; and potash, which gives strength to the crop to resist plant diseases and hastens the filling of the kernel. A shortage in any one of these constituents of plantfood produces wheat of poor quality. In this connection it should be carefully noted that livestock manure, while it is good for most crops, it is somewhat unbalanced for the production of wheat, in that it carries a relatively large amount of available nitrogen, a medium supply of potash, but a relatively short supply of the constituent of plantfood that causes the crop to ripen, phosphoric acid. Investigations have shown, therefore, that the farmer can very profitably supplement farm manure with an addition of acid phosphate. Such an addition reduces relative straw growth and increases the production of grain.

(Concluded next week.)



Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 233 Woodbine Ave., Toronto.

Patriot:—1. The new Trench Cap is not nearly as long or bulky as the old "Balaclava." It reaches just to the neck, and is designed for wear under the tin helmet by day, and as a sleeping cap by night. You will require about a quarter of a pound of wool—Canadian Khaki yarn at $1.76 a pound, or five-ply Beehive at 28 cents a skein would be suitable. Here are the directions: Cast on 96 stitches, 32 on each needle. Rib 2 and purl 2 for 25 rows. Knit 6 and purl 2 for 22 rows. Narrow second stitch on each end of needle until you have 4 stitches on each needle. Then thread the end of the wool with large darning needle and button-hole around the 4 left, leaving a small opening on top of cap. 2. I offer the following suggestions for the eleven-year-old brother's birthday party which you wish to make a patriotic affair. Write the invitations to the party on plain white paper, with a small flag in one corner. Have your table set with red, white and blue place cards, a white cloth and a centerpiece of red, white and blue flowers. The birthday cake may be decorated with the flags of the Allies. For one game you could have a sort of "history bee," like a spelling bee. The prize should go to the child who can tell the greatest number of historical events correctly—for instance, who were the generals at the Battle of the Plains of Abraham, who was Sir Isaac Brock, who made Ottawa the capital of Canada, what event we are celebrating this year, etc. The prize should be something that has to do with the war—a war picture or a small silk flag. The other games should all have something to do with the country or the war, and, of course, the singing of "The Maple Leaf," "Rule Britannia" and "O Canada" ought not to be omitted. Before they leave the children should sing the National Anthem, all standing at attention.

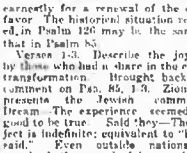
Sara:—1. Cornmeal dumplings may be made as follows: Scald a quart of milk, stir in three cupfuls of Indian meal, or enough to make a stiff dough. Cook for five minutes, stirring often from the bottom. Take from the fire, beat in one-half cupful of powdered suet with a tablespoonful of salt and let it get perfectly cold. Then add three eggs, beaten light, with two tablespoonfuls of sugar, and, lastly, a tablespoonful of flour sifted three times with half a tablespoonful of baking powder. Make out into balls the size of an egg, flour your hands, wrap in clean cheesecloth squares. The dumplings will double their size in boiling, so make all allowance in tying them up. Boil one hour hard. Dip into cold water for a second, turn out and serve with hard sauce. 2. An application of hydrogen peroxide will take scorch stains out of silk. Potassium permanganate followed by sulphuric acid will also remove them. I am sorry to say, however, that with the removal of the scorch stains the color of the waist is apt to be injured. If you find that this is true, it will be necessary to dye the blouse. 3. You can remove match marks from white paint by rubbing them with a piece of cut lemon.

Home-Maker: 1. A well-balanced dietary supplies body-building, heat-and-energy-supplying and regulating substances in the right proportion and in sufficient quantity. Simple meals can fulfill all requirements. It is wiser to spread the variety of food over many days than to provide many kinds of food in each meal every day. Following are examples of simple but well-balanced meals: 1. Fruit, oatmeal and whole milk. 2. Egg, bread, butter, fruit or vegetable. 3. Bread, cheese, tart fruit. 4. Baked beans, brown bread, apple sauce. 5. Mutton, potatoes, second vegetable, fruit batter pudding. 6. Milk soup, corn bread and syrup. 7. Whole wheat bread, whole milk, prunes. These are not ideal for all ages and conditions, but they meet the needs of healthy active adults.

Doll Dreams

I wonder what my dolly dreams
When she is fast asleep? I s'pose
She dreams she is a princess doll
With, 'stead of her old clothes—
A golden crown and satin dress
All edged with snowy fur.
Sometimes she dreams of me, I guess—
I often dream of her!

Dilly-Dally



Once upon a time there lived a little girl named Dorothy Hart. She was a dear little girl, but she had one great fault—she never obeyed promptly. She was never in any hurry and was usually late everywhere she went.

Next door to where Dorothy lived was a little girl named Evelyn Vail. Evelyn had a large collie, but no one liked the dog except herself.

One day Dorothy's mother told her to run out on the lawn, because Fluff was out of the coop and was running all around. But Dilly-Dally—for this was what every one called her because she always was late—took her time and when she got there she found that Evelyn's dog had eaten her beloved chicken.

This taught Dorothy a severe lesson, and now she has lost the title of Dilly-Dally by being on time.

When her uncle heard of this he bought her another chicken, and we may hope that Dorothy will take better care of it than she did of Fluff.

INTERNATIONAL LESSON
OCTOBER 7.

Lesson I. Psalms of Deliverance—Psalms 85 and 126. Golden Text.—Psa. 126. 5.

Verses 1-3. Jehovah's loving-kindness in the past. Brought back the captivity—Better, "restored the fortunes." In themselves the words contain no reference to restoration from exile; but the psalmist may have in mind the change in fortune due to the restoration. Sin caused the divine wrath, the divine wrath prompts the spending of calamity; hence the withdrawal of calamity proves that the divine wrath is appeased, which, in turn, proves that Jehovah has forgiven or removed the people's sin.

4-7. The transformation has been marvelous; but much remains to be done. If he only would complete his work! Turn us—Better, "turn to us," again, as in the past. The present distress shows that the divine wrath has not entirely disappeared; hence the cry.

8-13. The psalmist stands between his people and their God. He awaits Jehovah's reply to his [illegible] then brings to the waiting [illegible] assurance that their God [illegible] forsaken them; the manifestation of his loving-kindness in a complete deliverance and restoration is at hand. Saints—Synonymous with "his people;" perhaps better "his favored ones;" that is, those who are objects of special consideration. Fear—Those who are truly pious. Turn to folly—The clause gives sense only if translated as above. "And to those who do not turn to folly." Glory—The glorious manifestations of Jehovah. Mercy . . . truth . . . righteousness . . . peace—When the mercy, or loving-kindness, of God and the faithfulness of the people meet, then his righteousness, that is, his fidelity to the covenant relation between himself and Israel, will become active. This will result in the well-being of the faithful among his people.

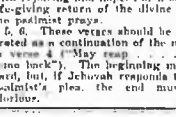
The thought expressed in the first line of verse 10 is repeated in verse 11, that of the second line in verse 12. Verse 13 is obscure. A slight change in the text makes possible the translation suggested above which gives excellent sense. Jehovah's righteousness, as defined above, prompts him to bless his people, who will enjoy peace following his glorious manifestation.

Psalm 126 closely resembles 85. Both express appreciation for past favors, both recognize the incompleteness of the deliverance, and both pray earnestly for a renewal of the divine favor. The historical situation reflected in Psalm 126 may be the same as that in Psalm 85.

Verses 1-3. Describe the joy felt by those who had a share in the earlier transformation. Brought back—See comment on Psa. 85, 1-3. Zion—Represents the Jewish community. Dream—The experience seemed too good to be true. Sold they—The subject is indefinite; equivalent to "it was said." Even outside nations recognized the wonderful transformation. Verse 2 represents the community as appropriating the words of the nations and as recalling the joy of the earlier experience.

4. Disappointment has come, and there is need of a new manifestation of the divine loving-kindness. Turn again—The benefits of the former interference are exhausted. Streams in the South—The South is the arid region to the south of Judah, called Negeb or South-land. The streams there, full of water during the rainy season, become dry during the summer; following the drought the life-giving water returns, filling the people with rejoicing and hope. For a similar life-giving return of the divine favor the psalmist prays.

5, 6. These verses should be interpreted as a continuation of the prayer in verse 4 ("May reap . . . may come back"). The beginning may be hard, but, if Jehovah responds to the psalmist's plea, the end must be glorious.



The Country Girl's Creed

I believe that life in the country is life at its highest, fullest and best. I believe that there I have the greatest chance to develop into the womanly woman I desire to be—fine, broad, sweet, true, wholesome. I believe that the broadness of the country, the ruggedness of the landscape, the beauty of God's growing things all around me, will mold and temper my character; will give me higher ideals, a greater depth of thought and a truer perspective of life, than I could ever gain between narrow walls in a city with its shams, pretenses and false standards. I want to try always to keep myself sunny, sweet and sane; to live up to the very best there is in me; to make the most of every opportunity to grow bigger, broader and better; to reach out always for higher and finer things. I believe in good hard work and plenty of it. I glory in the brain and the muscle with which to accomplish my task of striving and overcoming, that I may be ready for the harder things which are to come.

Bread pudding is greatly improved by the addition of raisins or currants.

A disagreeable job never becomes more attractive by sitting down and dreading it. The best thing to do it to go at it and get it out of the way quickly.

In Canada the parcels post system is restricted to 11 pounds, in the United States to 50 pounds. An extension of the parcels post system in Canada is one of the very greatest needs of the country.

There is this great point in favor of dairying: It brings in revenue every month of the year, and in every month the dairyman knows just what his income from that source is going to be. There is another important point: Dairying is a safe line; there are fewer ups and downs and fewer exceptional losses in it than in any other branch of farming.

What does it cost to raise a dairy heifer to one year and to two years old?

Feed alone at medium prices costs about $33 for the first year and $28 for the second. Cost accounts of raising calves by the Ohio, Massachusetts and Connecticut Experiment Stations and the U. S. Department of Agriculture were used as the basis for these figures.

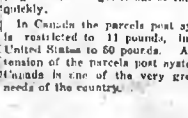
Labor, interest and miscellaneous overhead expenses must be added to this feed cost. The two-year-old heifer must be credited with a calf and the manure produced during two years. The net cost at medium prices is then given in the bulletin as $42.77 for the first year and $29.08 for the second. At present high prices the net cost for two years rises above $100.

Economy in dairying and care in breeding only good stock are therefore necessary. The heifer from a low-producing dam and an inferior sire will not return the cost of her production and maintenance.

Fast milking pays. The man who can make the milk fairly boil in the pail and raise a lot of foam usually is getting the maximum flow of milk from each cow; while the slower milker, no matter how particular and faithful he may be, often fails to get all that the cow would let down to the last milking cheerfully.

We may be certain that milk and it's products will command relatively higher prices after the war than will grain and milkfeeds, which are now at a premium.

Use of Poultry Manure



There is no natural manure produced on the farm so rich as poultry manure, according to the College of Agriculture, yet it receives from the farmer the least attention of any of the animal excrements. Average mixed horse and cattle manure carries 10 pounds of nitrogen, 5 pounds of phosphoric acid and 12 pounds of potash per ton. Poultry manure contains in comparison 32 pounds of nitrogen, 35 pounds of phosphoric acid and 18 pounds of potash. Where ordinary farm manure has a fertilizer value of $1.50 per ton, poultry manure is worth $5 per ton. Even when produced in small amounts such material is well worth careful preservation.

Poultry manure should be allowed to dry as quickly as possible and be kept dry. In this condition it will lose but small amounts of its valuable constituents. Like ordinary manure it ferments rapidly when moist; and will lose thereby a large percentage of its nitrogen, worth on the market 25 or 30 cents a pound. Since much of its potash, phosphoric acid and nitrogen is soluble this manure may suffer greatly from leaching.

Caustic lime should never be mixed directly with poultry manure as it liberates nitrogen as ammonia.

Poultry manure is rich in nitrogen and low in phosphorus. These two conditions may be corrected by diluting and re-enforcing the manure as follows: To ten pounds of the manure add six pounds of sawdust (or some similar dry material) and four pounds of acid phosphate. This gives a fertilizer carrying 8 per cent. of nitrogen, 9.6 per cent. of phosphoric acid and 4.8 per cent. of potash, or about the same proportion of plant food elements that are found in a 8-12-2 mixture but only one-fourth as concentrated.

For fighting lumber yard fires a monitor hose nozzle has been designed that may be mounted on lumber stacking machines.

Market Calendar

If not commenced previously, crate fattening should be started in October, and all cockerels and pullets intended for sale carefully and systematically fattened.

Market in October roasters (crate fed), last old hens, roasting young ducks, old geese, old turkeys.

In mixing a ration for crate feeding poultry, one of the first things to consider is the palatability of the feed. If the birds do not like it, they will not eat enough to put on the flesh. Next to this comes the composition of the feeds and their cost. The ration must be palatable and one that will produce flesh without costing too much.

Clean, fresh water lessens disease among poultry. Filthy drinking water is the source of much trouble.

The question of floor space for hens, like many other questions connected with poultry-house construction, cannot be answered definitely. The floor space which a hen requires depends on several things: (1) The breed of the hen; some hens require more space than others. (2) The nature of the food and how it is fed. Hens that are fed in a heavy litter during the Winter where the getting of the food entails considerable effort will obtain all the exercise necessary without too much space. (3) Ventilation.—The house poorly ventilated will not accommodate as many hens as a house properly ventilated. A few years ago when poultry houses were kept warm, instead of being ventilated, it was thought that each hen should have between 8 to 12 square feet of floor, and in all probability she did, but the same breed of hen does better now in the house properly ventilated with 4 square feet than her ancestors did with 12, and where good ventilation is provided 4 to 6 square feet is enough for the average hen.

The first half of the chicks hatched in an incubator contain practically all of the best laying hens in that batch. They will grow more rapidly, lay first and prove the best layers and will be stronger than the others. The last half of the hatch will be lower in vitality and will be unprofitable to keep; the broiler or frying age is the time to dispose of these. Mark the last half of the hatch and dispose of them in time to make a profit.

A good incubator should prove profitable on any place having sufficient room to keep chickens.

Selecting Seed Beans.

Bean growers should take steps to secure good seed for next year's planting from fields known to be free from anthracnose and blight. Seed from plants killed by frost before the pods are dry should not be used.

The use of good seed—properly ripened, plump, intact, and free from disease—is essential for securing large yields. It is crop insurance for growers to lay in their seed while there is still opportunity to inspect the fields or they can pick from the cream of commercial stocks instead of having to take whatever may be available later.

Seed from carefully selected, clean pods grown in one's own seed plant are safe. Once the beans have been threshed it is difficult to detect all which have come from diseased pods. It is possible, moreover, in the seed plant by planting the seed in hills and by spraying with Bordeaux mixture to protect the plants from anthracnose, even at an expense not warranted in larger plantings. The grower should see that no one moves among the seed plants while they are wet with rain or dew, when scores of the fungus causing anthracnose most readily are spread.

After the seed is threshed the grower should pick over his seed by hand two or three times and throw out all damaged or diseased beans and those not uniform in size and color. Even commercially hand picked seed often contains many affected beans. While a few discolored beans are not objectionable for household use, every such seed when planted may spread disease to many neighboring plants. In purchasing beans for planting a germination test should be made and only seed of high quality accepted.

P. POULIN & CO.,
29 Bannerman Market, Montreal

An automobile body made of seven flat sections, which can be taken apart for shipping flat or replaced if injured, has been invented by an Englishman in South Africa.

"One Whole Wheat Meal a Day"—that's the slogan for those who want to conserve food and also conserve strength and health. But be sure it is the whole wheat prepared in a digestible form. **Shredded Wheat Biscuit** is 100 per cent. whole wheat—nothing wasted, nothing thrown away. Fifteen years ago Shredded Wheat was eaten only as a breakfast cereal; now it is eaten for any meal as a substitute for meat, eggs, or potatoes. Two or three biscuits with milk or cream and some fresh fruits make a nourishing, satisfying meal at a cost of only a few cents.

Made in Canada.

THE DEADLY MANZANILLO.

Beautiful Tree, Native of the West Indies, Has Poisonous Properties.

Literature on the tropics abounds with stories of poisonous plants and trees, and to this beautiful tree, arching many a roadway with its glossy green leaves and rose-tinted flowers, has been ascribed the deadly poisonous properties of the far-famed Upas tree of the East.

To the fruit of this tree, more than to the effect of its foliage, is due its evil name. Manzanillo in Spanish means "little apple" and in the Papiamento tongue of the blacks of Curacao, Dutch West Indies, living in their little thatched huts, the same Manzanillo is pronounced but slightly differently from the Spanish.

It has been stated by Spanish writers that if one remains under its shade for a few hours or sleeps there death is likely to follow, or that even if the unfortunate escapes death the body will become a mass of running sores. The deleterious properties of the shade of this tree have, however, been greatly exaggerated, and as for the actual poisonous effect of the leaves and shade considerable diversity of opinion still exists, as is the case with the poison ivy of the States.

The small, apple-shaped fruits have tempted many a stranger to a much-regretted meal. As recently as the summer of 1916 an officer of a Dutch steamer had a narrow escape from serious poisoning, emetics and stomach pumps alone saving his life. Some 32 years ago 54 members of the crew of a German ship were taken to the local hospital all very sick from having eaten the fruit of the Manzanillo. Five of this number died and the rest, after serious illness for several weeks, recovered.

As is the case with the question of the leaves and shade, there are many accounts of the effect of the fruit. To quote from one writer "A fish which eats the fruit becomes infected, the gills becoming yellow and black, and one who eats the fish in this state is said to fall into a profound lethargy, with a general relaxation of all the limbs, according to the amount eaten."

The tree when cut exudes a quantity of white, milky juice, in the same manner as the common rubber-tree, and to most persons this juice has the same effect as our poison-ivy. However, if this acrid milky juice reaches the delicate membrances of the eye, temporary and often permanent blindness is sure to follow.

The Manzanillo is a native of the West Indian Islands and is usually found in moist situations.

Perhaps nothing better shows the cosmopolitan character of the present war than some figures that the British and Foreign Bible Society recently gave out. Since the war began, the society has distributed for use, by friend and foe, in trench, dugout, prison camp, barrack room, battleship and hospital, more than six million books in sixty languages.

If you never tasted Grape-Nuts FOOD you have missed one of the good things in life

Practical Designs

© McCall

Ready for work or play is this attractive little model. It is suitable for any of the wash materials such as gingham, percale, chambray or linen. McCall Pattern No. 7014, Girl's Middy or Dress Apron in 6 sizes; 2 to 12 years. Price, 15 cents.

© McCall

Here is a quaint little apron copied from the apron of the French Red Cross Nurses. It is most practical, completely covering the skirt, with a bib that fastens to the dress beneath, or is held up by suspenders. McCall Pattern No. 7961. French Apron. In 3 sizes; small, medium and large. Price, 15 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

BABY'S OWN TABLETS ALWAYS IN THE HOME

Mrs. Eugene Vaillancourt, St. Mathieu, Que., writes: "My baby suffered greatly from constipation till I began using Baby's Own Tablets. I was surprised with the prompt relief they gave him and now I always keep them in the house." Once a mother has used Baby's Own Tablets for her little ones she always keeps a supply on hand for the first trial convinces her there is nothing to equal them in keeping her little ones well. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

SUBMARINE MINING.

Quest of Gold is Carried on in Shallows of Bering Sea.

Few people know that men are so greedy for gold that their quest for the precious metal leads them to carry on mining operations under the sea. Submarines or diving apparatus are not used. The miners are assisted by Winter, the same stern season which deprives gold seekers in Alaska from extracting ore from the earth during a greater part of the year.

When Bering Sea, off Nome, takes on a coat of ice in Winter, the miners get busy for operations under the sea. "Hot points" are rigged for drilling through the ice down into the mud of the shallow sea, and then the mud is hauled to the surface, where gold is taken from it—often in very paying qualities.

Bering Sea, especially in this vicinity, is very shallow. Rarely does the depth go below 30 feet. Often it is but 20. New gold deposits seem to be formed by the action of the water during the open season when there is no ice. For this reason the Winter mining fields never become barren.

A miner recently returned from the North told the writer that men make big wages at the occupation of "fishing for gold" in Bering Sea every year. The sea bottom around Nome is said to be so rich with free ore that mud and sand gathered up along the beach yields paying qualities of the metal.

Leather travelling trunks were used in Rome in the time of Caesar.

CURING SKIN TROUBLES

So many people, both men and women, suffer from skin troubles, such as eczema, blotches, pimples and irritation that a word of advice is necessary. It is a great mistake for such sufferers and those with bad complexions to smear themselves with greasy ointments. Often they could not do anything worse—for the grease clogs the pores of the troubled skin and their condition actually becomes worse.

When there are pimples or eruptions, or an irritating or itching rash, a soothing boracic solution may help to allay the irritation, but of course that does not cure the trouble. Skin complaints come from an impure condition of the blood and will persist until the blood is thoroughly purified. It is well known that Dr. Williams' Pink Pills have effected the best results in many forms of skin disorders and blemishes. This is due to the fact that these pills make new, rich blood, and that this new blood attacks the impurities that give rise to skin troubles and disperses them; so that Dr. Williams' Pink Pills cure skin disorders from within the system—the only sure way.

It should be added that Dr. Williams' Pink Pills have a beneficial effect upon the general health. They increase the appetite and energy and cure diseases that arise from impure blood.

You can get these pills through any medicine dealer or by mail at 50 cents a box or six boxes for $2.50 from The Dr. Williams Medicine Co., Brockville, Ont.

PREPARING THE BULB BED.

No Garden is Complete Without a Display of These Exquisite Flowers.

Tulips, hyacinths and other autumn bulbs should be set out in October, or November will do if the ground is unfrozen. It is well, however, to make a mental survey of the garden, decide where the beds are to be made, what the shape and size is to be, estimate the quantity of bulbs and varieties wanted and place the order for early delivery. A little later the beds can be prepared. Turn under a liberal supply of stable manure if it can be had, and make the beds deep and mellow.

Set tulips four or five inches apart and about five inches deep; hyacinths six to eight inches apart and about the same depth as for tulips. Crocuses and snowdrops are usually set two or three inches apart, and these also require a depth of about four or five inches.

Where the soil is rich and deep a pleasing effect is produced by setting the bed full of bulbs so closely together that there will scarcely be any space between them.

Careful planters make the beds early—that is, dig them up and work in the fertilizer and allow the beds to settle. At planting time four or five inches of the soil is removed, leaving a level surface on which to set the bulbs.

To fill the bed with bulbs first set a row of early flowering tulips, such as Pottebakker scarlet, crimson scarlet or Artus, bright red. Set these six to eight inches apart. When the row of early tulips has been set in place set between each bulb of early tulips and in the same row a bulb of some Darwin tulip of a different color, such as Clara Butt, a soft pink. In placing the second row set the Darwin tulips first, so the Darwin tulips in the second row will be in the same position as the early tulips in the first row, a Darwin tulip in the second row placed exactly in front of an early tulip in the first row. When the Darwin tulips have been placed in the second row set an early tulip in the same row between the Darwins, so the early tulips in the second row will be exactly in front of the Darwins in the first row.

The first two rows of tulips having been set, place between the rows and between the bulbs in the rows crocus bulbs, and then tuck in as many snowdrops and scilla siberica as there is room for between the crocuses. Go on in like manner until all the rows in the bed are completed, then carefully replace the topsoil that has been removed so as not to disturb the position of the bulbs. After the ground has frozen a light covering of strawy manure or straw may be given.

The result will be that about as soon as the snow goes next spring flowers of the snowdrops and scillas will appear, beautiful little white and celestial blue flowers, followed by the crocuses, while the foliage of the tulips is breaking through the ground. By the time the crocuses have disappeared or before the bed will be a brilliant red or scarlet, according to the color of early tulips planted. These will gradually droop and fall about the time the early tulip beds fade, but suddenly the bed is aglow again, and this time instead of a brilliant red it has been transformed suddenly into a soft shell pink.

If a bed of this kind has not been tried make one this autumn.

Useless Argument.

Girlie was fond of playing with her dolls, and always called herself "little mother." One day when her mother wished to put her in her little crib for her nap Girlie objected, saying she wanted to be in bed. When her mother refused, Girlie started crying.

"Oh," said her mother, "Girlie mustn't cry like that. Don't you know little mothers don't cry?"

"Dey don't lie in cribs, eizer?" was Girlie's quick reply.

Minard's Liniment Cures Dandruff.

UNDER FIRE AT EPERNAY.

Experience of an American Nurse in Bombarded French Hospital.

"I wonder if, on Friday evening, the sixth of July, at 10.30, you had a vision of me crossing a moonlit town under such a rain of bombs and shrapnel as made the most gorgeous pyrotechnic display you can imagine? I had just undressed when the first bomb fell, says a nurse in a letter to her family. I dressed at once, and had I stopped to parley with my good landlady, who barred the doorway, declaring that I would be killed if I went out, I should have been caught in the Rue Donyon, for after I passed a bomb fell, destroying four houses. I admit it gave me a queer feeling—there's a crash of colliding planets and a gush of gas that isn't pleasant—but somehow I felt that I was being protected, so I didn't run nor swerve, though one of the Boches was humming just above my head, and all the air was filled with flying balls of fire from our brave little seventy-five. When I reached my service, on the second floor of the hospital, I found a lot of men nurses, with helmets on their heads, and with stretchers, too confused to act, and my poor wounded soldiers lying very frightened in the dark. As soon as possible, I got all who could be moved down into the basement, and by the time I had lined them up as comfortably as possible on their stretchers, the new wounded began to arrive—soldiers, old men, women and children—several dead when they arrived. By this time some of the surgeons appeared, and there being enough to attend to the dressings downstairs and none above, I went back to my floor with two wounded men—one, a brigadier with both legs blown off, or, to speak more accurately, hanging by a few shreds of tendon. I gave him serum in floods and other things, but the shock was too great; he died toward morning, amid unearthly thunders, begging me to comfort his 'poor wife and little ones.'

"And so I passed that terrible night, all alone up there under the roof, with only a wounded man to help me. When the first thrush sang out among the poplars and the town siren shrieked that there was no more danger, I trotted home for my cold bath before beginning another day. The Boches had left 300 visiting cards. Imagine the havoc wrought upon the tiny town of Epernay!"

Minard's Liniment Co., Limited

Gents,—A customer of ours cured a very bad case of distemper in a valuable horse by the use of MINARD'S LINIMENT.

Yours truly,
VILANDIE FRERES.

Plants For House Culture.

The following plants will do well in the temperature of an ordinary living room, where the plants will have the afternoon sun: Abutilon, ageratum, astilbe, amaryllis, asparagus plumosus nanus or asparagus fern, aspidistra, aucuba, azaleas, bouvardia, bougainvillea, callas, camelia, coleus, clivia miniata, a lily like plant; cobœa scandens, cyperus, farfugium, ficus, fuchsias, geraniums, including scented and ivy leaved varieties, heliotrope, hibiscus, lantanas, lobelia, palms, sansaveria, vinca, rex begonias and some of the annuals will do well, such as candytuft, alyssum, mignonette, gloxinias, primroses, &c. Of this list camellas and azaleas are the most difficult to grow; many, however, succeed with them in window gardens.

Minard's Liniment for sale everywhere.

Fighting Hostile Aircraft.

The pitfalls and dangers which an aviator must avoid at the front are becoming more numerous every day. Anti-aircraft guns mounted on fast motor cars chase around the country behind the lines and prevent the enemy airplanes and zeppelins from remaining over our territory. This type of battery was responsible for the zeppelins brought down at Compiegne in April, 1917, and Revigny in April, 1916. In fact this invention was one of the immediate causes of the Germans giving up their "strafeing" with zeppelins. The record for distance and height in hitting an airplane with this type of cannon is 15,000 feet in the air at 9,000 yards' distance across country. A very large crew is required to man one of these cannon. Beside the cannon a telephonist gets the report of the position over which the German machine is flying.

A man may be sharp but worthless—like a needle with a broken eye.

WESTWARD.

(In the terminology of the trenches "He went West" means "He died.")

Crimson the trail that westward runs
From the shot swept sky and the flaming guns,
From the haunts where death keeps vigil still
With fiery breath and steel's hot will.

Crimson the trail to the sunset far,
Countless the feet on the pathway are;
Westward is peace beyond the din
Where the gray ranks meet in the dawn mist thin.

Crimson the trail to the quiet skies
Where the great guns' threat into silence dies,
Where wounds are healed with a holy balm
And the fevered rest in a slumber calm.

Glorious the trail that the brave heart takes—
Though love behind knows the old heartaches—
Over the hills where the sun goes down
To vales eternal of bright renown!

—Arthur Wallace Peach.

FARMS FOR OUR SOLDIERS

Lt.-Col. George McLaren Brown, the European manager of the C.P.R., writes to the "Tariff Reformer and Empire Monthly," in England urging a comprehensive scheme by which the returned soldiers could be placed on the land in so far as they desired it—a scheme by which lands closed to the public would be fully opened up—not a few parcels of land, such as were noticed in the press, and which would not give a square foot to all who might seek this means of settlement, but a plan by which large numbers could be accommodated on the lands in the Mother Country. Mr. Brown refers to the plan of the C.P.R., which offers improved farms, in selected colonies, with distinctive military names, improved by the company; and assisted colonization farms of 320 acres each, selected by the intending settler and then improved by him with assistance from the company. Easy terms of payment are offered, carried over twenty years; but the point that Mr. Brown insists on is that it is not people out of the workhouse that Canada wants, because such are not desired in the Dominion, but people who are likely to succeed. He urges that the whole question of reconstruction be tackled with vigor on the other side.

MONEY ORDERS

A Dominion Express Money Order for five dollars costs three cents.

The Immortal Few.

"Father," said Chester, 'what is a diplomat?"

"A diplomat, my son," answered the father, "is a man who remembers a woman's birthday and forgets her age."

Record Wool Prices.

A Nova Scotia wool dealer recently sold a consignment of 14,606 lbs. of washed wool in the United States at 55c. a pound. The bleat of the sheep should again be heard in the land.

Minard's Liniment Relieves Neuralgia.

If food conservation shall bring about a revival of the production of that most appetizing article, cottage cheese, a great many people will be reconciled to food-controller Hanna, provided the cheese is made the way our grandmothers made it.

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

NUXATED IRON

$100.00 FORFEIT

Increases strength of delicate, nervous rundown people 100 per cent. in ten days in many instances. $100 forfeit if it fails as per full explanation in large article soon to appear in this paper. Ask your doctor or druggist about it. All good druggists always carry it in stock.

To Tend Heroes' Graves.

Some two women gardeners who have been trained at Kew Gardens, London, are going to France, where they will take up the duty of tending the graves of our dead soldiers. This is a first contingent, and others will follow.

Minard's Liniment Cures Burns, Etc.

Few men are worth more than a thousand dollars a year from their shoulders down. Those who get the big salaries do their work above the shoulders.

WOMEN OF MIDDLE AGE

Mrs. Quinn's Experience Ought to Help You Over the Critical Period.

Lowell, Mass.—"For the last three years I have been troubled with the Change of Life and the bad feelings common at that time. I was in a very nervous condition, with headaches and pain a good deal of the time so I was unfit to do my work. A friend asked me to try Lydia E. Pinkham's Vegetable Compound, which I did, and it has helped me in every way. I am not nearly so nervous, no headache or pain. I must say that Lydia E. Pinkham's Vegetable Compound is the best remedy any sick woman can take." —Mrs. MARGARET QUINN, Rear 259 Worthen St., Lowell, Mass.

Other warning symptoms are a sense of suffocation, hot flashes, headaches, backaches, dread of impending evil, timidity, sounds in the ears, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness, inquietude, and dizziness.

If you need special advice, write to the Lydia E. Pinkham Medicine Co. (confidential), Lynn, Mass.

BRUCE WOMEN MEET

The mass meeting of Bruce women
led for Monday afternoon in Walker-
on an audience that half filled the
ns Hall. Mrs Little of Teeswater
ved a capable chairwoman. The first
aker was Mrs Wisner, president of the
O. D. E., who eloquently urged the
men patriotic workers of Bruce to move
ward to greater triumphs. Mr Edgar,
ld Secretary of the Organization of
sources Committee, outlined the work
his organization and advocated the
ming of women's auxiliaries at various
ints throughout the County. What
e Food Controller wants, he said, is not
r the people to stint themselves, but
bstitution.' Bacon and beef forms a
rge portions of the rations of the men in
e trenches and the idea was for the
blic to substitute other foods for these.
iss Yeates, a professional dept. worker
nnected with the Women's Auxiliary
Toronto, and a very fluent speaker,
dressed the meeting at length. She
ld what the people of England were do-
conserving food, and urged the signing
edge cards. After her address Miss
eates offered to answer questions. One
dy asked her what she thought of oleo-
argerine. She replied that she hadn't
uch experience with it in this country
t said it was a "beastly" product, insis-
ting that it was not clean. Mrs Short,
visitor in the audience, took her to task
r her statements and in half a minute
ade the speaker look rather silly.
The meeting decided to allow the can-
ss for signing of the food pledge cards
be left with various local women's or-
anizations. In Walkerton the canvass
ill be undertaken by the I.O.D.E. and
the surrounding country by the local
omen's Institutes.
The meeting passed a resolution urging
e Government to prohibit the waste of
rain by breweries and distilleries at a
me when the people are called upon to
conomize.—Telescope.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

—The state of Maryland is no place for gentlemen" just now. The word gentleman is used in the Camp-bill official way, meaning a man who doesn't work. In Maryland a law has been passed and put into execution compelling every man to work at something. There are no exceptions; every man between the ages of 18 and 50 must work at something, under penalty of heavy fine and imprisonment. The police take around registration cards getting all particulars; then the order comes "You are to report for work at the canning factory," or the foundry, or the farm, or whatever other place work is needed.

1,500 Men to be First Draft Call in This Military District

Monthly Drafts Thereafter—Will Train Overseas

Men who are not within the age limits specified for the first class called under the military service act may volunteer after it is in effect, camp orders just issued at London state. They urge further that such men be encouraged to join the army.

It is contemplated that on the issue of the proclamation of the military service act calling up all men between the ages of 20 and 34, the draft-giving depots and C. E. F. companies now in existence will automatically cease recruiting operations, latest orders announce. In the meantime no further appointments to the recruiting staffs of these units will be made and no new recruiting plans will be put into operation.

Fifteen hundred men will be called up for the draft in No. 1 district, of which Bruce Co. is a part, it is estimated, although subsequent drafts will make the total of drafted men from this district much greater. It is understood that the instruction of the new recruits in Canada will be of an elementary nature only. All the advanced work and special training will be carried on in England where the facilities for such training are the best. For some time past the recruits all over the Empire has followed a syllabus that is supposed to take about fourteen weeks. Men may be sent overseas at the end of any week and continue their training in England at the point at which they left here.

Because of this system it is not likely that any large number of men will be under arms at any one time in this district. Drafts will move out frequently and a further draft is called up to replace them once a month, thus making the strain on civilian pursuits of the country as lightas possible.

GLAMIS

Miss Kate McKinnon, of Chicago, is visiting her mother, Mrs Calder for McKinnon, on the 10th of Kincardine.

Misses Eva and Margaret McKinnon spent a few days at Toronto and Niagara Falls.

Mr and Mrs Heith and Louise returned from their visit in Toronto on Thursday last.

Mr and Mrs Jas McKinnon spent Tuesday of last week with friends in Walkerton.

Clyde McKeeman is home again from Camp Borden.

Mr Mercer of Markdale, called on R J Nesbitt and family on Saturday.

Mrs McKeeman, Mr and Mrs Will Bandry motored to Wingham on Saturday, returning on Sunday.

Rev F McKinnon, of Portage la Prairie, is visiting his friends on the 10th of Kincardine.

Mr Jas Thomson is going in for thoroughbred stock, having purchased a cow from Mr Mercer, of Markdale, for which he paid $300.

Rev Mr Gilmour gave a lecture in St Paul's church on Friday, his subject being "With Kitchener at Khartoum." The lecture was illustrated with limelight views, which were very good. There were not very many out owing to the disagreeable weather. The collection amounted to $12.

The N Y P U rally of the Walkerton district meets in the Baptist church on Monday, Thanksgiving Day. The principal speaker will be Rev Mr Jones, of Ingersoll, afternoon and evening sessions. Special music will be given by some of the delegates and the choir. All are welcome

A Success—Twice Over

This season's thirty-five horse-power Overland Model Eighty-Five has scored a double hit in Canada.

For this is the popular model that offers to buyers a choice of either a Four or a Six. It is built in both motor designs.

The wheelbase of the Four is 112 inches—the Six 116 inches.

Solid comfort is assured in both. Big, roomy seats and cantilever rear springs are just two of the reasons why.

As for the motors themselves, little need be said—the fame of the Overland thirty-five horsepower four-cylinder engine is known the world over. And the engine in the six is just as efficient.

We believe the Overland Eighty-Five comes closer to fulfilling the commonsense requirements of more people in Canada than any other model brought out this year.

Let us show you these cars.

GEO. W. GILCHRIST, Agent
R. R. No. 2, Paisley

Model Eighty-Five Four

CANADA

Military Service Act, 1917

Explanatory Announcement by the Minister of Justice

THE MILITARY SERVICE ACT has received the assent of the Governor-General and is now part of the law of the land. It will be enforced accordingly, and the patriotism and good sense of the people can be relied upon to support it. Resistance to its enforcement, however by word or act must and will be repressed, as resistance to any other law in force must be.

Reinforcements under the Military Service Act immediately required

It is the intention of the Government immediately to exercise the power which the Act confers and to call out men for military service in order to provide reinforcements for the Canadian forces. This is necessary since the military authorities report that the reserves available or in sight for reinforcement will shortly be exhausted unless this step be taken.

First call limited to men between 20 and 34 who were unmarried or widowers without children on July 6, 1917

The present call will be limited to men not in the schedule of exceptions who were unmarried or widowers without children on 6th July, 1917, are at least twenty years of age, and were born on or since January 1st, 1883. Of this Class all those will be entitled to conditional exemption whose services in their present occupations, agricultural, industrial or other, are essential in the national interest, and whose business or domestic responsibilities are such that serious hardship would ensue if their services be required. Conscientious scruples based upon a prohibition of combatant service by the articles of faith of the religious denomination to which men belong will also be respected. The men first required to serve will consequently be those who can be called upon with the least disturbance of the economic and social life of the country.

Civil Tribunals to deal with exemptions

Questions of exemption will be determined, not by the military authorities or by the Government, but by civil tribunals composed of representative men who are familiar with local conditions in the communities in which they serve, who will generally have personal knowledge of the economic and family reasons which those whose cases come before them have had for not volunteering their services and who will be able sympathetically to estimate the weight and importance of such reasons. Provincial Appellate Tribunals constituted from the existing judiciary of the respective provinces will be provided to correct mistakes made by Local Tribunals, and a Central Appeal Tribunal for the whole of Canada, selected from among the present Judges of the Supreme Court of Canada, will be constituted in order that identical principles may be applied throughout the country. In this way every man may rest assured of the fair and full consideration of his circumstances and the national requirements both civil and military.

Proclamation will announce the day

A proclamation will issue calling out the bachelors and widowers referred to and fixing a day on or before which every man must report for service to the military authorities unless he has before that day made an application for exemption.

How to apply for exemption

Applications for exemption may be made by written notice on forms which will be available at every post office, and will be transmitted free of postage. They will not, however, be required to be made in this way, but may be presented by the applicants in person to the exemption tribunals. The cases of those who have given written notice in advance will take precedence, and appearance in person will therefore be likely to involve considerably more inconvenience and delay to the men concerned, so that it is recommended that advantage be generally taken of the facilities for written application.

Ottawa, September 11, 1917.

Exemption Tribunals in all parts of Canada

The local exemption tribunals will be constituted with the least delay possible, consistent with the selection of representative individuals to compose them, and the instruction of the members in their duties. There will be more than one thousand of such tribunals throughout Canada, each consisting of two members, one of whom will be nominated by a Joint Committee of Parliament, and the other by one of the Judges of the existing Courts. Every effort will be made by the wide distribution of tribunals, and by provision where necessary for their sitting in more than one place, to minimize the inconvenience to which men will be put in obtaining the disposition of their cases.

A Registrar will be appointed in each Province, who will be named in the proclamation and to whom enquiries may be addressed. Each Provincial Registrar will transmit to the appropriate tribunal the applications for exemption which have been submitted in advance of the sittings, and men who have sent these in will not be required to attend the tribunals until notified to do so. Other applicants should attend personally on the tribunal without notice.

How to report for service

Men who do not desire to claim exemption will report to the military authorities for service either by mail or in person at any time after the issue of the proclamation. Forms of report by mail will be found in all post offices, and, like applications for exemption, will be transmitted free of postage.

Early report advantageous

No man who reports for service will, although he may be medically examined and passed as fit, be required to go into camp or join a battalion until after a day fixed by the proclamation sufficiently late to permit of the disposition by the local tribunals of most, if not all, of the applications for exemption which may come before them. Thus no advantage will be gained by delaying or disadvantage incurred by prompt report for service on the part of those who do not intend to apply for exemption.

Facilities for immediate medical examination

Immediately upon the issue of the proclamation, medical boards will sit at every mobilization centre for the examination of men who report for service or who, subject to their right within the time limited to apply for exemption, desire to have their physical fitness determined in order to allay any doubt as to their physical condition, or to know definitely and in advance whether there is a possibility of their services being required. Certificates of physical unfitness issued by these Medical Boards will be accepted without any further investigation by exemption tribunals when they sit. Men found physically fit who have not reported for service may nevertheless apply for exemption on any of the prescribed grounds, including even their physical condition if dissatisfied with the Medical Board's conclusion.

Notice to join the colors

As reinforcements are required, notice to report to the nearest mobilization centre will be given from time to time to the men found liable and passed as fit for service. Disobedience of such notice will render the offender liable to punishment, but punishment for failure to report for military service, or to report subsequently for duty when called upon, will be imposed ordinarily by the civil magistrates; offenders, however, will remain liable for the performance of their military duties notwithstanding any civil punishment which may be imposed and will be liable to military punishment in cases in which civil proceedings are not taken.

Watch for the Proclamation

Notice of the day appointed for the making of a claim for exemption or for report for military service will be published as widely as possible, but, as no personal notice can be given until the individuals called out have so reported themselves or claimed exemption, men possibly concerned are warned to inform themselves with regard to the day fixed, since neglect may involve the loss by them of important privileges and rights.

CHAS. J. DOHERTY,
Minister of Justice.

Wiarton Council Will Get Into the Fuel Business

The Wiarton Echo says that there is lots of wood cut there for selling next winter, but so far the owners will not sell at a price to it, consequently the town council decided at its last meeting to get into the fuel game. A firm in Toronto offered coal in any quantity and of any quality, so the council will order ten cars. It is proposed also to buy some bush lots and get right down to business, and the prospects that wood will be put on the market at less than $5 per cord. A few winters ago the town purchased a bush lot, put men in it, and were able to sell wood considerably under market price. Last spring the town went into the potato game, brought in a carload, sold them away below the prevailing price, and even then cleaned up $50.

Thanksgiving Service

There was a fair attendance at the Thanksgiving service in the town hall on Monday forenoon. Rev Mr Neilson delivered an excellent address. The collection in aid of the Lord's Day Alliance Fund amounted to $27.

Christmas Parcels For Soldiers

The Woman's Patriotic League are preparing to send Christmas parcels to our boys at the front. Some of the men are going to furnish the tobacco, and the ladies are asking for a sock shower on Oct 17th. Call and get the yarn and have a big shower of sox. The Christmas parcel is to be taken out of the funds of the League.

Flying Machine Was Stalled

Aviator Burwash, who made the flight from Long Branch to Mr C McDougall's in Bruce Tp. last week, was delayed in his return trip by something going wrong with the machinery of his airship. Experts came up on a motor truck and made the necessary adjustments, and one of the mechanics took charge of the plane on its flight back to Toronto on Saturday, passing about two miles south of Paisley. Although only trained for a couple of months, young Burwash manipulates his machine very skillfully in the air.

Literary Society

The Paisley Continuation School has organized a Literary Society for the year 1917. The candidates were nominated on Wednesday, Oct 3rd, and at a meeting on Friday, Oct 5th, the following officers were elected: President, Alan Shoemaker; Vice-President, John Brown; Sec'y, Gertrude Brown; Treasurer, Farewell Fletcher; Editors, Wallace Tanner, Lorne Cargill; Pianist, Blanche Collins; Asst Pianist, Velma Pfaff. Councillors: Form I—Albert Stanley, Alma Fraser, Robert Fullerton, Edward Cargill; Form II—Irvine Gege, Mary Laidlaw; Form III—Gladys McCallum, Roberta Stark.

—Teachers' Institute entertainment, town hall, Thursday evening. Lecture by Prof Jones, of Toronto University, on "The Growth of the Imperial Conference." Good musical programme.

—Rev. A J Crighton, pastor of Paisley Methodist church, will deliver his educational lecture on "Seeing the Invisible" before the East Bruce Teachers' Institute at Wiarton on Thursday.

—Mr John Little spent a few days' vacation in Toronto.

—Mr Hartrop spent Thanksgiving at his home in Hanover.

—Mrs J A Logie returned home on Monday from Walkerton.

—Miss Prudence Kerr was home from Dutton for Thanksgiving.

—Mr and Mrs John Hargreaves were up from Toronto for a few days.

—Mr Jas Ellis came up from Toronto to spend Thanksgiving with his family.

—Mr and Mrs W Bairdsell of Owen Sound were guests at Mr T P Pearce's.

—Mr and Mrs J S Nicholls and Mrs Caldwell were at Jamestown for Thanksgiving.

—Miss McNeill and Miss Kate McNeill are visiting friends in Parkhead and Wiarton.

—Miss Agnes Pearce was home from Owen Sound Business College over Thanksgiving.

—Mr and Mrs J N Collins went to Ottawa on Tuesday to visit their son Harold for a couple of weeks.

—Lecture and entertainment, town hall, Thursday evening. Admission—Adults 25c, children 15c.

Mr Hugh Watt and family have moved from Chesley to Paisley, and are residing on Inkerman St.

—Miss Elva George has returned to Winnipeg after a visit to her parents, Mr and Mrs T H George.

—Misses Edna Hamilton, Victoria Rose May Grant and Nina Johnston were in Toronto over the holiday.

—Mr and Mrs C McGillivray and family of Mount Forest, were guests at Mr J P Fisher's over the week end.

—Mr and Mrs John Bryce, of Paisley, and Miss Cecile Lewis of Elderslie, arrived home from the west on Saturday night.

—Mrs McGladdery of Guelph spent Thanksgiving in Paisley and was accompanied home on Tuesday by her father, Mr Thos McBeath.

—Hear the lecture by Prof Jones, at Teachers' Institute entertainment, Thursday evening. Good musical programme. Admission—Adults 25c, children 15c.

—Thursday, Oct 25th, is the date for the Walkerton Philharmonic Society concert in Paisley Town Hall. Proceeds for patriotic purposes. Under auspices of Knox church ladies' patriotic class.

—A special prize of a pair of ducks was given by L C Spofford for a Scotch doubles bowling competition by members of the local club, and was won by Alex Jack and Allan Shoemaker. Dr Allen is the winner of the Fisher trophy in the singles competition, Jas Brown being his opponent in the final.

—The Walkerton Herald and Times observes that the aviator who went over last week "was probably the first that in years has gone through Paisley 'on the fly' without the cop taking toll of him." Right-o! Murdoch allows the real bird man the freedom of the air above Paisley. The automobile driver who attempts to fly on our streets, however, is his legal game, and he gets the car number every time. So beware, Artie, when you come this way in your little new Ford.

Pay Will Be The Same

Men selected under the Military Service Act will receive the same pay as those now on active service receive. Pay will start from the time a man reports for duty. Money from the Patriotic Fund and Separation Allowance will also be available for selected men.

Canadian soldiers are well paid. The fact that wages in Canada are generally higher than those paid in Europe is recognized in the system of remuneration for men on active service. Clothing and all equipment in addition to food is also supplied to the Canadian soldier, leaving him with no expense except personal incidentals.

The rate of pay for men in the Canadian Expeditionary Force, other than commissioned officers, is as follows:

	Pay	Field Allowance
Warrant Officers	$2.50	30 cts.
Regimental Sergt-Major, if not a Warrant Officer	1.85	20 "
Quartermaster-Sergeants	1.50	20 "
Orderly Room Clerks	1.50	20 "
Orderly Room Sergeants	1.50	20 "
Pay Sergeants	1.50	20 "
Squad., Batt., or Co. Sergt-Major	1.60	20 "
Colour-Sergeant or Staff-Sergeant	1.40	20 "
Squad., Batt., or Co. Q.M.S.	1.40	20 "
Sergeants	1.35	15 "
Lance-Sergeants	1.15	15 "
Corporals	1.10	15 "
Lance-Corporals	1.05	10 "
Bombardiers, or Second Corporals	1.05	10 "
Trumpeters, Buglers, and Drummers	1.05	10 "
Privates, Gunners, Drivers	1.00	10 "
Sappers, Batmen, etc.	1.00	10 "

As in the case of those already gone overseas, Separation Allowances will be available for those dependent for livelihood upon selected men. The Separation Allowance is $20.00 per month for the rank and file, $25.00 for sergeants and staff-sergeants and $30.00 for warrant officers. The experience is that many men can afford to assign half their pay to dependents, in addition.

A considerable number of men who have enlisted in the Canadian forces have found themselves better off under the army rate of pay, which is granted in addition to board, lodging, clothing, equipment, transportation, etc., than they were while in civilian positions. Their wants are provided for, and they receive a steady addition to the bank account each month.

Issued by
The Military Service Council.

BLACK, MIXED OR GREEN

Sense of Dignity

SOMETHING FINER THAN ONE'S NORMAL SELF, AND MORE ELEVATING THAN PASSION.

By H. M. EGBERT.

"A marriage has been arranged and will shortly take place between Miss Estelle Lambert, only daughter of Rear Admiral Charles Lambert (retired) and Mr. John Hewlett, the well-known senior partner of Hewlett & Mason, 89 Wall Street. The news of the engagement has occasioned considerable speculation among the friends of the bride, who—"

John Hewlett, seated at his desk in his capacious office, smiled very grimly as he read the insinuating paragraph in the society paper which had been sent to him, marked, by some one who preferred to remain anonymous. It was well that he had done so, for John Hewlett was not a very pleasant enemy, and he had been known to reply insults with good measure on more than one occasion.

But he only thrust the sheet contemptuously into his waste-paper basket, and then, having sorted the correspondence upon his desk, he closed it with a slam. He had arranged his affairs; he had settled his obligation to the last penny; now he was to settle a moral obligation which weighed on him more than the loss of his entire fortune, wiped out in a day by the sensational slump in Hardware Preferred.

John Hewlett was forty-three. From the age of eighteen to thirty he had worked in a foundry, stripped to the waist, the bully and overlord of a motley crew of hard fighters and hard workers. Then an education, painfully and laboriously acquired by the aid of a few books studied when he should have been sleeping, enabled him to break free from his enslavement. In five years more he was a man of average education and moderately rich, at forty he had entered Wall street, where, during three years, he had become known as the most audacious finance in the financial district. He had made millions, had been flattered and courted; then, at forty-three he had fallen in love, for the first time in his life. He had met Estelle, just back from school in France, to take her dead mother's place in the household; and by sheer force of personality he had swept her off her feet with his impassioned pleading.

And now he was ruined and his duty lay clear before him. John Hewlett had never flinched from duty when he was boss of the foundry gang. Hard-hitting, inflexible, he had gone straight to the point and always carried it. Now his course was clearly defined. He could not give her anything to compensate for what he was taking from her. He must release her from the engagement.

Three-quarters of an hour later he was being ushered into the drawing room of the Lamberts' house. It was a soft summer evening, agreeably cool; the lights were not yet turned on, and the house was almost dark. Miss Estelle was out; the maid said, but would return at any moment. Would he wait for her?

John Hewlett paced the room quietly, thinking out the speech that he had prepared. He passed into the hall. Adjacent to the drawing room was a smaller one, the entrance hidden by a Japanese screen. Behind this he heard the murmur of voices. One of them was Estelle's. The other was the softly modulated one of Theodore Faning. Hewlett was about to break in on them when something said aroused his attention, and, though he would have scorned to play the spy, he stood as though rooted there, awaiting the opportunity to slip away without arousing detection.

"Yes, Estelle, he's a beggar," he heard Faning say, with a self-satisfied laugh. "Every penny wiped out in the Hardware slump. It's all over the street. Poor beggar!"

"Why 'poor beggar'?" gasked Estelle.

"Because he's losing you, Estelle," Faning answered, 'and that makes him doubly poor. I tell you, when I heard the news my heart got into my throat and stayed there. He's so devilishly partinacious, that Hewlett fellow, I was half of a mind that he would hurry round and pour some lying story into the old man's ears and somehow contrive to keep his strangle-hold on you. But I guess he didn't have the nerve. Take it from me, you won't see him again, Estelle. He's probably miles away by now, with all the money that his dupes trusted him with."

In the old days in the foundry Hewlett had been famous for striking before speaking. "It's a word and a blow with John Hewlett," was said of him. Now, hearing this, he felt his temples suffused with blood; involuntarily he put out his hands and the Japanese screen toppled over. Next moment he was standing in front of Estelle and his traducer. All the decorum acquired through years of painful self-mastery had vanished, and he was elemental in his fury. His fists were clenched, his face was purple, and he rocked slightly, like an infuriated beast.

"I heard you," he bellowed. "I heard you! I—I won't hurt you in Miss Lambert's presence. But I'm going to speak to her alone. Get out!"

"Mr. Hewlett!" cried Estelle, springing to her feet, pale with anger, "please remember that you are both my guests."

Hewlett's hands fell to his sides. He felt himself trembling. At that moment Admiral Lambert entered the room quietly, stepped up, and took his place between the men.

"Come, Hewlett, my dear fellow," he began. "What's the matter between you and Mr. Faning?"

"May I be allowed to speak?" inquired Faning ironically. He stood up tall enough, although his hands were aching. "It amounts to this: that man is a pauper. His house has failed. And I think," he continued, with a little bow, "that he has come here to tell you so."

"Yes, you're right," cried Hewlett, and all his rage came back. Never before had he been balked by circumstances; now he saw everything red; he wanted to use his mighty fists, and, not being able to, felt humiliated and impotent. "Yes, I've lost all my money," he shouted. "And I came to tell Miss Lambert so—not you, admiral, but Miss Lambert, because it's her right to know."

"And I think Mr. Hewlett is angry that Mr. Faning should have told me first," put in Estelle indignantly.

Hewlett looked round at the calm, collected witnesses of his helpless rage. He was very like a bear being

Admiral Lambert Came Forward and Clasped the Other by the Hand.

baited by hounds. But in that moment a sense of dignity came to him, something finer than his normal self, which lifted him above his passion and left him cooler than all.

"Let's come to the point," he said. "I have asked Mr. Faning to withdraw. Now I can proceed. I have lost every penny I have, but I've paid my debts and I'm going to start life over again—and win. I've always won. But I've lost one thing. I came to say that. I wish to release Miss Lambert from our engagement. It wouldn't be fair."

He stopped and looked from one to another. There was something almost pitiful in his gaze. Faning shifted uneasily.

"With your permission, I will be going, sir," he said to the admiral, and, bowing to Estelle, he went out of the room. Outside he paused and grinned. Success was his now; he had heard enough. Hewlett had hopelessly lost—why, the coarseness of the man had shown through the polish like raw wood under a coat of varnish. He chuckled all the way home.

Inside there was a dead silence. Then the admiral spoke.

"Why wouldn't it be fair?" he asked.

"Why?" stammered Hewlett. "Why—why—"

Admiral Lambert came forward and clasped the other by the hand.

"I can't speak for Estelle, John," he said, "but I think you are doing us both a wrong. I hope you are. I believe, John, that this misfortune has swept away a barrier—a barrier which was once almost invisible, but has been growing higher and stronger—the barrier that you yourself have opposed to your own happiness. I mean your pride, John, and your self-deprecation. But I can't answer for Estelle. Perhaps she can answer."

He passed out of the room, and Hewlett, not understanding, stood staring after him beside the door. He stood as if in a dream till the rustle of a soft garment at his side caused him to start violently. Estelle stood by him.

"John," she said, and there were tears in her eyes—"John, won't you even understand? Well, then, I'll have to tell you. I loved you for yourself, my dear, not for your money, not in spite of your ruggedness, but because of the heart of a man beneath it. There! I've told you and I never dared to hope the time would come—"

And the tears that fell on his face washed away all bitter memories of the past.

Kerosene oil is excellent for cleaning the rubber rollers of a clothes wringer. After it has been applied, the rollers should be rinsed off with warm water.

About the House

DOMESTIC SCIENCE AT HOME

Eleventh Lesson.—Beverages.

Nearly three-fifths of the total weight of the human body is composed of water. For perfect assimilation of our food and to help the body regulate its processes, it is necessary that the adult drink from eight to ten glasses of water a day.

When an insufficient amount of water is provided for the human body the blood is overloaded with waste products and the organs of elimination become torpid. As an active constituent of the blood stream, it is of vital importance that sufficient good, pure drinking water be taken daily.

Tea is a decoction of boiling water and tea. It has no food value. Owing to various elements contained in the tea leaf, it acts as a stimulator. Coffee is made by various processes from the berry, which has been previously roasted and ground. By the addition of water, it becomes an active stimulant, containing caffeine. Cocoa is made by the addition of milk and water. It has a food value other than the value of milk. The sugar, fat and starches of cocoa or chocolate all contain nutriment.

Milk contains protein in the form of casein, fat and mineral salts, which make it the ideal food for children. It supplies material for building muscle, bone and teeth structures; it also gives energy. Mothers will find that a glass holding one-half pint of milk has a food value equal to that of three and one-half ounces of beef. Milk is particularly rich in vitamines, which promote growth and health.

English Method of Making Tea.

Use a white stone or an earthenware pot for making the tea. Fill the pot with boiling water to heat it. Now place the desired amount of water in the teakettle to boil. Just before the water reaches the boiling point turn out the water from the earthenware pot or white stone pitcher, dry the pitcher and then place in it the desired amount of tea. Now pour on the freshly boiled water. Cover it and allow to stand for five minutes, then use it.

This method will produce a delicious cup of fragrant tea, and it avoids drawing out the tannin which is present in the tea leaf. If water is used that has been standing in the teakettle or water that has been long in boiling, much of the valuable gases are destroyed.

French Method of Making Coffee

Use a stone pitcher, fill it with boiling water and set in a vessel containing hot water. This will thoroughly heat the pitcher. Now place one level tablespoonful of pulverized coffee for each cup desired in a clean piece of cheesecloth and tie. Have the water freshly boiled. Pour out the water from the pitcher. Put the coffee in the pitcher and pour the boiling water over it. Cover closely for ten minutes and place where it will be hot. One tablespoonful of coffee for each cup of boiling water.

Coffee made by this method will contain all the delicious aroma that escapes when it is made in a percolator or by boiling or scalding. The percentage of caffeine is much less than when the coffee is made by other methods.

Cocoa or Chocolate

Use equal parts of water and milk. Dissolve the cocoa or chocolate in hot water; add to rest of milk and water. If beaten continually the cocoa or chocolate will be smooth and rich in flavor.

When heating milk allow it to come just below the scalding point. Boiling destroys the vitamines and lowers the food value.

Home Canning.

Canned Pumpkin.—Cut the pumpkin and then peel and remove the seeds. Cut it into pieces suitable for cooking, place in a large preserving kettle and add water. Cook until soft, then drain and mash. Fill into sterilized jars. Place the rubber and lid in position and then partially tighten them. Place in a hot water bath and process for forty-five minutes after the water starts boiling. Remove from the bath and fasten the lids securely. Test for leaks and then store in a cool, dry place.

The pumpkin may be cut in half, the seeds removed. It may then be placed in an oven and baked. When tender scrape the soft pulp with a spoon and then fill into sterilized jars. Process the same as for boiled pumpkin.

Pumpkin Jam.—This jam can be made through the fall and winter. One quart of stewed pumpkin, juice of one lemon, juice and one cupful of raisins, cut in small pieces, two and one-half cupfuls of sugar. Place in a porcelain preserving kettle. Stir until the sugar is dissolved and then add the following spices tied in a cheesecloth bag: three tablespoonfuls of ginger, one tablespoonful of cinnamon, two teaspoonfuls of mace. Cook slowly for one hour, then remove the spice bag. Pour into sterilized glasses or crocks. Cover and store in the usual manner for jellies.

Squash.—Peel the squash and then remove the seeds. Cut into pieces and cook in boiling water until tender. Drain and mash and then season slightly with salt. Fill into sterilized jars. Adjust the rubbers and lids and then partially tighten them. Place in a hot water bath and process for forty minutes after the water starts boiling. Remove jars and fasten the lids securely and then test for leaks. Store in a cool, dry place. This may be used when fresh vegetables are scarce; for the sake of variety used as squash fritters or biscuits or in place of pumpkin for pie.

Quince Jam.—Peel one-quarter peck of quinces. Remove the seeds and cores. Cut in very thin slices. Place in a preserving kettle and cover with cold water, having the water at least two inches above the fruit. Cook slowly until the fruit is tender. Place the peelings and cores in a second preserving kettle. Cover with cold water. Cook slowly until tender and then drain through a jelly bag. Add this liquid to the thinly sliced quinces. Measure and allow one pint of sugar to each quart of the liquid and fruit. Return to the preserving kettle. Stir until the sugar is dissolved, then cook slowly until the fruit is transparent, and when some of the mixture if left on a cold saucer will thicken like jam. Now pour into the sterilized glass jars, pots or bowls, cool and cover with paraffine. Seal and store in the manner usual for jellies. Long and slow cooking will give the quinces the beautiful amber color.

Tomato Mustard.—Take one-quarter peck of green tomatoes, sliced very thin, and sprinkle them thickly with salt. Let them stand for five hours. Squeeze dry from the brine; now place one quart of onions cut in thin slices in bottom of preserving kettle, then a layer of tomatoes, proceeding in this way until all are used. Add four ounces of mustard, cover with vinegar and then cook gently for one and one-half hours. Put into jelly glasses and when cold cover the tops with paraffin.
